

DIPLOMATIC EMERGENCY INSTRUMENT

The Simple Steps Emergency Compact

A 60-Day Renewable Stabilization Framework

Between the United States of America
and the Islamic Republic of Iran

With Optional Opt-In: Israel / Lebanon

Reference: SSEC-2026-v1.0 | 27 May 2026

Status: For Immediate Signature

Preamble: Why This Exists

The situation as of 27 May 2026:

- The United States and Iran are closer to a comprehensive peace agreement than at any point since hostilities began – and simultaneously closer to catastrophic escalation.
- On 25 May, U.S. Central Command conducted "self-defence strikes" against Iranian missile sites near Bandar Abbas. On 26 May, Israeli forces struck Mashghara, Lebanon, killing twelve people.
- Iranian negotiators are in Doha. Israeli and Lebanese delegations are due in Washington on 29 May. Both ceasefires hold on paper but fray daily.

THE CORE PROBLEM

Negotiating a 70-page comprehensive treaty while kinetic operations occur is unrealistic. Every previous effort collapsed by trying to resolve everything at once. This Compact does the opposite: resolve almost nothing permanently, but stop the shooting long enough for the negotiators in motion to finish their work.

What This Compact Does

- Creates a **60-day renewable freeze** on all offensive military operations.
- Moves Iran's highly enriched uranium to **neutral escrow in Oman** (not the U.S.).
- Reopens the **Strait of Hormuz** to commercial traffic immediately.
- Activates a **humanitarian corridor** that survives even if everything else collapses.
- Releases frozen Iranian assets in **small, verified micro-tranches**.
- Offers an **optional Israel-Lebanon freeze** firewalled from the U.S.-Iran track.

What This Compact Does Not Do

- Permanently resolve Iran's nuclear program or dismantle any centrifuge.
- Lift all sanctions. Only targeted, reversible relief.
- Require anyone to alter diplomatic relationships or link to the Abraham Accords.
- Require Hezbollah's signature or consent.

NO-PRECEDENT CLAUSE (BINDING)

This Compact establishes no legal or political precedent. Each provision is tailored to the emergency circumstances of May 2026. No inference may be drawn regarding positions on any matter not expressly addressed herein.

Article 0: Five Simple Rules

Every provision in this Compact is governed by five rules.

Rule 1: Neither Side Moves Alone

Every Iranian commitment triggers a matching U.S. commitment on the same clock cycle. If one side stops, the other stops.

Rule 2: If It Can't Be Counted, It Doesn't Count

Every commitment must be expressible as a sensor reading, a data feed, a physical lock confirmation, or a financial transaction record.

Rule 3: One Problem Cannot Kill Everything Else

The nuclear freeze, Hormuz reopening, and military freeze are separable. What happens in Lebanon stays in Lebanon.

Rule 4: Breach Does Not Equal War

If either side breaches, the Compact pauses in graduated tiers. Ambiguity triggers investigation, not punishment.

Rule 5: Medicine and Food Survive Everything

Regardless of any breach or collapse, the humanitarian corridor through Hormuz remains open at zero cost under UN mandate.

Two Clocks, Not One

Clock	Duration	Renewal	Purpose
Military Freeze	72 hours	Auto-renews by silence	Stops the shooting
Economic/Nuclear	60 days	By mutual consent	Builds trust through verified steps

Core Participants

Role	Parties
Core Track A	United States, Islamic Republic of Iran
Opt-In Track B	State of Israel, Lebanese Republic
Facilitators	Oman (lead), Qatar (host), U.S. (Track B)
Verification	IAEA (nuclear), Oman (maritime), Switzerland (financial)

Article I: The Military Freeze

1.1 What Stops Immediately

The United States stops:

- All offensive airstrikes, naval bombardment, and blockade enforcement against Iranian targets.
- All offensive cyber operations against Iranian nuclear monitoring, banking, and maritime systems.
- U.S. naval forces transition to stand-off: minimum 5 nm from Iranian territorial waters; 3 nm from Iranian-flagged vessels not engaged in hostile acts.

Iran stops:

- All offensive military operations against U.S. forces and interests, including proxy kinetic actions.
- All enrichment activity above 3.67 percent U-235.
- All mine-laying, naval interdiction, and harassment operations in the Strait of Hormuz.
- All offensive cyber operations against U.S. critical infrastructure.

1.2 The Only Exception: Self-Defence

Either side may respond with force **only** to actual incoming weapons fire or imminent physical threat to personnel (within 15 minutes of launch detection). Surveillance, signalling, posturing, and cyber intrusion do not qualify. Any self-defence action must be reported to the Joint Hotline within 2 hours.

