

DIPLOMATIC FRAMEWORK
FOR SENIOR NEGOTIATORS AND CRISIS-MANAGEMENT TEAMS

RAMES

Reciprocal Accord for Middle East Stability

Version 9.1

Politically-Viable Negotiation-Ready Architecture

Core Treaty + Optional Implementation Annexes
15-Point Framework for Coordinated Regional Stability

STABILITY THROUGH COORDINATED MOTION

April 2026 — Negotiation Reference Document

Bilateral Iran–United States Core Treaty
Optional Annexes: Trilateral (Israel–Lebanon–Hezbollah) · Yemen · Gaza · Iraq–Syria · GCC

Note on Optional Annexes

Optional Annexes 1 through 6 address regional issues beyond the bilateral Iran–United States core. Any party may adopt any Optional Annex independently. Failure to adopt an Optional Annex does not affect the validity or implementation of the Core Treaty or any other Optional Annex. This modular architecture ensures the core nuclear stabilization and ceasefire framework enters force even if broader regional issues remain under negotiation.

Non-Precedent Clause and Modular Adoption Statement

This accord establishes context-specific arrangements for the parties named herein. It does not constitute precedent for other nuclear-capable states, other regional conflict arrangements, or general international law applicable to third parties. Neither party may cite this accord in proceedings, negotiations, or public statements concerning other states without mutual written consent. The Joint Implementation Group maintains a Precedent Firewall Register documenting any external citation attempts and coordinating response.

Optional Annexes are each independently adoptable. The Core Treaty text and any adopted Optional Annex operate as self-contained instruments. No Optional Annex automatically collapses the Core Treaty or any other Optional Annex if it stalls, is suspended, or fails to enter force.

Preamble: Coordinated Motion

Lasting stability does not require any party to make a dramatic unilateral concession. It requires all parties to move together in small, synchronized, verified steps — each movement balanced by a corresponding movement, so no party is exposed, rushed, or placed in a position of weakness.

This is the operating logic of RAMES v9.1. It is not rhetorical framing. It is the operational method. Obligations are paired. Compliance cycles are short enough that any deviation is detected within weeks. Escalation requires human authorization at each step. Every commitment can be paused through structured mechanisms without triggering collapse. Every benefit is earned through verified performance.

Five Operating Principles

Synchronized Movement Every obligation is paired with a corresponding obligation on the other side. Cycles advance together. Neither party moves alone.
Verified Compliance Performance is confirmed by independent technical verification before each benefit tranche is released. No credit is given for declared action alone.
Human-Authorized Escalation Escalation steps beyond advisory notices require explicit authorization by the Joint Implementation Group or designated review panels. No consequence beyond enhanced monitoring activates without human decision.
Staged and Reversible Architecture Each phase builds on the prior. Provisions are long-duration rather than irreversible, with structured review windows. Stabilization holds, technical lapse protocols, and exit pathways mean no party is locked into an untenable position.
Proportional Breach Response Violations trigger responses calibrated to severity and pattern, not reflexive collapse. The breach architecture distinguishes administrative delay from strategic defection, preventing a single incident from unraveling a functional framework.

Executive Summary: Outcomes for Each Party

This section summarizes the principal outcomes each party receives. All characterizations reflect the parties' own interests and do not imply any party has accepted defeat, capitulated, or surrendered sovereign prerogatives. Each outcome is the product of reciprocal and verified commitments.

For the United States of America

Verified suspension of Iranian enrichment above 3.67% with continuous IAEA monitoring; phased disposition of the entire 60%-enriched uranium stockpile within twelve months; permanent conversion of the Fordow facility to a medical isotope research center; domestic Iranian legislation criminalizing nuclear weapons development; multi-source verification architecture including challenge inspections; commercially competitive access for U.S. firms to Iranian energy markets under a fifteen-year sanctions moratorium; permanent open Hormuz transit through the International Hormuz Transit Authority; a congressional review checkpoint before later asset tranches; an emergency fast-track reversal pathway for clearly defined material breaches; and all sovereign self-defense rights preserved under UN Charter Article 51.

For the Islamic Republic of Iran

A permanent, internationally registered end to hostilities; formal recognition of the sovereign right to peaceful nuclear energy; return of frozen sovereign assets in phased tranches with escrow protection against capricious reversal; comprehensive sanctions relief over a staged timeline; a permanent institutional seat on the International Hormuz Transit Authority with annual reconstruction revenue; a binding non-interference commitment in constitutional governance; guaranteed civilian reactor fuel supply with multilateral backstop; preservation of a 164-centrifuge research program; a Stabilization Hold mechanism protecting against domestic political disruption; and performance-based acceleration of benefits for verified overperformance.

For Israel

Participation as a permanent observer on Iran-related Joint Implementation Group matters with full speaking rights; verified severance of external patronage to Lebanese armed groups; Iran's enrichment maintained below any weapons-relevant threshold with continuous international verification; civilian resilience infrastructure (hardened protection, layered interception systems, insurance mechanisms); an attack attribution tribunal providing forensic certainty before any proportionate response; and all sovereign self-defense rights preserved.

For the Lebanese Republic

Recovery of sovereignty over Shebaa Farms, Kfar Shouba, and northern Ghajar through phased, verified Israeli withdrawal; constitutional entrenchment of state authority over armed formations; a \$2B Lebanese Armed Forces capacity-building program; \$2B in infrastructure reparations; a civilian protection insurance mechanism; and an integration pathway for armed group personnel through LAF registration with amnesty — all available under Optional Annex 1.

For Hezbollah as a Political Actor

Recognition through Optional Annex 1 of a structured transition pathway: institutional participation in southern Lebanon governance, social-services integration into state programs with funding parity, an amnesty for personnel who register with the Lebanese Armed Forces, and a defined co-management role — with the explicit statement that no party is required to characterize these arrangements as disarmament or defeat.

For the Saudi-Led Coalition

A verified commitment under Optional Annex 2 to end Houthi cross-border missile, drone, and naval operations; internationalized monitoring of Yemeni ballistic and cruise missile stocks; Red Sea and Bab el-Mandeb open navigation; a GCC–Iran de-escalation channel through Oman; structured Yemen reconstruction funded against compliance milestones.

For the Houthi Movement / Ansar Allah

Recognition as a legitimate political actor under Optional Annex 2; retention of a declared defensive capability within verified limits; Houthi political party representation in a transitional Yemeni legislature; Saada and northern governorate autonomous administration with a permanent-status referendum at year five; cessation of Coalition airstrikes; and reconstruction funds reaching Houthi-administered areas without sectarian discrimination.

For the Palestinian People and Gaza

Under Optional Annex 3: a \$53B internationally supervised Gaza Reconstruction Trust; Palestinian-led technocratic interim administration; a coastal special economic zone; right-of-return discussions through a joint commission with an initial \$5B compensation fund; and a reaffirmed two-state political horizon under Quartet sponsorship.

For Iraq, Syria, and Regional Stability

Under Optional Annex 4: structured Popular Mobilization Forces transition in Iraq; phased Syrian reconstruction against political-transition benchmarks; cross-border energy and logistics corridors; and a Regional Coordination Council providing forum-based stakeholder ownership of the framework.

Domestic Messaging: Positioning Guidance for Each Constituency

The following positioning guidance is designed to assist senior officials in characterizing the accord to domestic audiences, legislatures, and media. The objective in each case is to accurately describe the substantive gains each party secures, using language that reflects each party's own values and priorities. None of these characterizations are inconsistent with one another; the accord is structured precisely so that each side's authentic interests are genuinely served.

United States — Positioning Guidance

Audience	Positioning
Security-focused legislators	Iran's enrichment is verifiably zeroed at the threshold. The 60%-enriched stockpile is eliminated within twelve months. Fordow is converted permanently. Inspectors access any declared or suspected site with cause. All Article 51 self-defense rights are preserved. Snapback requires Joint Implementation Group authorization — and an emergency fast-track pathway exists for clearly defined material breaches.
Foreign-policy realists	A declared end to a costly conflict with predictable verification, preserved deterrence, and competitive commercial access for U.S. firms to a major energy market. Fifteen-year oil moratorium creates durable economic entanglement. Hormuz is open permanently.
Budget-conscious legislators	No new appropriation is required. Asset releases are unfreezing Iranian sovereign property, not U.S. expenditure. Congressional review checkpoints at each major tranche. Quarterly compliance certification to Senate Foreign Relations and House Foreign Affairs Committees.
Israel-aligned constituencies	Israel participates in every Iran-related review. All Article 51 rights are preserved. Hezbollah's external patronage is severed by the accord's regional architecture. Iran's enrichment remains below any weapons threshold for the framework's duration.

Islamic Republic of Iran — Positioning Guidance

Audience	Positioning
Security and strategic establishment	The sovereign right to peaceful nuclear energy is formally recognized. The 164 IR-1 research centrifuges are preserved. The ballistic missile program is not addressed. Non-interference in constitutional governance is a binding treaty obligation. The standing fatwa against nuclear weapons is recognized internationally as state policy.
Economic and commercial interests	Frozen sovereign assets returned with escrow protection against reversal. Sanctions relief across a staged timeline. Full oil export capacity restored. EITI accession unlocks international financing. The Fordow conversion generates a \$200M+ annual medical isotope revenue stream serving the region.
Religious establishment	The fatwa is codified in domestic statute. No provision requires any theological pronouncement beyond what has already been stated. Fordow's transformation from enrichment facility to medical isotope center for regional healthcare constitutes a sovereign achievement.
General public	Humanitarian sanctions — medicine, medical equipment, food, aviation safety — are lifted on Day One, before any compliance milestone. The accord closes the chapter on a costly conflict and opens Iranian participation in regional trade and reconstruction.

