

DIPLOMATIC INSTRUMENT — STABILIZATION COMPACT

The Hormuz Stability Compact

A Regional Nonproliferation and Maritime Security Architecture

Reference: HSC-2026-v3.0 | Date: 22 May 2026

Supersedes: HSC-2026-v2.0 | Status: For Immediate Signature

Contents

POLITICAL FRAMEWORK

- Article I: Supersession Clause
- Article II: Breakout Impossible Standard
- Article III: Nuclear Civilian Conversion Lock
- Article IV: Maritime Safety and Deconfliction
- Article V: Economic Normalization
- Article VI: Security Architecture
- Article VII: Challenge Inspections
- Article VIII: Concealed Facilities Step-Back
- Article IX: Principles of Interpretation
- Article X: Proxy Force Containment
- Article XI: Rogue Actor Protocol
- Article XII: Entry into Force

TECHNICAL ANNEXES

- Annex A: Joint Secretariat

- Annex B: HEU Custody
- Annex C: Centrifuge Destruction
- Annex D: Fuel-Cycle Restoration
- Annex E: Maritime Deconfliction
- Annex F: Missile Transparency
- Annex G: Dynamic Deconfliction
- Annex H: Crisis Communications
- Annex I: Proxy Force Detail
- Annex J: Survivability Layer
- Annex K: Israel/GCC Reassurance
- Annex L: Economic Stabilization
- Annex M: Private Backchannels
- Annex N: Normalization Roadmap
- Annex O: Hourly Timeline
- Annex P: Emergency Off-Ramps

POLITICAL FRAMEWORK

This Framework constitutes the binding agreement between the Parties. Technical Annexes provide implementation detail. Heads of state sign here. Working groups execute the Annexes.

ARTICLE I: SUPERSESSION CLAUSE

This Compact establishes a new regional stabilization architecture for nonproliferation verification and maritime security. It supersedes all prior bilateral nuclear arrangements between the Parties. This Compact shall be known internationally as the Hormuz Stability Compact.

ARTICLE II: THE BREAKOUT IMPOSSIBLE STANDARD

At no point under this Compact may Iran possess sufficient fissile material, active cascades, or undeclared infrastructure capable of generating a nuclear breakout within twenty-four months.

Verified continuously by the IAEA. Any indication Iran approaches the threshold triggers Joint Secretariat consultation and, if unresolved within 14 days, graduated step-back under Article VIII. The 24-month standard is measured against IAEA-declared inventory, active cascade count, and verified LEU stockpile.

ARTICLE III: NUCLEAR CIVILIAN CONVERSION LOCK

3.1 HEU Custody. Iran's entire near-weapons-grade HEU inventory placed under extraterritorial custody within 72 hours (Annex B). Legal title in international escrow; physical custody by Oman-IAEA joint command; Iran retains procedural oversight. Material irreversibly downblended within 180 days to the IAEA LEU Bank, Kazakhstan.

3.2 Irreversible Civilian Conversion. Iran's nuclear facilities converted to civilian scientific infrastructure: 60–75% of advanced centrifuge rotors destroyed or exported under IAEA observation; remainder sealed under IAEA custody for potential civilian research. All facilities fitted with sealed tamper-resistant safeguards monitoring. Legal prohibition of any military or fissile-material production use. Facilities become medical isotope centers, research campuses, and safeguards training sites. Physical structures, scientific personnel, and institutional knowledge are preserved as irreversibly converted civilian scientific infrastructure.

3.3 Enrichment Renunciation and Dignity. Iran undertakes a long-duration renunciation of industrial-scale enrichment, enrichment above reactor grade, and independent fissile-material accumulation. Iran retains: reactor operation; medical and industrial isotope production; fuel fabrication from internationally supplied LEU; nuclear research and training. Iran may petition the Joint Secretariat for phased civilian fuel-cycle restoration under successor verification architecture, contingent upon sustained compliance. No enrichment above 3.67% for a minimum of twenty years. *Civilian Nuclear Dignity:* Nothing in this Compact shall be interpreted as denying Iran the sovereign right to peaceful civilian nuclear science under international safeguards.

3.4 Quantitative Caps. During the moratorium period: LEU stockpile capped at 300 kg at 3.67%; no more than 506 IR-1 first-generation centrifuges operational at Natanz; no cascade interconnection exceeding 30 machines; research and development cascades permitted only with 30-day IAEA advance notification and continuous monitoring.

3.5 No Enrichment Capability Preservation. Iran's nuclear infrastructure is recognized as irreversibly converted civilian scientific infrastructure, subject to continuous IAEA monitoring, from which no rapid military reconstitution is possible.

ARTICLE IV: MARITIME SAFETY AND DECONFLICTION

4.1 Toll Abolition. All unilateral commercial transit fees, tolls, and compulsory registration requirements by any Iranian entity as a condition of Hormuz transit are permanently abolished.

4.2 Maritime Infrastructure Contribution. A Multilateral Strait Environmental and Navigation Safety Assessment collected by the Joint Maritime Safety Board in Muscat under Omani authority, denominated in non-dollar currencies (Annex E).