1.3 Auto-Renewal: Silence Equals Continuation

The military freeze operates as a **self-renewing 72-hour module**. If both sides confirm compliance at Hour 71 through the Joint Hotline, the module auto-renews for another 72 hours. This continues indefinitely until either side provides written notice of non-renewal with six hours' advance notice. Only a deliberate, written act ends it.

1.4 Why This Works

Separating the ceasefire clock (72-hour loops) from the implementation clock (60-day phases) neutralizes the "negotiation about negotiation" trap. If talks stall on Day 14, the guns do not resume. The 72-hour freeze continues auto-renewing quietly, creating stability for diplomacy to proceed without the constant threat of reversion to open hostilities.

Article II: The Nuclear Step

2.1 The Problem

President Trump demands physical control of Iran's approximately 400 kg of highly enriched uranium. Iran declares its enriched uranium must remain under Iranian legal title. This Compact creates a third path.

2.2 The Oman Escrow Solution

What Happens

All uranium enriched above 20% is consolidated, inventoried, and transported to an **IAEA-monitored escrow facility in Muscat, Oman** within 14 days. Not the United States. Oman.

	What Trump Gains	What Iran Keeps
Control	Real-time monitoring; every gram outside Iran; no hidden breakout	Central Bank of Iran retains sovereign legal title; never enters U.S. custody
Security	Cannot be weaponized without detection	Iranian observers accompany every stage; friendly Islamic state hosts

2.3 Enrichment Freeze

- Iran halts all enrichment above 3.67% immediately. This is a **60-day freeze, not a permanent ban**.
- No centrifuge destroyed. No facility dismantled. Verified by OLEM and IAEA inspectors within 7 days.
- Iran retains the right to enrich to 3.67% at Natanz for civilian purposes.
- All enrichment infrastructure above 3.67% placed under IAEA seal with continuous camera monitoring. Fordow and non-Natanz facilities in non-operational status under seal.

2.4 Timeline

Time	Action	Verifier
Day 1 (T+0)	Compact activates; enrichment freeze begins	OLEM
Day 1 (+12h)	IAEA inspectors arrive; begin HEU inventory	IAEA
Day 2 (+24h)	Inventory complete; mass spectrometry confirms isotopics	IAEA
Day 3 (+48h)	Cylinders loaded into IAEA-certified casks; seals applied	IAEA
Day 7 (+7d)	Convoy departs for Oman under IAEA guard; satellite surveillance	IAEA + Oman
Day 14 (+14d)	HEU in IAEA custody at Muscat; dual-lock initiated	IAEA + Oman

14-day timeline may extend by up to 7 days for verified logistical constraints. Such delays do not constitute breach.

Article III: Reopening the Strait

3.1 Joint Transit Coordination Cell (JTCC)

Within 48 hours of Compact signature, a provisional JTCC is established at Bandar Abbas (Iranian side) and Khasab (Omani side), staffed by Iranian, U.S., and Omani officers. The JTCC does not stop, board, or search vessels. It monitors AIS data, coordinates patrols, responds to distress calls, and ensures uninterrupted transit.

3.2 What Iran Commits

- No IRGC vessel approaches within 500 metres of any transiting commercial vessel without JTCC notification.
- No boarding, inspection, or diversion of vessels during the interim period.
- No new mine-laying anywhere in the Persian Gulf or Gulf of Oman.
- No deployment of anti-ship missiles into launch-ready position along the Strait.
- No small-boat swarm formations of 3+ vessels within 10 nm of the transit corridor.
- Existing legacy mines disclosed to JTCC within 24 hours; joint clearance schedule established.

3.3 What the U.S. Commits

- Suspend enforcement of the naval blockade on Iranian commercial ports.
- U.S. Navy shall not board, inspect, or interdict Iranian-flagged commercial vessels.
- Maintain minimum 5-nm stand-off from Iranian territorial waters baseline.
- No provocative manoeuvres: no simulated attacks, no close-range intercepts within 3 nm, no laser illumination, no radar lock-on.
- Freeze all new sanctions designations on Iranian maritime, oil, and financial sectors.

3.4 No Tolls

During the 60-day interim period, **no transit fees or tolls** shall be collected by any party. JTCC operations are borne by a neutral Multilateral Maritime Maintenance Fund, not vessel operators.