Israel — Positioning Guidance

Audience	Positioning
Security and defense establishment	Participation in every Iran-related Joint Implementation Group review. Forensic attribution before any response. Hezbollah's external patronage severed through verified financial monitoring. Iran's enrichment maintained below weapons threshold. All Article 51 self-defense rights preserved.
Northern communities	Civilian resilience architecture: hardened shelter program, layered interception coverage, and a national attack insurance pool mean daily life is structurally protected, not dependent on any single political outcome.
Business and investment communities	Northern economic zone reopens as security environment stabilizes. Regional reconstruction contracts offer commercial opportunity. Normalization dividend reduces the regional risk premium on Israeli enterprise.

Lebanon, GCC States, and Regional Parties — Positioning Guidance

Party	Positioning
Lebanese state institutions	Territorial restoration without confrontation. LAF doubled and equipped through international assistance. Constitutional state monopoly on armed force entrenched. Reconstruction reaches all communities through state channels with full parity.
GCC states (Saudi Arabia, UAE, Bahrain, Kuwait, Qatar, Oman)	Cross-border attacks verified ended. GCC sovereign wealth funds gain first-mover access to opening regional markets. Oman's role as guarantor and mediator formally recognized. Vision 2030 and regional development agendas benefit directly from reduced risk premium.
Yemeni parties	Both Coalition and Houthi leadership can characterize Optional Annex 2 in their own terms: the Coalition as verified security restoration; the Houthis as recognition of political legitimacy and end of airstrikes.
Palestinian national leadership	The accord does not substitute for Palestinian sovereign determination but opens material conditions for reconstruction, economic activity, and resumed political negotiation under internationally backed frameworks.

Public Dignity Recitals

The following recitals are integral operative provisions of this accord. They reflect the understanding of both parties that no provision of this accord implies capitulation, defeat, acknowledgment of wrongdoing, or surrender of sovereign prerogative. Each party retains the right to characterize its own compliance in its own domestic terms, provided the objective benchmarks are met.

PUBLIC DIGNITY RECITAL

For the Islamic Republic of Iran. Nothing in this accord implies that Iran's nuclear activities were unlawful, that Iran lacked the sovereign right to peaceful enrichment, or that Iran's national security posture was unjustified. Iran's acceptance of verified limitations on enrichment is a sovereign exercise of choice in exchange for concrete and enforceable reciprocal benefits. Iran characterizes its obligations in whatever domestic terms best serve its constitutional processes and national dignity.

PUBLIC DIGNITY RECITAL

For the United States of America. Nothing in this accord implies that U.S. policy toward Iran was mistaken, that sanctions were unjustified, or that U.S. national security commitments to regional partners are diminished. The United States characterizes this accord as securing the most comprehensive and verifiable non-proliferation outcome achievable, with all sovereign defense capabilities preserved.

PUBLIC DIGNITY RECITAL

For the Islamic Republic of Iran — on financial provisions. The return of frozen Iranian sovereign assets constitutes the restitution of Iranian property to its lawful owner. It is not a payment, compensation, or concession by the United States. It is not a reward for any conduct. No party may characterize it otherwise in official communications.

PUBLIC DIGNITY RECITAL

For both parties — on the IAEA monitoring architecture. IAEA monitoring under this accord is conducted pursuant to internationally standardized safeguards protocols comparable to those applied to all Additional Protocol states including Brazil, Argentina, South Africa, and Japan. The monitoring represents standard international compliance parity, not exceptional surveillance. Both parties commit to this characterization in their domestic and international communications.

PUBLIC DIGNITY RECITAL

For all regional parties under Optional Annexes. No Optional Annex requires any party to acknowledge that its prior conduct was illegitimate, that its resistance activities were unjustified, or that its security concerns were invalid. Integration, registration, and institutional participation under Optional Annexes are sovereign choices made in exchange for defined reciprocal benefits.

Red Lines Explicitly Preserved

To assist domestic ratification, the following provisions are explicitly enumerated as preserved for each party. These are not subject to negotiation within the framework and are not affected by any escalation, suspension, or breach determination.

Party	Preserved Red Lines
United States	(1) All sovereign self-defense rights under UN Charter Article 51. (2) The right to initiate emergency fast-track snapback for clearly defined material breach (Annex F). (3) Congressional review authority over each major asset tranche. (4) All existing U.S. treaty obligations to regional allies. (5) The right to maintain intelligence collection on military capabilities.
Islamic Republic of Iran	(1) The sovereign right to peaceful nuclear energy, including civilian enrichment at 3.67% and the 164 IR-1 research program. (2) The sovereign right to maintain ballistic missile capabilities not addressed by this accord. (3) Constitutional governance processes — including the role of the Guardian Council and Assembly of Experts. (4) Non-interference in internal political affairs (operative provision under Point 3). (5) The right to characterize compliance domestically in any terms consistent with meeting objective benchmarks.
Israel	(1) All sovereign self-defense rights under Article 51. (2) Freedom to conduct intelligence operations on military capabilities. (3) No obligation to seek Joint Implementation Group authorization for responses to active armed attack. (4) The right to maintain and operate all existing defense systems. (5) No obligation to recognize or engage directly with any non-state armed actor.
All Parties — General	(1) No annex automatically collapses the Core Treaty. (2) No Optional Annex enters force without explicit adoption by the relevant party. (3) Core obligations (ceasefire, IAEA monitoring, fissile material custody, Hormuz coordination) continue regardless of any partial withdrawal, escalation, or annex-level dispute.

Minimum Viable Agreement Clause

This clause ensures that the accord's core nuclear stabilization and ceasefire objectives are protected from any failure, delay, or dispute in any other provision or annex.

Tier	Provisions	Entry into Force Condition
Tier 1 — Minimum Core	Point 1 (Cessation of Hostilities) · Point 14 (Non-Proliferation Legislation) · Point 13 (Ceasefire and Crisis Architecture) · Point 15 (Joint Implementation Group governance) · Point 4 (Enrichment Cap, initial phase only) · Annex D (Crisis Management)	Signature and exchange of instruments. No IAEA deployment, Congressional action, or other party's performance required. Enters force 72 hours after signature.
Tier 2 — Nuclear Core	All of Tier 1 plus Points 5, 6, 7, 8, 9, 10 · Annexes A, B, C	IAEA deployment confirmation + JIG inaugural session. Enters force Day 30.
Tier 3 — Full Core Treaty	All of Tiers 1 and 2 plus Points 2, 3, 11, 12 · Annexes E, F, G	Verified enrichment cap (Point 4) · Day One humanitarian sanctions freeze · Asset Tranche 1 release. Enters force Day 90.
Optional Annexes	OPT-1 through OPT-6 as adopted	Each Optional Annex enters force independently upon written adoption by all parties named in that annex.

Core Treaty independence guarantee

If any Optional Annex fails to enter force, is suspended, or is terminated, the Core Treaty and all other Optional Annexes that have entered force remain fully operative without modification. No party may invoke a failure in an Optional Annex as grounds to suspend, terminate, or renegotiate Core Treaty obligations.

Framework Calibration: 3-3-3-3-2-1 Architecture

Fifteen points, organized so neither party dominates the agenda. The calibration ensures that the accord addresses each party's highest-priority interests symmetrically, creating genuine reciprocity rather than a one-sided arrangement in either direction.

Track	Points	Description
IRAN CORE POSITIONS	1, 2, 3	Permanent end of hostilities · compliance-based use-of-force restraint · non-interference in constitutional governance
U.S. CORE POSITIONS	4, 5, 6	Verified enrichment cap and 60% disposition · Fordow conversion to medical isotope center · enhanced IAEA inspection regime
IRAN INSTITUTIONAL	7, 8, 9	Staged sovereign asset return · International Hormuz Transit Authority · recognition of sovereign right to peaceful nuclear energy
U.S. COMPLIANCE TRACK	10, 11, 12	Phased sanctions relief · regional security dialogue protocol · energy market reintegration
JOINT MINIMALIST FLOOR	13, 14	Structured ceasefire and crisis management · durable domestic non-proliferation legislation
JOINT GOVERNANCE	15	Joint Implementation Group with human-verified escalation, resilience architecture, and dispute resolution hierarchy

Strategic balance

Iran's three core positions (Points 1–3) establish the political and sovereignty framework. The U.S. three core positions (Points 4–6) establish the nuclear security framework. Each party's institutional/economic positions (Points 7–9, 10–12) are reciprocally weighted. The joint minimalist floor (Points 13–14) ensures the architecture holds even if higher-order provisions face delay. The governance provision (Point 15) is the shared foundation on which all else rests.

Part I: Iran Core Positions (Points 1–3)

POINT 1 · IRAN CORE POSITION

Permanent Cessation of Hostilities

Core provision. Both parties commit to a permanent, unconditional end to all direct military hostilities, codified in a binding bilateral treaty registered with the United Nations under Article 102. This provision does not require any party to acknowledge that prior conduct was unlawful or unjustified.

Operative provisions

- Cessation of all direct kinetic operations between U.S. and Iranian military forces, effective on signature.
- Cessation of operations against U.S. personnel, facilities, and interests globally that are attributable to the Islamic Republic through the attribution process in Annex D.
- Cessation of U.S. military strikes on Iranian sovereign territory, infrastructure, scientific facilities, and personnel, except as preserved under Article 51 self-defense.
- Regional non-state actor activities are addressed through the separate Regional Security Dialogue (Point 11) and do not constitute automatic treaty violation by either state party absent Joint Implementation Group attribution determination.
- Post-conflict economic arrangements constitute sovereign commercial activity, not reparations or war indemnities. No party may characterize them otherwise.
- The provisional ceasefire is not terminated for technical or procedural incidents absent JIG determination of material breach as defined in Annex F, or imminent armed attack under Article 51.

Domestic positioning — both parties

United States: A declared end to a costly conflict with preserved deterrence, full Article 51 rights, and commercially competitive access to a major regional market. **Iran:** A permanent, internationally registered treaty providing durable security guarantees that survive any future leadership transition on either side.

