

THE CRESCENT COMPACT

Diplomatic Executive Summary

COMPANION TO THE FULL TREATY TEXT — VERSION 1.7

WHAT IS THIS DOCUMENT?

This is the 10-minute briefing version of the Crescent Compact — a comprehensive Middle East peace framework. This document strips the mechanics and keeps only what political leaders, parliamentary briefers, and senior diplomats need to answer three questions: What does my side gain? How does it work in plain terms? What happens if something goes wrong?

① What Every Party Gets — The Political Wins	Pages 2–4
② How The Compact Works — The Crescent Cycle in Plain Terms	Page 5
③ If This Happens, Then That Happens — Consequence Reference Card	Pages 6–7
④ The Architecture at a Glance — Core Frame vs. Progressive Arches	Page 8
⑤ Diplomatic Safety Valves — What Leaders Can Control	Page 9
⑥ The Case for Signing — One Page Per Party	Page 10

① What Every Party Gets — The Political Wins

The Compact is designed so that every signatory can stand before their parliament within 90 days of signing and point to a concrete, visible, domestically defensible win. No party is asked to defend a concession without pointing to an equal reciprocal gain delivered on the same timeline. Below are the headline wins for each major party, framed in politically usable language.

IRAN — What Tehran Gains

- 100% of frozen sovereign assets returned with interest — permanent, irreversible once released
- Formal recognition of Iran's sovereign right to peaceful nuclear energy under the NPT
- U.S. force-use restraint: no military strikes on Iranian territory during verified compliance
- Fordow converted to an international medical isotope center — \$200M/year revenue by Year 10
- 15-year oil sanctions moratorium — 25% of new South Pars and Azadegan contracts open to competition
- Proxy wind-down on a 3-year timeline — not immediate disarmament
- Missile sovereignty explicitly preserved in the Core Frame
- IMCA permanent seat — recognized role in regional maritime governance
- Civilian nuclear energy guaranteed independently of Senate politics via Section 123 bridge

UNITED STATES — What Washington Gains

- Iranian non-proliferation legislation criminalizing nuclear weapons development (20-year penalties)
- Enrichment suspended to 3.67% with IAEA full verification and dual-key dilution of existing stockpile
- Challenge inspections anywhere with plausible nuclear activity — 25/year in enhanced mode
- 15-year oil market access for U.S. firms in major Iranian energy fields
- Proxy wind-down milestones — verified cessation of IRGC weapons flows to regional proxies
- Houthi shipping attack enforcement: targeted personal sanctions on decision-makers
- Saudi defense cooperation pact and civilian nuclear 123 Agreement
- Presidential Policy Directive architecture: no Senate treaty consent required
- Congressional Continuity Shield: supermajority required to override executive Compact authorities

ISRAEL — What Jerusalem Gains

- Permanent Non-Aggression Treaty with Lebanon, registered under UN Charter Article 102
- International Attack Attribution Tribunal — independent forensic attribution of all attacks
- Fast-Track Self-Defense Carve-Out: 24-hour proportional response during active multi-vector attack
- Iran–Israel Managed Non-Belligerence Protocol: Iran ceases elimination rhetoric
- Hezbollah operational constraints: weapons registration, JSRZ limits, SIWST confiscation
- Saudi–Israeli normalization pathway: full diplomatic recognition at Step 2, Abraham Accords at Step 3
- Blue Line demarcation roadmap: definitive boundary registered with UN Secretariat
- UNIFIL modernization: UAV surveillance, ground sensors, Chapter VI+ direct UNSC reporting

- Equal-weighting co-vote on all arms control decisions within 150km of the Blue Line

LEBANON & HEZBOLLAH — What Beirut Gains

- Phased return of Shebaa Farms, Kfar Shouba Hills, and Ghajar over 5 years (verified, irreversible)
- Border Economic Zone Development Fund: \$2B jointly funded by Israel and Gulf states
- LAF capacity building: \$2B international military assistance over 7 years
- Hezbollah formal political party registration — full electoral participation rights guaranteed
- Electoral non-interference guarantee: no Compact benefit conditioned on Hezbollah's vote share
- JSRZ Governance Credits: military compliance converted into JCC-certified political capital
- Israeli military overflight prohibition within 60 days
- Civilian Casualty Insurance Pool: \$500M, no-fault compensation for property damage
- Social services network funded through Lebanese ministries with international supplement