4.3 No Recognition of Hormuz Control. This Compact does not constitute US recognition of Iranian authority, co-control, sovereignty, or special rights over the Strait of Hormuz. Transit rights governed exclusively by UNCLOS Article 37. The JMSB is a coordination body, not a sovereignty instrument. No Iranian veto over transit. No transit conditioning.

4.4 Wartime Interdiction Adjustment. The United States adjusts its maritime emergency restrictions in graduated phases linked to verified Iranian compliance (Annex E.4).

4.5 Anti-Mining and Commercial Immunity. Both Parties explicitly prohibit mining, sabotage, autonomous maritime attacks, and GPS spoofing in the Strait of Hormuz and adjacent international waters. Commercial civilian shipping shall not be targeted, detained, or impeded absent verified piracy, trafficking, or armed threat.

ARTICLE V: ECONOMIC NORMALIZATION

5.1 Sanctions Relief. Relieved in tranches linked to verified Iranian compliance milestones under the Hourly Telemetry Protocol (Annex O). Early tranches large and irreversible; late tranches conditional. No more than 25% of frozen assets released prior to Year 1 sustained compliance certification.

5.2 No-Fault Credits. All references to liability, reparations, damages, or war compensation are permanently excluded. Economic reconstruction is international commercial investment in regional stability (Annex L).

5.3 Sovereign Asset Protection. Released assets transferred to Central Bank of Oman under sovereign immunity and UNSC resolution, shielding from US court seizure (Annex J).

ARTICLE VI: SECURITY ARCHITECTURE

6.1 Dynamic Deconfliction. Temporary deconfliction corridors established upon verified HEU custody (Annex G). 48-hour strike notification; non-escalatory posture commitments. Not exclusion zones. US retains full freedom of navigation and adjusts force posture consistent with regional stabilization.

6.2 No Regime Change. The Parties affirm that this Compact is directed solely toward regional stabilization and nonproliferation objectives, not internal political transformation. Neither Party shall use Compact mechanisms to pursue the destabilization of the other's government.

6.3 Missile Transparency. Iran commits to missile production transparency: 2,500 km range cap for 24 months; annual production limits; serial-number registry, depot inspections, and production audits; prevention of destabilizing transfers of advanced systems (Annex F). US commits not to deploy additional missile defense in the Gulf for 24 months. All Parties commit to avoiding escalatory military deployments inconsistent with regional stabilization.

6.4 Defensive Doctrine. Nothing in this Compact prohibits conventional self-defense capabilities consistent with the UN Charter.

ARTICLE VII: CHALLENGE INSPECTIONS

7.1 Scope. The IAEA may conduct challenge inspections at any declared or suspected nuclear-related location with 24-hour notice, requiring IAEA Director-General authorization plus Swiss concurrence. Each challenge inspection requires an articulable credible technical basis tied to nuclear activities. Managed access with Iranian military liaison; national security carve-outs for non-nuclear military bases.

7.2 Confidentiality. All inspection data unrelated to nuclear activities shall be destroyed within 72 hours of collection. Nuclear-related data is compartmentalized, encrypted, and stored at the triple-node system (Geneva, Muscat, Vienna) described in Annex A. No espionage, intelligence collection, or non-nuclear information extraction is permitted under the inspection protocol. Violation of confidentiality by any inspector triggers immediate expulsion and Permanent Five notification.

7.3 Purpose. Designed as anti-war verification: transparency reduces justification for military action.

ARTICLE VIII: CONCEALED FACILITIES STEP-BACK

Discovery of undeclared enrichment, undeclared cascades, or fissile diversion triggers graduated step-back:

1. **Immediate:** Halt of next scheduled sanctions relief tranche (14-day hold);
2. **Day 3:** Joint Secretariat investigation (IAEA + Swiss verification);
3. **Day 7:** If confirmed, rollback one compliance tier (one tier only);
4. **Day 14:** Iran may earn back through re-permitting inspections, re-sealing, or returning material. Earn-back restores relief at 50% per verified corrective action;
5. **Day 30:** If Iran refuses cooperation, full tier rollback; Facilitating State requests emergency UNSC consultations.

Principle: Step-back, not snapback. Iran can always earn back. Total collapse requires sustained refusal, not a single finding.

ARTICLE IX: PRINCIPLES OF INTERPRETATION

9.1 Stabilization Preference. Interpretation favors preservation of ceasefire stability, continuity of humanitarian protections, and proportional remedial measures over total suspension wherever feasible.

9.2 Proportionality. No provision requires a response disproportionate to its triggering breach. Graduated step-back is the default; total suspension the exception.

9.3 Anti-Collapse. Where ambiguity exists between interpretation preserving Compact operations and one terminating them, the preserving interpretation prevails.

9.4 Renewable Architecture. This Compact is a renewable stabilization framework. All obligations are subject to scheduled review and successor architecture adaptation. Nothing herein is intended as permanent beyond the initial term, which shall be reviewed at 24-month intervals.

