

RECIPROCAL ACCORD FOR MIDDLE EAST STABILITY (RAMES)

Condensed Treaty Document — Version 8.5

April 2026

Classification: For Open Circulation Among Authorized Diplomatic and Academic Channels

Framework Type: Reciprocal, Modular, Phased, Non-Precedential

Governing Principle: Coordinated Motion — Reciprocal Movement — Reversible Steps

PREAMBLE: THE PHILOSOPHY OF COORDINATED MOTION

Lasting stability does not require any party to make a dramatic unilateral concession. It requires all parties to move together in small, synchronized, verified steps — each movement balanced by a corresponding movement, so no party is exposed, rushed, or placed in a position of weakness.

This is the operating logic of RAMES v8.5. It is not rhetorical framing. It is the operational method.

Five foundational principles govern all provisions of this accord:

1. **Synchronized Movement** — Every obligation is paired with a reciprocal obligation performed in defined cycles. Neither party advances alone.
2. **Reversible Commitment** — Each step can be paused or unwound through structured mechanisms without catastrophic collapse.
3. **Mutual Awareness** — Both parties know the other's position, constraints, and compliance data at all times.
4. **Phased Architecture** — Benefits and obligations are released in timed sequences, not front-loaded or back-loaded.
5. **Breach Absorption** — Violations trigger graduated, proportional responses — never instant collapse.

Non-Precedent Clause: This accord establishes context-specific arrangements for the Middle East regional system. It does not create binding precedent for other nuclear-armed or nuclear-aspiring states, other regional conflict arrangements, or general international law applicable to third-party states. The Joint Commission maintains a Precedent Firewall Register documenting any external citation attempts.

Institutional Binding: All obligations, commitments, and benefits under this framework attach to the designated *institutions and offices* of the respective states — not to the individuals who currently hold those offices. Leadership transitions on any side do not void the framework.

Depository Status: This framework is deposited with the UN Secretary-General upon entry into force and constitutes a binding instrument of international law independent of the political continuity of any signatory government.

PART I: PHASE 0 — FOUNDATION ARCHITECTURE (MONTHS 1–6)

Section 1: The Zero-Regret Principle

Phase 0 is built entirely on *zero-regret moves* — actions that benefit the acting party regardless of whether the other party reciprocates or the broader framework succeeds.

For the United States: Verification that Iran is not weaponizing constitutes an intelligence gain even if the broader deal ultimately fails. No irreversible concessions are made.

For the Islamic Republic of Iran: Partial banking restoration and humanitarian trade channels provide immediate economic benefit without requiring strategic capitulation on regional posture or missile capabilities.

For all parties: Humanitarian access provides reputational gain at minimal security cost. Refugee stabilization reduces regional burden. None of these require trust — only compliance.

Because Phase 0 consists entirely of zero-regret moves, both parties retain incentive to complete it even if Phase 1 is doubtful.

Section 2: Phase 0 Scope and Deliberate Exclusions

Phase 0 solves one problem at a time. It consists of:

- **Core Bilateral Layer:** U.S.–Iran nuclear verification, limited sanctions relief, and banking restoration.
- **Humanitarian Coordination Track:** Refugee access, Gaza stabilization, and corridor management.
- **Joint Implementation Group (JIG):** U.S., Iran, and Oman mediator as the sole governance body.

Phase 0 **deliberately** excludes Hezbollah integration, Iraqi PMF reform, the Yemeni ceasefire, Palestinian political settlement, and Syrian political transition. These move to Phase 1 or later if Phase 0 stabilizes. No regional actor behavior outside the core bilateral layer triggers conditions on Phase 0 implementation.

Duration: 180 days (6 months).

Section 3: Rapid Results Layer — Days 0–30

To generate immediate domestic political cover and demonstrate framework viability, the following deliverables activate within the first 30 days:

Day	Deliverable
Day 3	Humanitarian surge: all corridors (Gaza, Lebanon, Syria) confirmed operational; 200-ton combined convoy delivery publicly verified
Day 7	Pilot sovereign asset release of USD \$50 million to the Iranian Central Bank from escrow — structured as humanitarian escrow release (medicine, food)
Day 10	Section 123 Agreement terms announced as agreed in principle — simultaneous government statements
Day 14	Medical isotope research exchange delegation convenes in neutral location (first formal U.S.–Iran scientist exchange)
Day 21	Tier 1 humanitarian banking corridor (pharmaceutical and food trade, zero toll) confirmed operational
Day 30	Joint Commission inaugural session; co-chairs issue public statement confirming framework is operational

Note: The Day 3 humanitarian surge, Day 7 asset release, and Day 14 exchange may proceed under the Preliminary Instrument of Stabilization before comprehensive ratification is complete.