SAUDI ARABIA — What Riyadh Gains

- U.S. Section 123 civilian nuclear agreement: Saudi nuclear energy without enrichment or reprocessing
- U.S.–Saudi Defense Cooperation Agreement: continuous U.S. technical military support
- IMCA permanent seat: co-governance of Red Sea and Hormuz maritime corridors
- Iran proxy wind-down: verified cessation of Iranian military funding to Houthi forces
- Yemen Reconstruction Fund: \$30B (Saudi-led, 1:1 milestone-verified) with YTPC governance
- Saudi–Iranian bilateral hotline, Hajj coordination protocol, Gulf maritime deconfliction
- Israeli normalization pathway: full diplomatic recognition on Saudi terms with Palestinian conditionality
- Diplomatic Innovation Fund access: discretionary stability projects in the region

IRAQ, YEMEN & SYRIA — What the Region Gains

- Iraq: ISTF \$15B PMF transition fund; Sadrist reintegration module; Baghdad sovereignty guarantee
- Yemen: YTPC power-sharing council; \$30B reconstruction fund; FTO designation suspension pathway
- Syria: \$50B reconstruction fund with anti-diversion audit; HTS delisting graduated pathway
- All: MEIZ Gulf-to-Mediterranean infrastructure corridor; \$100B regional investment framework
- All: RCIC counterterrorism intelligence sharing on ISIS/AQAP with cryptographic no-targeting wall
- All: Diplomatic Innovation Fund — \$24M/year for locally-administered stability micro-projects
- All: Regional Humanitarian Coordination Authority covering four concurrent humanitarian crises

② How The Compact Works — The Crescent Cycle

The Compact does not operate as a single grand bargain signed and then trusted. It operates in 60-day Crescent Cycles: synchronized windows in which all parties complete one verified step before the next window opens. Nobody advances alone. No cycle opens until all parties have closed the prior one.

What a single 60-day cycle looks like:

Days 1–5	Assessment	JCC reviews prior cycle. WBI recalculated. Any disputes to Rapid Panel.
Days 6–15	Verification	IAEA reports. ASPAN satellite analysis. CEMS telemetry reviewed. ZKPEV proof submitted.
Days 16–20	Certification	JCC issues Green/Amber/Yellow/Red. Disputed findings resolved.
Days 21–50	Implementation	All parties execute cycle obligations. Technical assistance to lagging party.
Days 51–60	Close & Publish	Final verification. WBI updated. Benefits released per status. Public Wins Ledger updated.

Cycle Status meanings: ● **GREEN** = all benchmarks met, full benefits, advance. ● **AMBER** = 75–99% met, advance with 80% benefits. ● **YELLOW** = 50–74% met, hold position, 30-day extension vote. ● **RED** = below 50% or material breach, full freeze, Enhanced Review.

③ If This Happens, Then That Happens — Consequence Reference Card

This is the quick-reference guide for what the Compact does automatically versus what requires a human decision. The system is designed to be predictable. Diplomats should know in advance exactly what will happen in each scenario.

Nuclear & Verification Scenarios

→ **IF: Iran enriches above 3.67% (CEMS/ZKPEV detect)**

✓ THEN: IMMEDIATE Category A response: WBI +8 points, JCC emergency session within 24hrs, Enhanced Review Protocol, UNSC referral pathway activates. No delay, no consultation window.

→ **IF: Verification sensor goes dark (any module)**

✓ THEN: VFL Stage 1 activates: joint technical team deployed within 48hrs. If unresolved by Day 7, Stage 2. If unresolved by Day 15, Stage 3 (75% benefits, 30-day cap). Day 31: WBI escalation.

→ **IF: Iran self-discloses a near-breach through Shadow Compliance Channel**

✓ THEN: 30-day Preemptive Remediation Window opens. Zero WBI during window. +0.25 WBI credit for disclosure. If resolved: logged as 'Proactively Resolved Technical Issue.' No public announcement.