3.5 PGSA Recognition (Operational Only)

The Persian Gulf Strait Authority (PGSA), established by Iran on 5 May 2026, is recognized as the designated Iranian operational body for transit coordination for the Compact duration. This does not confer international legal status. All PGSA permits bear dual branding: PGSA-Iran (domestic) and JTCC-Authorized (international). Recognition auto-extinguishes upon Compact termination.

3.6 Synchronized Naval Posture

Both sides maintain symmetrical 5-nm stand-off from the Strait transit corridor. Patrol schedules published weekly. Carrier strike groups remain at positions at entry into force or further from Iranian waters, never closer.

Article IV: Money and Medicine

4.1 Immediate Humanitarian Release (Day 1)

Upon signature and concurrent activation of the freeze, the U.S. authorizes release of **\$250 million via Swiss escrow** for immediate humanitarian purposes. Contingent solely on simultaneous freeze activation by both parties.

Qualifying goods: medicine and pharmaceuticals; medical equipment; staple foods and infant formula; drinking water and purification; civilian fuel for heating and hospital generators; emergency shelter; sanitation and hygiene supplies.

4.2 The Humanitarian Corridor (Inviolable)

Regardless of any breach, dispute, suspension, or collapse, a **zero-cost, zero-delay humanitarian corridor** through Hormuz is established immediately. Legally non-divertible. Oman's Royal Navy is the sole verification and escort authority. Neither the U.S. nor Iran is in the humanitarian verification chain.

4.3 Economic Confidence Measures (Day 7)

- OFAC general license authorizing sale of civilian aircraft spare parts to Iran for 60 days.
- Export of agricultural goods and medical equipment under existing humanitarian exemptions without additional licensing.
- Freeze on all new sanctions designations for the Compact duration.

4.4 Frozen Asset Release (Day 14)

Upon IAEA confirmation that HEU is in Oman escrow custody, **25% of frozen Iranian assets** are released via the Central Bank of Oman as escrow agent. The remaining 75% stays held pending comprehensive negotiation. Iran receives immediate economic benefit; the U.S. retains majority leverage.

4.5 Iran's Reciprocal Commitments

- Permit unrestricted humanitarian vessel transit through Hormuz at zero cost.
- Not interfere with humanitarian organizations (UN, ICRC, WHO) in Iranian waters or airspace.
- Cooperate with JTCC functions and publish weekly patrol schedules.

4.6 The 15-Day Micro-Tranche Model

Verified Trigger	Automatic Unlock	Window
Both sides confirm Hour 71 compliance	72-hr freeze renews; \$250M humanitarian release	Day 1
First 100 kg HEU arrives in Oman	Humanitarian tranche + aircraft parts license	Day 3-7
IAEA confirms enrichment freeze verified	Agricultural exports; humanitarian banking	Day 7
HEU placed in Oman escrow custody	25% frozen assets released	Day 14
Every 15 days verified compliance	Next sector-specific sanctions relief tranche	Ongoing

If verification stalls, economic flow freezes instantly. No politically messy UN snapback -- the tranche simply does not release.

Article V: The Israel-Lebanon Opt-In

5.1 This Article Is Optional

This Article is an **optional annex** activated by mutual written consent of the U.S., Iran, Israel, and Lebanon within 72 hours of Core Compact signature. It does not form part of mandatory obligations under Articles I-IV. Its sole purpose: prevent escalation on the Israel-Lebanon front from collapsing the core U.S.-Iran framework.

5.2 The Firewall Principle

THE MOST IMPORTANT RULE IN THIS ARTICLE

What happens in Lebanon **stays in Lebanon**. It cannot blow back onto Hormuz. The Lebanon file and the U.S.-Iran nuclear/maritime file are legally and operationally segregated. Neither the U.S. nor Iran may use incidents in southern Lebanon as justification for suspending the core Compact.

5.3 What Israel Commits

- Immediate pause on all offensive ground operations, airstrikes, and artillery inside Lebanese territory.
- Israeli forces inside Lebanon hold positions and do not advance northward. "Advancement" = movement beyond 500 metres from positions held at entry into force.
- Resupply, casualty evacuation, and personnel rotation may occur with prior Joint Hotline notification.

5.4 What Lebanon Commits

- The Lebanese Armed Forces (LAF) deploy to known Hezbollah launch points in southern Lebanon and physically interpose between launch teams and the border.
- The LAF is not required to disarm Hezbollah units – only to physically prevent firing.
- Confirmation that the Lebanese delegation travels to Washington for talks as scheduled (29 May).