9.5 Definitions. "Material breach" = sustained, verified violation the Joint Secretariat determines substantially undermines a core obligation. "Compliance" = IAEA-certified adherence to applicable Annex specifications. "Military nexus" = direct, demonstrable connection to nuclear weapons development. "Non-state actor" = armed group not formally part of a UN-member state's military.

ARTICLE X: PROXY FORCE CONTAINMENT

10.1 Best Efforts. Iran shall use best efforts to prevent affiliated, aligned, or partner network non-state actors from engaging in offensive operations against US, Gulf, Israeli, or international maritime targets. Does not require Iran to admit command or control over any specific group. Defined as: transmitting deterrent messages; responding to confidential Joint Secretariat notifications within 24 hours; not providing material support for operations pre-identified as likely to trigger escalation.

10.2 72-Hour Attribution Review. No single proxy kinetic incident automatically constitutes material breach. Any such incident triggers a 72-hour Joint Secretariat attribution review before step-back activates. The review considers: intelligence sourcing; chain-of-custody evidence; Iranian cooperation; and proportionality.

10.3 De-escalation Channel. Iran commits to receiving confidential Joint Secretariat notifications when intelligence suggests imminent proxy operations, responding within 24 hours with preventive action or factual explanation (Annex I).

ARTICLE XI: ROGUE ACTOR PROTOCOL

11.1 No Automatic Breach. No single kinetic incident — radar lock, drone misunderstanding, accidental engagement, cyber incident, militia strike, or false flag — automatically constitutes material breach absent Joint Secretariat review.

11.2 Investigation. All incidents trigger automatic Joint Secretariat investigation within 4 hours. Timeline: 24 hours preliminary findings; 72 hours full evidentiary report. Both Parties freeze military responses during investigation.

11.3 Thresholds. State attribution requires: corroborated intelligence from two independent sources; physical or digital evidence; opportunity for accused Party to present counter-evidence. Absent this threshold, incident classified "unattributed" and does not trigger step-back.

11.4 Cooling. Following any kinetic incident, an automatic 72-hour cooling period activates. No retaliatory military action permitted. Step-Back Protocol may be invoked but not executed until cooling expires.

11.5 Force Majeure. In the event of leadership death, civil unrest, cyber blackout, or regional war expansion beyond the Parties' control, the affected Party may invoke Emergency Suspension for up to 30 days without breach status. HSLF, IAEA baseline monitoring, and 72-hour security freeze continue during Emergency Suspension. Extension beyond 30 days requires Joint Secretariat supermajority approval.

ARTICLE XII: ENTRY INTO FORCE AND REVIEW

12.1 Signature. This Compact enters into force immediately upon signature by authorized representatives. No legislative approval required for the initial 90-day period. Deposited with the UN Secretary-General. Technical Annexes incorporated by reference.

12.2 Review Conferences. Mandatory review summits every 24 months, hosted by the Facilitating State. Review conferences assess: compliance status; Annex implementation; regional security environment; and adaptation needs. Review conference outcomes may modify implementation schedules but require unanimous Joint Secretariat approval to modify core obligations.

12.3 Regional Stabilization Forum. The Parties shall convene an annual Gulf Security and Energy Coordination Conference open to all regional states, focused on maritime safety, energy market

stability, and environmental cooperation. Participation is voluntary and does not imply political recognition.

For the United States of America:

Name: _____ Date: _____

Facilitating State:

Sultanate of Oman

For the Islamic Republic of Iran:

Name: _____ Date: _____

Verification Partner:

Swiss Confederation

Political Framework ends. Technical Annexes follow.

TECHNICAL ANNEXES

Annex A: Joint Secretariat Structure

The Joint Secretariat comprises seven permanent officers and three rotating observers:

Table A-1: Secretariat Composition

Position	Origin	Role	Vote
Chair	Oman (rotating 2-year)	Procedural chair; tie-breaker; emergency convener	Deadlock only
US Senior Officer	United States	US interests; compliance monitoring	Full
US Technical Officer	United States	Technical verification; data analysis	Advisory
Iranian Senior Officer	Iran	Iranian interests; compliance monitoring	Full
Iranian Technical Officer	Iran	Technical verification; data analysis	Advisory
Swiss Verification Officer	Switzerland	Neutral verification; inspection concurrence	Full (verification only)
IAEA Liaison	IAEA	Nuclear technical advisor	Advisory

Rotating Observers: GCC state (rotating), EU, China. 12-month terms. Speaking rights; no vote. Receive all non-classified reports.

Table A-2: Decision Thresholds

Category	Required Vote	Examples
Unanimity	All 4 voting members	Total suspension; Annex modification; hostage escrow release
Supermajority	3 of 4	Compliance tier adjustment; relief tranche release; routine step-back
Majority	2 of 4 including Chair	Report publication; meeting scheduling; administration
Auto-Trigger	None	72-hour freeze renewal; HSLF continuity; hourly telemetry

Emergency Authority: Chair convenes emergency session within 4 hours. Decisions by supermajority (3 of 4). Total suspension requires follow-up unanimous vote within 72 hours.

