

DIPLOMATIC INSTRUMENT — EMERGENCY PROTOCOL

INTERIM CRISIS PREVENTION ACCORD

A Minimum-Viable Emergency Framework

Between the United States of America
and the Islamic Republic of Iran

Negotiation Reference: ICPA-2026-v1.0

Date of Issue: 22 May 2026

Classification: Authorized Negotiators Only

Status: For Immediate Signature if Comprehensive Talks Stall

*"This instrument exists because the alternative is catastrophic.
It is not a comprehensive peace. It is a bridge across the abyss."*

PREAMBLE

THE EMERGENCY CONTEXT

As of 22 May 2026, the United States and the Islamic Republic of Iran stand at the precipice of renewed large-scale military confrontation. Following twelve weeks of hostilities under Operation Epic Fury, a fragile ceasefire has held since early April. President Donald Trump has publicly outlined five preconditions for any deal: physical control of Iran's highly enriched uranium stockpile; retention of only one operational Iranian nuclear facility; linkage of all negotiations to cessation of hostilities; withholding at least 25 percent of frozen Iranian assets; and rejection of Iranian war reparations claims.

Iran, in turn, has established the Persian Gulf Strait Authority (PGSA) on 5 May 2026, asserting sovereign regulatory authority over the Strait of Hormuz, and maintains that its enriched uranium must remain on Iranian soil, that all secondary sanctions must be lifted, and that the Strait falls under Iranian sovereign authority.

These positions have produced deadlock. The comprehensive frameworks developed through months of diplomatic effort remain unsigned. Each day of negotiation without an operational agreement increases the probability of accidental or deliberate escalation back to full-scale war.

This **Interim Crisis Prevention Accord** is not a substitute for a comprehensive peace agreement. It is an emergency instrument designed to achieve four immediate objectives:

1. **Prevent war** by creating a binding, verifiable security freeze that auto-renews;
2. **Secure the nuclear flashpoint** through an interim HEU custody arrangement acceptable to both sides;
3. **Reopen global energy flows** through an emergency Hormuz transit protocol that acknowledges the PGSA while guaranteeing freedom of navigation;
4. **Deliver immediate economic relief** to the Iranian population while preserving U.S. leverage for the comprehensive negotiation.

This Accord draws from the Modular Solutions Compendium, the Adaptive De-Escalation Architecture, The Final Steps Accord, the Unified Telemetry Protocol, the Stability-First Enhanced Accord v5.7, and the CRESCENT COMPACT. It extracts only the most essential, mutually acceptable elements and compresses them into a 90-day operational framework.

PURPOSE AND SCOPE

This Accord creates a **minimum viable stabilization zone** between the Parties. It addresses only those issues whose continued deadlock poses immediate risk of catastrophic escalation. All other matters — long-term enrichment rights, permanent facility status, full sanctions architecture, war reparations, ballistic missiles, regional proxy arrangements — are explicitly deferred to comprehensive negotiations to be conducted during or after the interim period.

NO-PRECEDENT CLAUSE

This Accord establishes no legal or political precedent for any future negotiation. Each provision is tailored to the emergency circumstances of May 2026. No inference may be drawn regarding positions on any matter not expressly addressed herein. The unique maritime coordination mechanisms apply exclusively to the Strait of Hormuz during the operational lifespan of this Accord.

CORE OPERATING PRINCIPLES

All provisions of this Accord are governed by three principles:

Synchronized Reciprocal Motion. Neither Party moves alone. Every Iranian commitment triggers a corresponding U.S. commitment on the same clock cycle. Verification is shared. Both governments can defend the sequencing as responding only when the other has moved first or simultaneously.

Telemetry-First Verification. Every commitment must be expressible as a sensor reading, a data feed, a physical lock confirmation, or a financial transaction record. If it cannot be verified by a neutral technical system, it does not belong in the operational text.

Rollback, Not Collapse. If either Party breaches, the Accord does not terminate. It pauses in graduated tiers: discretionary measures halt first, core constraints survive longest, and humanitarian protections remain in force regardless.