5.5 What Iran Commits (Omani Back-Channel)

Through Omani-facilitated private channels, Iran formally transmits to Hezbollah leadership that attacks during the freeze will not be supported, supplied, or politically defended by Tehran. This commitment is formalized in a binding, sealed annex deposited with the Omani facilitator. Existence acknowledged publicly; content is not.

5.6 The 10-Casualty Threshold

Level	Definition	Effect
Minor	0-2 fatalities or 0-9 wounded	Logged; enhanced monitoring; Core Compact unaffected
Moderate	3-9 fatalities or 10-49 wounded	72-hour diplomatic consult; JFMC review; Core unaffected
Significant	10+ fatalities or 50+ wounded in 24 hours	Annex may collapse; emergency session; Core still protected by Firewall

5.7 Hezbollah Operational Pause

If this Annex is activated, Iran commits to transmit formal instructions to Hezbollah for structured operational de-escalation concurrent with the Core Compact timeline. This is not disarmament, surrender, or political concession. It is a structured, time-limited military de-escalation.

Article VI: If Someone Fires

6.1 No Hair Triggers

A single alleged violation does **not** suspend this Compact. The Compact survives through a four-tier response architecture.

Tier	Trigger	Response	Time
1-Incident	Single alleged violation; no casualties; no confirmed hostile intent	JFMC logs; enhanced monitoring; freeze continues	4 hrs
2-Pattern	Three Tier 1 in 24 hrs; OR one incident 1-9 fatalities	Consultation opens; next tranche held; benefits may pause	48 hrs
3-Crisis	Confirmed state-ordered attack; OR 10+ casualties; OR enrichment above 60%; OR IAEA seal removal	Cooling-Off activates; discretionary benefits frozen; JFMC emergency session	72 hrs
4-Collapse	Tier 3 + refusal to Cool-Off; OR kinetic attack on other party's territory; OR sustained cyber-sabotage	Compact suspends; Reconstitution Conference within 14 days; humanitarian corridor survives	14 days

6.2 Third-Party Spoiler Protocol

If an incident is caused by a non-signatory actor (ISIS, unaffiliated militia, criminal organization, or unidentified third party):

- 1. Within 4 hours:** JFMC issues "non-attribution" notice, suspending blame-shifting.
- 2. Within 24 hours:** JFMC publishes public incident summary with known facts.
- 3. Within 48 hours:** JFMC conducts fact-finding; no party may take military action during this window.
- 4. Default finding:** If attribution remains inconclusive, classified as "non-attributable third-party action" – no tier escalation.

6.3 Mandatory Cooling-Off Period

If disagreement occurs and attribution is unclear, all escalation freezes automatically for a mandatory **24-to-72-hour Cooling-Off Period**. Neither side may take escalatory military action. The Facilitating State investigates and recommends resolution within 72 hours. This is automatic - no request required.

6.4 No Unilateral Military Response

Neither side shall undertake military action in response to a perceived breach without first exhausting dispute resolution procedures, except in verified imminent armed attack under UN Charter Article 51. Premature military response forfeits the next scheduled benefit tranche.

Article VII: Verifying It

7.1 Three Bodies Only

Previous frameworks created elaborate architectures: Joint Commissions, subcommittees, working groups, weighted breach indices. This Compact creates **three bodies**.

Body	Location	Function	Staff
Joint Hotline	Muscat, Oman	24/7 senior U.S.-Iran communication; compliance confirmation; crisis response	Omani duty officers (3/shift)
Shared Dashboard	Switzerland (host); Oman (mirror)	Real-time data on verification, compliance, asset transfers, naval posture	Neutral IT team (4)
Facilitator's Office	Geneva (primary); Muscat (backup)	Manages escrow, convenes mediation, publishes compliance reports	Neutral diplomatic staff (6)

7.2 Five-Channel Verification

Compliance verified through five independent channels. Convergence of at least three required:

1. **IAEA Technical:** On-site inspectors, OLEM sensors, mass spectrometry, camera feeds.
2. **Neutral-State Naval:** Omani naval observers log positions and movements.
3. **AIS/Satellite:** Lloyd's List and independent monitors confirm Hormuz transit volumes.
4. **Financial Escrow:** Swiss Financial Cell confirms asset transfers and disbursements.
5. **Joint Hotline:** Daily operational reporting through Muscat.