Section 4: Iran's Phase 0 Commitments (6 Months)

- Enrich uranium at no more than 3.67% — the current operational level
- Freeze all stockpile accumulation above 300 kg UF₆
- Commit to conversion of Fordow Fuel Enrichment Plant to medical isotope production facility (no enrichment)
- Provide complete declaration of all nuclear facilities within 30 days of signature
- Permit IAEA continuous 24/7 monitoring at all declared sites
- Permit IAEA complementary access inspections (maximum 5 per year)
- Submit to monthly trilateral Iran–U.S.–IAEA compliance reviews
- Cooperate with the Joint Implementation Group for the full 180-day Phase 0 period

Section 5: United States Phase 0 Commitments (6 Months)

- Provide immediate Day 1 humanitarian sanctions relief (Tranche 1): automatic lifting of all sanctions affecting medicine, food, medical equipment, aviation safety parts, and environmental goods
- Restore a single limited banking correspondent channel for humanitarian trade
- Provide quarterly unclassified U.S. compliance assessments to the JIG

- Accept the Verification Continuity Ladder (Section 13) as the structured breach response — not immediate escalation
- Accept Iran's right to proportionate suspension if the U.S. materially breaches
- Support IAEA monitoring without political interference
- Refrain from covert military action against Iranian nuclear facilities during Phase 0

Section 6: Both Parties' Joint Phase 0 Commitments

- Participate in weekly JIG working-level meetings and monthly plenaries
- Maintain a crisis hotline operational 24/7
- Commit to the Third-Party Attribution Protocol (Section 14) for all third-party incidents
- Support UN humanitarian operations and access guarantees
- Accept quarterly compliance review and public reporting through the Transparency Summary

PART II: CORE BILATERAL LAYER — NUCLEAR AND ECONOMIC ARCHITECTURE

Section 7: Nuclear Stabilization — The Three-Site Architecture

The nuclear architecture is organized around three sites with specific roles:

7.1 Natanz Enrichment Facility

- All enrichment capped at 3.67% with continuous IAEA monitoring
- 164 IR-1 equivalent centrifuges retained for technical research and institutional continuity under 24-hour IAEA monitoring — with no accumulation of enriched material above the 300 kg cap
- Reconversion to higher enrichment requires JIG unanimous consent plus IAEA Director General certification of legitimate civilian need

7.2 Fordow Conversion — International Persian Gulf Medical Isotope Research Center (IPMIRC)

- The Fordow Fuel Enrichment Plant is permanently converted to the IPMIRC, operated by Iran's Atomic Energy Organisation under IAEA monitoring with an international scientific advisory board
- All military personnel withdraw within 90 days; IRGC retains no operational role
- Projected to supply 40% of regional medical isotope demand within five years, generating USD \$200 million annually for Iran
- Conversion is framed as a sovereign Iranian achievement in regional healthcare leadership — not a concession

7.3 Isfahan Nuclear Technology Center

- Remains under full IAEA Additional Protocol safeguards
- Converts to civilian research functions under the Strategic Energy Partnership Framework

7.4 Disposition of 60%-Enriched Stockpile

Tranche	Timeline	Action	Verification
Tranche 1	Days 1–90	Export 50% of 60%-enriched stockpile to agreed third country OR downblend on Iranian soil	IAEA chain-of-custody seal, satellite confirmation, serial-number registry
Tranche 2	Days 91–365	Export or downblend remaining 50%	IAEA continuous oversight
Infrastructure	Months 12–24	Centrifuge rotors and bellows removed to IAEA-supervised third-country storage, OR casings welded in-place — Iran selects method	Continuous IAEA camera coverage; quarterly neutral-state technical audits

Technical Lapse Protocol: Failure to complete a scheduled tranche within 30 days of its deadline is a **technical lapse, not a material breach**. The JIG convenes within 14 days for an adjusted timeline. Sanctions restoration only initiates if the lapse exceeds 45 days without a JIG-approved remediation plan.

Section 8: Sanctions and Banking Architecture

8.1 Day-One Humanitarian Relief (Unconditional)

Effective upon signature, immediately and irrevocably: all sanctions affecting medical supplies, medical equipment, food, agricultural inputs, aviation safety parts, and environmental goods are lifted. Banking channels for humanitarian trade reopen under streamlined licensing within 14 days. This provision is **not subject to reversal on compliance grounds**.