POINT 2 · IRAN CORE POSITION

Compliance-Based Use-of-Force Restraint Framework

Core provision. The U.S. restraint commitment becomes operative upon IAEA certification that Iran is in full compliance with the nuclear provisions (Points 4, 5, 14). Once operative, the U.S. commits not to initiate military action against Iran and to condition offensive operational support for third-party military action on a prior JIG determination that Iranian compliance has materially lapsed. Nothing in this provision creates a mutual defense obligation or restricts U.S. policy beyond its declared scope.

Operative provisions

- **Article 51 preservation.** The restraint framework does not apply to an imminent armed attack under Article 51. In time-sensitive cases, the U.S. may provide limited defensive assistance while JIG review is ongoing, with notification within seven days.

- **Israeli observer participation.** Israel appoints a permanent observer to the Joint Implementation Group with full speaking rights on security-guarantee and Iran-related regional matters, and receives simultaneous notification of IAEA compliance determinations. Israel does not hold a formal vote on binding decisions concerning nuclear implementation, sanctions, or asset-release. Israeli expedited-review requests are subject to a cooling-off protocol if more than one request is filed per 30-day period.
- **Pre-institutional bridge.** Pending JIG establishment, any party may request 48-hour trilateral consultation on Hormuz enforcement actions via the Oman or Pakistan communication channel.
- **Congressional notification.** The Executive Branch provides prior written notification to Congressional foreign affairs and armed services committees, including an Iran compliance assessment, before initiating major military operations against Iran, and in all cases within seven days.
- **Suspension threshold.** Restraint obligations are suspended only upon JIG determination of material breach as defined in Annex F, or IAEA certification lapse exceeding 90 consecutive days due to Iranian refusal of access.

Domestic positioning — both parties

United States: All Article 51 rights preserved. Conditioning on verified compliance creates a meaningful incentive structure. Israeli participation ensures close regional ally is represented. Emergency fast-track exists for material breach. **Iran:** A genuine, binding commitment protecting against unprovoked military action. Conditioned on compliance that Iran itself controls — not on regional events beyond its influence.

POINT 3 · IRAN CORE POSITION

Non-Interference in Constitutional Governance

Core provision. Both parties commit to non-interference in each other's constitutional order. The term "non-interference in constitutional order" replaces earlier formulations of "covert action" or "regime-change prohibition" to achieve equivalent protective effect with lower political cost for both sides. Neither party need characterize its prior conduct as unlawful to adopt this provision.

Defined prohibited activities

- Financial support to political opposition with intent to destabilize constitutional governance.
- Cyber operations targeting electoral infrastructure, legislative systems, or executive command-and-control.
- Physical sabotage of critical state functions timed to political transition.
- Coordinated information operations using fabricated evidence to delegitimize constitutional processes.
- Direct or indirect support for military coups, insurrections, or armed challenges to constitutional authority.

Explicitly permitted activities

- Intelligence collection on military capabilities (not on domestic political activity).
- Diplomatic pressure through bilateral and multilateral channels.
- Public criticism of policies, practices, or leadership through official statements.
- Academic analysis, scholarly research, and journalistic reporting.
- Support for civil-society organizations engaged in human-rights documentation (not partisan political activity).

Confidence-building measures (optional, independently suspendable)

- Protected consular channel for detainees, dual nationals, and missing persons.

- Limited academic and scientific exchange tied to nuclear safety and medical isotope research.
- Exploration of direct charter flight resumption within 24 months, subject to applicable law.
- Cultural heritage protection: up to 20 designated sites per party with UNESCO registration, surviving framework termination.

Domestic positioning — both parties

Iran: The highest-priority sovereignty demand — binding internationally — without requiring either party to admit prior conduct was illegal. **United States:** Reciprocal Iranian commitment on support to non-state actors. Standard intelligence, diplomatic, and information activities remain fully permitted.

Part II: U.S. Core Positions (Points 4–6)

POINT 4 · U.S. CORE POSITION

Verified Enrichment Cap and Phased Disposition of 60%-Enriched Stockpile

Core provision. Iran voluntarily suspends enrichment above 3.67% within 30 days, with all enrichment infrastructure under continuous IAEA monitoring and stockpiles capped at 300 kg UF6. The framing of voluntary sovereign choice reflects Iran's prerogative to limit enrichment in exchange for concrete, enforceable reciprocal benefits.

Disposition schedule — 60%-enriched stockpile

Tranche	Timeline	Action	Verification
Tranche 1	Days 1–90	50% of 60%-enriched stockpile: export to mutually agreed third country under IAEA chain-of-custody, or — if no recipient agreed within 60 days — downblend to 3.67% on Iranian soil under continuous IAEA supervision	IAEA chain-of-custody seal · satellite confirmation · serial-number registry · JIG certification
Tranche 2	Days 91–365	Remaining 50%: export or downblend by Day 365	IAEA continuous oversight · JIG certification
Infrastructure conversion	Months 12–24	Centrifuge rotors and bellows removed to IAEA-supervised third-country storage, OR casings welded in-place — Iran selects method	Continuous IAEA camera coverage · quarterly neutral-state technical audits · JIG review

Key protections

- **Recipient deadlock resolution.** If the U.S. vetoes all proposed third-country recipients without offering at least one alternative, persistent deadlock activates the in-Iran downblending fallback automatically — without JIG vote.
- **Research program preservation.** Iran retains 164 IR-1 equivalent centrifuges at Natanz for technical continuity, under 24-hour IAEA monitoring, with no accumulation of enriched material.
- **Reconversion bar.** Reconversion to enrichment above 3.67% requires JIG unanimous consent plus IAEA Director General certification of legitimate civilian need.
- **Technical lapse protection.** Failure to complete a scheduled tranche within 30 days of its deadline is a technical lapse, not a material breach. JIG convenes within 14 days for adjusted timeline. Only if the lapse exceeds 45 days without a JIG-approved remediation plan does the sanctions-restoration process initiate.
- **72-hour escrow.** Any uranium above 3.67% discovered after Tranche 2 completion is transferred to the designated neutral custodian (Oman or Pakistan) within 72 hours pending JIG determination.

Domestic positioning — both parties

United States: The 60%-enriched stockpile — the most weapons-relevant material outside nuclear-weapons-state arsenals — is eliminated within 12 months under international custody. Enrichment is maintained below any weapons-relevant threshold. **Iran:** Sovereign choice framing, no infrastructure destruction (conversion only), R&D; continuity preserved, and each step is triggered only by U.S. reciprocal performance.

POINT 5 · U.S. CORE POSITION**Fordow Conversion: International Medical Isotope Research Center**

Core provision. The Fordow Fuel Enrichment Plant is converted into the **International Persian Gulf Medical Isotope Research Center (IPMIRC)**, operated by Iran's Atomic Energy Organisation under IAEA monitoring with an international scientific advisory board. This transformation is a sovereign Iranian achievement — converting a facility of concern into a regional humanitarian asset — not a capitulation.

- All military personnel withdraw within 90 days. No IRGC operational, intelligence, or security role at the site.
- Access limited to civilian nuclear medicine researchers with IAEA escort.
- Iran's higher-enriched material progressively downblended to medical-grade molybdenum-99 and other radioisotopes.
- International scientific advisory board: WHO, IAEA, and representatives of six consumer nations. Open to researchers from all countries.
- IPMIRC eligible for priority access to G7/EU research programmes and WHO/IAEA health initiatives.
- Projected output: sufficient to supply 40% of regional medical isotope demand within five years — generating \$200M+ annual revenue for Iran.
- All enrichment infrastructure removed or placed in IAEA-sealed storage under Iranian sovereign custody.
- Reconversion to enrichment requires JIG unanimous consent plus IAEA Director General certification.

Domestic positioning — both parties

United States: Permanent transformation of a proliferation-sensitive facility into international humanitarian infrastructure with continuous verification. The most durable non-proliferation outcome achievable. **Iran:** A sovereign achievement in regional healthcare leadership. A \$200M+ annual industry employing Iranian scientists and serving the Muslim world. The fatwa codified in concrete.

POINT 6 · U.S. CORE POSITION**Enhanced IAEA Inspection Regime with Managed Access**

Core provision. Iran ratifies the Additional Protocol and accepts challenge inspections of any declared or suspected site. All IAEA monitoring under this accord is conducted pursuant to internationally standardized safeguards protocols comparable to those applied to Brazil, Argentina, South Africa, and other Additional Protocol states. Monitoring represents standard compliance parity, not exceptional surveillance.

- **Threshold.** The IAEA Director General determines whether a request meets the threshold of "specific, articulable, and technically plausible evidence of nuclear material diversion or undeclared enrichment activity." Annual JIG review of inspection frequency for proportionality.
- **Notice.** 48-hour standard notice. 72-hour notice during pre-declared sensitive periods (religious holidays, military exercises, leadership transitions; not exceeding 30 days per year; 14-day advance declaration to the IAEA).
- **Iranian observer.** An Iranian national observer accompanies all challenge inspections and may document procedures and file dissenting reports to the JIG if protocols are violated.
- **Managed access for military sites.** IAEA requests notified additionally to Iran's Supreme National Security Council. Iran must accept at least one of: (a) physical access with military escort; (b) environmental sampling by neutral third party; or (c) remote monitoring installation.

- **Dispute resolution.** If Iran disputes necessity, the JIG neutral chair plus one randomly selected member render a binding determination within 24 hours. Environmental sampling proceeds pending determination.
- **Annual proportionality review.** JIG conducts annual review to ensure the regime remains evidence-based and proportionate, and may recommend adjustments with effect from the following inspection cycle.
- **Multi-party intelligence liaison.** U.S., Israeli, and Iranian intelligence representatives maintain permanent liaison presence at IAEA headquarters with real-time access to compliance data streams, subject to IAEA information-security protocols. Iran maintains equivalent liaison presence.

IAEA parity framing (applicable in all public communications)

Both parties commit to characterizing IAEA monitoring as standard international compliance parity — comparable to Brazil, Argentina, South Africa — in all official statements, legislative testimony, and media briefings. Unauthorized characterization of monitoring as punitive surveillance triggers a minor compliance notation in the JIG record.