Deadlock: After two voting rounds (minimum 48 hours apart), matter referred to International Arbitration Tribunal at The Hague (decision within 30 days). Status quo ante prevails during arbitration.

Data: All telemetry, inspection, and compliance data owned jointly by the Parties. Stored redundantly at Geneva, Muscat, and Vienna. No single node can delete or modify data without concurrence from at least one other node. Third-party access requires unanimous approval.

Dispute Escalation: Tier 1 (technical): 7 days. Tier 2 (verification): 14 days. Tier 3 (political): 30 days or arbitration. Tier 4 (existential): 60 days or Reconstitution Protocol (Annex P).

Annex B: HEU Extraterritorial Custody Protocol

Remove all near-weapons-grade HEU from Iranian territory within 72 hours without material entering US hands.

Option A: Immediate Dual-Key Extraterritorial Custody (IDKEC)

Iranian military C-130, IRGC escort, to INMCF at Duqm, Oman within 72 hours. Physical keys: Oman-IAEA joint command exclusively. US receives telemetry only. Iran holds legal "veto key" over security logs. Legal title in Swiss BIS escrow; disposition requires 2 of 3 (US, Iran, IAEA). Downblending within 30 days; completed within 180 days. LEU to IAEA LEU Bank, Kazakhstan.

Option B: In-Line Mobile Dilution (ILMD)

Swiss/Kazakhstan mobile processing vehicles at Shahid Rajaee Port. Material exits Iranian sovereignty immediately upon IAEA seal. Downblending on 96-hour accelerated timeline in international waters or Duqm. PEI protocol: vessel barred from clearing waypoints until Day 10 blockade triggers verified. If US defaults, material returns under international escort.

Option C: Tri-National Custody (TNC-CD)

Al Udeed facility, Qatar. Three-key: US (digital), Iran (physical), Qatar (procedural). Joint Destruction Commission over 12 months; Iran holds blocking minority. Month 12: automatic IAEA downblending if no decision. PEI overlay: Qatar as escrow node; 72-hour advance notification.

Annex C: Centrifuge Destruction and Conversion Lock

Visible irreversible dismantlement preserving personnel and structures.

Rotor Destruction: Iran destroys or exports 60–75% of advanced centrifuge rotors (IR-2m, IR-4, IR-6, IR-8) within 60 days under IAEA observation at Natanz and Fordow. Export option: IAEA LEU Bank in Kazakhstan. Remaining 25–40% sealed under IAEA custody for potential civilian research, subject to Joint Secretariat authorization.

Table C-1: Facility Conversion Lock

Facility	Civilian Conversion	Prohibited	Verification
Fordow	Medical Isotope Production (Mo-99, I-131)	Enrichment >3.67%; fissile storage; military activity	IAEA continuous; multinational review
Natanz	Nuclear Research and Training Campus	Industrial enrichment; cascade operation; HEU handling	Sealed verification; 90-day check
Isfahan	LEU Storage and Safeguards Training	HEU storage; reprocessing; weaponization R&D	Remote IAEA; blockchain log
Site 4	Geophysical Research Station	All fissile material; all enrichment	Environmental sampling; satellite
Site 5	Materials Science Laboratory	All fissile material; all enrichment	Managed inspections

Legal Lock: Each facility's conversion designation is legally binding. Inconsistent activity = Tier 2 breach. Enforceable through International Arbitration Tribunal at The Hague.

Sealed Verification Systems: Continuous sensor monitoring (temperature, pressure, electromagnetic, vibration) transmits encrypted data to IAEA nodes in Vienna and Geneva. Anomaly alert within 15 minutes. Permissioned blockchain log (Swiss and Omani nodes) creates immutable history.

Annex D: Civilian Fuel-Cycle Restoration Pathway

Twenty-year moratorium without automatic resumption triggers.

No Automatic Resumption. Iran may *petition* the Joint Secretariat for phased civilian fuel-cycle restoration. Granted only upon: IAEA clean compliance for 5 years; unanimous Joint Secretariat approval; successor verification with challenge inspections; confirmation Breakout Impossible Standard would not be compromised.

Japan-Without-Domestic-Enrichment. Iran operates as a nuclear fuel consumer state. Retains: reactor operation; isotope production; fuel fabrication from supplied LEU; research and training.

Renounces: enrichment above 3.67%; accumulation beyond 300 kg; more than one enrichment facility.

Option A: Sovereign Energy Guarantee (SEG-20)

20-year moratorium. US/Russia/China/France provide binding fuel supply guarantee backed by \$10B IAEA escrow. If consortium fails for 90 days, moratorium reduces to 10 years and Iran may petition for restoration.

Option B: Tiered Variable Duration (TVD-10-20)

Years 1–10: total suspension. Years 11–20: petition for 3.67% at Natanz only, 500 kg cap. Transition requires IAEA clean certification only. Material breach triggers 2-year extension; clean compliance beyond Year 8 triggers early petition review.

