DIPLOMATIC WORKING DOCUMENT

The Gulf Stability Accord

A Comprehensive Regional Stability Architecture for US-Iran De-escalation, Strait of Hormuz Governance, Nuclear Stabilization, and Symmetrical Economic Recovery

G.S.A.

The Gulf Stability Accord v1.0

Calibrated for the May 2026 Negotiation Environment

Date of Issue: May 20, 2026

Status: Integrated Framework with Thirty Symmetrical Economic Incentives

AUTHORIZED NEGOTIATORS ONLY

Table of Contents

Executive Decision Brief

Preamble: The May 2026 Moment

Section I: Core Principles

- 1.1 Synchronized Reciprocal Motion
- 1.2 Modular Architecture
- 1.3 Sovereignty Preservation
- 1.3(b) Institutional Binding Doctrine
- 1.4 Framework Survival Core
- 1.5 No Precedent Clause
- 1.6 Political Shock Absorber

Section II: Framework Overview

Section III: Maritime Architecture

- 3.1 Persian Gulf Maritime Security Contribution (PG-MSC)
- 3.2 Established Operational Nomenclature
- 3.3 Synchronized Dual-Blockade Lift
- 3.4 Maritime Safety and Revenue Architecture

Section IV: Nuclear Stabilization Architecture

- 4.1 The 60 Percent Freeze and IAEA Custody
- 4.2 Enrichment Moratorium Architecture
- 4.3 Fordow Conversion and Medical Isotope Partnership

Section V: The Thirty Symmetrical Economic Incentives

- 5.1 Incentives 1-10: Immediate De-escalation Dividends
- 5.2 Incentives 11-20: Stabilization Recovery Credits
- 5.3 Incentives 21-30: Long-Term Prosperity Partnership

Section VI: Financial Module and Asset Architecture

- 6.1 Reconstruction Escrow and Sovereign Immunity
- 6.2 Asset Return Tranche Architecture

6.3 SWIFT Reconnection Pathway

Section VII: Security and Verification Architecture

7.1 Five-Channel Verification Convergence

7.2 Three-Tier Breach System

7.3 Step-Back Architecture (No Snapback)

Section VIII: Governance and the Facilitating State Matrix

Section IX: Implementation Timeline

Section X: Face-Saving Metrics and Domestic Wins

Section XI: Safeguards and Force Majeure

Section XII: Reconstitution Mechanism

Section XIII: Three Deal Options

Appendix A: Quick Reference Matrix

Executive Decision Brief

For Senior Officials. Read this before the full document.

The Core Exchange

The Gulf Stability Accord (GSA) creates a sequenced, reversible, verified exchange between the United States and Iran. Neither side moves alone. Every Iranian commitment is matched by a corresponding US commitment, activated simultaneously, verified by neutral observers through a distributed facilitating state matrix.

What the United States Delivers

- **$250M Pilot:** Immediate humanitarian tranche via Swiss escrow. Non-reversible. Humanitarian goods only.
- **Blockade Lift:** US naval blockade of Iranian commercial ports lifted, synchronized with Hormuz reopening.
- **Sanctions Relief:** Eight-tranche staged architecture through non-US channels (no Congress required initially).
- **PG-MSC Co-Governance:** Iran receives permanent voting seat on the Persian Gulf Maritime Security Contribution (PG-MSC) Council with alternating chair authority.
- **Nomenclature Recognition:** Legitimization of established US operational designations for the transit corridor within the framework's administrative registry.
- **SWIFT Reconnection:** Phased restoration of Iranian banking access tied to verified IAEA milestones.

What Iran Delivers

- **60% Freeze:** Immediate freeze of all enrichment at or above 60%. Verified by IAEA within 72 hours. Sustained throughout framework.
- **Hormuz Reopening:** IRGC-Navy withdraws small craft from transit corridor. Synchronized with US blockade lift on Day 7.
- **Stockpile Transfer:** Weapons-grade enriched uranium to IAEA custody in Oman by Day 1. Verified by mass spectrometry.

- **1-Year Renewable Cap:** Moratorium on enrichment above 3.67%, renewable annually for up to 15 years based on performance.
- **No Precedent Clause:** Explicit language: this Accord creates no legal or political precedent for future negotiations.

The Thirty Symmetrical Economic Incentives

The GSA Framework introduces thirty paired economic incentives: fifteen designed to deliver immediate, visible benefits to the Islamic Republic of Iran, and fifteen designed to deliver immediate, visible benefits to the United States. Each incentive is symmetrical: for every Iranian economic gain, there is a corresponding US economic gain of equivalent strategic value. Neither side subsidizes the other. Both sides profit from de-escalation.

The Distributed Facilitating State Matrix

Table 1 Distributed Facilitating State Matrix

State	Domain	Core Function
Oman	Maritime Deconfliction	Hotline management, naval encounter facilitation, Hormuz transit oversight
Switzerland	Financial Verification	Escrow administration, asset transfer verification, sanctions relief monitoring
Qatar	Escrow and Liquidity	Emergency liquidity facility, bridging finance, humanitarian corridor support
IAEA	Nuclear Verification	Enrichment monitoring, stockpile custody, facility inspection
UN Appointee	Procedural Mediation	Governance facilitation, dispute resolution, deadlock breaking
Pakistan	Emergency Convening	High-level crisis summits, backchannel facilitation, institutional relay

Timeline at a Glance

Table 2 Implementation Timeline

Phase	Duration	Iranian Steps	US Steps
Micro-Pilot	Days -30 to -1	Freeze 60% enrichment; IAEA access within 72h; IRGC presence reduced 30%	$250M via Swiss escrow; partial blockade reduction; open 30-day nuclear window
Stage 1: Opening	Days 1-14	Ceasefire; stockpile to IAEA; Hormuz reopening; mine clearing	Suspend Epic Fury; OFAC license; blockade lift; maritime notice
Stage 2: Stabilization	Days 15-60	Declare moratorium; idle centrifuges; Fordow Phase A; HEU export plan	Sanctions tranche; aviation licenses; 50% asset return; SWIFT Phase 1
Stage 3: Permanent Architecture	Days 61-180	Permanent PG-MSC successor framework; Fordow Phases B/C opened	Full sanctions relief; 85% assets returned; Crescent Compact opened

Bottom Line

This framework creates a reversible, verifiable, politically defensible pathway. The Micro-Pilot tests trust at low stakes. The modular architecture ensures nothing collapses if one element pauses. The distributed facilitating state matrix replaces single-point-of-failure guarantors. The three-tier breach system prevents accidental escalation. The thirty symmetrical economic incentives make de-escalation profitable for both sides. Every provision includes face-saving metrics.

Preamble: The May 2026 Moment

As of May 20, 2026, the United States and the Islamic Republic of Iran stand at the closest point to a durable agreement since hostilities began on February 28, 2026. After eleven weeks of military confrontation under the codename Operation Epic Fury, both sides have exhausted the military escalation ladder and returned to the negotiating table. The GSA Framework is designed for this exact diplomatic moment.

Current Military Status

A Pakistan-mediated ceasefire has been in place since April 8, 2026. Prime Minister Shehbaz Sharif has mediated four rounds of talks. The most recent round (May 12-14) produced a preliminary understanding on humanitarian corridors and the 60% enrichment freeze, but deadlocked on asset return sequencing and facility consolidation. The GSA Framework resolves these remaining blockers.

What Makes the GSA Framework Different

The GSA Framework builds on the architecture of the Stability First Enhanced Accord, the Hormuz First Enhanced Accord, the Regional Cooperation and Stability Architecture, and the Crescent Bridge Accord. It introduces four structural innovations that prior frameworks lacked:

First: Thirty symmetrical economic incentives that make de-escalation commercially irresistible for both sides. Prior frameworks offered political benefits; this framework offers tangible economic profits.

Second: The Established Operational Nomenclature provision, which creates a permanent administrative registry recognizing each party's sovereign right to designate the transit corridor according to domestic preference, while preserving the standardized international designation for all binding legal instruments.

Third: The GSA financial architecture, which embeds the Gulf Stability Contribution as a funded, institutionalized mechanism for regional maritime security infrastructure, with transparent governance and revenue sharing.

Fourth: A graduated sovereignty restoration trajectory that demonstrates a visible path from supervised compliance to full economic autonomy, with sovereignty milestones published quarterly.

The Zero-Breakout Objective

> **Article ZBO-1: Aspirational Framework Objective**
>
> The objective of this framework is a verifiable zero-breakout timeline. Through phased verification, centrifuge mothballing, stockpile transfer to third-party custody, and continuous IAEA monitoring, the framework aims to eliminate Iran's capacity to produce weapons-grade uranium without detection. Neither side is required to surrender sovereign rights. The timeline is performance-based, reversible, and subject to annual review. But the strategic direction is unambiguous: toward a Middle East in which no state can rapidly break out to a nuclear weapon.

Hard Constraints as of May 20, 2026

Table 3 Current Negotiation Constraints

Constraint	Implication
Supreme Leader transition; institutional succession to Mojtaba Khamenei	Iranian negotiators need demonstrable sovereignty preservation
US naval blockade since March 4; Hormuz transit down 85%	Iran needs blockade lift as immediate, visible win
Insurance rates up 400%; global energy markets disrupted	Global energy markets demand urgent resolution
Precedent of JCPOA collapse (2018) and 2026 war	Both sides need irreversible facts, not reversible promises
Israeli opposition to any Iranian enrichment	Verification must be intrusive enough for quiet acquiescence
Gas prices at $4.53 nationally; midterm election cycle	US administration needs visible economic wins
Trump "Strait of Trump" nomenclature claims	Framework must legitimize existing US operational designations

Section I: Core Principles

1.1 Synchronized Reciprocal Motion

Neither side moves alone. Every Iranian commitment is matched by a corresponding US commitment on the same day. Verification is shared. Both governments can defend the sequencing as responding only when the other has moved first or simultaneously.

IRANIAN STEP	US STEP
Freeze all enrichment above 60%; allow IAEA inspectors to verify at Natanz and Fordow within 72 hours. *Narrative:* "NPT rights preserved; enrichment continues at 3.67%; sovereign annual review."	Partially lift naval blockade; authorize first humanitarian tranche ($250M) through Swiss escrow. *Narrative:* "60% weapons-grade enrichment halted; IAEA inside Natanz within 72 hours."

1.2 Modular Architecture with Partial Continuity Rule

> **Article PC-1: Partial Continuity Rule**
>
> Stabilization pause in one module does not suspend unrelated modules. Maritime disputes cannot terminate humanitarian channels. Cyber incidents cannot terminate medical isotope cooperation. Nuclear verification gaps do not affect Hormuz transit.

The Partial Continuity Rule applies automatically. No governance body approval required. When one module enters stabilization pause, all other modules continue at current operational levels for a minimum of 90 days while the Coordination Secretariat assesses recovery options.

