

CONFIDENTIAL -- FOR AUTHORIZED NEGOTIATORS ONLY

Stability First Accord

Negotiator's Field Brief
5-Minute Reference for Active Negotiation

Version 1.0 | May 2026

Derived from Stability First Accord v1.0 (69 pp.)

Keep this document open at the negotiating table.

The Deal in Two Minutes

What This Is

A **three-stage, 180-day framework** that ends the US-Iran war, reopens the Strait of Hormuz, and resolves the nuclear question through synchronized reciprocal exchange. Neither side moves alone. Every commitment is matched.

Core Trade

The Single Sentence

Iran transfers its weapons-grade stockpile to IAEA custody in Oman and accepts a 12-year civilian enrichment ceiling in exchange for the immediate opening of Hormuz under joint authority, lifting of both blockades on Day 7, return of frozen sovereign assets in irreversible tranches, and permanent Iranian co-governance of the Strait.

What the US Gets (Headlines)

- **Hormuz reopened Day 7** -- gas prices begin falling within weeks
- **Weapons-grade stockpile in IAEA custody Day 14** -- verified by mass spectrometry
- **12-year enrichment moratorium** -- violation adds 2 years automatically
- **Fordow converted to medical-isotope center Day 60**
- **No basing concessions** -- all Gulf bases preserved
- **Congressional oversight on all asset tranches**

What Iran Gets (Headlines)

- **War ends Day 1** -- permanent bilateral ceasefire
- **US naval blockade lifted Day 7** -- synchronized with Hormuz reopening
- **Permanent IHTA governance seat Day 90** -- co-equal with US
- **\$200M/year reconstruction revenue** -- from IHTA tolls
- **Frozen assets returned:** \$250M Day 1; 50% by Day 60; 85% by Day 180
- **NPT rights preserved** -- 3.67% enrichment resumes after moratorium
- **Missile program untouched** -- deferred to successor framework

Three Stages at a Glance

STAGE	DAYS	GOAL	CLOSING TRIGGER
1: The Opening	1-14	End war; transfer stockpile; reopen Hormuz; lift both blockades	200+ vessel transits; IAEA custody verified
2: The Exchange	15-60	Nuclear moratorium; Fordow conversion; sanctions relief; SWIFT	Nuclear exchange verified; 50% assets returned

3: Permanent Architecture 61-180 IHTA treaty; regional security dialogue; IHTA ratified; 85% assets returned
successor framework

Day-by-Day Sequencing Matrix

Rule: Neither side moves alone. Every Iranian commitment is matched by a US commitment on the same day or the next.

DAY	US MOVES	IRAN MOVES
1	Suspend Project Freedom; cease offensive ops; issue \$250M OFAC license; confirm Sovereign Energy Partnership framing	Cease offensive ops; initiate stockpile transfer to IAEA Oman custody; transmit Hezbollah pause; transmit Houthi pause
3	OFAC humanitarian license issued (medicine, food, aviation parts)	First humanitarian-flagged vessel cleared for Hormuz transit
7	Lift naval blockade; transition Project Freedom assets to JHA convoy support	Open Hormuz to commercial transit; withdraw IRGC small craft from central corridor; commence mine-clearing
14	Stage 1 Closing -- both blockades lifted, 200+ transits, IAEA custody verified	
15	Welcome IAEA full redeployment under Partnership terms	Issue IAEA invitation for declared sites; continuous monitoring installed
30	First sanctions tranche operative; process second asset tranche; 30-day Congressional notification	Declare and verify 3.67% civilian moratorium; idle higher-enrichment centrifuges under IAEA seal
45	JHA transitions to operating mode; Tier 1 and Tier 2 tolling active; first toll revenue to Iranian Civilian Reconstruction Fund	
60	Process third asset tranche (cumulative 50%); commence SWIFT reconnection	Fordow conversion verified; host International Medical Isotope Summit; IHTA Tier 3 tolling active
75	Regional Security Dialogue opens -- bilateral teams convene in Geneva	
90	Permanent IHTA activated -- treaty ratified; UN neutral chair appointed; first chair rotation	
120	Fourth asset tranche (20%; cumulative 70%); Stage 3 sanctions (petrochemicals, oil services)	Confirm moratorium maintenance; IAEA annual review clean
150	Section 123 Agreement (civilian fuel supply guarantee) negotiation framework opened	
180	Fifth asset tranche (15%; cumulative 85%); successor framework opened	Confirm Stage 3 closing compliance; RCSA/Crescent Compact opened