8.2 Phased Relief Sequence

Phase	Timing	Iranian Milestone	U.S. Action
0	Day 1	Signature	Day-One humanitarian relief; Tier 1 banking authorization
1	Days 1–90	IAEA baseline deployed; 3.67% cap verified; Tranche 1 60%-disposition	Aviation parts licenses; 50% asset release (Tranches 1–2); SWIFT reconnection process
2	Days 91–180	Stockpile reduction verified; Fordow conversion commenced	Tier 2 banking; remaining nuclear sanctions phased lifting; oil services licensing
3	Days 181–365	Infrastructure conversion 50% complete; Additional Protocol ratified	Full nuclear-related sanctions relief; remaining asset releases; EITI accession support
4	Year 2	Sustained compliance; civilian oversight council operational	Oil ramp to 2.0M bpd; 15-year oil moratorium active

8.3 Sanctions Inertia Buffer

Reimposition of sanctions requires: (a) JIG majority vote process — 30 days; plus (b) commercial wind-down notice to private sector — 60 days; plus (c) banking implementation period — 60 days. Total minimum interval: **150 days**. No instant snapback.

8.4 Compliance Cost Symmetry

If the U.S. reimposes sanctions outside the JIG process, Iran may proportionately suspend nuclear obligations and implement commercial countermeasures. Neither party can unilaterally escalate without bearing comparable economic cost.

Section 9: Return of Frozen Iranian Sovereign Assets

All frozen Iranian sovereign assets are returned in staged tranches with congressional review checkpoints, escrowed performance protection, and mutual restitution framing. Released funds constitute the **return of Iranian sovereign property** — not a U.S. payment, concession, or reparation.

Tranche	Trigger	Amount	Notes
1	Signature; Day-One humanitarian freeze	25%	Unrestricted; immediate
2	Day 30; JIG inaugurated; IAEA deployed	25%	Closes first 50% threshold
3	Day 90; 60%-Tranche 1 exported/downblended	20%	Congressional review window
4	Day 180; Fordow conversion commenced	15%	Congressional review window
5	Day 365; 12-month sustained compliance	10%	Congressional review window
Reserve	Clean certification at Month 18	5%	JIG-administered escrow

Irreversibility Protections: If the U.S. reimposes sanctions outside the JIG process, Iran retains at least 50% of released funds plus penalty interest (U.S. Treasury rate + 3%). Re-freezing is limited to assets released within the preceding 12 months — earlier releases remain permanently unfrozen. Asset-return obligations are registered with the IMF and World Bank as sovereign-commitment instruments.

Section 10: International Hormuz Transit Authority (IHTA)

The Strait of Hormuz is placed under a permanent international governance regime replacing provisional arrangements with predictable, transparent mechanisms. Navigation Service Charges (the internationally standard designation for maritime cost-recovery tolls) fund reconstruction and operations.

Governance: Iran, United States, GCC rotating chair (Oman, Qatar, or UAE), EU observer, PRC observer, UN-appointed neutral chair (standing pool: Switzerland, Singapore, Oman, Brazil, Sweden).

Navigation Service Charge Schedule

Tier	Vessel Category	Rate	Clearance
1	Humanitarian (medicine, food, medical equipment)	Zero	24-hour fast-track
2	Standard commercial	\$0.15/ton	48-hour
3	Energy premium (oil tankers, LNG, chemicals)	\$0.25/ton or \$35,000 flat (VLCC)	Standard with surcharge

Revenue Allocation (est. \$500M annually)

Allocation	Annual	Use
Iranian Civilian Reconstruction Fund	\$200M (40%)	Infrastructure repair; World Bank trustee; EITI-published quarterly
International Maritime Safety Fund	\$175M (35%)	Joint hotline, coast-guard coordination, pollution response
IHTA Operations Reserve	\$125M (25%)	Capped at 24 months' operating costs; surplus redirected to Reconstruction Fund

Charges phase to zero upon full verified implementation of nuclear enrichment cap and 60%-stockpile disposition provisions, with the IHTA transitioning to cost-recovery-only mode.

Section 11: Recognition of Iran's Sovereign Right to Peaceful Nuclear Energy

All parties recognize Iran's sovereign right to peaceful civilian nuclear energy. This recognition is paired with — and is the reciprocal basis for — the verification provisions in Sections 7 and 19.

A **Section 123 Agreement** for peaceful nuclear cooperation is launched on Day 1 of the ceasefire, with agreed terms announced within 30 days and formal submission to Congress within 180 days of verified enrichment conversion.

Senate-Failure Fallback: If Congress does not approve the 123 Agreement within 180 days, the U.S. shall: (a) facilitate Iran's access to the IAEA LEU Bank in Kazakhstan or an equivalent multilateral mechanism within 60 days; (b) authorize third-country fuel supply arrangements (EU, Russia, or NSG member) with U.S. non-objection guarantees; and (c) continue sanctions relief for fuel-related transactions regardless of 123 Agreement status. Iran is never left without guaranteed fuel supply.

Religious-Legal Pillar Recognition: Each party's binding domestic legal and ethical pronouncements — including the standing fatwa against nuclear weapons — are recognized as foundational pillars of the framework, creating a domestic-legitimacy bridge without altering technical provisions.