Table 4 Module Survival Tiers

Tier	Modules	Behavior During Pause
Tier 1 (Inviolable)	Ceasefire hotline, humanitarian access, emergency diplomatic channel	Never pause under any circumstances

Tier 2 (Protected)	IAEA basic monitoring, Hormuz non-military transit, asset tranches 1-2	Continue during most stabilization pauses
Tier 3 (Conditional)	SWIFT reconnection, bonus tranches, successor framework talks, Fordow advanced phases	May enter hold during disputes

1.3 Sovereignty Preservation

This framework does not supersede any constitution. It does not create supranational authority. NPT rights are preserved. US treaty commitments to Gulf partners are preserved. Every provision is interpreted through the lens of sovereign equality: the United States and Iran enter this framework as equal signatories, each retaining full domestic nomenclature authority, full economic sovereignty, and full defense rights under Article 51 of the UN Charter.

1.3(b) Institutional Binding Doctrine

Article IB-1: Agreements Bind Institutions, Not Leadership

All obligations, commitments, and benefits established under this framework bind the sovereign institutions of the signatory states — the Government of the United States of America and the Government of the Islamic Republic of Iran — not to individual officeholders, administrations, or leadership. The framework is entered into by and between these institutional sovereigns as continuing legal persons under international law. Successor governments, administrations, and leadership inherit all rights and obligations automatically upon assumption of constitutional authority.

Article IB-2: Leadership Transition Automatic Continuity

In the event of a leadership transition in either signatory state — whether through election, succession, appointment, or constitutional process — the framework continues in full force without requiring reaffirmation, re-signature, or re-ratification. The new leadership assumes all framework rights and obligations as of the date of constitutional assumption of office. No new government may claim that its predecessor's commitments are void due to the transition. This Article operates as a binding succession clause under the Vienna Convention on Succession of States in Respect of Treaties.

Article IB-3: Institutional Counterparties for All Transactions

All financial transactions, escrow arrangements, asset transfers, and commercial licenses under this framework are executed between institutional counterparties: the Swiss Federal Office for Customs and Border Security (for escrow), the IAEA Director General's Office (for nuclear verification), and the Joint Coordination Secretariat (for governance). No transaction is contingent on the personal authority, signature, or continued tenure of any individual official. The institutional counterparty designation survives leadership change automatically.

Article IB-4: State-Level Economic Constituency Lock-In

Wherever feasible, economic incentives under this framework are structured to create beneficiaries at the sub-federal level — US state governments, Iranian provincial authorities, municipal jurisdictions, and private-sector entities — who have independent political and economic stakes in framework continuity. These sub-federal beneficiaries serve as distributed guarantors: their vested interests create domestic political constituencies that transcend individual leadership and provide institutional pressure for framework continuation regardless of administration change.

1.4 Framework Survival Core

Under all circumstances, including total framework suspension, the following three elements survive:

1. **Ceasefire Hotline:** The Omani-facilitated 24/7 bilateral hotline between US and Iranian military commanders remains active regardless of framework status. Neither party may disable the hotline without 30 days' notice to the UN Secretary-General.
2. **Humanitarian Access:** The zero-fee, no-inspection-delay humanitarian corridor through Hormuz for food, medicine, medical equipment, and UN supplies continues regardless of any dispute, breach, or suspension.
3. **Emergency Diplomatic Channel:** The backchannel through the Coordination Secretariat remains open for crisis communication, de-escalation, and framework reconstitution regardless of formal diplomatic status.

The Framework Survival Core is established as a standalone humanitarian arrangement under UN auspices. It is not contingent on any other provision of this framework. Even if both parties formally withdraw, the Survival Core continues for 180 days pending reconstitution efforts.

1.5 No Precedent Clause

> **Article 1.5**
>
> This Accord establishes no legal or political precedent for future negotiations. Each provision is sui generis, tailored to May 2026. No inference may be drawn from any provision regarding positions on any matter not expressly addressed herein. The unique maritime coordination mechanisms herein apply exclusively to the Strait of Hormuz during the operational lifespan of this Accord. This text shall not be cited in any international court or treaty to define or alter sovereign rights under UNCLOS elsewhere in the world.

1.6 Political Shock Absorber

If any of the following political shocks occur in either party's jurisdiction, framework implementation automatically enters a Review Pause rather than terminating: national elections or referenda; assassination of senior leadership; cabinet collapse or government reshuffle affecting negotiating ministries; mass protests affecting government authority; leadership transitions (Supreme Leader, President, Foreign Minister); significant military incident affecting domestic politics.

During a Review Pause: All Tier 1 (Inviolable) and Tier 2 (Protected) modules continue unchanged. Tier 3 (Conditional) modules enter hold status. The Coordination Secretariat issues a Review Pause Certificate within 48 hours. The affected party has 30 days to confirm continuation, propose modifications, or request stabilization pause. Maximum Review Pause duration: 90 days, extendable by mutual agreement.

Article PSA-4: Presumed Continuation with Affirmative Opt-Out

(a) Presumption of Continuity: The framework operates on a presumption of institutional continuity. Upon any leadership transition, the framework continues in full effect automatically. The successor government is not required to reaffirm, re-sign, or re-ratify. Continuation is the default state.

(b) Affirmative Opt-Out Only: A successor government may only exit the framework by issuing an explicit, written notification of withdrawal through its constitutional foreign policy authority (for the US: Secretary of State notification to the Joint Coordination Secretariat; for Iran: Foreign Minister notification to the Secretariat). This notification must cite the specific constitutional provision authorizing withdrawal and must be published in the Transparency Portal. Mere non-communication, failure to appoint framework representatives, or hostile rhetoric does NOT constitute withdrawal.

(c) 90-Day Cooling-Off Period: Upon receipt of an opt-out notification, the framework enters a mandatory 90-day Cooling-Off Period during which all Tier 1 (Inviolable) and Tier 2 (Protected) modules continue unchanged. The Secretariat convenes emergency consultations with both parties and all facilitating states. The opt-out does not take effect until the Cooling-Off Period expires. During this period, the Secretariat may propose modifications to address the successor government's concerns without requiring full renegotiation.

(d) Opt-Out Reversal Window: A successor government that has issued an opt-out notification may reverse it at any time before the Cooling-Off Period expires, with full framework continuity restored. After the Cooling-Off Period expires, withdrawal is effective but the Framework Survival Core continues for 180 days regardless, preserving the ceasefire hotline, humanitarian access, and emergency diplomatic channel.

(e) Institutional Binding Override: No successor government may claim that the framework was the personal commitment of a prior leader and is therefore void. Article IB-1 (Institutional Binding Doctrine) explicitly nullifies any such claim. The framework binds the sovereign institution — the United States of America and the Islamic Republic of Iran — not individuals.

(f) Domestic Political Actor Management: Each signatory state is responsible for communicating to its domestic political actors that framework continuation is the default and that only an affirmative opt-out through constitutional channels can alter this status. The Secretariat provides model communications for this purpose.

Section II: Framework Overview

Three Stages at a Glance

Table 5 Framework Stage Overview

Stage	Duration	Primary Goal	Closing Trigger
Micro-Pilot	Days -30 to -1	Build trust through limited, reversible exchanges	Both sides certify pilot objectives met
Stage 1: Opening	Days 1-14	End the war; transfer stockpile; reopen Hormuz	Blockades lifted; 200+ transits; IAEA custody verified
Stage 2: Stabilization	Days 15-60	Negotiate nuclear specifics; staggered cap; facility protocols	Moratorium ratified; HEU export confirmed; 50% assets returned
Stage 3: Permanent Architecture	Days 61-180	Joint Transit Authority; regional dialogue; normalization	Authority charter ratified; 85% assets returned; successor opened

Flexible Timeline Windows

Previous frameworks specified exact deadlines ("within 7 days"). The GSA Framework replaces these with target windows that dramatically improve survivability. "Within 7 days" becomes "Target window: 7-14 days." "Within 72 hours" becomes "Target window: 48-96 hours." "By Day 30" becomes "Target window: Days 25-35." Only the 60% enrichment freeze verification remains "within 72 hours" because it is the Micro-Pilot's central deliverable. All other timelines use flexible windows.

Joint Coordination Secretariat

The GSA Framework consolidates all governance functions into one Joint Coordination Secretariat (Geneva, with Muscat maritime desk) containing specialized subcells:

Table 6 Secretariat Subcell Structure

Subcell	Function
Political Coordination Cell	Senior-level bilateral coordination, dispute resolution, high-level messaging

Maritime Operations Cell	Hormuz transit management, naval deconfliction, hotline operations
Nuclear Verification Cell	IAEA coordination, enrichment monitoring, facility inspection logistics
Financial Operations Cell	Escrow management, asset transfer verification, SWIFT coordination, GSA fund administration
Communications Cell	Media coordination, public messaging, leak management, crisis communications, Nomenclature Registry maintenance
Crisis Response Cell	24/7 incident monitoring, attribution assessment, spoiler detection, rapid response

Rotating Facilitation: The Secretariat operates under rotating facilitation cycles. The facilitating state rotates quarterly among Oman, Switzerland, and Qatar. The rotating facilitator has convening authority, agenda-setting rights, and procedural mediation powers, but no substantive voting power.

Dual-Site Architecture with 4-Hour Failover

The Secretariat operates from two sites: Primary Site in Geneva (Political Coordination, Financial Operations, Crisis Response, Communications Cells) and Backup Site in Muscat (Maritime Operations Cell, all hotline operations, regional liaison functions). If the Geneva site becomes inoperable, all functions fail over to Muscat within 4 hours. Both sites maintain 24/7 staffing with minimum 2 duty officers at all times. During crisis periods, staffing scales to minimum 6 officers per site.

Section III: Maritime Architecture

3.1 Persian Gulf Maritime Security Contribution (PG-MSC)

The PG-MSC is simultaneously the US freedom-of-navigation achievement and Iran's permanent governance seat replacing decades of US unilateralism. Both statements are factually correct.

Table 7 PG-MSC Council Composition

Member	Status	Role
Islamic Republic of Iran	Permanent voting member	Senior seat; territorial sovereignty; Chair in alternating years
United States	Permanent voting member	Permanent seat; maritime security provider; Co-chair alternating
GCC Rotating Chair	Permanent voting member	Rotates among Oman, Qatar, UAE; primary tie-breaking authority
European Union	Observer	Chairs Environmental and Safety Subcommittee
People's Republic of China	Observer	Largest Gulf-oil importer; technical observer
UN Appointee	Neutral chair	Tie-breaking on procedural matters only

Tie-Breaking Override

If the GCC representative abstains on an enforcement vote, tie-breaking defers to joint consensus of the EU and PRC observers. Their shared commercial interest in open shipping lanes provides an automatic override that bypasses regional political gridlock. To address scenarios where EU and PRC commercial interests diverge:

Article IHTA-5: Multi-Tier Tie-Breaking Architecture

Tier 1 (Primary): GCC rotating chair casts deciding vote. The GCC representative is required to vote on all substantive matters and may abstain only by providing written justification to the Secretariat. Unjustified abstention triggers Tier 2.

Tier 2 (Secondary): If the GCC abstains with justification, or if the GCC seat is vacant, tie-breaking defers to consensus of the EU and PRC observers. Both must concur for the override to take effect. If either objects, proceed to Tier 3.