ARTICLES OF ACCORD

ARTICLE I: 72-HOUR AUTO-RENEWING SECURITY FREEZE

1.1 Simultaneous Operational Freeze

Upon signature of this Accord, both Parties shall immediately implement a legally binding cessation of hostilities across all fronts: the United States shall suspend all offensive military operations, airstrikes, and naval blockade enforcement actions against Iranian targets; the Islamic Republic of Iran shall suspend all offensive military operations, proxy kinetic actions, and enrichment activity above 3.67 percent U-235.

1.2 The Auto-Renewing Mechanism

The security freeze operates as a **self-renewing 72-hour module**. If verification teams report compliance at Hour 71, the module automatically renews for another 72 hours. This mechanism continues indefinitely until either Party provides 48 hours' written notice of non-renewal to the Joint Secretariat, or until the Accord is superseded by a comprehensive agreement.

Why this works: Separating the ceasefire clock (72-hour loops) from the implementation clock (90-day phases) neutralizes the "negotiation about negotiation" trap. If talks stall on Day 14 over implementation details, the guns do not automatically resume firing. The 72-hour military freeze continues auto-renewing quietly in the background.

1.3 Verification of the Freeze

The enrichment freeze above 3.67 percent is verified immediately via Online Enrichment Monitors (OLEM) and real-time camera feeds at Natanz and Fordow. Physical on-site IAEA inspector verification follows within 7 days. The 72-hour clock starts on OLEM confirmation, not physical arrival. U.S. operational compliance is verified by Omani naval observers and Lloyd's List AIS tracking of U.S. naval positions.

1.4 Attribution Deferral for Proxy Incidents

If a regional proxy strike occurs during the freeze, neither Party may unilaterally declare a material breach. The Joint Secretariat has 48 hours to conduct forensic assessment and attribute the incident. During this window, the 72-hour military freeze remains active. Only the Secretariat's attribution finding can trigger tier escalation. Rogue actors and false-flag operations are excluded from bilateral penalties.

ARTICLE II: INTERIM HEU CUSTODY ARRANGEMENT

2.1 The Core Problem

President Trump has demanded physical control of Iran's approximately 400 kg highly enriched uranium (HEU) stockpile. Supreme Leader Mojtaba Khamenei has declared that HEU must remain on Iranian soil. This is the single most contentious material issue in the negotiation.

2.2 The Interim Solution: Dual-Lock In-Iran Custody

Rather than forcing a choice between U.S. custody and Iranian retention, this Accord creates a third path that satisfies both Parties' essential requirements:

The entire stockpile of uranium enriched to 60 percent U-235 and above shall be consolidated and placed under a **dual-lock custody system** at the Esfahan Nuclear Technology Center or another IAEA-declared facility within Iranian territory, selected by mutual agreement within 72 hours of Accord activation.

Digital Lock: The IAEA holds exclusive digital encryption keys to all monitoring arrays, tamper-evident seal controls, and access verification systems. No Iranian personnel can access sealed material without IAEA digital authorization.

Physical Lock: Iran holds physical perimeter security keys and maintains armed outer-perimeter security. No IAEA inspector can access the facility perimeter without Iranian escort authorization.

Neither Party can access the sealed containers without the other's physical presence. Both keys are required simultaneously. Unauthorized access triggers immediate Tier 2 breach notification.

2.3 No Hidden U.S. Custody Clause

At no stage may the United States receive, store, transport, or exercise operational control over the Iranian enriched-uranium stockpile under this Interim Accord. All custody remains with the IAEA. U.S. personnel shall not be present at any consolidation, packaging, or transit operation. This clause is self-executing and non-waivable.

2.4 What President Trump Gains

- Every gram of Iran's 400 kg HEU stockpile is located, sealed, and under international control;
- U.S. technical personnel receive real-time monitoring access via encrypted telemetry;
- Consolidation to one facility eliminates the risk of hidden breakout material;

- The material cannot be weaponized without detection.

2.5 What Iran Retains

- The HEU never crosses an Iranian border;
- It remains on Iranian soil, in an Iranian facility, guarded by Iranian forces;
- The IAEA role provides political cover — Iran is fulfilling nonproliferation obligations, not bowing to American demands;
- Iran retains a formal veto over any access to its material through the dual-key mechanism.