PART III: GOVERNANCE ARCHITECTURE

Section 12: Joint Commission (JIG / Joint Commission)

The Joint Commission is the central institutional body governing this framework. Its authority derives from the framework itself and cannot be suspended, overridden, or dissolved by either party unilaterally.

Composition:

- Co-chairs: Iranian Foreign Ministry–level representative and U.S. Deputy Secretary–level representative
- Neutral chair from a standing pool: Switzerland, Brazil, Singapore, Sweden, Oman (rotating; 18-month renewable terms)
- Secretariat: 30-person neutral professional staff; budget shared equally

Meeting Cadence: Weekly working-level sessions; monthly plenaries; emergency sessions within 72 hours of any party's request (the neutral chair may convene without unanimous agreement in a genuine crisis).

Decision Rules:

- Operational decisions: weighted majority
- Compliance determinations: weighted majority plus neutral chair
- Consequential decisions: near-consensus
- Structural changes: unanimity plus notice period

Dispute Resolution Ladder (Mandatory Exhaustion Sequence):

1. Working-level bilateral consultation — minimum 14 days; documented in writing
2. JIG working-level formal convening — minimum 14 days
3. Joint Technical Panel advisory determination — findings within 21 days
4. JIG ministerial-level review — formal findings with neutral chair concurrence
5. Binding arbitration (mutual opt-in) or UN Secretary-General non-binding reference

No party may escalate to a higher tier without a **Certificate of Exhaustion** from the JIG Secretariat confirming all lower tiers have been formally invoked and completed in good faith.

Section 13: Compliance Indicators System (CIS)

The Joint Commission maintains the CIS tracking implementation performance across four domains:

Domain	Weight	Indicators
Nuclear and Verification	3 pts/indicator	Enrichment compliance; IAEA access; stockpile status; Fordow conversion; supply chain transparency

Domain	Weight	Indicators
Security and Proxy	2 pts/indicator	Proxy operational activity; maritime incidents; militia freeze compliance; IRGC deployment
Economic and Sanctions	2 pts/indicator	Sanctions relief delivery; asset release; banking functionality; IHTA status; oil reintegration
Humanitarian and Regional	1pt/indicator	Humanitarian access; reconstruction disbursement; ceasefire trends; governance legitimacy

Escalation Thresholds:

- CIS score 5.0 → Enhanced monitoring
- CIS score 8.0 → Formal compliance assessment
- CIS score 12.0 → Snapback consideration

Pattern-of-Concern Designation: Three or more indicators of concerning activity across two consecutive review cycles, demonstrating a coordinated pattern, may be designated a Pattern of Concern. Effect: enhanced domain monitoring and a mandatory explanatory briefing — no automatic economic or security consequences.

Performance Acceleration: Zero CIS accumulation for two consecutive cycles + no Pattern of Concern for three cycles + on-time delivery for two cycles = 15% benefit acceleration, or half-cycle timeline advancement, or enhanced verification privilege. The performing party selects the reward.

Quarterly Transparency Summary: Published in English, Persian, Arabic, and French. Contains current CIS with trend assessment; active mechanism status; current phase and days remaining; benefit flow summary; compliance snapshot for all parties; next milestone; and top three risks with mitigation status.

Section 14: Crisis Management and Human-Verified Escalation

Foundational Rule: No escalation consequence above an Advisory Notice activates without explicit human authorization by the Joint Commission. Automation does not escalate — humans decide.

Five Independent De-escalation Pathways:

Mechanism	Trigger	Human Authorization	Maximum Duration
Crisis Lock	10+ party-national fatalities; verified direct military clash; critical infrastructure attack; IAEA integrity alert	JIG emergency session within 48h; fact-finding team within 72h	14 days (extendable to 42 by JIG majority)
Third-Party Spoiler Attribution Protocol (TSAP)	Third-party attack or spoiler activity	Attribution panel determines sponsorship; non-attributable = no penalties	10-day investigation window

Mechanism	Trigger	Human Authorization	Maximum Duration
Military Deconfliction Hotline	Any military incident	Preliminary de-escalation guidance only; no escalation authorized by hotline alone	Permanent 24/7
Regional Incident Firewall	Third-party regional escalation threatening framework	JIG notification within 4h; bilateral consultation within 24h; coordinated statement within 48h	On-demand
Direct Executive Link	Imminent crisis requiring head-of-state communication	Pre-established secure channel; 6-hour consultation capability	On-demand

TSAP Default Rule: If a third-party incident investigation remains inconclusive after 10 days, the event is classified **Non-Attributable** — no bilateral penalty applies, and response is limited to cooperative threat mitigation. This prevents exploitation of ambiguity to trigger escalation.