Tier 3 (Tertiary): If EU-PRC consensus cannot be achieved, the Secretariat's neutral UN-appointed chair casts a binding tie-breaking vote. This vote is based solely on the principle of maintaining Hormuz transit continuity and maritime safety, not on geopolitical alignment. The UN Appointee is required to publish a written rationale within 48 hours.

Tier 4 (Emergency): If Tier 3 produces a deadlock (e.g., UN Appointee recusal or vacancy), the Automated Default Distribution activates: toll revenues distribute per baseline percentages (40% Iranian Civilian Reconstruction, 35% Maritime Safety, 25% Operations) regardless of political gridlock. The neutral Secretariat executes within 7 days. Political deadlock cannot freeze baseline distributions.

Weighted Commercial Interest Calculation: For disputes involving shipping lane allocation or transit priority, Tier 3 tie-breaking incorporates a transparent commercial interest formula: each observer state's annual tonnage through Hormuz (per Lloyd's List data) is divided by total observer-state tonnage, producing a commercial weight. The UN Appointee's tie-breaker must acknowledge these weights in the written rationale but is not bound by them.

Automated Toll Disbursal Default

If the PG-MSC Council fails to pass an annual budget due to US-Iran deadlock, toll revenues automatically distribute per baseline percentages: 40% Iranian Civilian Reconstruction, 35% Maritime Safety, 25% Operations. The neutral Secretariat executes within 7 days. Political deadlock cannot freeze baseline distributions.

PG-MSC Tolling Structure

Table 8 PG-MSC Transit Tolling Schedule

Tier	Vessel Category	Rate
Tier 1	Humanitarian (medicine, food, medical equipment)	Zero (24h fast-track)

Tier 2	Standard commercial	$0.15/ton
Tier 3	Energy/premium (oil, LNG, chemicals)	$0.25/ton or $35K flat VLCC
Member States	PG-MSC Council member vessels	Exempt

Annual revenue: approximately $500M. Allocation: 40% Iranian Civilian Reconstruction Fund; 35% International Maritime Safety Fund; 25% PG-MSC Operations.

3.2 Established Operational Nomenclature

Section B.3: Established Operational Nomenclature

Article B.3-1: Recognition of US Operational Designations

The United States may designate the operational transit corridor under nomenclature established through executive order, official communications, and public statements issued prior to framework signature. Such designations, including but not limited to historical, commemorative, or institutional nomenclature applied to the waterway or designated operational sectors, are recognized as the US operational designation for purposes of domestic US communications, policy statements, and maritime authority coordination.

Article B.3-2: Equivalent Autonomous Authority for All Signatories

All signatory states retain equivalent autonomous authority to designate the same waterway or sectors according to their own domestic nomenclature preferences, including but not limited to historical or sovereignty-based designations. The Islamic Republic of Iran may designate the waterway according to its own domestic nomenclature preferences, including but not limited to references reflecting Persian Gulf historical designation, Iranian territorial sovereignty, or other domestically selected nomenclature. Such designations are recognized as the Iranian operational designation for purposes of domestic Iranian communications, policy statements, and maritime authority coordination.

Article B.3-3: Neutral Nomenclature Registry

The Joint Coordination Secretariat maintains a neutral Nomenclature Registry documenting each party's official designations. This Registry is administrative and descriptive only. It does not confer, diminish, or alter any sovereign rights, territorial claims, or legal status under international law. The Registry is published quarterly and available to all signatory states upon request.

Article B.3-4: Preserved International Designations

All binding legal instruments filed with UNCLOS, IMO, and IAEA retain the standardized international designation "Strait of Hormuz" for enforceability, clarity, and consistency with established international maritime law. The Nomenclature Registry does not supersede, replace, or modify any international legal instrument or the standardized designations used therein. No party shall invoke the Nomenclature Registry or any domestic operational designation as basis for territorial claims or legal rights beyond those established in this framework and existing international law.

Article B.3-5: Nomenclature Registry Dispute Resolution Protocol

(a) Registry Interpretation Immunity: No party may treat the Nomenclature Registry or any entry therein as conferring diplomatic, legal, or political advantage over any other party. The Registry carries zero interpretive weight in any international legal proceeding, treaty negotiation, or diplomatic exchange outside this framework. All domestic political actors are bound by this interpretive limitation as a condition of framework participation.

(b) Dispute Resolution Pathway: If any signatory state alleges that another party's Registry entry or public statement about the Registry contradicts the "administrative and descriptive only" doctrine, the complaining party may file a Registry Interpretation Complaint with the Joint Coordination Secretariat within 14 days. The Secretariat's neutral chair (the UN Appointee) conducts an administrative review within 7 days, issuing a binding determination of whether the challenged statement or entry exceeds the Registry's descriptive scope. This determination is final and not subject to appeal.

(c) Rhetorical Ownership Prohibition: No party may publicly claim that its domestic operational designation has been "accepted," "endorsed," "approved," or "legitimized" by any other party or by the framework itself. Permitted language: "documented in the Nomenclature Registry pursuant to Article B.3." Prohibited language: any claim implying that Registry inclusion confers international legal status, historical validity, or third-party obligation. Violations constitute narrative violations under Section X and trigger CIS procedural penalties (+0.5).

(d) Domestic Political Actor Accountability: Each signatory state bears responsibility for ensuring that its domestic political actors — including elected officials, state media, and affiliated entities — comply with Registry interpretive limitations. A pattern of three or more Registry-related narrative violations within 90 days triggers a mandatory diplomatic consultation and may result in temporary suspension of a party's Registry update rights for 60 days.

Rationale for the Nomenclature Architecture

The Established Operational Nomenclature provision addresses the current diplomatic reality that the United States, through executive communications and public statements between March and April 2026, has advanced operational designations for the transit corridor that reflect institutional nomenclature. This provision creates a framework mechanism that acknowledges these existing US designations as domestic operational nomenclature without requiring any signatory state to adopt, endorse, or recognize such designations in its own domestic communications.

Simultaneously, the provision guarantees Iran equivalent autonomous authority to maintain and advance its own domestic nomenclature preferences, including sovereignty-based and historically grounded designations. The neutral Nomenclature Registry maintained by the Joint Coordination Secretariat ensures transparency without imposition: each party's designations are documented, but neither party's designations are binding on the other.

The preservation of "Strait of Hormuz" as the standardized international designation for all UNCLOS, IMO, and IAEA filings ensures that the nomenclature provision has no impact on binding international legal instruments, maritime navigation rights, or territorial sovereignty disputes. The Registry is purely administrative and descriptive.

3.3 Synchronized Dual-Blockade Lift

Day 7, 0000 GMT: Both blockades lift simultaneously within a 60-second window. Confirmed by Omani naval observers, Lloyd's List AIS tracking, and PG-MSC observation vessels.

Table 9 Synchronized Lift Verification Telemetry

Time	Iranian Action	US Action	Neutral Verification
T-60 min	IRGC Commander transmits stand-by to Maritime Operations Cell	5th Fleet Commander transmits stand-by to Maritime Operations Cell	Omani facilitating state logs both signals
T-15 min	IRGC craft withdraw to 5nm; AIS broadcast	US Navy withdraws to 5nm; AIS broadcast	Lloyd's List confirms
T=0	Hormuz opening declaration	Blockade lift declaration	SIMULTANEOUS within 60s
T+15 min	First vessel commences transit	Notice to Mariners issued	Lloyd's List, AIS confirm

Emergency Maritime Safety Carve-Out

Vessels experiencing verified mechanical distress, severe weather, medical emergencies, or environmental containment failure are exempt from the weekly transit quota. Such vessels may seek safe harbor under PG-MSC monitoring without triggering a blockade violation. Emergency status is verified by the Maritime Operations Cell within 2 hours. Applies symmetrically to all flagged vessels.

3.4 Maritime Safety and Revenue Architecture

The GSA Framework establishes the Persian Gulf Maritime Security Contribution as a permanent funding mechanism for regional maritime safety infrastructure. The GSA is funded through PG-MSC toll revenues, voluntary contributions from signatory states, and a 0.05% levy on energy transit values. The GSA fund is administered by the Financial Operations Cell of the Joint Coordination Secretariat, with quarterly transparency reporting.

Table 10 GSA Fund Allocation

Category	Allocation	Administrator
Iranian Civilian Reconstruction	40%	PG-MSC with Iranian programmatic control
International Maritime Safety	35%	International Maritime Safety Fund
PG-MSC Operations	25%	Joint Coordination Secretariat

Section IV: Nuclear Stabilization Architecture

4.1 The 60 Percent Freeze and IAEA Custody

> **Article NS-1: Immediate Enrichment Freeze**
>
> Iran shall freeze all uranium enrichment at or above 60% at Natanz and Fordow facilities beginning Day 1 of the Micro-Pilot. The freeze is verified immediately via Online Enrichment Monitors (OLEM) and real-time camera feeds. Physical on-site IAEA inspector verification follows within 7 days. The 72-hour clock starts on OLEM confirmation, not physical arrival.

Stockpile Transfer to IAEA Custody

Iran transfers its entire stockpile of uranium enriched to 60% or above to IAEA custody in Oman by Day 1 of Stage 1. Transfer is verified by mass spectrometry, continuous CCTV monitoring, and satellite surveillance. The stockpile remains under IAEA dual-lock custody until downblending or conversion to civilian fuel plates is completed according to the selected disposition pathway.

4.2 Enrichment Moratorium Architecture

Table 11 15-Year Renewable Moratorium Structure

Phase	Duration	Enrichment Standard	Advancement Condition
Moratorium	Years 1-15 (minimum; extendable)	Zero enrichment above 3.67%; all higher-enrichment centrifuges under IAEA seal	Clean IAEA certification at 15-year review
Civilian Transition	Years 16-18	3.67% enrichment at Natanz only	Fuel supply guarantee in escrow
Steady-State Civilian	Year 19 onwards	3.67% under full IAEA safeguards	Successor framework confirmed

Material breach triggers automatic 2-year extension per breach. Determined by JIG majority on IAEA technical reporting, not unilateral US certification.

Mothball Protocol

All centrifuge rotors and bellows producing enrichment above 3.67% are removed, sealed in IAEA-tamper-evident containers, and stored in a UN-monitored facility within Iran. Centrifuge casings and infrastructure remain in place. The storage facility uses a two-stage digital and physical locking system: IAEA holds digital encryption keys; Iran holds physical keys and armed outer-perimeter security. Neither party can access containers without the other's physical presence.

4.3 Fordow Conversion and Medical Isotope Partnership

The Fordow facility is converted to an International Medical Isotope Research Centre (IMIRC) under IAEA oversight. Iran hosts the inaugural International Medical Isotope Summit by Day 60. The IMIRC operates under an International Scientific Advisory Board with Iranian co-chair authority. This conversion is framed as a scientific achievement for Iran, not a military concession: Iranian scientists lead global health innovation from a facility that was formerly a military target.

Neutral-Custody Blending

The 400kg HEU stockpile is transferred to a neutral third-party nation (Oman or Kazakhstan) under strict IAEA dual-lock custody. Down-blending to LEU or conversion to civilian fuel plates proceeds on a fixed timeline, pegged to phased oil export sanctions relief. Neither Iran nor the US holds unilateral access. Iran selects the pathway from six approved options. IAEA verifies the chain of custody.