Critical Note on Verification

Every milestone requires **concurrent certification** from at least two of: Pakistan (political), Oman (technical/maritime), Switzerland (financial), IAEA (nuclear). No single channel can trigger or block compliance findings.

Deadlock Bypass Matrix -- For Mediators

When negotiators say "we cannot accept this," the response is never "talks are over." The response is: "Pathway A does not work -- let us pull Pathway B from the Annex."

Deadlock 1: The Enrichment Stalemate

The Trap

US demands 20 years or permanent zero enrichment. Iran demands 5 years and refuses to surrender NPT rights.

The Bypass: 12-year cap at 3.67%, framed as a "Sovereign Energy Partnership" (not a concession). Automatic 2-year extension per breach satisfies US enforcement needs.

Mediator Script: "This is not Iran giving up enrichment. This is Iran choosing civilian energy leadership. The 12 years is a sovereign commitment, not surrender. And every violation auto-extends -- the enforcement is built in."

Deadlock 2: The HEU Custody Fight

The Trap

US demands all 60% uranium be transferred to the US or destroyed. Iran calls this "handing it to the enemy."

The Bypass: IAEA Third-Country Custody in Oman. Material physically leaves Iran (US win). Iran retains sovereign ownership in a neutral Muslim nation (Iranian win).

Mediator Script: "The material is not going to America. It is going to Oman, under IAEA control. Iran chose the location. Iran retains ownership. It is held in trust, not confiscated. For the US, weapons-grade material leaves Iranian territory."

Deadlock 3: Who Moves First?

The Trap

US will not lift blockade until Hormuz is open. Iran will not open Hormuz until blockade is lifted.

The Bypass: The Waltz Protocol. Day 7 at 0000 GMT, both lifts declared operative simultaneously, monitored by joint Omani/UN observation vessels.

Mediator Script: "Nobody moves first. Both moves are operative at the exact same moment. If either side fails to lift, the other side's obligation auto-suspends. No unilateral exposure."

Anti-Walkaway Mechanisms

MECHANISM	FUNCTION	DURATION
72-Hour Cooling-Off	No escalatory response after any incident. JIG takes over fact-finding.	72 hours minimum
Stabilization Hold	Stage 1 stays frozen even if Stage 2 deadlocks. War does not restart over banking disputes.	90 days per hold; max 2 per stage
150-Day Inertia Buffer	No snapback can take effect for 150 days after notification.	150 days mandatory
Emergency Ambiguity	Neutral chair can delay compliance assessments or issue ambiguous statements to prevent escalation.	Up to 14 days

Priority Mechanisms -- Activation Order

Implement these in sequence. Each creates the political and economic conditions for the next.