Section 15: Verification Architecture

Multi-Source Verification Stack (7 Layers):

1. IAEA continuous monitoring — cameras, seals, environmental sampling at all declared facilities (24/7)
2. IAEA periodic inspections — mining, milling, waste storage (quarterly)
3. Challenge inspections — 48-hour notice; managed-access framework; evidence threshold: "specific, articulable, technically plausible"
4. National technical means — U.S. satellite, signals, open-source; Iranian reciprocal transparency declarations
5. Supply-chain tracking — blockchain-verified custody from mining to waste; dual-use technology import monitoring
6. Joint Technical Committee — two technically qualified representatives per party; Oman as observer
7. Independent Actuarial Reviewer — neutral institution maintains rolling Compliance Indicator Score; methodology audits public

Iranian Observer Right: An Iranian national observer accompanies all challenge inspections and may document procedures and file dissenting reports to the JIG if protocols are violated.

Verification Failure Fallback Ladder:

Stage	Days	Action	Benefit Continuation
Stage 1	1-7	Technical remediation; joint technical team dispatched within 48h	100%
Stage 2	8-14	Substituted verification; alternative methods activated	100%

Stage	Days	Action	Benefit Continuation
Stage 3	15–30	Limited compliance assumption within established bounds	75%
Hard Deadline	Day 30	If verification not restored: standard CIS escalation initiates	Standard rules

Ambiguity in verification data due to cyber attack, system failure, or environmental interference does not trigger automatic escalation. It triggers a Verification Integrity Uncertain (VIU) state — no breach classification, no sanctions, no termination based solely on ambiguity.

PART IV: REGIONAL ARCHITECTURE — PHASE 1 AND BEYOND

Section 16: Dual-Track Ring Architecture (Phase 1)

Phase 1 operates through two parallel tracks to avoid requiring ideological reconciliation before economic integration:

Ring 1 — Israel Track: Israel–Saudi normalization; Gulf–Israel maritime cooperation; Abraham Accords expansion; U.S.-aligned security architecture.

Ring 2 — Iran Track: Iran–Iraq energy cooperation; Iran–Gulf maritime stability; Iran–Lebanon humanitarian corridors; Iran–Syria stabilization support.

These tracks operate in parallel with **limited coordination** rather than through a single multilateral framework. Israel and Iran need not sit in the same economic projects. Saudi Arabia can normalize with Israel in Ring 1 while deepening energy ties with Iran in Ring 2. Ideological collision does not paralyze economic integration.

Section 17: Trilateral Stability — Israel, Lebanon, and Hezbollah

The trilateral context is structurally distinct from bilateral arrangement. Lebanon's government does not exercise exclusive control over all armed actors. The architecture recognizes this and works with it rather than demanding its immediate resolution.

The framework applies a 3-3-3-3-2-1 calibration across 15 points — three Israeli maximalist positions, three Lebanese maximalist positions, three Hezbollah positions, three moderate convergence points, two joint minimalist floor provisions, and one governance provision.

Key Provisions:

- **Permanent Attack Prohibition Treaty (PAPT):** Israel and Lebanon establish a permanent, UN-registered prohibition on cross-border attacks, with scientific attribution eliminating ambiguity and structured response eliminating discretion.
- **Hezbollah Integration Pathway:** No forced disarmament. Hezbollah's social services (clinics, schools, welfare) are integrated into state programs with funding parity. LAF

chain-of-command registration with full personnel and weapons amnesty. Political party registration with proportional legislative representation.

- **Disputed Territories:** Phased Israeli withdrawal from Shebaa Farms, Kfar Shouba Hills, and northern Ghajar with security buffering and conditionality safeguards.
- **Lebanese Reparations:** USD \$2 billion for prior infrastructure damage. USD \$2 billion LAF capacity-building program over seven years. USD \$500 million civilian casualty insurance pool.

Section 18: Gaza Reconstruction and Palestinian Track

- **Gaza Reconstruction Trust:** USD \$53 billion funded by GCC states, EU, U.S., and international financial institutions, administered by a Palestinian-led technocratic interim authority under UN supervision.
- **Gaza Coastal Economic Zone:** Port access and desalination capacity.
- **Right-of-Return Commission:** Joint Israeli-Palestinian-international commission with a USD \$5 billion compensation fund for refugee documentation, voluntary return options, and compensation methodology.
- **Two-State Horizon:** Reaffirmed as the political horizon; negotiating tracks resumed under Quartet sponsorship.