→ **IF: Iran invokes Supreme National Interest Waiver**

✓ THEN: One obligation suspended up to 21 days. Written justification to JCC within 4hrs. Rapid Panel review within 72hrs. Obligation resumes Day 22 automatically. Maximum once per 12 months.

Military & Security Scenarios

→ **IF: Attack on Israel from Lebanese territory (any actor)**

✓ THEN: IAAT 4-Hour Freeze Declaration issued (all parties commit to no retaliation). 7-day preliminary attribution. 21-day final ruling. Israel may invoke Fast-Track Self-Defense Carve-Out if active multi-vector attack (24hr window, proportional, 1hr JCC notification).

→ **IF: Third-party disruption actor launches attack designed to trigger war**

✓ THEN: TPDAP (Third-Party Disruption Attribution Protocol): joint investigation, 10-day maximum. Default non-attribution if inconclusive. Zero penalties to main parties. Joint threat mitigation only.

→ **IF: U.S. Congress passes resolution targeting Compact authorities**

✓ THEN: Congressional Continuity Shield: simple majority insufficient. Supermajority (two-thirds both chambers) required to override continuity-critical national security measures. FURP remains operative.

→ **IF: Houthi attacks commercial shipping after Compact entry**

✓ THEN: Targeted personal travel bans and asset freezes on named Houthi decision-makers (IAAT panel within 7 days). YSD participation suspension 30 days. New reconstruction tranches pause 30 days. Existing humanitarian operations continue uninterrupted.

Political & Diplomatic Scenarios

→ IF: A leader gives escalatory speech about the other party

✓ THEN: Yellow Card (first offense per 90-day window): private JCC written notice only, zero WBI. Red Card (second offense same window): 0.5 WBI, publicly logged. Third offense: 1.0 WBI + mandatory Joint Communication Window within 48hrs.

→ IF: Ambassadors invoke Override before a WBI penalty is logged

✓ THEN: 72-hour consequence suspension. Breach always logged in confidential JCC record immediately. If joint remediation agreement filed within 72hrs: Remediated Technical Variance at 50% WBI. If not: original consequence fires. One Override per party per cycle.

→ IF: New administration takes office in the U.S.

✓ THEN: FURP 18-month continuity lock applies: supermajority required to terminate. DPDC Political Stabilization Hold available: new obligations pause 30-60 days; core obligations (ceasefire, IAEA, fissile custody) continue without exception.

→ IF: Leader invokes Goodwill Credit to forgive a counterpart's violation

✓ THEN: Breach reclassified as Forgiven Technical Variance. Zero WBI. JCC publishes notification that credit was deployed. The forgiving party creates visible diplomatic capital: 'We chose to overlook this; we expect equivalent goodwill in return.'

→ IF: JCC deadlocks on a dispute

✓ THEN: Tier 3 UN arbitration triggers: UN Secretary-General appoints neutral chair from five-state pool. Binding ruling. Core obligations remain in force throughout arbitration. No party may exit during active arbitration.

④ The Architecture at a Glance

The Compact is structured in two layers. The Core Frame is the minimum viable peace — it can be signed without committing to deeper integration. The Progressive Arches unlock only after Core Frame stability is demonstrated.

CORE FRAME	PROGRESSIVE ARCHES
Part I: Iran–U.S. Nuclear & Economic Normalization Part II: Israel–Lebanon–Hezbollah Security Part III: JCC Governance & Crisis Architecture Mandatory operative language ('shall', 'commits to') Category A breaches permanently algorithmic Can be ratified independently per Modular Ratification Part III (JCC) is non-severable prerequisite	Part IV: Israel–Arab Normalization (Saudi, Palestinian) Part V: Yemen & Red Sea Maritime Security Part VI: Iraq Stabilization & Sadrist Reintegration Part VII: Syria Reconstruction & Golan Pathway Part VIII: Regional Economic Integration & Arms Transparency Aspirational language ('good-faith effort toward defined outcomes') Unlock after two consecutive green Core Frame cycles Good-faith floor defined and enforceable

Key design insight: A government may ratify Parts I and III (Iran–U.S. nuclear + JCC) without Part II (Israel–Lebanon), or ratify Parts II and III without Part I. The entry ticket is sized to each party's domestic political capacity. The full Compact's integrated machinery applies to each party only for the Parts it has ratified.