Table 12 Six Pathways for HEU Disposition (Iran Selects)

Path	Description	Destination	Timeline
A	In-place downblending to medical-grade LEU at Esfahan	Medical isotope production in Iran	142 days
B	HEU export to IAEA custody in Oman	IAEA facility, Oman (NOT US)	14 days
C	Downblended in Iran, transferred to IAEA LEU Bank	Oskemen, Kazakhstan	75 days
D	Transfer to Rosatom under IAEA safeguards	Russian Federation	60-90 days
E	Conversion to reactor-grade LEU fuel assemblies	Bushehr reactor supply	180 days
F	Hybrid: stockpile divided into batches through different pathways	Multiple destinations	Concurrent

Article NS-2: Third-Party Destination Guarantee

Under no circumstances may Iran's enriched uranium be transferred to US territory, custody, or control. All six pathways specify third-party destinations. This is binding and non-negotiable.

Section V: The Thirty Symmetrical Economic Incentives

The GSA Framework introduces thirty paired economic incentives: fifteen designed to deliver immediate, visible benefits to the Islamic Republic of Iran, and fifteen designed to deliver immediate, visible benefits to the United States. Each incentive is symmetrical: for every Iranian economic gain, there is a corresponding US economic gain of equivalent strategic value. Neither side subsidizes the other. Both sides profit from de-escalation. This section transforms the framework from a political accommodation into a commercial proposition.

5.1 Incentives 1-10: Immediate De-escalation Dividends (Days 1-30)

The first ten incentive pairs activate immediately upon Micro-Pilot certification and deliver visible economic benefits within 30 days. These are the "trust dividends" that make the framework commercially viable from its first hour.

Incentive Pair 1: Humanitarian Corridor and Agricultural Export License

Incentive 1A: Iran -- $250M Humanitarian Tranche

Immediate release of $250 million in frozen Iranian assets via Swiss escrow for humanitarian goods (medicine, food, agricultural inputs). Unconditional, non-reversible, activated on Day 1 of the Micro-Pilot. Iranian Central Bank confirms receipt within 48 hours. This tranche is protected by the Humanitarian Firewall: it cannot be frozen, clawed back, or subject to rollback under any breach scenario.

Incentive 1B: United States -- Agricultural Export License to Iran

OFAC general license authorizing US agricultural commodity exporters (wheat, corn, soy, rice) to sell to Iranian buyers at market rates, with transactions cleared through the Swiss escrow channel. Estimated value: $400M in Year 1. US farmers gain access to a market of 87 million consumers that has been closed since 2018. Congressional Farm Belt constituencies receive a direct, visible economic win.

Incentive Pair 2: Blockade Lift and LNG Transit Priority

Incentive 2A: Iran -- Commercial Port Access Restoration

Full lifting of the US naval blockade on Iranian commercial ports, allowing Iranian-flagged vessels to load and unload at Bandar Abbas, Bandar Imam Khomeini, and Chabahar without interference. Three pre-verified Iranian commercial vessels per week permitted to exit the Persian Gulf. Enables resumption of petrochemical and non-oil exports worth an estimated $2B annually.

Incentive 2B: United States -- LNG Transit Priority Corridor Rights

Guaranteed priority berthing and transit scheduling for US-flagged LNG carriers through the PG-MSC system, with dedicated transit windows reserved for US Gulf-to-Asia LNG shipments. US LNG exporters gain predictable, priority access to the world's most important energy transit corridor, securing an estimated $1.2B in additional annual export revenue.

Incentive Pair 3: IAEA Custody and Medical Isotope Purchase Agreement

Incentive 3A: Iran -- IAEA Custody Transfer Confirmation

Upon verified transfer of the 60% enriched uranium stockpile to IAEA custody in Oman, Iran receives immediate confirmation of stockpile security, triggering the release of Tranche 1 (25% of remaining frozen assets, minus the $250M pilot). This non-reversible transfer provides Iran with approximately $22-25 billion in liquid assets.

Incentive 3B: United States -- Exclusive Medical Isotope Purchase Agreement

The US Department of Energy and National Institutes of Health enter into exclusive purchase agreements for medical isotopes produced at the converted Fordow IMIRC facility. The US gains a reliable, non-Russian source of Molybdenum-99 and other critical medical isotopes, worth an estimated $180M annually, while supporting the conversion of a former military facility to civilian medical use.

Incentive Pair 4: SWIFT Phase 1 and Boeing Aviation Parts License

Incentive 4A: Iran -- SWIFT Phase 1 (Restricted Reconnection)

Reconnection of 5 Iranian banks (Bank Melli, Bank Sepah, Pasargad Bank, Mellat Bank, and Tejarat Bank) to SWIFT for MT 103/202 messages only. Enables basic correspondent banking for humanitarian and approved commercial transactions. Iranian banking access begins normalization after 8 years of exclusion.

Incentive 4B: United States -- Boeing and GE Aviation Parts Export License

Exclusive OFAC license authorizing Boeing and GE Aviation to supply replacement parts, maintenance kits, and technical documentation for Iranian civilian aircraft (Boeing 747, 727, and Airbus fleets). Estimated value: $320M in Year 1. Boeing and GE gain access to a captive fleet maintenance market, with Iranian carriers required to purchase through authorized US suppliers.

Incentive Pair 5: Petrochemical Export Authorization and US Oil Services Access

Incentive 5A: Iran -- Petrochemical Export License

General license authorizing export of Iranian petrochemical products (methanol, urea, polyethylene, sulfur) to global markets without secondary sanctions risk. Petrochemical exports currently generate approximately $12B annually for Iran; this license removes the primary barrier to full market access.

Incentive 5B: United States -- US Oil Services Company Access to Iranian Field Rehabilitation

Authorization for Halliburton, Schlumberger, and Baker Hughes to provide technical services, equipment, and engineering consulting for rehabilitation of Iranian oil and gas fields damaged during Operation Epic Fury. Joint ventures structured through the Reconstruction Escrow, with US companies holding 49% equity stakes. Estimated contract value: $2.5B over 3 years.

Incentive Pair 6: Pharmaceutical Supply Chain and US Pharma Market Access

Incentive 6A: Iran -- Pharmaceutical Supply Chain Normalization

Full normalization of the pharmaceutical supply chain: elimination of banking restrictions on medicine imports, authorization for Iranian pharmaceutical companies to purchase active pharmaceutical ingredients (APIs) from EU and Indian suppliers, and restoration of cold-chain logistics for vaccine and biologic imports. Addresses critical shortages affecting 15 million Iranians with chronic conditions.

Incentive 6B: United States -- US Pharmaceutical Company Iran Market Access

OFAC licenses authorizing Pfizer, Johnson & Johnson, Merck, and Gilead to register and market patented pharmaceuticals in Iran, with pricing at regional market rates (not discounted humanitarian rates). Iran represents an $8B annual pharmaceutical market that has been inaccessible to US companies since 2018. Estimated Year 1 revenue: $450M.

Incentive Pair 7: Aviation Safety Parts and Priority Technology Licensing

Incentive 7A: Iran -- Aviation Safety Parts License

General license for aviation safety parts (engines, landing gear, avionics, navigation systems) for Iranian civilian aircraft. Safety-of-flight items are fast-tracked with 48-hour auto-approval. Restores airworthiness to Iran's civilian fleet, which has suffered 18 fatal accidents since 2018 due to maintenance restrictions.

Incentive 7B: United States -- Priority Technology Licensing for Agricultural and Medical Sectors

Priority licensing for US agricultural technology companies (precision agriculture, irrigation systems, drought-resistant seeds) and medical device manufacturers (MRI, CT scanners, dialysis equipment) to enter the Iranian market through joint ventures. Licensing fees flow to the US Treasury's Office of Foreign Assets Control as offset revenue. Estimated value: $600M over 2 years.

Incentive Pair 8: Mine-Clearing Operations and Defense Contractor Participation

Incentive 8A: Iran -- Mine-Clearing Technical Assistance

UN-supervised mine-clearing mission in Hormuz waters, with technical support from UK NATO mine countermeasures teams, Omani naval engineers, and PG-MSC Maritime Safety Working Group. Removes navigational hazards that threaten all commercial shipping, reducing insurance costs for Iranian-flagged vessels by an estimated 35%.

Incentive 8B: United States -- US Defense Contractor Participation in Gulf Reconstruction

Preference for US defense and security contractors (Lockheed Martin, Raytheon, Northrop Grumman) in bids for PG-MSC maritime security infrastructure (radar systems, coastal surveillance, C4ISR integration). Contracts funded through the International Maritime Safety Fund (35% of PG-MSC toll revenue). Estimated value: $1.8B over 5 years.

Incentive Pair 9: Regional Development Fund Access and Digital Infrastructure Contracts

Incentive 9A: Iran -- Regional Development Fund Project Financing

Iranian infrastructure projects (rail, port modernization, renewable energy, water desalination) are eligible for preferential financing through the Regional Development Fund, with 15% of fund capitalization reserved for Iranian-accessible projects. Loans at 3.5% interest, 20-year terms. Estimated accessible capital: $3.5B.

Incentive 9B: United States -- Digital Infrastructure Development Contracts

Authorization for US technology companies (Cisco, Microsoft Azure, Amazon Web Services) to bid on digital infrastructure projects funded through the Regional Development Fund: customs modernization, port digitization, maritime traffic management systems. Estimated contract value: $900M over 3 years.

Incentive Pair 10: Insurance Rate Normalization and Reinsurance Premium Revenue

> **Incentive 10A: Iran -- Maritime Insurance Rate Normalization**
>
> Joint PG-MSC-US Treasury certification that Hormuz transit is "commercially insurable at standard rates," triggering normalization of Lloyd's Joint War Committee ratings from current "War Risk" to "Standard Commercial." Reduces insurance costs for Iranian-flagged vessels from current 1.5% of hull value to 0.15%. Annual savings: approximately $180M.

> **Incentive 10B: United States -- US Reinsurance Premium Revenue**
>
> Normalization of Hormuz insurance opens the market to US reinsurance providers (Berkshire Hathaway Re, AIG, Chubb) who have been excluded from Gulf maritime reinsurance since 2020. US reinsurance carriers gain access to an estimated $2.1B annual premium pool, with US companies capturing an estimated 35% market share ($735M annually).

5.2 Incentives 11-20: Stabilization Recovery Credits (Days 31-90)

The second ten incentive pairs activate upon Stage 1 closing certification and deliver benefits during the stabilization period. These are the "reconstruction credits" that make continued compliance economically rational.

Incentive Pair 11: Full SWIFT Reconnection and Higher Education Exchange Revenue

> **Incentive 11A: Iran -- SWIFT Phase 2 (Expanded Reconnection)**
>
> All Iranian banks with clean compliance records reconnected to SWIFT for full messaging suite (MT 103, 202, 700, 760). Enables trade finance, documentary credits, and correspondent banking relationships. Iranian banks can process international transactions without intermediary third-country banks. Estimated transaction cost savings: $1.2B annually.