Option C: Performance-Linked Extension (PLAE)

Baseline 8 years, extendable by 2 years per year of IAEA-certified compliance, capping at 20. Extension requires affirmative JIG certification each year — not automatic. Material breach pauses at achieved duration.

Annex E: Maritime Deconfliction and Navigation Safety Assessment

Abolish unilateral tolls; establish multilateral coordination without sovereign recognition.

PGSA Downgrade. The Persian Gulf Strait Authority continues as an Iranian statutory body but is operationally integrated into regional maritime coordination. Public references use "regional maritime coordination bodies." PGSA participates in the Joint Maritime Safety Board as Iran's technical representative with no unilateral authority.

JMSB. In Muscat under Omani chair. Composition: Oman (permanent chair), US (permanent), Iran (permanent technical representative), GCC rotating, EU observer, China observer. Administers the Navigation Safety Assessment, coordinates patrols, operates distress response, publishes safety bulletins. Does not issue transit permits, levy unilateral fees, or deny passage.

Navigation Safety Assessment. Tier 1 (humanitarian/agricultural): zero assessment, 24-hour fast-track. Tier 2 (standard commercial): \$0.15/ton. Tier 3 (energy/VLCC): \$0.25/ton or \$35,000 flat. Revenue: 35% International Maritime Safety Fund; 35% Regional Environmental Remediation; 20% JMSB Operations; 10% US Naval Cost-Recovery to US Treasury.

Transit Rights. All vessel transit governed by UNCLOS Article 37. No denial based on nationality, cargo, origin, destination, or ownership. Israeli-flagged vessels receive identical treatment.

Wartime Interdiction Adjustment. Five phases: Phase 1 (Day 1): Iran freezes enrichment above 60%; US exempts HSLF vessels. Phase 2 (Day 7): Iran opens Hormuz to JMSB humanitarian transit; US reduces interdiction 50%. Phase 3 (Day 14): HEU under custody; US suspends aerial surveillance. Phase 4 (Day 21): JMSB checkpoint control; US adjusts force posture. Phase 5 (Day 30): Full interdiction lift. Iran moves first each phase; US responds after verification.

Annex F: Missile Production Transparency

Address proliferation concerns without total dismantlement.

Range Cap. Iran commits not to produce, test, or deploy ballistic missiles exceeding 2,500 km for 24 months. Existing missiles above 2,500 km mothballed under IAEA-style seal with GPS tamper sensors. Sub-2,500 km production unrestricted. The 2,500 km cap preserves Iran's regional deterrence while addressing concerns about reach to European territory.

Annual Production Limits. Ballistic missiles: max 40/year. Cruise missiles: max 60/year. Long-range combat drones: max 100/year. Short-range ISR drones: no limit. Reported quarterly to Joint Secretariat.

Serial-Number Registry and Audits. All missiles and combat drones produced after signature fitted with non-removable serial numbers at manufacture. Registry maintained by Joint Secretariat includes: production date; facility; range class; and depot location. Random depot inspections by IAEA-like mobile teams verify registry accuracy. Production audits conducted semi-annually. Continuous GPS location tracking is not required; depot verification and production audits provide sufficient transparency.

Transfer Commitment. Iran commits to preventing destabilizing transfers of advanced missile and drone systems. All state-to-state transfers require 14-day advance notification and entry in public Transfer Registry. The Compact does not require Iran to accept sweeping prohibitions on all non-state engagement; rather, Iran undertakes best efforts to prevent destabilizing transfers of advanced systems to armed groups.

US Reciprocal. US commits not to deploy additional missile defense in the Gulf for 24 months. All Parties commit to avoiding escalatory military deployments inconsistent with regional stabilization. Existing assets remain.

Annex G: Dynamic Deconfliction Corridors

Iranian security reassurance without permanent exclusion zones.

Temporary Corridors. Established upon verified HEU extraterritorial custody. Not exclusion zones — coordination mechanisms to prevent inadvertent escalation during the 90-day interim.

Strike Notification. US commits to 48-hour advance notification to Joint Secretariat (which immediately notifies Iran) of any kinetic strike within 100 nm of Iranian territorial waters. Applies to offensive strikes only, not patrols, escorts, or defensive responses. Emergency defensive operations exempt.

Non-Escalatory Posture. During 90-day interim: no additional forces deployed; no large-scale exercises within 50 nm of the other's territory; no cyber operations against critical infrastructure; no snap inspections at sea. Verified through satellite and AIS monitoring.

Termination. Corridors expire automatically at end of 90-day interim, or upon IAEA certification that all HEU downblended. Either Party may terminate early with 14-day notice if other Party commits Tier 2 breach.

No Surrender of Naval Freedom. Temporary confidence-building measures, not permanent restrictions. US retains full rights to operate naval forces in international waters. Corridors create transparency; they do not create exclusion.

Annex H: Crisis Communications and Deconfliction Protocol

Prevent single incidents from collapsing the Compact through miscommunication.