Part III: Iran Institutional Positions (Points 7–9)

POINT 7 · IRAN INSTITUTIONAL

Staged Return of Frozen Sovereign Assets — Escrowed and Verified

Core provision. Frozen Iranian sovereign assets are returned in staged tranches with congressional review checkpoints, escrowed performance protection, and mutual restitution framing. Released funds constitute the return of Iranian sovereign property — not a U.S. payment or concession.

Tranche	Trigger	Amount	Congressional Review	Notes
1	Signature + Day-One humanitarian freeze	25%	7-day notification	Unrestricted; immediate
2	Day 30: JIG inaugurated; IAEA deployed; enrichment cap verified	25%	30-day review window	Closes 'first 50%' threshold
3	Day 90: 60% Tranche 1 exported/downblended	20%	30-day review window	Subject to review; no automatic release
4	Day 180: Fordow conversion commenced; stockpile cap verified	15%	30-day review window	Subject to review
5	Day 365: 12 months sustained compliance; 60% Tranche 2 complete	10%	30-day review window	Subject to review
Reserve	Held pending any material breach determination	5%	JIG-administered	Released on Clean Certification at Month 18

Congressional review mechanics

Before Tranches 3, 4, 5, and Reserve, the Executive Branch submits a compliance certification to the Senate Foreign Relations Committee and the House Foreign Affairs Committee. A 30-day review window follows. Release proceeds unless Congress enacts a resolution of disapproval within the review window. This mechanism preserves congressional oversight without requiring affirmative Senate action for each tranche.

Irreversibility and escrow protections

- **Withdrawal-penalty escrow.** Released funds placed in protected accounts. If the U.S. reimposes sanctions outside the JIG process, Iran retains at least 50% of released funds plus penalty interest calculated at U.S. Treasury rates + 3 percentage points.
- **Re-freezing constraints.** Re-freezing requires (a) JIG majority determination of material breach under Annex F; (b) 30-day Congressional notification; (c) IAEA Director General independent assessment. Re-freezing is limited to assets released within the preceding 12 months; earlier releases remain unfrozen.
- **Sovereign debt registration.** Asset-return obligations registered with IMF and World Bank as sovereign-commitment instruments, increasing the legal and reputational cost of unilateral reversal by either successor government.
- **150-day sanctions inertia buffer.** Reimposition requires JIG determination (30 days) plus commercial wind-down notice (60 days) plus banking implementation (60 days) — 150 days minimum. Emergency fast-track (Annex F) available for clearly defined material breach events only.

Domestic positioning — both parties

United States: Congressional review checkpoints at every major tranche. Emergency fast-track for material breach. No new appropriation required. The return of Iranian property is not U.S. expenditure. **Iran:** Front-loaded (50% on or near Day One), escrowed against capricious reversal, framed as sovereign property restitution not a concession.

POINT 8 · IRAN INSTITUTIONAL

International Hormuz Transit Authority (IHTA)

Core provision. A permanent international governance regime for Strait of Hormuz transit, replacing provisional arrangements with predictable, transparent mechanisms. Tolls are formally designated as **Navigation Service Charges** — a standard designation used in international maritime frameworks for operational cost-recovery, not a political levy on a global chokepoint. The IHTA enters a **provisional operating phase** for the first 24 months before full permanent authority activates.

Governance

Permanent Council seats: Iran · United States · GCC rotating chair (Oman, Qatar, or UAE) · European Union (observer) · People's Republic of China (observer) · UN-appointed neutral chair (standing pool: Switzerland, Singapore, Oman, Brazil, Sweden). Iraq as observer when its maritime exports are directly affected. Transit rules require weighted majority. Enforcement actions affecting Iranian-flagged vessels require Iranian concurrence; all other enforcement requires consensus-minus-one.

Navigation Service Charge schedule

Tier	Vessel Category	Rate	Clearance
1	Humanitarian essential (medicine, food, medical equipment)	Zero	24-hour fast-track
2	Standard commercial (general cargo, container, bulk)	\$0.15/ton	48-hour
3	Energy/premium (oil tankers, LNG, chemicals)	\$0.25/ton or \$35K flat (VLCC)	Standard with surcharge structure

Rate adjustments capped at inflation +2% annually. 90-day advance notice for structural changes. Navigation Service Charges phase to zero upon full implementation of Points 4 and 5, with the IHTA transitioning to cost-recovery mode. Charges do not apply to military vessels of member states.

Revenue allocation

Allocation	%	Annual (~\$M)	Use
Iranian Civilian Reconstruction Fund	40%	\$200M	Infrastructure damaged in recent operations; World Bank trustee; EITI-published quarterly
International Maritime Safety Fund	35%	\$175M	Joint hotline, coast-guard coordination, pollution response, navigational safety
IHTA operations and reserve	25%	\$125M	Capped at 24 months operating costs; surplus redirected to Reconstruction Fund

Provisional phase safeguards

During the 24-month provisional phase, the IHTA operates Navigation Service Charges on a trial basis. At month 24, a JIG-reviewed assessment determines whether the IHTA transitions to permanent authority, continues

provisional operation for a further 24 months, or is restructured. This staged approach makes the IHTA politically introducible as a pilot program before permanent commitment.

Domestic positioning — both parties

United States and Coalition: Permanent open-strait guarantee. Navigation Service Charges recoverable from maritime users — not a political U.S. commitment. GCC rotating chair provides Gulf partners structural voice. **Iran:** A permanent institutional seat, \$200M/year for reconstruction, and recognition of Iran's role in Gulf governance — converting geographic position into institutional standing.

POINT 9 · IRAN INSTITUTIONAL

Sovereign Right to Peaceful Nuclear Energy and Civilian Fuel Supply

Core provision. All parties recognize Iran's sovereign right to peaceful civilian nuclear energy. This recognition is paired with — and is the reciprocal basis for — the verification provisions in Points 4–6 and 14. Iran's voluntary limitation of domestic enrichment to 3.67% is a sovereign exercise of choice in exchange for a guaranteed and diversified civilian fuel supply.

- **Section 123 Agreement.** The U.S. launches Section 123 Agreement negotiations on Day 1 of the ceasefire, with agreed terms announced within 30 days and formal submission to Congress within 180 days of verified enrichment conversion.

- **Guaranteed fuel supply.** The 123 Agreement guarantees fuel supply at market rates with financial penalties if the U.S. defaults.

- **Multilateral fuel-bank backstop.** Complementary fuel-supply assurances from at least one additional Nuclear Suppliers Group state or a multilateral fuel bank under IAEA auspices, ensuring supply is not dependent on any single provider.

- **Senate-failure fallback.** If Congress does not approve the 123 Agreement within 180 days, the U.S. shall: (a) facilitate Iran's access to the IAEA LEU Bank in Kazakhstan or equivalent mechanism within 60 days; (b) authorize third-country supply (EU, Russia, NSG member) with U.S. non-objection guarantees; (c) continue sanctions relief for fuel-related transactions regardless of 123 Agreement status.

- **Strategic Energy Partnership framing.** Civilian nuclear fuel cooperation is framed as a reciprocal technical partnership with joint governance and capacity-building, not as externally managed compliance.

- **Religious-legal pillar recognition.** Each party's binding domestic legal and ethical pronouncements — including the standing fatwa against nuclear weapons — are recognized as foundational pillars of the framework, creating a domestic-legitimacy bridge without altering technical provisions.

Domestic positioning — both parties

Iran: Permanent recognition of sovereign right, guaranteed supply with multilateral backstop, framed as a reciprocal partnership. Senate-failure fallback ensures Iran is never left without fuel supply. **United States:** The Senate-failure fallback means U.S. obligations are fulfilled even without ratification. The structure creates an international fuel-bank as a non-proliferation precedent.

Part IV: U.S. Compliance Track (Points 10–12)

POINT 10 · U.S. COMPLIANCE TRACK

Phased Sanctions Relief Tied to Verified Compliance

Core provision. Nuclear-related sanctions are lifted in phases corresponding to independently verified Iranian compliance milestones. Humanitarian sanctions are lifted on Day One, before any compliance milestone, as a standalone commitment that does not affect or depend on any other provision.

Day-One humanitarian sanctions relief

Upon signature: immediate lifting of all sanctions affecting medical supplies, medical equipment, food, agricultural inputs, aviation safety parts, and environmental goods. Banking channels for humanitarian trade reopened under streamlined licensing within 14 days. This is unconditional and not subject to reversal on compliance grounds.

Phased relief sequence

Phase	Timing	Iranian Milestone	U.S. Action
0	Day 1	Signature	Day-One humanitarian relief; Tier 1 banking authorization
1	Days 1–90	IAEA baseline deployed; 3.67% cap verified; Tranche 1 of 60% disposition	First sanctions tranche; aviation parts licenses; 50% asset release (Tranches 1–2); SWIFT reconnection process
2	Days 91–180	Stockpile reduction verified; Fordow conversion commenced; Tranche 1 complete	Tier 2 banking; remaining nuclear sanctions phased lifting; oil services licensing
3	Days 181–365	Enrichment infrastructure conversion 50% complete; Additional Protocol ratified	Full nuclear-related sanctions relief; remaining asset releases 3–5 per schedule; EITI accession support
4	Year 2+	Sustained compliance; civilian oversight council operational; oil ramp to 2.0M bpd	15-year oil moratorium active; strategic banking channels (Tiers 3–4); annual congressional certification

Snapback — human-verified, graduated

Step	Threshold	Human Authorization Required	Effect
1 — Advisory Notice	Verified compliance anomaly; WBI 5+	JIG notification only — no vote	Enhanced monitoring; advancement frozen; formal notice to responsible party
2 — Partial Restriction	WBI 8+; or 2 minor + 1 major breach; or Pattern of Concern designation	JIG majority vote	Targeted sector restrictions; new banking tier review; published JIG determination
3 — Emergency Fast-Track	Clearly defined material breach under Annex F; or WBI 12+	JIG 2/3 supermajority vote; or Presidential certification to Congress with 48-hour notice	Full snapback consideration; asset freeze reversal (subject to PSILP protections)

Human verification requirement

No sanctions consequence beyond Step 1 Advisory Notice activates without explicit human authorization by the Joint Implementation Group. Step 1 is the only self-activating step. Steps 2 and 3 require deliberate JIG decisions. This ensures no automated cascade from technical anomaly to economic rupture.