Section 19: Regional Economic Integration — The \$300 Billion Incentive Architecture

The framework deploys approximately USD \$300 billion in structured economic incentives across all tracks over a decade. Key components:

Phase 0 Quick Wins (USD \$15 billion, Months 1–6):

- USD \$7 billion baseline asset tranche structured as Compliance Performance Funds
- USD \$730 million Lebanon emergency stabilization (fuel, healthcare, water, food)
- USD \$200M+ Gaza humanitarian corridor activation

Phase 1 Economic Boom (USD \$58 billion, Months 7–18):

- Iranian oil capacity restoration to 2.0M barrels per day
- U.S. firms gain commercially competitive access to 25% of new Iranian oil field development contracts (EITI-transparent, competitively tendered)
- Iran-Iraq-Turkey-Levant pipeline and rail corridors qualified for international financial institution co-financing
- Regional airline direct routes resume

Phase 2–3 Lock-In (USD \$200+ billion):

- 15-year oil sanctions moratorium (automatic 5-year extensions)
- Gaza Reconstruction Trust (\$53 billion) activated

- Syria Reconstruction Trust (\$45 billion) tied to governance benchmarks
- Regional Connectivity Corridors: Iran–Iraq–Syria–Levant rail and pipeline; GCC–Levant energy network; Hormuz-to-Suez maritime logistics belt; Trans-regional digital backbone

PART V: NON-STATE ACTOR AND PROXY ARCHITECTURE

Section 20: Proxy Freeze and Affiliated Armed Group Architecture

Iran's sovereign ballistic missile capabilities are **not addressed by this accord** — they remain within Iran's national defense prerogative. Separate bilateral missile transparency discussions may be pursued by mutual consent.

Proxy Activity Monitoring: Iran commits to a phased transition of IRGC Quds Force external operational deployments:

- Year 1: Cessation of transfers of advanced weapons systems (precision-guided munitions, drone components) to designated non-state actors
- Year 2: 50% reduction in IRGC Quds Force personnel deployed to external operations
- Year 3: Full transition to non-operational advisory status

Critical Firewall: The first 50% of all asset releases and all humanitarian sanctions relief are **not contingent** on proxy-track milestones. The nuclear deal's independent viability is protected. The proxy track runs on a separate lane.

Non-State Observer Framework (Phase 1):

- Hezbollah liaison to Joint Commission humanitarian committee — monthly
- Iraqi PMF liaison to governance committee — monthly
- Houthi liaison to humanitarian committee — quarterly

Each receives information, a voice, a pathway to Phase 2 integration, and conditional economic benefits for their constituencies — creating positive-sum alternatives to spoiler behavior.

Section 21: Red Sea, Yemen, and Houthi De-escalation

Coalition Commitments: Saudi-led Coalition formalizes cessation of active airstrikes and naval bombardment on Houthi-administered areas, filed in writing with the UN Secretary-General and the Oman mediation channel.

Houthi Commitments: No ballistic missile, cruise missile, drone, or naval attacks on Coalition territory; verified by joint border monitoring.

Houthi Political Recognition: Houthi political party registration with proportional legislative representation. Saada and northern governorate autonomous administration preserved during transition, with a permanent-status referendum at Year 5.

Red Sea Maritime Security Commission: Internationalized maritime monitoring for the Red Sea and Bab el-Mandeb. GCC–Iran de-escalation dialogue through an Oman-hosted channel.

PART VI: RESILIENCE ARCHITECTURE

Section 22: Domestic Political Disruption Clause

Political turbulence is the most common reason agreements unravel. The Domestic Political Disruption Clause (DPDC) creates a controlled pause that prevents political shocks from cascading into treaty collapse.

Trigger conditions (any one of): Election transition; legislative blockage; executive constraint (court order, impeachment, statutory limitation); referendum requirement.

Effect: Political Stabilization Hold — 30 to 60-day pause on *new* obligation activation. Existing obligations continue without breach classification. Benefits continue at 50% rate. JIG maintains full operation. Core obligations (ceasefire, IAEA monitoring, fissile-material custody) continue regardless of the Hold.

Maximum one Hold per 12-month period per party; maximum 60 days without JIG two-thirds supermajority approval.

Section 23: Graduated Exit and Re-Entry Pathways

A party may partially or fully exit through structured procedure. Exits are **designed features** — not failures.

Partial Withdrawal: 60-day written notice to the JIG specifying suspended and maintained obligations. Core obligations continue regardless. Benefits reduced proportionately. Not classified as a breach. Re-entry available at any time after a 30-day re-baseline assessment.

Full Exit: 12-month advance notice. Core obligations maintained throughout the notice period. Re-entry after full exit requires a 90-day re-baseline plus JIG certification.

Commercial Continuity Protection: Private-sector contracts certified during the framework's active period are protected for **24 months** following any snapback or partial withdrawal, administered through neutral arbitration (Singapore International Arbitration Centre or Swiss Chambers). This creates a commercial constituency with direct economic interest in framework stability.

Section 24: Treaty Survival in Institutional Collapse

If total institutional collapse, coup, or dissolution of governing authority occurs on either side:

- **Self-executing provisions** continue automatically: IAEA monitoring presence, third-country fissile-material custody, Fordow sealed storage, ceasefire obligations, Hormuz coordination operations.