#	MECHANISM	DAY	WHY IT MATTERS
1	Ceasefire + \$250M Pilot Release	1	Immediate visible win for Iran; creates US interest in completion
2	Synchronized Dual Blockade Lift	7	The single most important mechanical element. Neither side moves first.
3	Humanitarian Zero-Toll Fast Track	1	Insulated from all snapbacks. Civilian benefit creates political inertia.
4	Oil-Price Stabilization (SPR + Insurance)	7	Visible fuel-price relief politicians can claim credit for
5	Stockpile Transfer to Oman IAEA Custody	1	Physically irreversible. Weapons-grade material leaves Iran.
6	No Regime Change Understanding	1	Politically huge for Iran. Lowers existential resistance.
7	12-Year Moratorium + Auto-Extension	30	Iran frames as sovereign commitment; US gets built-in enforcement
8	IHTA Permanent Treaty	90	Iran gets permanent co-governance seat; US gets freedom-of-navigation guarantee
9	Fordow IMIRC Conversion	60	Weapons facility becomes cancer-treatment center. Striking it attacks global patients.
10	Asset Return Tranches (Irreversible)	1-180	First 50% is non-reversible. Creates mutual interest in completion.
11	Five-Channel Verification	1	No single channel controls compliance. Convergent evidence required.
12	Consumer Relief Timeline	7	Abstract diplomacy becomes kitchen-table economics
13	BRICS+ Guarantor Layer	30	Dilutes "Western-imposed" narrative

14	Regional Security Dialogue	75	Opens missile and proxy discussion without bundling into main accord
15	Generational Declaration	Pivot 90	Camp David-level legacy framing. Elevates accord beyond crisis management.

Crisis Protocols and Framing

If an Incident Occurs

1. **First 72 hours:** No escalatory action permitted by either side. Period.
2. **Notify JIG immediately:** Geneva hotline operates 24/7. All channels notified simultaneously.
3. **JIG fact-finding:** Pakistani guarantor backchannel + Omani technical assessment + IAEA if nuclear-related.
4. **Technical Discrepancy Panel convenes within 72 hours.** Neutral experts from Switzerland, Brazil, Sweden, Singapore, Oman.
5. **No unilateral action during review.** Self-defense rights preserved only for active armed attacks in progress.

Critical Phone Numbers / Contacts

ROLE	LOCATION	FUNCTION
Pakistani Guarantor	Islamabad	Political channel; crisis facilitation; attribution
Omani Technical Channel	Muscat / Khasab	Maritime operations; JHA secretariat; hotline
Swiss Financial Channel	Geneva / Bern	Asset transfers; escrow; banking reconnection
IAEA Director General	Vienna	Nuclear verification; stockpile custody; monitoring
JIG Secretariat	Geneva	Central coordination; dispute resolution; compliance scoring
Maritime Coordination Cell	Khasab, Oman	24/7 Hormuz transit operations; incident response

Diplomatic Framing Cheat Sheet

ELEMENT	US SAYS	IRAN SAYS
Stockpile to Oman	"Weapons-grade material removed from Iran"	"Sovereign asset held in trust; we chose Oman"
12-year moratorium	"12-year moratorium with auto-extension"	"Time-limited sovereign commitment; NPT rights intact"
Fordow conversion	"Most sensitive facility permanently neutralized"	"Iranian scientists lead world-class medical research"
IHTA governance	"International authority prevents unilateral closure"	"Permanent co-equality replacing US unilateralism"
Asset return	"Tranche architecture with Congressional oversight"	"Irreversible return of sovereign property"

Synchronized lift	"Iran lifts with us -- neither moves alone"	"US lifts with us -- synchronized reciprocity"
Verification	"Five-channel verification prevents cheating"	"Multi-source; no single power controls findings"

Headlines for Each Party

PARTY	HEADLINE
US	"Freedom of Navigation Secured -- Without Firing a Shot"
Iran	"Sovereign Equality Recognized -- Ending Decades of Unilateralism"
Gulf	"Regional Stability Leadership -- \$5B Investment Fund Activated"
Europe	"Multilateral Diplomacy Restored -- 40-Nation Coalition Institutionalized"
Pakistan	"Historic Mediation Success -- Primary Guarantor Role Confirmed"
Oman	"Permanent Institutional Centrality -- IHTA Secretariat in Muscat"

Final Reminder

This brief is derived from the full Stability First Accord v1.0 (69 pages, 45 mechanisms, 57 tables). For module details, verification specifications, economic architecture, and full legal text, consult the complete document. This brief is for rapid reference at the negotiating table -- not a substitute for the full instrument.