POINT 11 · U.S. COMPLIANCE TRACK

Regional Security Dialogue Protocol

Core provision. Both parties conduct structured bilateral consultations on regional stability through a dedicated diplomatic channel. Iran's sovereign ballistic missile capabilities are acknowledged as within Iran's national defense prerogative and are not addressed by this accord. Separate bilateral discussions on missile transparency may be pursued at any time by mutual consent.

Parallel confidential protocol

Implementation details are established in a parallel confidential protocol between Iran's Supreme National Security Council and the U.S. Department of Defense. The protocol is explicitly non-precedential and time-limited (3 years, renewable by mutual consent). It establishes measurable annual milestones with a delayed public annex released at year three.

Year	Milestone	Consequence of Non-Achievement
1	Cessation of transfers of advanced weapons systems (precision-guided munitions, drone components) to designated non-state actors	Suspension of subsequent sanctions tranches; freeze on new U.S. oilfield services licenses; JIG review of 123 Agreement fuel-supply timeline — no automatic snapback
2	50% reduction in IRGC Quds Force personnel deployed to external operations	Same graduated consequences as Year 1
3	Full transition of Quds Force external presence to non-operational advisory status	JIG determination; public annex released

Firewall protections

- The first 50% of asset releases and all humanitarian sanctions relief are **not** contingent on parallel-protocol milestones. The nuclear deal's independent viability is protected.
- Coastal-defense system exemption: categorical exemption for non-ballistic, short-range coastal defense systems from any missile-related discussions, with declaration and verification requirements.
- Symmetrical compliance monitoring: all compliance-indicator observation is extended to relevant regional parties, not targeted solely at Iran.

POINT 12 · U.S. COMPLIANCE TRACK

Iranian Energy Market Reintegration

Core provision. Iran restores oil export capacity (2.0–2.5 million barrels per day) within 24 months. U.S. firms gain commercially competitive access to up to 25% of new field development contracts in South Pars and Azadegan fields under transparent EITI tendering. The U.S. provides a 15-year moratorium on oil-specific sanctions with automatic 5-year extensions absent 24-month notice.

- **EITI accession** by Iran with quarterly publication of production and revenue data.

- **Competitive tendering.** No contract awarded on non-commercial terms by reason of nationality. European and other international firms receive equal bidding status.
- **Expedited licensing** for U.S. oilfield services companies within 90 days of Phase 2 entry.
- **Moratorium durability.** The 15-year moratorium survives even if nuclear provisions lapse, unless material breach is verified by IAEA and confirmed by JIG under Annex F.
- **Regional infrastructure integration.** Iran-Iraq-Turkey-Levant pipeline and rail corridors qualify for international financial institution co-financing through the Regional Coordination Council (Optional Annex 4).

Domestic positioning — both parties

United States: Commercially competitive access to a major energy market. Fifteen-year moratorium creates investment certainty. Firms compete on merit, not nationality preference. **Iran:** Full export capacity restored. Sovereign control over field development. EITI accession unlocks international project financing.

Part V: Joint Minimalist Floor (Points 13–14)

POINT 13 · JOINT MINIMALIST FLOOR

Structured Ceasefire Framework and Crisis Management Architecture

Core provision. The provisional ceasefire is converted into a structured framework. The Strait of Hormuz is permanently accessible to international shipping through Point 8. Crisis management architecture provides five independent de-escalation pathways before any escalatory response is authorized.

Crisis management mechanisms — all require human authorization above advisory level

Mechanism	Activation	Human Authorization to Escalate	Maximum Duration
Crisis Lock	10+ party-national fatalities; verified direct military clash; critical infrastructure attack; IAEA integrity alert	JIG emergency session within 48h; fact-finding team within 72h; extension requires JIG majority	14 days; extendable to 42 by JIG majority
Third-Party Shock Absorber	Third-party attack or spoiler activity	Attribution panel must determine sponsorship before any bilateral penalty applies; non-attributable classification = no penalties — JIG certified	30-day investigation window
Military Deconfliction Hotline	Any military incident	Preliminary de-escalation guidance before political authorization required; no escalation authorized by hotline alone	Permanent 24/7
Regional Incident Firewall	Third-party regional escalation threatening framework	JIG notification within 4 hours; bilateral consultation within 24 hours; coordinated statement within 48 hours	Immediate
Direct Executive Link	Imminent crisis requiring head-of-state communication	Pre-established secure channel; 6-hour consultation capability	On-demand

Third-Party Spoiler Attribution Protocol (TSAP)

When a third-party event occurs, an independent review panel — including a named neutral third-party expert from a standing roster — classifies the event within 72 hours into one of four categories: (1) state-sponsored; (2) proxy with state backing; (3) independent non-state actor; (4) inconclusive. **Default rule:** if investigation remains inconclusive after 10 days, the event is classified Non-Attributable. No bilateral penalty applies. Response is limited to cooperative threat mitigation. This prevents exploitation of ambiguity to trigger escalation.

Why five de-escalation layers matter

Historical analysis of treaty collapse shows that frameworks fail not from deliberate policy reversal but from a single ambiguous incident that neither side has adequate institutional tools to manage. Crisis Lock, TSAP, Direct Executive Link, Regional Incident Firewall, and Military Deconfliction Hotline provide five independent pathways to de-escalation, each requiring human authorization before any escalatory consequence activates.

POINT 14 · JOINT MINIMALIST FLOOR

Durable Domestic Non-Proliferation Framework

Core provision. Iran enacts domestic legislation through the Majlis codifying its longstanding doctrinal opposition to nuclear weapons in enforceable domestic statute. This is characterized as a sovereign act of codification — giving legal form to an existing commitment — not as a foreign-imposed obligation.

- **Criminalization.** Nuclear weapons development criminalized with minimum 20-year penalties for principals, financiers, and material contributors.
- **Independent civilian oversight council** reporting to the Majlis and the IAEA, with neutral-state technical advisors.
- **Automatic UNSC referral** for any verified fissile-material diversion to undeclared sites or weapons-related activities.
- **Religious-legal validation.** The Guardian Council issues a statement recognizing the continuing validity of the standing fatwa as binding state policy, OR the Assembly of Experts issues a formal opinion to the same effect. The U.S. acknowledges either satisfies this provision. No theological extension of the fatwa is required.
- **Fissile material custody.** All fissile material above 300 kg LEU transferred to IAEA-supervised custody held by a consortium (Oman, Pakistan, Switzerland, Kazakhstan, plus IAEA) — not dependent on any single state.
- **Permanent monitoring.** Continuous IAEA presence across the full nuclear fuel cycle from mining through waste storage.
- **Graduated escalation for other concerns.** Other verified compliance concerns are referred to JIG for a 30-day remediation process before any Security Council escalation, with a presumption in favor of graduated, targeted measures.
- **Guardian Council compatibility review** with presumption of conformity, preserving constitutional integrity.

Domestic positioning — both parties

United States: Iranian domestic legislation criminalizing nuclear weapons survives any leadership transition. Twenty-year penalties for anyone involved. The most durable outcome achievable. **Iran:** Codification of an existing commitment, recognized internationally as state policy. Multi-state custody, not U.S.-controlled. Constitutional integrity preserved.

Part VI: Governance Architecture (Point 15)

POINT 15 · JOINT GOVERNANCE

Joint Implementation Group — Human-Verified Escalation Architecture

Core provision. A Joint Implementation Group administers implementation, resolves disputes, and maintains the framework through political and institutional turbulence. Israel participates as a permanent observer with full speaking rights on Iran-related security matters.

Composition and cadence

Co-chairs: Foreign-Minister-level Iranian representative; Deputy Secretary-level U.S. representative; neutral chair from a standing pool (Switzerland, Sweden, Singapore, Brazil, Oman). Chair serves 18-month renewable terms. **Secretariat:** 30-person neutral team. **Meeting cadence:** Weekly working-level; monthly plenary; emergency within 24 hours. Quarterly comprehensive review with public summary. Annual performance report.

Decision-making and escalation — human authorization at every stage

Level	Decision Required	Human Authorization	Effect
L0 — Technical monitoring	None — continuous	IAEA and JTC automatic	No consequence; data collection
L1 — Advisory notice	JIG notification	JIG co-chairs acknowledge	Enhanced monitoring; advancement frozen
L2 — Partial restriction	JIG majority vote	Majority of JIG members	Targeted sector restrictions; published determination
L3 — Enhanced review	JIG 2/3 vote	Supermajority	Pattern of Concern designation; benefit-suspension review
L4 — Snapback consideration	JIG unanimous or Emergency Fast-Track	All members or Presidential certification	Full snapback process; Annex F criteria apply
L5 — Arbitration	UN Secretary-General referral	Both parties or JIG determination	Binding arbitration for core-obligation disputes

Resilience provisions

Provision	Activation	Effect
Domestic Political Disruption Hold	Election transition; legislative blockage; executive constraint; referendum requirement	30–60 day pause on new obligations; benefits continue at 50%; maximum once per 12-month period per party; core obligations continue
Technical Lapse Protocol	Up to 45-day delay on a scheduled milestone, with good-faith demonstrated	Obligations frozen at current level; no rollback; JIG adjusted timeline within 14 days
Force Majeure	Natural disaster; attack by non-parties; cyber attacks on critical infrastructure	30-day suspension; benefits at 50%; JIG review within 14 days

Verification Failure Fallback	Verification breakdown (data gaps, denied access, sensor failure)	Stage 1: Technical Remediation (7 days) → Stage 2: Substituted Verification (14 days) → Stage 3: Limited Compliance Assumption (30 days) — no escalation without JIG authorization
Election Quiet Period	National election within 60 days; 30 days post-election	Sensitive measures deferred; maximum 2 per 5-year cycle per party
Performance Acceleration	Zero WBI for 2 cycles; no Pattern of Concern for 3 cycles; on-time delivery for 2 cycles	15% benefit acceleration; or half-cycle timeline advancement; or enhanced verification privilege — party selects

Succession continuity

All treaty obligations survive changes in leadership on either side. In contested succession or institutional vacuum, the JIG maintains administration until a recognized authority resumes engagement. If an extra-constitutional change of government occurs, a 30-day review period applies before any suspension is invoked. If two or more Iranian signatories are incapacitated simultaneously, the JIG neutral chair, in consultation with Oman and Switzerland, identifies the senior surviving official with authority to provide provisional accreditation. A 90-day pause applies; the treaty remains in force.