- A 12-month standstill locks all sanctions, assets, and oil-moratorium provisions at their status quo as of the date of collapse — no new relief, no re-freezing.
- The JIG operates as caretaker administrator through the neutral chair and the non-collapsed party.
- A successor government inherits all treaty benefits and obligations unless it formally repudiates the agreement. Repudiation triggers automatic snapback of lifted sanctions and indefinite third-country fissile-material custody.

Iranian Signatory Incapacitation: The Iranian commitment is executed through collective institutional action by the President, the Speaker of the Islamic Consultative Assembly, the Secretary of the Supreme National Security Council, and the Governor of the Central Bank of Iran. If two or more signatories are simultaneously incapacitated, the JIG neutral chair identifies the senior surviving official capable of providing provisional accreditation. A 90-day implementation pause applies; the treaty remains in force.

Section 25: Failure Containment Firewalls

Four automatic firewalls prevent cascade failure from localized incidents:

- Firewall 1: Economic collapse does not trigger nuclear escalation.
- Firewall 2: Military incidents in one zone do not automatically escalate to another zone.
- Firewall 3: Leadership crisis does not automatically suspend commitments.
- Firewall 4: Subregional crisis does not automatically spread to other regions or tracks.

PART VII: DOMESTIC MESSAGING AND POLITICAL ARCHITECTURE

Section 26: Pre-Cleared Political Framing by Constituency

The framework is engineered so every signatory walks away with concrete, defensible deliverables suitable for domestic political consumption. No party should need to admit defeat, capitulate, or surrender sovereign prerogatives.

United States:

- *For Hawks:* Iran's 60%-enriched stockpile — the most weapons-relevant material in any non-nuclear-weapons state's possession — is eliminated within 12 months. Fordow is converted. Inspectors go anywhere with cause. All Article 51 self-defense rights preserved. Snapback architecture requires human authorization but exists. Israel is at the table.
- *For Doves:* We ended an escalation we never wanted. We unlocked Iranian assets that were never ours. We saved global energy markets. We stopped the cycle of deployment.
- *For Business:* U.S. firms gain competitive access to a \$400 billion Iranian energy reintegration. Hormuz is permanently open. Energy prices stabilize.

Islamic Republic of Iran:

- *For Conservative IRGC-Aligned Constituencies:* Sovereign right to peaceful nuclear energy formally recognized. 164 IR-1 centrifuges preserved for technical continuity. Ballistic missile program untouched. Non-interference guarantee is binding.
- *For Reform/Pragmatist Constituencies:* \$50 billion in frozen assets returned. SWIFT reconnection. Foreign investment returns. Iran rejoins the world on its own terms.
- *For the Religious Establishment:* The fatwa is operational state policy. Fordow becomes a center for medical isotope research serving the umma — a sovereign achievement, not a concession.

Israel:

- *For Security Establishment:* Cross-border attack triggers automatic, scientifically attributed, graduated response. Hezbollah's Iranian patronage is severed through monitored buyout. Iran's enrichment is below weapons-relevance. Permanent participation on the Iran review track.
- *For the Center Public:* Daily life is no longer hostage to rocket fire. Hardened shelters, layered interception, and an attack insurance pool absorb whatever still happens.

Section 27: Non-Interference in Constitutional Governance

Both parties commit to non-interference in each other's constitutional order. The term "non-interference in constitutional governance" achieves equivalent protective effect to "regime-change prohibition" without requiring either party to characterize its prior conduct as unlawful.

Prohibited: Financial support to political opposition with intent to destabilize; cyber operations targeting electoral infrastructure; physical sabotage of critical state functions timed to political transition; coordinated information operations using fabricated evidence; direct or indirect support for coups or armed challenges to constitutional authority.

Explicitly Permitted: Intelligence collection on military capabilities; diplomatic pressure through bilateral and multilateral channels; public criticism of policies; academic analysis, scholarly research, and journalistic reporting; support for civil-society organizations engaged in human-rights documentation (not partisan political activity).

PART VIII: DURABLE NON-PROLIFERATION FRAMEWORK

Section 28: Iranian Domestic Legislation

Iran enacts domestic legislation through the Majlis codifying its longstanding doctrinal opposition to nuclear weapons as an enforceable domestic statute. This is characterized as a sovereign act of codification — giving legal form to an existing commitment — not as a foreign-imposed obligation.

Operative Provisions:

- Nuclear weapons development criminalized with minimum 20-year penalties for principals, financiers, and material contributors
- Independent civilian oversight council reporting to the Majlis and the IAEA, with neutral-state technical advisors
- Automatic UNSC referral for any verified fissile-material diversion to undeclared sites or weapons-related activities
- Guardian Council issues a statement recognizing the continuing validity of the standing fatwa as binding state policy; the U.S. acknowledges this satisfies the provision

Fissile Material Custody: All fissile material above 300 kg LEU transferred to IAEA-supervised custody held by a consortium (Oman, Pakistan, Switzerland, Kazakhstan, plus IAEA) — not dependent on any single state.