2.6 Verification Timeline

Phase	Clock Time	Action	Verifying Party
T+0	Day 1	Accord activates; Parties activate commitments	Joint Secretariat
T+12h	Day 1	IAEA inspectors arrive; begin physical inventory	IAEA
T+24h	Day 2	Inventory complete; mass spectrometry confirms isotopic composition	IAEA
T+48h	Day 3	Cylinders loaded into casks; tamper-evident seals applied	IAEA
T+72h	Day 4	Day-One deadline: dual-lock custody initiated and verified	Joint Secretariat

ARTICLE III: OPERATIONAL FACILITY LIMITATION

3.1 Interim Single-Facility Operation

During the 90-day interim period, Iran shall limit all enrichment-related operations to **a single declared facility** (Natanz). All other enrichment infrastructure, including Fordow, shall be placed in non-operational status under IAEA seal with continuous camera monitoring. This is not dismantlement. It is not destruction. It is a temporary, reversible, verified operational pause at non-primary facilities.

3.2 Fordow Status

The Fordow facility shall transition to a designated **non-enrichment research status** during the interim period. All centrifuges capable of enrichment above 3.67 percent shall be placed under IAEA seal. The facility may continue non-fissile-material research activities (materials science, geophysical studies) under continuous IAEA monitoring. This preserves the facility as sovereign infrastructure while eliminating weapons-relevant activity during the interim window.

3.3 What This Means

For President Trump: Iran operates only one enrichment facility. The hardened underground complex at Fordow is under seal. This meets the President's precondition of single-facility operation during the interim period.

For Iran: The facilities are not destroyed. The centrifuges are not dismantled. They are sealed and preserved. The underlying right to peaceful nuclear energy is unaffected. The limitation is time-bound and explicitly reversible upon Accord review.

ARTICLE IV: STRAIT OF HORMUZ EMERGENCY TRANSIT PROTOCOL

4.1 Acknowledging the PGSA

The Persian Gulf Strait Authority (PGSA), established by Iran on 5 May 2026, is recognized as the **designated Iranian operational body for transit coordination within Iranian territorial waters** for the duration of this Accord. This Accord does not confer or withhold international legal status upon the PGSA. It simply treats the Authority as the existing operational entity through which transit coordination occurs.

4.2 Emergency Joint Transit Coordination

Within 7 days of Accord signature, a **provisional Joint Transit Coordination Cell (JTCC)** shall be established at Bandar Abbas (Iranian side, leveraging existing PGSA infrastructure) and Khasab (Omani side), staffed by personnel from Iran, the United States, and Oman. The JTCC does not stop, board, or search vessels. Its function is purely coordinative: monitor AIS data, coordinate patrol schedules, respond to distress calls, and ensure uninterrupted commercial transit.

4.3 Universal Emergency Transit Certificate

All commercial vessels transiting the Strait during the interim period shall receive an **Emergency Transit Certificate (ETC)** issued by the JTCC Secretariat, certifying: (a) valid registration and insurance; (b) cargo manifest does not include prohibited materials per UNSC resolutions; (c) AIS transponder is functional. The ETC does not discriminate based on flag state, cargo type, or port of origin.

4.4 No Unilateral Tolls

During the 90-day interim period, **no transit fees or tolls shall be collected by any Party**. This addresses President Trump's explicit demand: "We don't want tolls." The cost of JTCC operations shall be borne by the Multilateral Maritime Maintenance Fund established under Article V, not by vessel operators. The PGSA's fee-collection function is suspended for the interim period, with Iran's cooperation recognized as a material contribution to global energy security.

4.5 Synchronized Naval Posture

Both Parties shall maintain a symmetrical 5-nautical-mile stand-off distance from the Strait transit corridor during the interim period. Neither Party shall conduct provocative naval maneuvers, boarding operations, or interdiction actions within the transit corridor. Patrol coordination schedules shall be published weekly to all JTCC members.

4.6 What Each Party Gains

For President Trump: The Strait is open. Tolls are suspended. American and allied vessels transit without interference. U.S. naval forces operate with clear rules of engagement. Global energy flows resume.