> **Incentive 11B: United States -- Higher Education Exchange Program Revenue**
>
> Iranian students eligible for US university enrollment (graduate-level STEM, medicine, business) with student visa processing through a dedicated PG-MSC-facilitated channel. Iranian students pay full international tuition rates. Estimated 5,000 Iranian students in Year 1 at average $45,000 tuition: $225M in direct university revenue, plus associated housing, services, and ancillary spending of $150M.

Incentive Pair 12: Oil Export Authorization to China/India and Energy Equipment Export

Incentive 12A: Iran -- Oil Export Authorization to Major Asian Markets

General license authorizing Iranian crude oil exports to China, India, Japan, and South Korea at market rates, with payment processing through the Qatari riyal bridge and SWIFT Phase 2. Iran can restore oil exports from current estimated 400,000 bpd to pre-sanctions levels of 2.5 million bpd. Additional annual revenue at $75/bbl: approximately $57B.

Incentive 12B: United States -- US Energy Equipment and Technology Export

Authorization for US energy equipment manufacturers (turbines, drilling equipment, pipeline technology, LNG liquefaction modules) to export to Iranian energy infrastructure projects. Equipment purchases funded through oil escrow accounts. US energy equipment exports: estimated $3.2B over 3 years.

Incentive Pair 13: IMF Article IV Consultation and Financial Services Access

Incentive 13A: Iran -- IMF Article IV Consultation Restoration

Restoration of Iran's right to regular IMF Article IV consultations, balance-of-payments support, and access to IMF technical assistance. IMF publishes annual economic assessment of Iran, unlocking access to $5B in standby credit arrangements. Signals international financial community confidence in Iranian economic stability.

Incentive 13B: United States -- US Financial Services Access to Iranian Market

Authorization for Citibank, JPMorgan Chase, and Goldman Sachs to establish representative offices in Tehran, providing investment banking, asset management, and advisory services to Iranian corporations and the National Development Fund. Captures advisory fees on an estimated $15B in capital raising and M&A activity over 3 years.

Incentive Pair 14: World Bank Project Financing and Construction Contracting

Incentive 14A: Iran -- World Bank Project Financing Access

Restoration of Iran's eligibility for World Bank project financing, IBRD loans, and IDA concessional financing. Priority projects: water desalination, renewable energy (solar, wind), earthquake-resistant housing, and rural broadband. Estimated accessible financing: $4.5B over 5 years.

Incentive 14B: United States -- US Construction and Engineering Contracting

Preference for US engineering and construction firms (Bechtel, Fluor, AECOM) in World Bank-financed projects in Iran. Joint ventures with Iranian construction companies required (minimum 30% local content). US firms capture an estimated 40% of contract value on $4.5B in projects: $1.8B over 5 years.

Incentive Pair 15: Renewable Energy Technology Transfer and Climate Technology Licensing

Incentive 15A: Iran -- Renewable Energy Technology Transfer License

License for transfer of solar panel manufacturing technology, wind turbine assembly, and battery storage systems from EU, Chinese, and US suppliers to Iranian manufacturing facilities. Enables Iran to build 5GW of renewable capacity over 5 years, reducing domestic electricity shortages. Estimated value: $2.8B in technology transfer.

Incentive 15B: United States -- Climate Technology Licensing Revenue

US clean energy technology companies (Tesla Energy, First Solar, NextEra) licensed to supply proprietary technology and engineering services for Iranian renewable energy projects. Licensing fees and engineering services: estimated $650M over 5 years. Contributes to US clean energy export targets.

Incentive Pair 16: Correspondent Banking Restoration and Cross-Border Payment Processing

Incentive 16A: Iran -- Full Correspondent Banking Restoration

Restoration of correspondent banking relationships between Iranian banks and major international banks (Standard Chartered, HSBC, Deutsche Bank, BNP Paribas). Eliminates the current "channel banking" workaround that adds 8-12% to transaction costs. Iranian importers and exporters can conduct business at standard international banking rates.

Incentive 16B: United States -- Cross-Border Payment Processing Revenue

Visa, Mastercard, and American Express authorized to process transactions for Iranian commercial activity conducted through the PG-MSC and Reconstruction Escrow channels. Payment processing fees (1.5-2.5% per transaction) on an estimated $8B in annual trade volume: $120-200M annually in US payment network revenue.

Incentive Pair 17: Auto Parts and Manufacturing License and Automotive Export

Incentive 17A: Iran -- Auto Parts and Manufacturing License

General license authorizing import of automotive parts, assembly line equipment, and quality control technology for Iran's domestic auto industry (Iran Khodro, SAIPA). License covers EU, Chinese, Korean, and US-origin parts. Iran produces 1.2 million vehicles annually; restoration of supply chains prevents further production halts. Estimated value: $800M annually.

Incentive 17B: United States -- US Automotive Technology Export

Authorization for Ford, General Motors, and Tesla to export electric vehicle technology, battery systems, and autonomous driving components to Iranian auto manufacturers for domestic EV production. Licensing and component export: estimated $400M over 3 years. Positions US companies for long-term market presence.

Incentive Pair 18: Telecommunications Infrastructure and 5G Technology Licensing

Incentive 18A: Iran -- Telecommunications Infrastructure Modernization

License for purchase and installation of 5G telecommunications equipment, fiber optic cable, and satellite ground stations from EU, Chinese, Korean, and US suppliers. Modernizes Iran's telecommunications backbone, which has suffered from 8 years of technology embargo. Estimated value: $1.5B in equipment procurement.

Incentive 18B: United States -- 5G Technology and Satellite Services Licensing

Qualcomm, Intel, and Iridium Communications authorized to license 5G chipsets, satellite communication systems, and ground station technology for Iranian telecom modernization. US companies gain foothold in a market that will purchase an estimated $6B in telecom equipment over 5 years. Licensing revenue: $200M over 3 years.

Incentive Pair 19: Tourism and Cultural Exchange Authorization and Hospitality Service Revenue

Incentive 19A: Iran -- Tourism and Cultural Exchange Authorization

Tourist visa processing restored for citizens of 28 countries through PG-MSC-facilitated channels. Visa-on-arrival available at Imam Khomeini International Airport for holders of PG-MSC transit permits. Iran's tourism sector, which hosted 8 million visitors in 2018, can rebuild toward pre-sanctions levels. Estimated Year 1 revenue: $1.2B.

Incentive 19B: United States -- US Hospitality and Tourism Service Revenue

Marriott, Hilton, and Hyatt authorized to establish management contracts for Iranian hotel properties (Tehran, Isfahan, Shiraz). US hospitality companies earn management fees (3-5% of gross revenue) on an estimated $800M in Iranian hotel revenue over 3 years: $24-40M annually. Cultural exchange programs generate additional service revenue.

Incentive Pair 20: Port Modernization and Port Management Contracting

Incentive 20A: Iran -- Port Modernization Financing

Regional Development Fund financing for modernization of Chabahar Port (strategic Indian Ocean access), Bandar Abbas container terminals, and Bandar Imam Khomeini petrochemical loading facilities. Total financing package: $1.8B at 3.5% interest over 20 years. Transforms Iran's port capacity from 4 million TEU to 12 million TEU annually.

Incentive 20B: United States -- US Port Management and Logistics Contracting

Authorization for US port management companies (APM Terminals, SSA Marine) and logistics providers (FedEx, UPS) to bid on Chabahar and Bandar Abbas modernization contracts. Joint ventures with Iranian port authorities required. US companies capture estimated 30% of $1.8B project value: $540M over 4 years.

5.3 Incentives 21-30: Long-Term Prosperity Partnership (Days 91-180)

The final ten incentive pairs activate upon Stage 2 closing certification and deliver transformational economic benefits during the permanent architecture phase. These are the "prosperity partnerships" that make the framework self-sustaining beyond its initial term.

Incentive Pair 21: Full SWIFT Membership and Investment Banking Revenue

Incentive 21A: Iran -- Full SWIFT Membership

Full restoration of Iranian banks to SWIFT membership with complete messaging access, including MT 500 (securities), MT 700 (documentary credits), and MT 900 (cash management). Iranian banks regain full correspondent relationships and can issue letters of credit, process trade finance, and conduct cross-border investment transactions without intermediary banks.

Incentive 21B: United States -- Investment Banking and Capital Markets Revenue

Goldman Sachs, Morgan Stanley, and JPMorgan authorized to underwrite Iranian sovereign bonds, corporate debt, and equity IPOs on international markets. Iranian government and corporations estimated to raise $15-20B in international capital over 3 years. US investment banks earn estimated $400-600M in underwriting fees.

Incentive Pair 22: Sovereign Asset Return and Legal Services Revenue

Incentive 22A: Iran -- 85% Sovereign Asset Return

By Day 180, 85% of frozen Iranian sovereign assets (estimated $85-100B of approximately $120B total) returned through the Swiss escrow channel in non-reversible tranches. Remaining 15% held in reserve escrow, released upon full successor framework compliance. Iran regains full sovereign control over its financial resources.

Incentive 22B: United States -- Legal and Advisory Services Revenue

US law firms (Sullivan & Cromwell, Cleary Gottlieb, Baker McKenzie) authorized to provide legal advisory services for Iranian asset unfreezing, contract negotiation, and international arbitration. Legal fees on asset return, contract structuring, and M&A activity: estimated $150-250M over 2 years.

Incentive Pair 23: PG-MSC Revenue Sharing and Maritime Security Contracting

Incentive 23A: Iran -- PG-MSC Revenue Share (40%)

Permanent entitlement to 40% of PG-MSC toll revenues (estimated $200M annually) directed to the Iranian Civilian Reconstruction Fund. Funds administered by Iran with PG-MSC oversight for infrastructure, healthcare, education, and environmental remediation projects. Provides Iran with a permanent, predictable revenue stream from Hormuz transit.

Incentive 23B: United States -- PG-MSC Maritime Security Infrastructure Contracts

US defense and maritime security contractors (Lockheed Martin, General Dynamics, Huntington Ingalls) awarded priority bidding status for PG-MSC maritime security infrastructure: coastal radar networks, VTS (Vessel Traffic Service) systems, and maritime patrol aircraft basing. Funded through 35% Maritime Safety allocation. Estimated: $1.2B over 5 years.

Incentive Pair 24: Caspian Sea Trade Corridor and Rail Technology Export

Incentive 24A: Iran -- Caspian Sea Trade Corridor Access

Framework guarantees for Iran's North-South Transport Corridor (INSTC) connecting India-Russia-Europe through Iranian territory. Reduces transit time from 40 days to 20 days. Caspian Sea ferry services, rail connections, and customs facilitation generate estimated $3B annually in transit revenue for Iran.

Incentive 24B: United States -- US Rail and Logistics Technology Export

Wabtec, Greenbrier, and CSX Corporation authorized to supply locomotive technology, freight car manufacturing, and logistics management systems for the INSTC rail modernization. Joint ventures with Iranian rail authorities. Estimated contract value: $450M over 4 years.

Incentive Pair 25: Scientific Cooperation and Research Partnership Revenue

Incentive 25A: Iran -- Scientific Cooperation Framework

Iranian scientists eligible for joint research programs, conference participation, and publication collaboration with US, EU, and Asian research institutions. The Fordow IMIRC operates as a global hub for nuclear medicine research. Iranian researchers lead major programs in cancer treatment, agricultural science, and water technology.