Domestic positioning — both parties

The architecture survives elections, transitions, contested succession, and institutional turbulence. Neither side is exposed to the risk that the other's domestic politics collapse the framework. Both sides have controlled exit pathways through staged withdrawal, not catastrophic rupture.

Annex A — Implementation Sequencing

Eight implementation cycles, each a 90-day block with a 30-day assessment period and 60-day implementation period. Transitions require JIG certification that prior cycle obligations have been met. No cycle advances without verified reciprocal completion.

Cycle	Days	Iran	United States	Joint
0 — Foundation	1–30	Declaration of nuclear facilities; SNSC ratification; Guardian Council review	Banking Tier 1 authorization; Day-One humanitarian sanctions relief; 123 Agreement launched	JIG established; crisis hotline activated; Direct Executive Link tested
1 — Verification	31–90	IAEA baseline inspection; enrichment cap (3.67%) verified	Asset Tranches 1–2 (50%); SWIFT reconnection; aviation parts licenses	First quarterly review; Rapid Dispute Panel test; TSAP protocol exercised
2 — Disposition	91–180	60% Tranche 1 exported/downblended; Fordow conversion begins; EITI filed	Asset Tranche 3 (20%); Tier 2 banking; oil services licensing	WBI baseline established; PSILP framework launched; IHTA provisional phase opens
3 — Consolidation	181–365	Stockpile cap verified; Fordow 50% converted; 60% Tranche 2 complete	Asset Tranches 4–5 (25%); remaining nuclear sanctions relief	First maintenance assessment; IHTA review at Month 24; congressional review checkpoints
4 — Normalization	Year 2	Full Additional Protocol active; civilian oversight council operational; oil ramp to 2.0M bpd	Full nuclear-related sanctions relief; Tiers 3–4 banking; 123 Agreement submitted to Congress	Annual JIG review; Fordow conversion complete; year-one parallel-protocol milestone verified
5 — Integration	Year 3	Parallel-protocol Year 1 complete; regional dialogue active	Strategic banking; 15-year moratorium in effect; public parallel-protocol annex released	Regional Coordination Council operational
6 — Stabilization	Year 4	Quds Force external deployment reduction verified	Annual congressional certification; reconstruction co-financing active	Security guarantee fully operative
7 — Maintenance	Year 5+	Quds Force transition to advisory complete; oil at 2.5M bpd	Treaty review conference; renewal assessed	Permanent IAEA presence; transition to maintenance framework with reduced inspection frequency

Cycle transition logic

Green (all benchmarks met): advance with full benefits. **Amber** (75–99%): advance with 80% benefits. **Red** (50–74%): hold; benefits at 50%. **Black** (<50%): freeze; no new benefits; JIG enhanced review.

Annex B — Verification Architecture

B.1 Multi-source verification stack

Layer	Source	Function
1	IAEA continuous monitoring	Cameras, seals, environmental sampling at all declared facilities (24/7)
2	IAEA periodic inspections	Mining, milling, waste storage (quarterly)
3	Challenge inspections	10–25/year; 48-hour notice; managed-access framework; dispute-resolved by Rapid Dispute Panel
4	National technical means	U.S. satellite, signals, open-source; Iranian reciprocal transparency declarations
5	Supply-chain tracking	Blockchain-verified custody from mining to waste; dual-use technology import monitoring
6	Joint Technical Committee	Two technically qualified representatives per party + Oman permanent observer; flags anomalies within 7 days of cycle close
7	Independent Actuarial Reviewer	Neutral institution maintains Weighted Breach Index methodology; audit findings are public documents

B.2 Verification Integrity Uncertain (VIU) state

If verification data becomes ambiguous due to cyber attack, system failure, data corruption, or environmental interference, the ambiguity triggers a VIU state — not escalation. No breach classification, no sanctions consequence, and no framework termination may be based solely on data ambiguity. VIU triggers the Verification Failure Fallback Ladder (Annex B.3).

B.3 Verification Failure Fallback Ladder

Stage	Days	Action	Benefit Level
1 — Technical Remediation	1–7	Joint technical team within 48h; sensor repair/replacement; backup data reconstruction; daily JIG reporting	100%
2 — Substituted Verification	8–14	Alternative methods: satellite, environmental sampling, logistics records, commercial imagery; expanded challenge inspections	100%
3 — Limited Compliance Assumption	15–30	Temporary assumed compliance within established bounds; enhanced monitoring at Stage 1 intensity	75%
Hard deadline	Day 30	If verification not restored: JIG convenes within 14 days to determine whether WBI escalation is warranted — human decision required	Standard JIG process

B.4 Weighted Breach Index (WBI)

All compliance events are scored on a weighted index. Cumulative scores determine advisory levels. Every consequence above Advisory Notice (L1) requires explicit JIG human authorization.

Domain	Points per Event	Advisory Threshold	Review Threshold
--------	------------------	--------------------	------------------

Nuclear	3.0	5.0	8.0
Missile transparency (if protocol active)	2.0	—	8.0
Proxy / regional	2.0	—	8.0
Maritime	1.0	—	—
Other (information, banking)	1.0	—	—

B.5 Pattern of Concern designation

Three or more categories of concerning activity across two cycles demonstrating coordinated intent to undermine the framework. Before any public designation, a mandatory 48-hour confidential consultation window allows technical clarification without public attribution. Equal access for all parties. Designation requires JIG 2/3 vote.

Annex C — Economic and Sanctions Architecture

C.1 Banking channel architecture

Tier	Purpose	Clearance
1 — Humanitarian	Medicine, food, medical equipment, aviation safety, environmental	24-hour; zero service charge; unconditional
2 — Essential Commercial	Standard commercial; PSILP-certified contracts	72-hour; standard terms
3 — Advanced Commercial	Enhanced due-diligence categories	7-day; case-by-case approval
4 — Strategic	JIG-approved categories only	30-day review

C.2 Private Sector Integration Lock-In Protocol (PSILP)

Private-sector contracts signed during the relief period are protected for 24 months post-snapback through neutral arbitration (Singapore International Arbitration Centre; Swiss Chambers' Arbitration). Certification criteria: minimum 12-month duration; multinational structure (3+ jurisdictions); neutral arbitration clause; political-risk insurance; public disclosure of existence and value to JIG.

C.3 150-day sanctions inertia buffer — with emergency fast-track exception

Standard reimposition requires: JIG majority determination (30 days) + commercial wind-down (60 days) + banking implementation (60 days) = 150-day minimum. **Emergency fast-track exception** (Annex F clearly defined material breach only): Presidential certification to Congress, 48-hour notice to JIG, and simultaneous IAEA Director General consultation — available for defined material breach events without the standard 150-day interval. This answers the political objection that the U.S. could be trapped while preserving protection against frivolous reversal.

C.4 Mutual accountability mechanism

If the U.S. reimposes sanctions outside the JIG process and the fast-track exception is not invoked, Iran may proportionately suspend corresponding nuclear obligations and implement commercial countermeasures. Pain is distributed to both sides, preventing unilateral cost-free escalation.

C.5 Performance dividend mechanism

Sustained overperformance — zero WBI over 2 cycles, no Pattern of Concern over 3 cycles, on-time delivery for 2 cycles — triggers accelerated benefits. Party may choose: (a) next tranche accelerated 15%; (b) timeline advanced one half-cycle; (c) enhanced verification privilege. Capped at 20% per cycle; maximum two accelerations per 12-month period.

Annex D — Crisis Management and Human-Verified Escalation

D.1 Crisis Lock

Triggers: 10+ party-national fatalities; verified direct military clash; imminent destabilization; critical infrastructure attack; IAEA verification system integrity alert. Effect: 14-day freeze on all status-quo changes. JIG emergency session within 48 hours. Fact-finding team within 72 hours. No prejudice from Lock-period actions. Extension by JIG majority; maximum 42 days total. **Every consequence above monitoring requires JIG human authorization.**

D.2 TSAP — Independent review panel requirement

The Third-Party Spoiler Attribution Protocol now includes a named neutral expert from a standing roster maintained by the JIG Secretariat (roster drawn from retired heads of international arbitration institutions; rotates quarterly). The neutral expert participates in every attribution panel as a non-voting but formally recorded independent reviewer. This provides institutional legitimacy beyond ad hoc arrangement.

D.3 Domestic Political Disruption Hold

Trigger conditions: election transition; legislative blockage; executive constraint; referendum requirement. Effect: 30–60 day pause on new obligation activation; existing obligations continue; benefits at 50%; JIG continues full operation; core obligations (ceasefire, IAEA, fissile custody) continue always. Maximum one Hold per 12-month period per party; exceeding 60 days requires JIG 2/3 vote.

D.4 Graduated Exit Pathway

Partial withdrawal: 60-day advance notice; suspended and maintained obligations specified; benefits reduced proportionally; core obligations continue regardless. **Full exit:** 12-month transition; core obligations maintained for 12 months; re-entry requires 90-day re-baseline and JIG certification.