For Iran: The PGSA is acknowledged as the operational coordination body. Iranian personnel staff the Bandar Abbas coordination center. Iran's sovereignty over adjacent territorial waters is not challenged. The principle of Iranian involvement in Strait governance is recognized.

ARTICLE V: HUMANITARIAN & ECONOMIC RELEASE VALVE

5.1 Immediate Humanitarian Release

Upon signature of this Accord and concurrent activation of the security freeze, the United States shall authorize the release of **\$250 million** via Swiss escrow for immediate humanitarian purposes: medicine, food, medical equipment, and agricultural inputs. This release is not contingent on IAEA verification. It is contingent solely on simultaneous activation of the security freeze by both Parties. This is Day-One relief for the Iranian population.

5.2 Humanitarian Firewall

The humanitarian channel is **legally non-divertible and inviolable**. It continues regardless of any dispute, breach, or suspension of other Accord provisions. The UN OCHA/WHO administrator holds sole disbursement authority. Any attempt to redirect, condition, or delay humanitarian funds triggers automatic IAEA investigation but does not affect the humanitarian flow itself.

5.3 Economic Confidence Measures

Within 14 days of verified dual-lock HEU custody (Article II), the United States shall:

1. Issue an OFAC general license authorizing the sale of civilian aircraft spare parts to Iran for 90 days;
2. Permit the export of agricultural goods and medical equipment under existing humanitarian exemptions without additional licensing requirements;
3. Freeze all new sanctions designations for the duration of the Accord.

5.4 Iran's Economic Commitment

In reciprocal motion, Iran shall permit unrestricted humanitarian vessel transit through the Strait of Hormuz at zero cost and shall not interfere with the operations of humanitarian organizations (UN, ICRC, WHO) in Iranian waters or airspace.

ARTICLE VI: PARTIAL FROZEN ASSET RELEASE

6.1 The 25 Percent Compromise

President Trump has demanded that at least 25 percent of frozen Iranian assets be withheld. Iran has demanded full release. This Accord splits the difference: **50 percent of frozen assets shall be released** to Iranian control in two tranches during the 90-day interim period, with the remaining 50 percent held in the Joint Sovereign Custody Escrow as performance reserve for the comprehensive negotiation.

6.2 Tranche Schedule

Tranche	Timing	Amount	Trigger
Tranche 1	Day 7	25% of total frozen assets	IAEA confirms dual-lock HEU custody; security freeze sustained 7 days
Tranche 2	Day 45	25% of total frozen assets	IAEA confirms 30 days clean compliance; JTCC operational; no material breaches
Reserve	Day 90+	50% held in escrow	Released upon comprehensive agreement or held pending further negotiation

6.3 Sovereign Immunity Shield

All assets released under this Article are transferred to the Central Bank of Oman as escrow agent, designated as "diplomatic escrow funds" protected by sovereign immunity and by a UN Security Council resolution recognizing their protected status. This prevents seizure by American courts under terrorism judgments and protects the funds from both unilateral seizure and Iranian diversion.

6.4 What Each Party Gains

For President Trump: 50 percent of assets remain in reserve — exactly as demanded. Release is performance-gated. The United States retains leverage for the comprehensive negotiation.

For Iran: Half of frozen assets flow within 45 days. The release is in binding tranches, not subject to American political whims. Funds are protected from court seizure in a friendly Islamic-country institution.

ARTICLE VII: MUTUAL CESSATION OF HOSTILITIES PLEDGE

7.1 Binding No-First-Strike Commitment

Both Parties pledge not to initiate offensive military operations against the other for the duration of this Accord, except in the event of: (a) verified imminent armed attack under UN Charter Article 51; or (b) determination of material breach by the Joint Secretariat. This is not a mutual defense treaty. It is a reciprocal commitment to refrain from offensive action.

7.2 Proxy Force Stand-Down

Iran commits to use its influence to reduce operational proxy military activities against U.S. and allied interests during the interim period. The United States commits to refrain from retaliatory strikes on Iranian-affiliated positions absent verified attribution of direct Iranian authorization. Neither Party is required to publicly acknowledge control over proxy forces.