Incentive 25B: United States -- Research Partnership and Grant Revenue

US universities and research institutions (MIT, Johns Hopkins, Caltech) eligible for NIH, NSF, and DOE grants supporting joint research with Iranian counterparts at the Fordow IMIRC and other facilities. US institutions receive overhead and administrative fees on joint research grants: estimated $80M over 3 years.

Incentive Pair 26: Water Technology Partnership and Environmental Services Export

Incentive 26A: Iran -- Water Technology and Desalination Partnership

Joint venture framework for construction of desalination plants, water recycling facilities, and irrigation modernization across Iran's arid regions. Addresses critical water scarcity affecting 30 million Iranians. Regional Development Fund provides $2B in concessional financing.

Incentive 26B: United States -- Environmental and Water Technology Export

Xylem, Danaher, and Ecolab authorized to supply water treatment technology, desalination membranes, and environmental monitoring systems for Iranian water projects. Joint ventures with Iranian engineering firms required. Estimated export value: $380M over 3 years.

Incentive Pair 27: Mining and Mineral Development and Mining Equipment Export

Incentive 27A: Iran -- Mining and Mineral Development License

License for international mining companies to develop Iran's copper, iron ore, rare earth, and zinc deposits in partnership with the Iranian Ministry of Industry, Mine and Trade. Iran holds 7% of global mineral reserves but produces at 30% of capacity due to technology and capital constraints. Estimated FDI: $5B over 5 years.

Incentive 27B: United States -- Mining Equipment and Services Export

Caterpillar, Komatsu, and Freeport-McMoRan authorized to supply mining equipment, extraction technology, and engineering services for Iranian mineral development projects. Equipment and services: estimated $1.1B over 5 years. Positions US mining services for long-term Iranian market presence.

Incentive Pair 28: Petrochemical Downstream Expansion and Chemical Technology Licensing

Incentive 28A: Iran -- Petrochemical Downstream Expansion

Joint venture framework for construction of downstream petrochemical facilities (polymer production, fertilizer plants, specialty chemicals) at Assaluyeh and Mahshahr. Transforms Iran from raw material exporter to high-value chemical producer. Estimated investment: $8B over 5 years, generating $15B annually in export revenue.

Incentive 28B: United States -- Chemical Technology and Process Licensing

Dow Chemical, DuPont, and Honeywell UOP authorized to license proprietary chemical process technology, catalysts, and engineering design for Iranian petrochemical expansion. Licensing fees and engineering services: estimated $600M over 5 years.

Incentive Pair 29: Sovereign Wealth Fund Normalization and Asset Management Revenue

Incentive 29A: Iran -- National Development Fund Normalization

Iran's National Development Fund (sovereign wealth fund) restored to full international operational status. Fund can invest in international markets, hold foreign currency reserves, and serve as guarantor for Iranian sovereign borrowing. Restores Iran's capacity for counter-cyclical fiscal policy and long-term investment planning.

Incentive 29B: United States -- Asset Management and Advisory Revenue

BlackRock, Vanguard, and Fidelity authorized to manage portions of the National Development Fund's international portfolio and provide investment advisory services. Management fees on an estimated $10B in internationally invested assets (0.5-1.0%): $50-100M annually.

Incentive Pair 30: Full Trade Normalization and Bilateral Trade Revenue

Incentive 30A: Iran -- Full Trade Normalization

Complete normalization of Iran's international trade relationships: all primary and secondary sanctions suspended (not waived), enabling Iran to trade with all countries without US sanctions risk. Iranian exports projected to reach $120B annually (from current $25B). GDP growth projected at 6-8% annually for 3 years.

Incentive 30B: United States -- Bilateral US-Iran Trade Revenue

Full restoration of bilateral US-Iran trade: US exports to Iran (agriculture, machinery, aircraft, pharmaceuticals) projected at $8-12B annually. US imports from Iran (petrochemicals, carpets, pistachios, caviar) at $3-5B annually. Net US trade surplus: $5-7B annually. Total US corporate revenue from Iranian market access: estimated $45-60B over 5 years across all sectors.

Summary: Total Economic Value

Table 13 Aggregate Economic Incentive Value (5-Year Horizon)

Category	Iranian Value (USD)	US Value (USD)
Immediate De-escalation (Incentives 1-10)	$30.2 billion	$7.3 billion
Stabilization Recovery (Incentives 11-20)	$72.1 billion	$5.7 billion
Long-Term Prosperity (Incentives 21-30)	$158.4 billion	$48.6 billion
Total 5-Year Value	**$260.7 billion**	**$61.6 billion**

Note: Iranian figures reflect restoration of pre-sanctions economic capacity plus new growth. US figures represent new market access and export revenue that did not exist under sanctions. Both figures are illustrative projections based on current market conditions and framework implementation.

Section VI: Financial Module and Asset Architecture

6.1 Reconstruction Escrow and Sovereign Immunity

> **Article FM-1: Swiss Escrow Architecture**
>
> The Swiss Federal Office for Customs and Border Security (FOCBS) administers the primary escrow for all frozen Iranian sovereign assets. The escrow operates under the terms of the "Beijing Memorandum" (May 10, 2026): assets remain under Swiss custody until released through framework-specified tranches. The Swiss escrow is protected by a formal Presidential Policy Directive prohibiting unilateral re-freezing, except in the event of a nuclear test or direct attack on US forces. Neither Congress nor any US agency can re-freeze assets without a joint US-Iran-Swiss determination of Tier 3 breach.

Escrow Mechanics

Table 14 Escrow Structure and Governance

Parameter	Specification
Administrator	Swiss Federal Office for Customs and Border Security (FOCBS)
Co-Trustee	Qatar Central Bank (emergency liquidity facility)
Asset Protection	Presidential Policy Directive prohibiting unilateral re-freezing
Legal Standard	Joint US-Iran-Swiss determination of Tier 3 breach required for re-freezing
Currency	Released in USD, EUR, and QAR tranches
Reporting	Quarterly public transparency reports

6.2 Asset Return Tranche Architecture

The GSA Framework specifies an eight-tranche asset return, each linked to verified milestones and triggering economic incentives on both sides:

Table 15 Eight-Tranche Asset Return Architecture

Tranche	Amount (est.)	Trigger	Iranian Economic Benefit	US Economic Benefit
Micro-Pilot	$250M	Framework signature	Humanitarian goods import	Agricultural export license
Tranche 1	$25B	60% freeze + IAEA custody	Liquidity restoration	Medical isotope purchase agreement
Tranche 2	$20B	Blockade lift + Hormuz reopening	Commercial port access	LNG transit priority
Tranche 3	$15B	Moratorium ratification	SWIFT Phase 1	Boeing/GE aviation parts license
Tranche 4	$15B	HEU export to third party	Petrochemical export	Oil services access
Tranche 5	$15B	Fordow Phase A complete	Pharma supply chain	US pharma market access
Tranche 6	$15B	IAEA clean certification	Full SWIFT	Investment banking access
Tranche 7	$15B	Successor framework ratified	85% total returned	Construction contracting
Reserve	$20B	Full compliance (Year 2)	Full sovereign control	Legal services revenue

Tranches 1-2 are non-reversible: once released, they cannot be clawed back. Tranches 3+ are reversible upon Tier 3 breach determination. This architecture gives Iran immediate, irreversible wins while protecting US interests through the staged structure.

6.3 SWIFT Reconnection Pathway

Table 16 Three-Phase SWIFT Restoration

Phase	Scope	Messaging Access	Trigger
Phase 1 (Restricted)	5 designated banks	MT 103, 202 only	Tranche 3 release
Phase 2 (Expanded)	15+ banks with clean records	MT 103, 202, 700, 760	Stage 2 closing
Phase 3 (Full Membership)	All compliant Iranian banks	Full messaging suite	IAEA clean certification

SWIFT reconnection proceeds through the Qatari riyal bridge: Iranian banks process transactions in QAR, which converts to USD/EUR at point of settlement. This protects against unilateral USD clearing disruption.

The Qatari riyal bridge is administered by the Qatar Central Bank with IAEA financial oversight.

Section VII: Security and Verification Architecture

7.1 Five-Channel Verification Convergence

The GSA Framework uses five independent verification channels. No single channel triggers snapback. Compliance requires convergence of at least three channels:

Table 17 Five-Channel Verification Matrix

Channel	Method	Administrator	Reporting Frequency
Channel 1: Technical	OLEM, satellite imagery, seismic monitoring	IAEA	Continuous real-time
Channel 2: Human	IAEA physical inspectors, neutral observers	IAEA + Oman	Daily during Micro-Pilot; weekly thereafter
Channel 3: Financial	Escrow transaction monitoring, banking surveillance	Switzerland + Qatar	Real-time transaction monitoring
Channel 4: Maritime	AIS tracking, Lloyd's List, PG-MSC observation vessels	Oman + PG-MSC Secretariat	Continuous AIS; daily Lloyd's reports
Channel 5: Open Source	Commercial satellite, social media, trade data	Independent analysts	Weekly compilation

Convergence Protocol

Two-channel compliance requires neutral (Omani) review. Three-channel compliance triggers automatic tranche release. Four-channel compliance triggers bonus incentive activation. Five-channel compliance triggers accelerated Stage advancement. Breach requires two or more channels confirming non-compliance after a 72-hour clarification window.

7.2 Three-Tier Breach System

Only deliberate hostile violations trigger suspension. Accidents, technical glitches, force majeure, and miscommunication do not constitute breach:

Table 18 Three-Tier Breach Architecture

Tier	Type	Definition	Response
Tier 1	Technical Dispute	Minor procedural non-compliance; clerical errors; equipment malfunction	7-day diplomatic resolution; no benefit suspension; +0.5 CIS penalty
Tier 2	Material Disruption	Significant non-compliance affecting one module; delays beyond target windows	30-day mediation; affected module paused; other modules continue; +2.0 CIS penalty
Tier 3	Deliberate Hostile Violation	Intentional breach with escalatory intent; nuclear weapons program activity; military attack	Emergency consultation; 10-50% rollback (not snapback); Tier 3 modules suspended; Reconstitution Conference within 30 days

7.3 Step-Back Architecture (No Snapback)

The GSA Framework rejects the JCPOA's "snapback" model, which proved catastrophic in 2018. Instead, it employs graduated step-back: small penalties for small violations, with proportional responses rather than nuclear options:

Table 19 Graduated Step-Back Penalties

Breach Level	Penalty	Reversibility
Tier 1	+0.5 CIS procedural penalty; 7-day resolution	Fully reversible upon compliance
Tier 2	+2.0 CIS penalty; affected module paused; 30-day mediation	Reversible upon verified compliance; earn-back pathway
Tier 3, First Instance	10% penalty on next tranche; 30-day Reconstitution Conference	Fully reversible through Reconstitution
Tier 3, Second Instance	25% penalty; 60-day enhanced monitoring; deferred SWIFT	Reversible through 90-day compliance demonstration
Tier 3, Third Instance	50% penalty; full Tier 3 module suspension	Reversible only through full Reconstitution Protocol

Critical design principle: penalties are percentage reductions in future tranches, not clawbacks of already-released funds. Released funds stay released. This means Iran never loses what it has already received, creating irreversible ratchets that favor continued compliance.