7.3 Joint Freeze Monitoring Cell (JFMC)

Oman, Qatar, and the U.S. each designate a senior diplomatic officer as Compliance Monitor, forming the JFMC. The JFMC receives reports, assesses them against Compact definitions, and communicates findings within 4 hours. It has **no authority to suspend the freeze or declare breach** – only to inform. Constituted within 24 hours of Compact signature.

7.4 Data Mirroring Rule

All incident reports, attribution assessments, verification data, and compliance determinations transmitted simultaneously to all parties. No preferential early access. All data time-stamped and cryptographically signed.

7.5 Good Faith Clause

Neither side shall deliberately engage in cyber-spoofing, signal-jamming, data falsification, or technical interference with the Joint Hotline, Shared Dashboard, IAEA systems, or any verification channel. Verified deliberate sabotage of monitoring infrastructure constitutes a Tier 3 breach.

Article VIII: Selling It at Home

A deal will only be signed if both leaders can present it as victory to their domestic bases. Each side is free to frame the exact same text differently.

8.1 For the United States

Suggested Messaging

"We achieved a complete operational pause on Iranian aggression in the Strait. Hormuz is open. Oil is flowing. No tolls. Iran's fast-attack boats are at anchor. Their mine-layers are stood down. The HEU stockpile is outside Iranian territory and under lock and key. We retain full carrier strike group positioning. We gave up nothing permanent. This freeze was our choice – we can end it with six hours' notice at any time."

8.2 For the Islamic Republic of Iran

Suggested Messaging

"The illegal blockade of Iranian commercial ports is suspended. The PGSA is recognized as the operational coordination body – our sovereignty over the Strait is preserved. Iran's enriched uranium remains our sovereign property, held in international trust by a friendly Islamic state, not seized by an adversary. Our delegation in Doha is protected and negotiating from strength."

8.3 For Israel (If Track B Activated)

Suggested Messaging

"We achieved a cessation of Hezbollah fire on northern Israel. The Lebanese state has been compelled to deploy LAF against Hezbollah launch sites. Israeli airstrikes on Lebanese soil are paused – civilian casualties stop. We retain all current positions inside Lebanon. We did not withdraw. We did not negotiate with Hezbollah."

8.4 For Lebanon (If Track B Activated)

Suggested Messaging

"The Lebanese state is exercising sovereign authority over its territory. Israeli airstrikes on Lebanese soil are paused. We are pursuing a peaceful resolution through direct talks. The LAF, not any non-state actor, is the sole legitimate armed force in Lebanon. This Compact respects Lebanese sovereignty and contains no foreign-imposed terms."

Article IX: How to Say Yes

9.1 Oral Confirmation Is Enough

This Compact enters into force upon **oral confirmation** by authorized representatives to their respective facilitators. Written signature is not required for initial entry into force. A joint written record is prepared by the JFMC within 12 hours and deposited with the UN Secretary-General. The oral mechanism allows capitals to implement the freeze immediately without domestic political exposure. The written record follows implementation; it does not precede it.

9.2 Six-Hour Synchronized Confirmation Window

- All parties confirm within a **six-hour window** opening at the moment of the first confirmation.
- The freeze does not begin running until the window closes.
- If fewer than all parties confirm, confirming parties may proceed at their joint discretion.
- Non-confirming parties remain free to accede subsequently.

9.3 No Legislative Ratification Required

The initial 60-day period and 72-hour freeze module require no domestic legislative approval. Extension beyond 60 days by mutual written consent may require legislative notification as required by domestic law, but does not require affirmative legislative vote.

9.4 Authorized Confirmers

Party	Authorized Confirmer
United States	Secretary of State or designated Cabinet-rank representative
Islamic Republic of Iran	Minister of Foreign Affairs or Speaker of the Majlis
State of Israel (Opt-In)	Prime Minister or Minister of Foreign Affairs
Lebanese Republic (Opt-In)	Prime Minister or Minister of Foreign Affairs

9.5 Protected Venue Status

All delegations in negotiation – the Iranian delegation in Doha and U.S. counterparts – are protected persons under this Compact. Qatar is a protected neutral venue. The Washington talks venue (29 May) receives equivalent protection for Track B delegations if Article V is activated.

9.6 Why This Compact Is Achievable Today

- **All delegations are already in motion.** This Compact asks parties to do one thing: confirm a freeze to facilitators already sitting across from them.
- **Every leader can claim the freeze as a victory.** Trump can claim the deal has begun. Tehran can claim the blockade is suspended and PGSA sovereignty is preserved. Netanyahu can claim he forced Hezbollah fire to stop. The Lebanese government can claim it exercised state sovereignty.
- **The cost of continued escalation is symmetric and high.** No party benefits from the next 72 hours of operational contact.
- **This Compact is explicitly not a surrender document.** Iran does not transfer HEU to the U.S. The U.S. does not lift sanctions permanently. Israel does not withdraw. Lebanon does not disarm Hezbollah. Nothing here cannot be walked back tomorrow.