CENTCOM-Iran Hotline. Dedicated encrypted military-to-military line between CENTCOM Forward (Al Udeid) and Iranian Armed Forces General Staff (Tehran). Operated 24/7 by bilingual officers. Daily testing at 0600 and 1800 GMT. Failure to respond within 15 minutes triggers Joint Secretariat notification.

Naval VHF Channels. Three dedicated channels for Persian Gulf, Strait of Hormuz, and Gulf of Oman. Monitored by US 5th Fleet and Iranian Navy. All communications recorded and archived at JMSB Muscat for 90 days.

Emergency Airspace Coordination. Pre-deconflicted air corridor grid. Military aircraft file flight plans with Joint Air Coordination Cell in Muscat 2 hours before operations. Emergency sorties exempt but must notify Cell upon launch.

Cyber Incident Reporting. Dedicated hotline between US Cyber Command and Iran's National Cyberspace Center. Reports trigger 48-hour joint technical investigation by Swiss Verification Officer and both technical officers. Retaliatory cyber operations during investigation prohibited.

Accidental Engagement. Any kinetic exchange triggers automatic five-step procedure: (1) Both forces disengage immediately; (2) Hotline activated within 15 minutes; (3) 72-hour cooling period begins; (4) Joint Secretariat convenes within 4 hours; (5) Both Parties freeze military operations in incident area. No retaliation until investigation complete. Applies even if one Party believes incident was deliberate.

Annex I: Proxy Force Containment Detail

Address the most likely real-world spoiler: militias, proxies, and aligned armed groups.

Best Efforts Framework. Iran shall use best efforts to prevent affiliated, aligned, or partner network non-state actors from engaging in offensive operations against US, Gulf, Israeli, or international maritime targets. Does not require Iran to admit command or control. Defined as: transmitting deterrent messages through available channels; responding to Joint Secretariat confidential notifications within 24 hours; not providing material support for operations pre-identified as likely to trigger escalation.

72-Hour Attribution Review.

- **Hour 0–4:** Joint Secretariat convenes; both Parties submit intelligence;
- **Hour 4–24:** Preliminary attribution by Swiss Verification Officer using corroborated intelligence from two independent sources;
- **Hour 24–72:** Full evidentiary report; Iranian rebuttal; proportionality assessment;
- **Hour 72:** Determination: (a) attributed with evidence = step-back one tier; (b) attributed without conclusive evidence = 14-day observation; (c) unattributed = logged, no step-back.

De-escalation Channel. Joint Secretariat operates confidential notification system. When intelligence suggests imminent proxy operations, Chair confidentially notifies Iranian Senior Officer. Iran has 24 hours to respond: (a) preventive action taken; (b) factual explanation disputing intelligence; (c) request for clarification. Channel is not public and its existence is not acknowledged in official statements.

Escalation Ladder. First attributed incident (90 days): 14-day hold on next tranche + confidential note. Second: 30-day hold + CI reduction 10 points. Third: rollback one full tier + public report. Fourth: referral to UNSC consultations. Sustained 180-day clean period: 10-point CI bonus + expedited next tranche.

Annex J: Congressional and Majlis Survivability Layer

Ensure Compact durability survives elections, parliamentary attacks, and leadership transitions.

Multilateral Escrow. All frozen Iranian assets released through Central Bank of Oman under contracts governed by Swiss and Omani law, not US domestic law. Contracts include liquidated damages clauses penalizing unilateral withdrawal. A future US administration cannot "tear up the deal" without violating binding commercial contracts enforceable in Swiss courts.

Fuel Guarantees. The Sovereign Energy Guarantee (Annex D, Option A) is multilateral: US, Russia, China, France. If a future US administration withdraws, the other three remain bound. \$10 billion IAEA escrow pre-funded; cannot be frozen by any single guarantor.

Private Insurance. Lloyd's of London reinsurance backstop (\$20 billion) is a private commercial contract between Lloyd's, Omani Sovereign Wealth Fund, and US DFC. Not government-to-

government. Private insurers have profit incentives to maintain coverage regardless of politics.

World Bank Inertia. International Gulf Reconstruction Fund administered by World Bank. Once projects are approved and contractors hired, reversal requires formal World Bank Board action involving 189 member countries.

Commercial Maritime Contracts. Priority transit agreements for US-flagged vessels are commercial contracts enforceable under English law in DIFC. Future US administrations benefit (shipping companies earn money) and face domestic commercial pressure to maintain them.

Arbitration. All Compact obligations include pre-agreed arbitration clauses at The Hague. Binding under New York Convention (165 signatory states). Defection faces binding judgment and asset seizure risk in 165 jurisdictions.

Continuity Reserve. \$500 million pre-funded at signature (\$250M each Party), held in Swiss escrow. If either Party unilaterally suspends, Reserve finances 90 days of continued humanitarian operations, IAEA monitoring, and Joint Secretariat functions.

Annex K: Israel and GCC Quiet Reassurance

Address fear of sidelining that could drive regional sabotage, without making Israel or GCC states signatories.