⑤ Diplomatic Safety Valves — What Leaders Can Control

The Compact is not a trap. Leaders retain meaningful control at every stage. Here are the ten mechanisms designed specifically to give diplomats and leaders genuine agency without breaking the framework's structural integrity.

1. Political Circuit Breaker	14-day Consultation Stay on any non-Category-A breach. Consequences paused while you fix the problem privately. Resolve it: 50% WBI instead of 100%.
2. Ambassador's Override	Unanimous ambassadors can suspend a consequence's public announcement for 72 hours. The record is always kept — but you get 72 hours to resolve it first.
3. Goodwill Credit	Each party can formally forgive one minor breach per year. Not a free pass — a visible diplomatic gesture that creates reciprocity currency.
4. Supreme National Interest Waiver	One specific obligation suspended up to 21 days, once per year, for genuine national emergencies. Not renewable. Not applicable to nuclear.
5. Shadow Compliance Channel	Disclose near-breaches confidentially before they become crises. 30-day remediation window. Zero WBI. You get credit for honesty.
6. Quiet Diplomacy Channel	Private conversations with no formal outcomes, no public record. The place where problems are solved in corridors before they reach the committee room.
7. Sunset of Automation	After 48 months of clean performance, Category B automatic consequences convert to JCC deliberation. You earn back discretion by demonstrating you don't need training wheels.
8. Annual Calibration Summit	Every 12 months, parameters can be re-calibrated by unanimous consent. The Compact adapts with changing political realities.
9. Narrative Sovereignty Clause	Tell your parliament whatever story serves your domestic politics, provided you don't contradict verified facts or incite breach behavior.
10. Modular Ratification	Sign the parts you can sign today. Ratify more later. No party is locked into commitments beyond their current domestic political capacity.

⑥ The Case for Signing — One Paragraph Per Party

Each party needs a clear, one-paragraph answer to the question their parliament will ask: 'Why did you sign this?' These are the Compact's answers, written in politically usable language.

Iran	We signed because we received full recognition of our sovereign nuclear rights, return of every dollar of frozen assets with interest, permanent cessation of U.S. military threats against our territory, and formal acknowledgment of our role in regional governance — all in exchange for enrichment limits that we chose as sovereign acts, not imposed constraints, and that we can resume if the other side defaults. We did not surrender. We negotiated.
United States	We signed because we achieved the most comprehensive Iranian non-proliferation architecture in history — with verified enrichment caps, full IAEA access, neutral contractor dilution, and a domestic Iranian law criminalizing nuclear weapons — while opening Iran's energy sector to American business, reducing Iranian proxy military capacity, and building a regional security architecture that serves U.S. interests for the next generation. We did it without Senate treaty ratification and with a Congressional supermajority requirement protecting our commitments.
Israel	We signed because we secured the first permanent non-aggression treaty with Lebanon in history, a formalized attack prohibition backed by an international attribution tribunal, operational constraints on Hezbollah's weapons in our northern border zone, the first real pathway to Saudi normalization, and a managed non-belligerence protocol with Iran that eliminates the elimination rhetoric. We retained our self-defense doctrine, our fast-track response authority, and our Blue Line co-governance veto. We gave up nothing we were not already losing.
Saudi Arabia	We signed because we received a U.S. civilian nuclear agreement, a defense cooperation pact, co-governance of the maritime corridors our economy depends on, verified Iranian proxy wind-down in Yemen, a pathway to Israeli normalization on our terms with Palestinian conditionality, and a direct bilateral relationship with Iran that replaced the proxy war with a managed rivalry. The Compact is the Beijing normalization with architecture.
Lebanon	We signed because we received the return of our occupied territories, a \$2 billion economic development fund for our border communities, LAF capacity building that gives us real military sovereignty for the first time in a generation, formal recognition of Hezbollah's political party rights within our constitutional framework, and an end to Israeli overflights. We traded Hezbollah's heavy weapons in a 5km zone for everything we have been demanding for thirty years.

“The crescent does not illuminate all at once. It grows.”