D.5 Cascade Prevention Protocol

If two or more of {Pattern of Concern designation, WBI threshold breach, Dynamic Stabilization Buffer activation} occur within 14 days, a 10-day mandatory JIG impact assessment precedes any escalation response. Single-mechanism responses proceed without delay. Multi-mechanism cascades are classified as tactical (coordinated exploitation) or organic (independent violations) before proportionality is assessed.

Annex E — Public Implementation Dashboard

Visibility into framework performance increases political viability. The JIG publishes a quarterly one-page Compliance Transparency Summary (CTS) containing non-sensitive metrics that allow domestic constituencies, legislative bodies, and media to assess framework health without exposing operational detail.

E.1 CTS contents (published quarterly, within 7 days of cycle close)

- Current Weighted Breach Index score with trend indicator (improving / stable / deteriorating).
- Active mechanisms list: all operational provisions with status indicators (green / amber / red).
- Current implementation cycle and days remaining.
- Benefits delivered to date: asset tranches released, humanitarian channels open, commercial contracts protected.
- Compliance snapshot: Iranian obligations status, U.S. obligations status, joint obligations status.
- Next milestone: upcoming benchmark with date and verification requirement.
- Risk register: top three identified risks with mitigation status.

E.2 Distribution

Published within 7 days of each cycle close by the JIG Secretariat. Available in English, Persian, Arabic, and French. Media briefing by JIG co-chairs within 14 days. Archived in a publicly accessible repository. Each co-chair may publish a separate national-language summary characterizing the CTS data in terms suited to domestic audiences, provided factual accuracy is maintained.

Annex F — Material Breach: Tightly Defined Scope

Tightly defining material breach reduces fear of politicized snapback and protects the credibility of the enforcement ladder. Only the events below constitute material breach for snapback purposes.

Category	Event	Fast-Track Available
Nuclear	Enrichment above 3.67% at any declared or undeclared site, verified by IAEA	Yes
Nuclear	Diversion of fissile material to undeclared sites or weapons-related activity, IAEA-certified	Yes
Nuclear	Systematic denial of IAEA access at declared sites for >45 days without JIG-approved justification	Yes
Military	Direct armed attack on U.S. military personnel or facilities, JIG-attributed	Yes
Economic	Unilateral Iranian closure of Hormuz transit to commercial shipping without JIG authorization	Yes
Economic	U.S. reimposition of sanctions without JIG authorization and without material breach in any of the above categories	Yes — for Iran's proportionate suspension

F.1 Events that do NOT constitute material breach

- Technical delays in milestone completion where good faith is demonstrated (Technical Lapse Protocol applies).
- Domestic political turbulence preventing implementation (Domestic Political Disruption Hold applies).
- Third-party spoiler events not attributed to the responsible party under TSAP.
- Verification system anomalies pending TSAP or VIU investigation.
- Disagreements about interpretation of provisions pending Rapid Dispute Panel resolution.
- Rhetorical statements or media characterizations inconsistent with agreed framing, absent operational breach.

F.2 Graduated response before fast-track

Even for fast-track-eligible material breach events, the JIG must first verify the breach determination through IAEA certification or attribution panel finding. Unilateral assertions do not constitute material breach. Verification may proceed in parallel with emergency fast-track notice.

Annex G — Dispute Resolution Hierarchy

A dispute-resolution hierarchy maximizes the proportion of issues resolved at technical and working levels, keeping the political relationship stable. The more frequently disputes resolve below the ministerial level, the less the framework feels one escalation away from collapse.

Tier	Mechanism	Timeline	Binding
1 — Technical Working Level	Joint Technical Committee review; informal consultation	14 days	No — but factually authoritative
2 — Rapid Dispute Panel	5 experts (2 Iranian, 2 U.S., 1 mutually agreed neutral); urgent decisions in 72 hours; standard in 21 days	72h urgent / 21 days standard	Yes — within framework
3 — JIG Mediation	JIG co-chairs mediation with neutral chair facilitation	30 days	Yes — by JIG majority
4 — Ministerial Review	Foreign minister-level engagement with neutral facilitation	60 days	Negotiated outcomes only
5 — UN Binding Arbitration	UN Secretary-General referral for core-obligation disputes only	By agreement	Yes — international law

G.1 Dispute Exhaustion Rule

No party may activate Tier 4 or Tier 5 without a Certificate of Exhaustion issued by the JIG Secretariat confirming that Tiers 1–3 have been formally invoked, completed their minimum duration, and were participated in good faith. Exception: critical breach (weapons diversion, imminent armed attack) permits emergency bypass directly to Tier 5 with 48-hour JIG notification.

G.2 Precedent Registry

All finalized Rapid Dispute Panel and JIG determinations are binding and entered in the Precedent Registry. Precedents are subject to mandatory 5-year review. After 5 years, a precedent may be reopened if changed circumstances materially affect its application. Old precedent remains operative until replaced. Unanimous JIG vote required for revision outside the 5-year cycle. Quarterly publication.

Optional Annex 1 — Trilateral Stability: Israel–Lebanon–Hezbollah

[OPTIONAL MODULE] OPTIONAL ANNEX — INDEPENDENT ADOPTION

This annex enters force independently upon written adoption by Israel, Lebanon, and the parties designated below. It does not require adoption to enter force the Core Treaty. Failure, suspension, or termination of this annex does not affect the Core Treaty.

This annex addresses the Israel–Lebanon–Hezbollah triangle through a 3-3-3-2-1 calibration mirroring the Core Treaty. First-signature-round objectives are narrowed to deconfliction and civilian protection; full institutional integration is a phased second-round objective.

OPT-1.1 Calibration

Track	Points	Description
Israel Positions	T1, T4	Attack prohibition with attribution tribunal; strategic decoupling and LAF integration
Lebanon Positions	T2, T5	Disputed territories restoration protocol; constitutional state authority over armed formations
Hezbollah Positions	T3, T6	Deconfliction and civilian incorporation in JSRZ; calibrated deterrence framework (second-round objective)
Israel Moderate	T7, T10	Borderland security federalism with mirror structure; 7-year phased withdrawal
Lebanon Moderate	T8, T11	Phased territorial transition with mutual recognition; sovereign process with NSSRC
Hezbollah Moderate	T9, T12	Tripartite buffer governance; joint civilian protection with \$500M insurance pool
Israel Minimalist	T13	Civilian resilience architecture (hardened shelter, insurance pool, layered interception)
Lebanon Minimalist	T14	Regulated non-belligerence with graduated reciprocity and Joint Antagonism Management Commission
Joint Governance	T15	Trilateral Coordination Commission

OPT-1.2 First-Round: Deconfliction and Civilian Protection

The first-signature-round objective under Optional Annex 1 is deconfliction and civilian protection — not full institutional integration. Institutional integration of Hezbollah personnel into the LAF, formal recognition of governance roles, and the broader sovereignty restoration provisions are second-round objectives, adopted after the first-round framework demonstrates stability.

- **Ceasefire formalization.** Permanent cessation of all cross-Blue-Line military operations; Joint Antagonism Management Commission (JAMC) co-located at Naqoura with UN chair; 24/7 military deconfliction hotline.
- **Attack attribution (IAAT).** International Attack Attribution Tribunal at The Hague; 72-hour preliminary classification; default non-attributable rule prevents exploitation of ambiguity.
- **Joint civilian protection command.** Co-located in Tyre; integrated staff (Hezbollah Civilian Protection 30%, Lebanese Civil Defense 35%, UN OCHA 20%, ICRC 15%); three-veto structure; \$500M Civilian Casualty

Insurance Pool.

- **Military Deconfliction Hotline.** Permanent 24/7 trilateral communication channel: Israeli military — LAF — TCC secretariat.

OPT-1.3 Second-Round: Institutional Integration and Territorial Restoration

[OPTIONAL MODULE] SECOND-ROUND OBJECTIVE — NOT A FIRST-SIGNATURE COMMITMENT

The provisions below are second-round objectives, adopted after six months of stable first-round operation as verified by the Trilateral Coordination Commission. They are not ratification prerequisites.

- **LAF registration and amnesty.** Hezbollah military personnel register with LAF within 60 days of second-round activation; lump-sum buyout (\$30,000–\$75,000 per rank tier); pension, vocational, and integration options; \$8B Sovereign Transition Fund (Gulf states 50%, EU 25%, U.S. 15%, international 10%); amnesty for all pre-registration activities.
- **Joint Security and Reconstruction Zone (JSRZ).** 5km strip north of Blue Line; LAF 45%, Hezbollah-registered-with-LAF 30%, international 25%; weapons limited to small arms; no rockets, missiles, drones above 85mm; quarterly audit; tunnels sealed under UN supervision within 180 days.
- **Disputed territories restoration.** Shebaa Farms (Israeli withdrawal Day 61; LAF 2,000 personnel; \$150M EU demining grant). Kfar Shouba (identical 90-day timeline; \$50M agricultural fund). Northern Ghajar (immediate LAF/civil-administration assumption; 12-month referendum). \$2B reparations over 10 years through World Bank trust fund.
- **7-year phased Israeli withdrawal** with four phases (Consolidation, Reduction, Handover, Normalization); \$2B LAF capacity-building; \$1B southern Lebanon reconstruction; technical lapse protocol freezes transition at current phase rather than resetting; amnesty for all Hezbollah combatants who register.

OPT-1.4 Civilian Resilience Architecture (Israel)

- **Hardened shelter mandate:** every residence, workplace, school, and public facility within 50km of the Lebanese border equipped with hardened shelter; 80% government subsidy; 5-year compliance deadline.
- **National attack insurance pool:** mandatory insurance for all border-region property; government subsidies for businesses (60%) and residences (40%); agricultural protection at 80% of 3-year revenue average.
- **Layered interception coverage:** Iron Dome and successors covering all populated areas; drone defense at 95% interception rate; AI-powered border surveillance.
- **Pre-programmed proportionate response:** attack triggers immediate proportionate response on identified source; human oversight within 10 minutes to confirm or abort if misidentification detected.