Confidential Observer Status. Israel and up to three GCC states (rotating) receive confidential observer status with the Joint Secretariat. All non-classified compliance reports shared 24 hours after transmission to full members. Clarification requests through Swiss Verification Officer. No attendance at confidential sessions.

Maritime Intelligence Fusion. JMSB operates shared maritime intelligence fusion cell in Muscat. Israel and all GCC states may contribute AIS data, satellite imagery, and naval intelligence. Contributions anonymized before sharing with Iran. Weekly maritime security assessments published.

Missile Telemetry Summaries. Iran's missile transparency data (ranges, production numbers, serial registry) summarized in quarterly reports shared with Israel and GCC observers through Swiss Verification Officer. Raw data not shared; aggregated trends only.

Red Sea Deconfliction. Crisis Communications Protocol (Annex H) extended to Red Sea. Dedicated coordination channel links JMSB with Israeli Navy and Egyptian Navy for Bab el-Mandeb transit.

Advance Notice. US commits to 48-hour advance notice to Israel and key GCC allies of significant Compact milestones through existing intelligence channels.

Non-Signatory. This Annex is a reassurance mechanism, not binding on Israel or GCC states. Participation is voluntary and revocable.

Annex L: Economic Shock Stabilization

Position the Compact as global stability architecture, not merely an Iran nuclear arrangement.

Energy Stabilization. International Energy Stabilization Fund (IESF) at World Bank: \$5 billion initial capitalization (US \$2B, EU \$1.5B, China \$1B, Japan \$500M). Auto-activates when Brent crude exceeds \$100/barrel for 5 consecutive days. Triggers: coordinated SPR releases; emergency tanker routing; shipping insurance subsidies.

Shipping Insurance. Hormuz Shipping Insurance Guarantee (HSIG): up to \$20 billion reinsurance. Underwritten by Lloyd's, Swiss Re, Omani Sovereign Wealth Fund. Covers commercial insurance premium excess above 1% of cargo value.

Maritime Risk Certificates. JMSB issues certificates to vessels with verified AIS, insurance, and documentation. Entitles vessels to: priority distress response; coordinated naval escort if

requested; automatic insurance premium discounts.

Fertilizer Reserve. \$2 billion Agricultural Input Emergency Reserve at FAO. If fertilizer prices exceed \$800/ton for 10 consecutive days, Reserve releases pre-positioned stockpiles (Jordan, Oman, India) at subsidized prices.

Debt Monitoring. IMF monitors sovereign debt in Iran, Iraq, Lebanon, and Jordan. If Compact-related uncertainty causes spreads to widen beyond 300 basis points, IMF automatically convenes emergency financing review.

Annex M: Private Diplomatic Backchannels

Real agreements survive through quiet channels. This Annex formally institutionalizes emergency intermediaries.

Omani Channel. The Sultanate of Oman serves as the primary confidential intermediary for all Compact-related communications requiring discretion. The Omani Foreign Minister or designated representative may convey messages, proposals, and clarifications between the Parties without formal diplomatic protocol. Messages transmitted through the Omani Channel have the same standing as formal diplomatic notes for purposes of Compact interpretation.

Swiss Channel. The Swiss Confederation serves as the verification and escrow intermediary. The Swiss Federal Council or designated representative may: convey technical verification concerns; mediate escrow disputes; and facilitate confidential clarifications on financial matters. The Swiss Channel operates in parallel to the Omani Channel and may be used when financial or technical matters require neutral expertise.

Qatari Channel. The State of Qatar serves as the humanitarian and commercial intermediary. The Qatari Foreign Minister or designated representative may: facilitate confidential discussions on humanitarian corridor operations; mediate commercial transit disputes; and convey non-political technical clarifications. The Qatari Channel is particularly suited to matters involving the JMSB and maritime operations.

Channel Integrity. All three channels operate under strict confidentiality. Neither Party may disclose the content of backchannel communications without the consent of the other Party and the facilitating state. The existence of the channels is acknowledged in this Annex but their operational details (specific individuals, communication methods, meeting locations) are not documented in any circulated text and are known only to the designated representatives.

Emergency Activation. Any Party may activate any channel by contacting the Joint Secretariat Chair, who notifies the relevant facilitating state within 2 hours. Channel activation does not constitute formal dispute invocation and does not trigger public reporting requirements.

Annex N: Phased Normalization Roadmap

Provide a concrete trajectory for full normalization beyond sanctions relief, helping Iran sell the deal internally.