Article X: Getting Out

10.1 60-Day Initial Duration

This Compact enters into force upon confirmation and remains in force for 60 days. It may be extended by mutual written consent for additional 60-day periods without limit. **Extension by silence:** If neither side provides written notice of non-extension at least 48 hours before expiration, the Compact auto-renews for another 60 days.

10.2 Graduation Pathway

The express purpose of this Compact is to create stable conditions for comprehensive peace negotiations. Within 14 days of signature, both sides commit to commence good-faith comprehensive negotiations toward a permanent agreement addressing all outstanding issues deferred by this Compact.

10.3 Dual-Track Exit

Module	Notice Required			Effect
Military freeze (Art. I)	6	hours	written notice	Freeze expires; auto-renewal stops
All other provisions	72	hours	written notice	Economic and nuclear provisions suspend; HEU remains in IAEA custody

10.4 Minimum Viable Core (What Survives Collapse)

Under all circumstances, including total suspension:

1. The military-to-military hotline remains active for 180 days.
2. The humanitarian corridor through Hormuz continues at zero cost under UN mandate.
3. The emergency diplomatic channel stays open for 180 days.
4. HEU remains in IAEA custody at the Oman escrow facility pending further negotiation.

10.5 HEU Return

If no comprehensive agreement supersedes this Compact within 180 days, either side may request the Facilitator convene a return conference. The default: **return of HEU to Iranian sovereign control** under IAEA monitoring, transport costs borne equally. Neither side may unilaterally seize or block return. Return within 30 days of conference convening.

10.6 Reconstitution Commitment

If the Compact enters full suspension, both sides commit to attend a **Reconstitution Conference** within 14 days, hosted by the Facilitating State, to attempt restoration of the minimum viable core.

10.7 Supersession

This Compact is automatically superseded upon entry into force of any comprehensive agreement. All escrowed materials, verification activities, and institutional arrangements transition seamlessly into the successor framework unless otherwise agreed.

Article XI: What This Compact Does Not Touch

To be agreed quickly, this Compact must be narrow. The following are **explicitly deferred**:

Issue	Deferred To
Permanent status of Iran's enrichment rights	Comprehensive negotiations
Long-term scope of Iran's nuclear program	Comprehensive negotiations
Full sanctions architecture and timeline	Comprehensive negotiations
Return of remaining 75% of frozen assets	Comprehensive negotiations
War reparations or reconstruction credits	Successor framework
Regional proxy activity (Yemen, Syria, Iraq)	Separate regional track
Hezbollah disarmament	29 May Washington talks and beyond
Israeli withdrawal from Lebanon	29 May Washington talks and beyond
Lebanese state monopoly on arms enforcement	Internal Lebanese process
PGSA legal status and Hormuz governance	Comprehensive negotiations
Ballistic missile program constraints	Comprehensive negotiations
Abraham Accords expansion	Separate diplomatic track

WHY EXCLUSION IS STRENGTH

Every prior negotiation collapsed because all sides attempted to resolve everything simultaneously. This Compact resolves only the immediate operational question: **Will the shooting stop long enough for the delegations now in motion to finish their work?**

11.1 The Compact as Floor, Not Ceiling

This Compact is the floor, not the ceiling. It holds the space open. Everything built above it – the comprehensive nuclear agreement, the Washington framework on Lebanon, the sanctions architecture – rests on the assumption that this floor does not fall away.

11.2 If This Compact Is Not Activated

The likely trajectory: continued daily skirmishing in Hormuz; continued Israeli airstrikes in Lebanon; Hezbollah retaliatory fire; collapse of the 29 May Washington talks; loss of Doha momentum; return to full-scale hostilities within days.

If activated: 72 hours of silence, then another 72 hours, then another. In that silence, the delegations negotiate. The auto-renewing mechanism removes the need for any leader to make an active decision to continue peace. **Silence equals continuation. Only a deliberate act ends it.**

Instruments of Acceptance

This Compact may be accepted orally (confirmation to facilitators), in writing (signature below), or by electronic communication to the JFMC Portal. All three methods produce identical legal effect. No domestic legislative approval is required for the initial 60-day period.