Article CIS-MB: Compliance Incentive Score Methodology Board

(a) Independent Methodology Authority: The CIS is calculated by an independent Methodology Board comprising three members: one appointed by the IAEA Director General, one appointed by the Swiss Federal Council, and one appointed by the Omani Foreign Ministry. Board members serve 3-year staggered terms and may not be removed except for documented malfeasance. The Board operates independently of the Political Coordination Cell and reports directly to the Joint Coordination Secretariat's neutral chair.

(b) Published Algorithm: The CIS calculation methodology is published in full as Annex M to this framework and is available to both signatory states upon request. The algorithm specifies: (i) the exact weighting factors for each verification channel; (ii) the data sources and validation procedures; (iii) the dispute resolution pathway for contested data points; (iv) the audit trail requirements; and (v) the appeal process for scoring challenges. No methodology change may be implemented without 60 days' notice and written consent of both signatory states.

(c) Dual-Key Data Verification: All raw data feeding into the CIS calculation is stored in a dual-key encrypted repository: the IAEA holds one encryption key; the Joint Coordination Secretariat holds the second. Both keys are required to access or modify the data repository. Either party may request an independent audit of the data repository by a neutral third party (selected from a pre-approved roster of five international accounting firms) at any time, with audit results published within 30 days.

(d) Quarterly Methodology Audit: The Methodology Board conducts a quarterly audit of CIS calculation accuracy, publishing a public attestation that the published CIS score accurately reflects the algorithm applied to verified data. If the Board identifies any calculation error exceeding 0.5 CIS points, the Board corrects the score retroactively and publishes an explanation.

(e) Scoring Challenge Protocol: Either signatory state may challenge a published CIS score within 14 days of publication. The challenge triggers an automatic Methodology Board review within 7 days. If the challenge is substantiated, the score is corrected and the challenging party receives a procedural credit of +0.5 CIS points. If the challenge is rejected, the challenging party receives no penalty. Either party may escalate a rejected challenge to the Triad Arbitration Panel (see Section VIII).

Compliance Incentive Score (CIS)

The CIS provides incremental positive feedback: Iran earns +0.1 per clean day during Micro-Pilot, +0.2 per clean day during Stage 1, and +0.3 per clean day during Stage 2. At CIS +20, Iran receives bonus tranche releases. At CIS -20, framework enters enhanced monitoring. The CIS is published monthly and provides visible, quantifiable evidence of compliance trajectory.

Full CIS methodology, including the published algorithm, data validation procedures, and scoring challenge protocol, is documented in Annex M (CIS Methodology Manual), available to both signatory states upon request from the Joint Coordination Secretariat.

Security and Privacy Protection

IAEA inspectors enjoy full diplomatic immunity. Inspectors are selected from neutral countries (non-US, non-Iranian). Sensitive facility data is encrypted with a three-key system: IAEA holds two keys, Iran holds one. All data transfer uses secure channels. Cameras stream encrypted video only to IAEA servers. Environmental samples are split: one portion to IAEA, one to a neutral third-party lab, one retained by Iran.

Cyber Operations Stabilization Module

Table 20 Cyber Stabilization Categories

Category	Protected Infrastructure	Restraint	Violation Response
I (Critical)	Nuclear monitoring systems; banking settlement; maritime navigation	Strict non-aggression	Tier 2 breach; emergency session within 24h
II (Important)	Humanitarian logistics; medical supply chains; pipeline control	No offensive operations; defensive permitted	Tier 3 response; 72-hour review
III (Commercial)	General commercial infrastructure; telecoms; civilian aviation	No persistent disruption	Tier 1 diplomatic resolution

Emergency Maritime Safety Carve-Out

Vessels experiencing verified mechanical distress, severe weather, medical emergencies, or environmental containment failure are exempt from the weekly transit quota. Such vessels may seek safe harbor under PG-MSC monitoring without triggering a blockade violation. Emergency status is verified by the Maritime Operations Cell within 2 hours. Applies symmetrically to all flagged vessels.

Section VIII: Governance and the Facilitating State Matrix

The Distributed Facilitating State Matrix

The GSA Framework replaces single-point-of-failure guarantors with a six-domain facilitating state matrix:

Table 21 Facilitating State Matrix Detail

State	Domain	Core Function	Contact Point
Oman	Maritime Deconfliction	Hotline management, naval encounter facilitation, Hormuz transit oversight, mine-clearing coordination	Omani Maritime Security Centre, Muscat
Switzerland	Financial Verification	Escrow administration, asset transfer verification, sanctions relief monitoring, GSA fund oversight	Swiss FOCBS, Bern
Qatar	Escrow and Liquidity	Emergency liquidity facility, bridging finance, humanitarian corridor support, SWIFT bridge administration	Qatar Central Bank, Doha
IAEA	Nuclear Verification	Enrichment monitoring, stockpile custody, facility inspection, technical assessment reporting	IAEA Director General, Vienna
UN Appointee	Procedural Mediation	Governance facilitation, dispute resolution, deadlock breaking, Nomenclature Registry oversight	UN Secretary-General appointee, Geneva
Pakistan	Emergency Convening	High-level crisis summits, backchannel facilitation, institutional relay, emergency diplomatic channel	Pakistani Foreign Ministry, Islamabad

Rotating Facilitation

The Secretariat operates under rotating facilitation cycles (not permanent co-chair authority). The facilitating state rotates quarterly among Oman, Switzerland, and Qatar. The rotating facilitator has convening authority, agenda-setting rights, and procedural mediation powers, but no substantive voting power. Decisions on operational matters require consensus of the Political Coordination Cell. Structural decisions (new annex activation, framework amendment, sanctions snapback activation) require unanimous consensus plus neutral chair concurrence.

The Nomenclature Registry

The Joint Coordination Secretariat Communications Cell maintains the Nomenclature Registry as a standing administrative function. The Registry is updated quarterly and published in the framework Transparency Portal. Each signatory state may update its official designation at any time through written notification to the Secretariat. The Registry documents the date of each designation, the authority issuing it (executive order, legislative act, official communication), and the scope of application (domestic communications, policy statements, maritime authority coordination, or other). The Registry does not evaluate, endorse, or rank designations. It is purely documentary.

Section IX: Implementation Timeline

Table 22 Detailed Implementation Timeline

Day	Iranian Action	US Action	Verification	Economic Incentives Activated
-30	Freeze 60% enrichment; reduce Hormuz interdiction; pause proxy attacks; reduce cyber ops	No new sanctions; reduce Hormuz patrols; process humanitarian licenses	IAEA remote monitoring; Omani naval logs	None
-1	Confirm Micro-Pilot objectives met	Confirm Micro-Pilot objectives met	Joint certification	None
1	Transfer 60% stockpile to IAEA; ceasefire; proxy pause	Suspend Epic Fury; $250M humanitarian tranche; open 30-day nuclear window	IAEA DG confirmation; mass spectrometry; concurrent certification	Pair 1 (Humanitarian/Agricultural), Pair 2 (Blockade/LNG), Pair 3 (Custody/Isotopes)
7	IRGC withdrawal to 5nm; Hormuz reopening declaration; mine-clearing support	Blockade lift declaration; naval withdrawal to 5nm; Notice to Mariners	Omani naval logs; Lloyd's List; AIS	Pair 4 (SWIFT/Boeing), Pair 5 (Petrochemical/Oil Services), Pair 6 (Pharma/Pharma), Pair 7 (Aviation/Agricultural Tech)
14	Stage 1 closing certification	Stage 1 closing certification	Joint certification; IAEA report	Pair 8 (Mine-clearing/Defense), Pair 9 (RDF/Digital), Pair 10 (Insurance/Reinsurance)
15-30	Declare moratorium; idle centrifuges; Fordow Phase A	Sanctions tranche; aviation licenses; 50% asset return; SWIFT Phase 1	IAEA continuous monitoring; Swiss escrow confirmation	Pairs 11-15 (SWIFT/Education; Oil/Energy Equipment; IMF/Financial Services; World Bank/Construction; Renewables/Climate Tech)

31-60	HEU export plan; proxy cap ratification; Fordow IMIRC launch	SWIFT Phase 2; Tranche 4-5 release	IAEA custody chain; Omani monitoring	Pairs 16-20 (Banking/Payments; Auto/Automotive; Telecom/5G; Tourism/Hospitality; Ports/Port Management)
61-180	Permanent PG-MSC charter; successor framework; full moratorium	Full sanctions relief; 85% assets; Crescent Compact	IAEA clean certification; PG-MSC charter ratification	Pairs 21-30 (Full SWIFT/Investment Banking; Sovereign Return/Legal; PG-MSC Revenue/Security; Caspian/Rail; Science/Research; Water/Environment; Mining/Mining Equipment; Petrochemical/Chemical; Sovereign Wealth/Asset Management; Full Trade/Bilateral Trade)

Section X: Face-Saving Metrics and Domestic Wins

Iranian Domestic Narrative

Table 23 Iranian Face-Saving Metrics

Claim	Fact	Evidence
"We ended the war"	Permanent bilateral ceasefire	Ceasefire hotline active since Day 1
"Blockade lifted"	US naval blockade removed	Commercial port access restored
"Assets returning"	$250M immediate; 50% by Day 60; 85% by Day 180	Swiss escrow transaction logs
"Enrichment capped and verified"	1-year renewable cap; IAEA continuous monitoring	IAEA monthly reports
"Sovereignty preserved"	No precedent clause; NPT rights intact; annual review	Framework Article 1.5
"Hormuz governed jointly"	Iran holds permanent voting seat on PG-MSC Council	PG-MSC charter Article 5
"Domestic nomenclature preserved"	Equivalent autonomous authority to designate waterway	Framework Section B.3
"Fordow transformed to science"	IMIRC operates under Iranian co-chair	Fordow IMIRC charter

US Domestic Narrative

Table 24 US Face-Saving Metrics

Claim	Fact	Evidence
"Hormuz is open"	200+ transits in 14 days	Lloyd's List, AIS tracking

"Weapons-grade uranium secured"	Entire stockpile in IAEA custody	Mass spectrometry; IAEA report
"60% enrichment halted"	Freeze verified within 72 hours	OLEM data; IAEA confirmation
"No bases lost"	All US Gulf bases remain	DOD force posture unchanged
"We moved as equals"	Every US concession matched simultaneously	Waltz pairing documentation
"Operational nomenclature recognized"	US designations documented in Nomenclature Registry	Framework Section B.3
"Congressional oversight"	Tranches 3+ subject to 30-day Congressional review	Framework Article LC-1
"30 US economic wins"	$61.6B in US economic benefits over 5 years	Economic Incentive Summary

Synchronized Announcement Strategy

Major framework milestones require coordinated announcement timing. Party A announces at T+0 hours (domestic prime time); Party B at T+6 hours (their domestic prime time). Joint press conference uses neutral venue (Geneva or Muscat); neutral chair delivers factual statement; each party's representative delivers their narrative-framed statement.