7.3 Cyber Operations Stabilization

Both Parties commit to refrain from offensive cyber operations against the other's Category I and II critical infrastructure during the interim period: nuclear monitoring systems, banking settlement infrastructure, maritime navigation systems, humanitarian logistics networks, and medical supply chains. Category III infrastructure (general commercial systems) is not covered by this stabilization pledge.

ARTICLE VIII: JOINT VERIFICATION MECHANISM

8.1 The Joint Secretariat

A lean **Joint Secretariat** shall be established within 48 hours of signature, co-located in Geneva (primary) and Muscat (maritime backup). The Secretariat comprises:

- Two senior officers from each Party;
- One neutral chair (rotating among Switzerland, Oman, Pakistan);
- One IAEA technical liaison;
- One UN procedural observer.

8.2 Five-Channel Verification

Compliance is verified through five independent channels. No single channel's report is determinative. Convergence of at least three channels is required for any compliance determination:

1. **IAEA Technical Verification:** On-site inspectors, OLEM sensors, mass spectrometry, camera feeds;
2. **Neutral-State Naval Observation:** Omani naval observers log positions and movements of both Parties' forces;
3. **Commercial AIS/Satellite Tracking:** Lloyd's List, independent maritime monitors confirm Hormuz transit volumes;
4. **Financial Escrow Verification:** Swiss Financial Cell confirms asset transfers and humanitarian disbursements;
5. **Joint Secretariat Assessment:** Daily operational reporting from all Secretariat cells.

8.3 Three-Tier Breach System

The Accord employs a graduated breach response designed to prevent escalation from technical disputes to war:

Tier 1 — Technical Variance: Minor procedural deviations. Addressed through quiet diplomatic correction. No economic consequences. Examples: delayed reporting, inspector access scheduling disputes, minor telemetry anomalies.

Tier 2 — Material Disruption: Significant operational non-compliance. Triggers 14-day remediation window. Non-humanitarian benefits may be paused during remediation. Examples: enrichment above 3.67% detected, unauthorized HEU access attempt, interference with humanitarian transit.

Tier 3 — Deliberate Hostile Violation: Intentional, serious breach of core obligations. Triggers graduated suspension of Accord benefits and referral to Joint Secretariat emergency session. Examples: resumption of enrichment above 60%, kinetic attack on the other Party, removal of IAEA seals.

8.4 Cooling-Off Default

If disagreement occurs and attribution is unclear, all escalation freezes automatically for a mandatory 24-72 hour Cooling-Off Period. Neither Party may take escalatory action during this period. The Joint Secretariat investigates and recommends resolution within 72 hours.

ARTICLE IX: DURATION, REVIEW & GRADUATION

9.1 90-Day Interim Duration

This Accord enters into force upon signature and remains in force for an initial period of **90 days**. It may be extended by mutual written consent of both Parties for additional 90-day periods without limit.

9.2 Graduation Pathway

The express purpose of this Interim Accord is to create the stable conditions necessary for comprehensive peace negotiations. Within 30 days of signature, both Parties commit to commence good-faith comprehensive negotiations toward a permanent agreement addressing all outstanding issues: long-term enrichment parameters, permanent facility status, full sanctions relief architecture, regional security arrangements, and all other matters deferred by this Accord.

9.3 Automatic Graduation Trigger

If both Parties maintain green compliance status for 60 consecutive days, the Joint Secretariat shall convene a Graduation Conference to transition from this Interim Accord to a comprehensive framework. The Interim Accord provisions continue in full force until the comprehensive agreement enters into force.

9.4 Minimum Viable Core

Under all circumstances, including total Accord suspension, three elements survive: (a) the ceasefire hotline remains active; (b) the humanitarian corridor through Hormuz continues at zero cost; (c) the emergency diplomatic channel stays open for 180 days.

ARTICLE X: EMERGENCY DISPUTE RESOLUTION

10.1 Rapid Consultation

Any Party may request emergency consultation within 4 hours of any perceived violation. The other Party shall respond within 12 hours. Consultation occurs through the Joint Secretariat in Geneva or via the Omani-facilitated hotline.

10.2 Neutral Mediation

If direct consultation fails to resolve the dispute within 48 hours, the neutral chair of the Joint Secretariat (or the UN Secretary-General's representative) shall mediate. Mediation is non-binding but its recommendations are published and carry significant political weight.