Permanent Monitoring: Continuous IAEA presence across the full nuclear fuel cycle, from mining through enrichment to waste storage.

PART IX: GOVERNANCE LIFECYCLE

Section 29: Sunset, Renewal, and Five-Year Review Architecture

Initial Term: Five years from entry into force.

Automatic Renewal: The framework renews for successive five-year periods unless either party provides written notice of non-renewal at least 24 months before the end of the current term.

Mandatory Review Conference: Convened in the fourth year of each five-year term. Hosted by a rotating neutral party (Oman, Switzerland, Pakistan). All parties participate. Produces a public assessment report and confidential recommendations.

Non-Renewal Process: Notice triggers: (a) JIG convenes within 30 days; (b) 12-month wind-down period begins during which core obligations continue unchanged, benefit tranches continue at 75%, and no new modules may be activated; (c) orderly termination or re-entry discussions follow.

Political Framing: "This framework is not an indefinite commitment. It is a renewable arrangement that both parties choose to continue every five years. Either party can choose not to renew with 24 months' notice, ensuring that no government is locked into an arrangement that no longer serves its interests."

Section 30: Implementation Sequencing — Eight 90-Day Cycles

Cycle	Days	Iran	United States	Joint
0 — Foundation	1–30	Declare all nuclear facilities; SNSC ratification; Guardian Council review	Banking Tier 1 authorization; Day-One humanitarian sanctions relief; 123 Agreement launched	JIG established; crisis hotline activated; Direct Executive Link tested
1 — Verification	31– 90	IAEA baseline; enrichment cap 3.67% verified	Asset Tranches 1–2 (50%); SWIFT reconnection; aviation parts licenses	First quarterly review; TSAP protocol exercised
2 — Disposition	91– 180	60% Tranche 1 exported/downblended; Fordow conversion begins; EITI filed	Asset Tranche 3 (20%); Tier 2 banking; oil services licensing	WBI baseline established; IHTA provisional phase opens
3 — Consolidation	181– 365	Stockpile cap verified; Fordow 50% converted; 60% Tranche 2 complete	Asset Tranches 4–5 (25%); remaining nuclear sanctions relief	First maintenance assessment; IHTA Month-24 review
4 — Normalization	Year 2	Full Additional Protocol active; civilian oversight council operational	Oil ramp to 2.0M bpd; full nuclear sanctions relief; 123 Agreement submitted to Congress	Annual JIG review; Fordow conversion complete
5 — Integration	Year 3	Parallel-protocol Year 1 complete; regional dialogue active	Strategic banking; 15- year moratorium in effect; public parallel- protocol annex released	Regional Coordination Council operational
6 — Stabilization	Year 4	Quds Force external deployment reduction verified	Annual congressional certification; reconstruction co- financing active	Security guarantee fully operative
7 — Maintenance	Year 5	Quds Force transition to advisory complete; oil at 2.5M bpd	Treaty review conference; renewal assessed	Permanent IAEA presence transitions to reduced-frequency maintenance framework

Cycle Transition Logic: Green (all benchmarks met) → advance with full benefits. Amber (75–99%) → advance with 80% benefits. Red (50–74%) → hold at current cycle; benefits at 50%. Black (below 50%) → freeze; enhanced JIG review.

CLOSING CERTIFICATION

This condensed document is a faithful summary of RAMES v8.5 Complete Consolidated Master Document. The full technical specifications, verification hardening mechanisms, optional annexes (M through NN), financial architecture, and operational implementation details are contained in the Master Document (v8.5, approximately 800 pages).

Framework Integrity Checklist:

- ✓ Zero-regret Phase 0 foundation — no irreversible Phase 0 concessions
- ✓ 3-3-3-3-2-1 calibration — no party dominates the agenda
- ✓ Human-verified escalation — automation does not escalate
- ✓ Domestic political disruption clause — framework survives electoral transitions
- ✓ Four failure containment firewalls — cascade failure prevented
- ✓ Commercial continuity protection — private-sector lock-in creates stability constituency
- ✓ Five independent de-escalation pathways — crisis management without automaticity
- ✓ Verification continuity ladder — technical noise cannot trigger false escalation
- ✓ Third-party spoiler attribution protocol — ambiguity cannot be weaponized
- ✓ Graduated exit pathways — exit is a feature, not a failure
- ✓ Treaty survival in institutional collapse — self-executing core provisions persist
- ✓ Non-precedent clause — framework scope is strictly contained

Stability is built through coordinated motion, preserved through calibrated architecture, and sustained through mutual awareness that no partner advances alone.