Table N-1: Normalization Phases

Phase	Timing	Sector	Normalization Measure
1	Day 1–7	Humanitarian	Food, medicine, agricultural machinery licenses; HSLF activation
2	Day 7–30	Aviation	Civilian aircraft parts; air safety equipment; limited overflight permissions
3	Day 30–90	Banking	Consolidation-bank SWIFT gateway; correspondent banking with Oman/Qatar
4	Day 90–180	Petroleum	Petroleum sales to pre-approved customers; petrochemical exports; shipping insurance normalization
5	Month 6–12	Commerce	Automotive parts; textiles; metals and minerals; general commercial licenses
6	Month 12–18	Academic	University exchanges; scientific collaboration; medical research partnerships; nuclear safeguards training
7	Month 18–24	Civil Nuclear	Reactor fuel supply contracts; isotope export agreements; IAEA technical cooperation expansion
8	Year 2+	Comprehensive	Full secondary sanctions review; diplomatic facility normalization; regional security dialogue

Auto-Advancement. Each phase advances automatically upon IAEA certification of sustained compliance at the previous phase. No renegotiation required. If compliance concerns arise, advancement pauses at the current phase until resolved — does not roll back already-completed phases.

Annex O: Hourly Telemetry Timeline

Synchronize acute-phase actions into telemetry-verified hourly triggers.

Table O-1: Day 1: Security Freeze and HSLF Activation

Hour	Iranian Action	US Action	Verification
H00	Freeze enrichment >60%; IAEA seals on Fordow cascades	Telemetry link activated; Swiss/Pakistani monitoring online	IAEA seal confirmation + handshake
H02	Confirm cascade shutdown; OLEM freeze verification	\$250M humanitarian to Swiss escrow; OFAC ag export licenses	Swiss Cell confirms
H04	IRGC craft withdraw to 5nm anchorage; AIS on	Adjust maritime emergency restrictions; HSLF corridor authorized	Omani naval observers; Lloyd's List
H06	Centrifuge rotor destruction begins at Natanz under IAEA	Suspend new sanctions designations; freeze OFAC enforcement	IAEA rotor destruction verification
H08	First HSLF vessel (UN-flagged grain carrier) through Hormuz at zero cost	Release \$5B to Oman escrow; aircraft parts license	WHO transit logs + Omani port
H10	HEU transport boards at Isfahan; Iranian Guard escort	Strike-notification restriction activated	Pakistani satellite confirmation
H12	HEU aircraft clears Iranian airspace; deconfliction corridors live	Confirm corridor parameters; transmit to Joint Secretariat	Swiss telemetry confirms lock
H18	HEU arrives Duqm/Qatar; IAEA seal transfer confirmed	Reduce maritime emergency restrictions 25% for HSLF cargo	Omani receipt; IAEA spectrometry
H24	Day 1 compliance report to Joint Secretariat	Day 1 compliance report to Joint Secretariat	Joint Secretariat publishes D1 Report

Table O-2: Days 3–30: Custody Consolidation and Economic Opening

Day	Iranian Action	US Action	Verification
D3	Custody operational; 30% of advanced rotors destroyed	Reduce maritime emergency restrictions 50%	IAEA custody + rotor report
D5	HEU crosses Iranian border; PEI waypoint 1	Sanctions waivers for maritime insurance	Swiss PEI node confirms
D7	JMSB operational cells activated	Release Tranche 1 (\$5B); reduce restrictions 75%	JMSB certification
D10	PEI clearance; transport to final destination	Adjust force posture consistent with stabilization	Pakistan + Oman telemetry
D14	Full Hormuz open; UTC system live	Full adjustment of maritime emergency restrictions; SWIFT Phase 1	Lloyd's List volume cert
D30	30-day clean compliance; 60%+ rotors destroyed	Authorize petroleum sales; release \$15B	IAEA 30-day report

Annex P: Emergency Off-Ramps

Off-Ramp Alpha: 72-Hour Auto-Renewing Security Freeze

The ceasefire operates as a self-renewing 72-hour module. If verification teams report compliance at Hour 71, the module auto-renews. Only a written 48-hour notice of non-renewal from either Party to the Joint Secretariat can terminate the freeze. This off-ramp survives total Compact collapse and operates independently of all other provisions. Even if every annex fails, the 72-hour freeze continues auto-renewing until explicitly terminated.

Off-Ramp Beta: Humanitarian Supply Line Firewall (HSLF)

The humanitarian corridor through the Strait of Hormuz and the agricultural supply line from Aqaba/Bandar Abbas operate at zero cost, with zero inspection delay, for all vessels carrying WHO/FAO-verified humanitarian and agricultural cargo. The HSLF continues regardless of any dispute, breach, suspension, or total Compact collapse. It is legally non-divertible. UN OCHA/WHO/FAO administrators hold sole disbursement authority. No Party may restrict, tax, or inspect HSLF vessels. Even in total war, food and medicine flow.

Off-Ramp Gamma: Emergency Reconstitution Protocol

If the Compact enters full suspension, both Parties commit to attend a Reconstitution Conference within 14 days, hosted by Oman, with mandatory participation. Either Party's refusal to attend triggers the Facilitating State immediately requesting emergency UN Security Council consultations. The Conference has a single agenda: restoration of the minimum viable core (ceasefire + HSLF + IAEA baseline monitoring). A \$50M escrow, pre-funded by both Parties at signature and administered by Switzerland, finances the Conference regardless of dispute status. The escrow cannot be frozen by either Party.