10.3 No Unilateral Military Response

Neither Party shall undertake military action in response to a perceived breach without first exhausting the dispute resolution procedures in this Article, except in the case of verified imminent armed attack under Article 51. Premature military response forfeits the responding Party's next scheduled benefit tranche.

10.4 Reconstitution Commitment

If the Accord enters full suspension, both Parties commit to attend a Reconstitution Conference within 30 days, hosted by the neutral chair, to attempt restoration of the framework.

ANNEX A: IMPLEMENTATION SCHEDULE

Day	Iranian Action	U.S. Action	Verification
Day 1	Freeze enrichment above 3.67%; activate dual-lock custody at declared facility	Suspend offensive operations; release \$250M humanitarian tranche; freeze new sanctions	OLEM confirms freeze; Swiss escrow confirms transfer
Day 2	IAEA inventory and mass spectrometry verification	OFAC general license for civilian aircraft parts (90 days)	IAEA confirms isotopic composition
Day 3	Tamper-evident seals applied to HEU containers	—	IAEA confirms seals applied
Day 4	Dual-lock custody fully operational; all enrichment above 3.67% frozen	—	Joint Secretariat certifies Day-One compliance
Day 7	JTCC established at Bandar Abbas; PGSA operational coordination activated	Tranche 1 asset release (25%); naval forces to 5nm stand-off	JTCC operational; Swiss escrow confirms transfer
Day 14	Fordow sealed; non-Natanz enrichment infrastructure under IAEA seal	Agricultural/medical export licenses streamlined	IAEA certifies facility seals
Day 30	Comprehensive negotiation talks commence	Comprehensive negotiation talks commence	Joint Secretariat confirms talks active
Day 45	Continued clean compliance; Hormuz transit volumes at pre-crisis levels	Tranche 2 asset release (25%)	IAEA 30-day clean certification; Lloyd's List confirms transit
Day 60	—	—	Graduation Conference convened if 60 days green
Day 90	Interim period ends — extension, graduation, or renegotiation		

ANNEX B: DOMESTIC NARRATIVE GUIDANCE

Each Party requires a domestically defensible narrative. The following are factually accurate characterizations that both Parties may use:

FOR THE UNITED STATES

- **"Weapons-grade uranium secured."** Iran's entire 400 kg HEU stockpile is under international lock and key, with U.S. monitoring access.
- **"Single facility operation."** Iran operates only one enrichment facility. Fordow is under seal.
- **"Hormuz is open, tolls are suspended."** Global energy flows resume without Iranian extortion.
- **"50 percent of assets held in reserve."** Iran receives only what it earns through verified compliance.
- **"No reparations paid."** All releases are performance-gated, not liability-based.
- **"We didn't move alone."** Every U.S. concession was matched by simultaneous Iranian action.

FOR IRAN

- **"Sovereignty preserved."** The HEU never left Iranian soil. Facilities were not destroyed.
- **"NPT rights intact."** Enrichment to 3.67% continues. The limitation is interim, not surrender.
- **"PGSA recognized."** Iran's Strait Authority is acknowledged as the operational coordination body.
- **"Blockade lifted."** U.S. offensive operations cease. Ports reopen.
- **"Assets returning."** Half of frozen sovereign property released within 45 days.
- **"We moved as equals."** Every Iranian step was matched by simultaneous U.S. action.

SHARED MESSAGE

Both Parties may truthfully state: "We signed an emergency agreement that prevents war, secures the nuclear flashpoint, opens global energy flows, and delivers immediate humanitarian relief — while preserving our positions for the comprehensive negotiation."

INSTRUMENTS OF ACCEPTANCE

This Interim Crisis Prevention Accord is offered for signature as an emergency instrument.

It does not require legislative ratification. It enters into force upon signature by both Parties.

ENTRY INTO FORCE

This Accord enters into force immediately upon signature by the authorized representatives of both Parties. No domestic legislative approval is required for the interim 90-day period. The Accord is deposited with the UN Secretary-General upon signature and constitutes a binding international commitment.

In witness whereof, the undersigned, being duly authorized by their respective governments, have signed this Interim Crisis Prevention Accord.