Narrative Violation Protocol

If a party makes a public claim contradicting framework provisions: +0.5 CIS procedural penalty; factual correction via transparency portal. If violation persists after 2 corrections within 90 days: +1.0 CIS penalty; revised communications guidance required. Narrative penalties are "soft" -- they do NOT trigger benefit suspension.

Section XI: Safeguards and Force Majeure

Humanitarian Firewall

The humanitarian channel operates independently of framework political conditions. Zero-fee, no-inspection-delay humanitarian corridor through Hormuz for food, medicine, medical equipment, and UN supplies continues regardless of any dispute, breach, or suspension. This includes the $250M Micro-Pilot tranche (non-reversible), medical isotope shipments, and refugee camp supplies.

Force Majeure Protection

Natural disasters, epidemics, terrorist attacks, and external military interventions activate the Force Majeure Protocol: 30-90 day operational freeze; no penalties; humanitarian and IAEA operations continue; banking channels remain open at current tier; Reconstitution Conference convened within 30 days.

No-Precedent Binding Interpretation

> **Article NP-1: Binding No-Precedent Language**
>
> Article 1.5 applies to all framework provisions, all governance body decisions, all dispute resolution outcomes, and all international filings. No party may cite the GSA Framework in any international court, tribunal, or treaty negotiation to establish a precedent regarding: sovereign rights under UNCLOS; nuclear enrichment rights under NPT; sanctions architecture or relief mechanisms; maritime governance structures; or nomenclature provisions. This no-precedent clause is itself binding and enforceable through the dispute resolution mechanism.

Legal Architecture: Binding but Not a Treaty

The GSA Framework uses a "binding administrative arrangement" model: it is legally enforceable through the IAEA, PG-MSC, and escrow mechanisms, but does not require 67 Senate votes for ratification. It is structured as a "package deal" through existing executive authorities and non-treaty instruments (IAEA Additional Protocol, IMO conventions, bilateral investment treaties, executive orders for asset release, and OFAC licensing actions). This legal architecture preserves both the President's authority to negotiate and Congress's oversight role without creating a ratification barrier.

Congressional Constraint

Tranches 1-2 are non-reversible and require no Congressional action (funds are already frozen; release is administrative). Tranches 3-8 require 30-day Congressional review but not affirmative approval. Congress can block, but cannot attach poison-pill riders, targeting waivers, or sunset provisions.

> **Article LC-2: Congressional Review Institutional Lock-In**
>
> To strengthen institutional survivability beyond executive will alone, the following binding mechanisms apply to all tranches subject to Congressional review:
>
> **(a) Escrow Auto-Release Trigger:** If the 30-day Congressional review period expires without affirmative blocking resolution, tranches release automatically from escrow. Congressional inaction constitutes tacit approval. No affirmative vote is required. The Swiss escrow administrator releases funds upon certification that the 30-day window has closed without blocking action.
>
> **(b) State-Level Beneficiary Constituencies:** Economic Incentives 1B, 2B, 4B, 5B, 6B, 7B, 8B, 10B, 11B, 12B, 14B, 15B, 16B, 17B, and 19B are structured to create direct economic beneficiaries in specific US states and congressional districts (Farm Belt agricultural exports, Gulf Coast LNG, Midwest aviation manufacturing, Texas oil services, pharmaceutical corridors, etc.). These beneficiaries receive framework notification and are positioned to lobby their congressional delegations against blocking actions.
>
> **(c) Contractual Pre-Commitment:** The Joint Coordination Secretariat enters into binding commercial contracts with US private-sector beneficiaries (Boeing, GE, pharmaceutical companies, agricultural exporters, reinsurance carriers) contingent on tranche release. These contracts create vested third-party interests with standing to challenge executive re-freezing actions through domestic administrative and judicial processes.
>
> **(d) Poison-Pill Rider Immunization:** The framework is designated as a "national security arrangement" under the International Emergency Economic Powers Act, immunizing executive implementation from Congressional riders, targeted waivers, and sunset provisions attached to unrelated appropriations bills. Any rider targeting this framework is deemed procedurally invalid under the framework's implementing executive order.

Section XII: Reconstitution Mechanism

Automatic Return-to-Talks

Any breach automatically triggers emergency consultation before suspension. Reconstitution Conference convened within 30 days of Tier 3 breach. All framework parties must attend. The Conference reviews breach circumstances, proposes modifications, and determines re-entry pathway.

Four Re-Entry Pathways

Table 25 Reconstitution Re-Entry Pathways

Pathway	Condition	Restoration
Pathway A: Clean Re-entry	Full compliance restored; IAEA clean certification	Full restoration of all modules; accelerated tranche schedule
Pathway B: Conditional Re-entry	Partial compliance; good-faith effort; technical delays only	Tier 1 and Tier 2 modules restored; Tier 3 deferred; enhanced monitoring
Pathway C: Modified Framework	Political changes require framework adaptation	Revised parameters negotiated; new incentives may be added; existing incentives protected
Pathway D: Emergency Fallback	Full collapse; no compliance pathway visible	Minimum Viable Accord activates: ceasefire, Hormuz transit, humanitarian channel, enrichment freeze

Framework Survival Core Doctrine

Under all circumstances, including total framework suspension, three elements survive: (1) the ceasefire hotline remains active, (2) humanitarian access continues uninterrupted, (3) the emergency diplomatic channel stays open. Even if everything else enters stabilization pause, the Survival Core continues for 180 days pending reconstitution efforts.

Section XIII: Three Deal Options

The GSA Framework presents three complete deal packages, each representing a different depth of commitment. Default: Minimal activates by default; automatic graduation to Medium upon verified Micro-Pilot completion.

Table 26 Three Deal Options Comparison

Parameter	Minimal (Crisis Containment)	Medium (Stability First)	Maximal (Comprehensive)
Nuclear	60% freeze; no stockpile transfer	3.67% cap; stockpile to IAEA; Mothball Protocol	3.67% cap; AI fusion; missile test moratorium
Monitoring	Minimal (cameras + OLEM)	Medium (UGES sensors + ICS)	Maximal (AI + digital twin + drones)
Economic	$850M + limited oil	$85B + SWIFT	$260B+ full trade normalization
Economic Incentives	Incentives 1-5 only	Incentives 1-20	All 30 Incentives
Duration	90 days renewable	1-year renewable	2-year initial
PG-MSC	Observer status	Full voting member	Full member + alternating chair
Maritime	Basic transit	Full PG-MSC governance	Full PG-MSC + GSA fund
Face-Saving	Basic	Enhanced	Maximum

Graduation Pathway

Minimal automatically graduates to Medium upon verified Micro-Pilot completion. Medium graduates to Maximal upon Stage 2 closing certification. Graduation is automatic, not requiring new negotiations. Each graduation unlocks additional economic incentives, deeper integration, and expanded benefits. The graduation pathway creates positive momentum: compliance at one level unlocks greater rewards at the next.

Appendix A: Quick Reference Matrix

Table 27 Framework Quick Reference

Question	Answer
What is the core exchange?	60% enrichment freeze + stockpile custody for sanctions relief + asset return + Hormuz co-governance
How many economic incentives?	30 symmetrical pairs: 15 for Iran, 15 for US
What is the Nomenclature provision?	Section B.3: Recognizes existing US operational designations; grants Iran equivalent authority; preserves "Strait of Hormuz" for UNCLOS/IMO/IAEA
What is the GSA?	Gulf Stability Contribution: funded mechanism for regional maritime safety, administered by PG-MSC
Who verifies compliance?	Five-channel convergence: IAEA (technical), Omani naval (maritime), Swiss escrow (financial), Lloyd's List (commercial), open source
What happens if someone cheats?	Three-tier breach: Tier 1 (diplomatic resolution), Tier 2 (module pause), Tier 3 (graduated rollback, not snapback)
Can either side walk away?	Yes, with 30 days' notice. But Survival Core continues: hotline, humanitarian, diplomatic channel
What survives total collapse?	Ceasefire hotline, humanitarian corridor, emergency diplomatic channel -- minimum for 180 days
Does Iran get to enrich?	Yes -- 3.67% for civilian energy, under IAEA safeguards, with annual review
Does the US get naming rights?	US operational designations recognized in Nomenclature Registry; "Strait of Hormuz" preserved for all international legal instruments
How long does this last?	Moratorium: 1-year renewable up to 15 years. Full framework: 2-year initial with 5-year renewal reviews
What about Congress?	Tranches 1-2: no Congress required. Tranches 3+: 30-day review, not affirmative approval required

What about the Supreme Leader?	Framework survives leadership transitions through Political Shock Absorber: automatic Review Pause
What about Israel?	Israeli Parallel Reassurance Mechanism: IAEA data-sharing, US coordination, military readiness guarantees
What about proxies?	Proxy cap: 30% reduction from pre-war baselines; attribution protocols; rogue commander accountability

Key Provisions Summary

Table 28 Key Framework Provisions

Provision	Location	Status
Synchronized Reciprocal Motion (Waltz)	Section I, Article 1.1	Core principle
Partial Continuity Rule	Section I, Article PC-1	Automatic
Framework Survival Core	Section I, Article 1.4	Inviolable
No Precedent Clause	Section I, Article 1.5	Binding interpretation
Political Shock Absorber	Section I, Article 1.6	Automatic Review Pause
PG-MSC Co-Governance	Section III, Article 3.1	Iran: permanent voting seat
Established Operational Nomenclature	Section III, Article B.3	Registry maintained by Secretariat
GSA Fund	Section III, Article 3.4	$500M annual PG-MSC revenue
60% Freeze + IAEA Custody	Section IV, Article NS-1	Within 72 hours
15-Year Renewable Moratorium	Section IV, Article 4.2	Performance-based
Six HEU Disposition Pathways	Section IV, Table 12	Iran selects; third-party only
Thirty Economic Incentives	Section V	Symmetrical pairs
Eight-Tranche Asset Return	Section VI, Table 15	Milestone-linked
Three-Tier Breach System	Section VII, Article 7.2	Graduated step-back
CIS Compliance Incentive Score	Section VII, Article 7.3	Positive/negative feedback

Reconstitution Mechanism	Section XII	Four re-entry pathways

Document Certification

This document constitutes the Gulf Stability Contribution (GSA) Framework Version 1.0, calibrated for the May 2026 negotiation environment between the United States and the Islamic Republic of Iran. It draws from the Stability First Enhanced Accord (v5.8), the Hormuz First Enhanced Accord (v2), the Regional Cooperation and Stability Architecture (v3.6), and the Crescent Bridge Accord (v3), incorporating thirty symmetrical economic incentives, the Established Operational Nomenclature provision, and the GSA financial architecture.

The framework is designed for authorized negotiators only. Distribution is restricted to the Joint Coordination Secretariat, the six facilitating states, and designated senior officials of the United States and Iranian governments.

Document Status: Integrated Framework with Thirty Symmetrical Economic Incentives

Version: 1.0

Date of Issue: May 20, 2026

Classification: Diplomatic Working Document -- Authorized Negotiators Only

Next Review: June 20, 2026 or upon completion of Stage 1, whichever is earlier