OPT-1.5 Trilateral Coordination Commission (TCC)

9 members: 3 Israeli, 3 Lebanese, 2 Hezbollah (political representative + security liaison as registered with LAF), 1 UN chair (rotating: Swiss, Brazilian, Singaporean, Norwegian). 24/7 crisis hotline. 72-hour Cooling-Off: TCC may mandate suspension of all military operations. 10-level published escalation ladder. Decisions by consensus; 7 of 9 weighted majority when consensus elusive; UN chair tie-breaks procedural matters only.

Optional Annex 2 — Yemen: Coalition and Houthi Track

[OPTIONAL MODULE] OPTIONAL ANNEX — INDEPENDENT ADOPTION

This annex enters force independently. It does not require or affect the Core Treaty.

OPT-2.1 Cross-Border Attack Cessation Framework

Houthi commitment to cease all ballistic missile, cruise missile, armed drone, and naval operations against Saudi Arabia, UAE, Bahrain, Kuwait, and Egypt. Defensive coastal patrol and short-range systems for Yemeni territorial defense retained within a declared inventory.

Phase	Days	Action
1	1–60	Ballistic and cruise missiles removed from forward positions to declared storage under UN verification
2	60–180	Long-range armed drone inventory reduced 60%; excess to UN custody or destroyed
3	180–365	Rocket artillery limited to 75km range with technical modifications verified by UN
4	365–730	Negotiation of permanent regional missile/drone limitation regime

OPT-2.2 UN Coalition Security Monitoring Mission

Headquarters in Abu Dhabi; field presence in Riyadh, Manama, and Yemeni border governorates. UN Security Council mandate. 5,000 personnel. Random access to declared facilities. Quarterly briefings. Houthi naval operations limited to 24-nautical-mile coastal zone with UN monitoring.

OPT-2.3 Political Integration and Governance

- Houthi political party registration with proportional legislative representation in transitional Yemeni legislature.
- Saada and northern governorate autonomous administration preserved during transition; permanent-status referendum at year five under UN supervision.
- Civilian harm fund: \$5B Coalition contribution for prior operations; \$1B Houthi contribution for cross-border attack victims. Neutral administration; no war-crimes liability admission.
- Coalition cessation of airstrikes and naval bombardment on signature.

OPT-2.4 Yemen Reconstruction Trust

\$35B over 10 years: GCC states 50%, EU 20%, U.S. 10%, international financial institutions 20%. Allocation: infrastructure 40%, housing 25%, healthcare and education 15%, agriculture 10%, humanitarian 10%. UN-supervised; World Bank trustee; EITI-published quarterly. No sectarian discrimination.

OPT-2.5 GCC–Iran De-escalation Channel

Permanent Oman-hosted channel between Iran and GCC states for ongoing de-escalation. Quarterly ministerial meetings. Standing working groups on maritime security, counter-terrorism, pilgrimage safety, and economic cooperation. Builds on the 2023 Beijing-mediated Saudi-Iran rapprochement.

Optional Annex 3 — Gaza Reconstruction and Palestinian Track

[OPTIONAL MODULE] OPTIONAL ANNEX — INDEPENDENT ADOPTION

This annex enters force independently. It does not require or affect the Core Treaty.

OPT-3.1 Gaza Reconstruction Trust (\$53B over 10 years)

Source	Amount	Notes
GCC states	\$25B (47%)	Saudi Arabia, UAE, Qatar, Kuwait — staged against governance milestones
European Union	\$15B (28%)	EU Trust Fund; technical implementation through EU agencies
United States	\$5B (10%)	Through USAID and international financial institutions
International Financial Institutions	\$5B (10%)	World Bank, IMF, Islamic Development Bank, AIIB
UN agencies and private donors	\$3B (5%)	UNDP, UNRWA, private foundations

OPT-3.2 Palestinian-Led Technocratic Interim Administration

Palestinian-led technocratic interim authority under UN supervision for an initial 36-month period, with renewable mandate. Independent Palestinian professionals with international technical advisors. Mandate: reconstruction administration; civil services; judicial and security capacity-building; preparation for elections at month 36.

OPT-3.3 Demobilization, Disarmament, and Reintegration

All armed factions submit to DDR under UN supervision. Options: (a) integration into a newly constituted Palestinian security force vetted by UN; (b) civilian reintegration with vocational training and stipend (\$15,000–\$40,000); (c) emigration to third countries with sponsoring-state agreements. Heavy weapons to UN custody; tunnel infrastructure permanently sealed. Reconstruction funds flow only to areas under demilitarized administration.

OPT-3.4 Gaza Coastal Special Economic Zone

Port access, desalination capacity, solar power infrastructure, and customs-free industrial zones. International investment invited on non-discriminatory terms. Israeli technical cooperation through neutral channels for water, electricity, and digital interconnection. Maritime corridor under UN naval observation.

OPT-3.5 Political Horizon

- Two-state framework reaffirmed as horizon; negotiating tracks resumed under Quartet sponsorship.
- Right-of-return discussions through joint Israeli-Palestinian-international commission with \$5B initial compensation fund.
- Refugee documentation and resettlement support; Lebanese and Jordanian host-state burden-sharing through international assistance.
- Jerusalem provisions deferred to final-status negotiations; status quo on holy sites maintained; international observer presence.

Optional Annex 4 — Iraq, Syria, and GCC Regional Integration

[OPTIONAL MODULE] OPTIONAL ANNEX — INDEPENDENT ADOPTION

This annex enters force independently. It does not require or affect the Core Treaty.

OPT-4.1 Iraq — Militia Integration and State Authority

- \$3B Iraqi capacity-building program (U.S. 30%, EU 25%, GCC 25%, Iran 10%, UN 10%): equipment, training, intelligence cooperation.
- PMF transition over 36 months: (a) integration into Iraqi Security Forces; (b) civilian reintegration with stipend (\$10,000–\$30,000); (c) integration into Border Guard Force.
- Kurdistan Regional Government constitutional status preserved; oil revenue-sharing formula codified.
- World Bank-supervised anti-corruption public financial management reforms.

OPT-4.2 Syria — Reconstruction and Political Transition

- \$45B Syria Reconstruction Trust over 15 years: GCC 40%, EU 30%, IFIs 15%, U.S. 10%, UN 5%. Tied to verified political-transition benchmarks.
- Voluntary refugee return program; host-state burden-sharing (Turkey, Lebanon, Jordan) through international compensation.
- Property restitution courts: hybrid mechanism with UN-administered compensation fund.
- Joint Counter-Terrorism Coordination Cell for ISIS-affiliated operations.

OPT-4.3 GCC Integration Tracks

- Iran-GCC bilateral normalization: staged ambassador exchange; commercial aviation agreements; pilgrimage facilitation.
- Persian Gulf maritime cooperation: joint coast-guard exercises; pollution response; AIS sharing with IHTA.
- Energy infrastructure integration: Iran-GCC LNG cooperation; petrochemical joint ventures; renewable energy interconnection.
- Cultural and academic exchange: scholarship program; joint archaeological research; Persian Gulf heritage protection.

OPT-4.4 Regional Coordination Council (RCC)

Permanent forum for regional coordination: U.S., Iran, Israel, Lebanon, Saudi Arabia, UAE, Qatar, Oman, Bahrain, Kuwait, Egypt, Iraq, Syria, Jordan — with Turkey (observer), EU (observer), and UN (observer). Quarterly ministerial meetings. Standing working groups on maritime security, counter-terrorism, energy, environment, refugees, and infrastructure. Consensus decisions; non-binding recommendations forwarded to JIG for binding adoption where applicable.

Optional Annex 5 — Regional Economic Dividend

[OPTIONAL MODULE] OPTIONAL ANNEX — INDEPENDENT ADOPTION

Provisions below supplement economic architecture in the Core Treaty and Optional Annexes 1–4. Adoptable independently or in combination.

OPT-5.1 Consolidated economic outcomes

Mechanism	Scale	Recipient	Trigger
Frozen asset return	\$50B over 365 days	Iran (sovereign)	Phased tranches on verified compliance
IHTA Reconstruction Fund (annual)	\$200M/year	Iran (infrastructure)	IHTA Navigation Service Charges
IHTA Maritime Safety Fund (annual)	\$175M/year	Joint regional	IHTA Navigation Service Charges
Day-One humanitarian sanctions relief	Immediate	Iran (population)	Signature
123 Agreement fuel-cycle market	\$10–20B	Iran	Signature + 30 days
IPMIRC medical isotope revenue	\$200M+/year	Iran	Fordow conversion (Year 2)
U.S. energy-field access (25%)	\$50–100B over 15 years	U.S. firms	Phase 2; competitive tendering
LAF capacity-building	\$2B over 7 years	Lebanon (LAF)	Phased withdrawal milestones (OPT-1)
Civilian casualty insurance pool	\$500M	Israeli + Lebanese civilians	JSRZ activation (OPT-1)
Reparations — disputed territories	\$2B over 10 years	Lebanon	Territorial restoration (OPT-1)
Yemen Reconstruction Trust	\$35B over 10 years	Yemen	Cross-border cessation (OPT-2)
Civilian harm fund (Yemen)	\$6B combined	Yemeni + Coalition civilians	OPT-2 activation
Gaza Reconstruction Trust	\$53B over 10 years	Gaza (administration)	DDR + administration (OPT-3)
Right-of-return compensation fund	\$5B initial	Palestinian refugees	OPT-3 joint commission
Iraqi capacity-building	\$3B over 5 years	Iraq (ISF + Border Guard)	PMF integration (OPT-4)
Syria Reconstruction Trust	\$45B over 15 years	Syria (governance milestones)	Political benchmarks (OPT-4)
Regional connectivity corridors	\$30B over 10 years	Cross-border infrastructure	Multi-party agreements (OPT-4)

OPT-5.2 Regional connectivity corridors

- **Iran-Iraq-Syria-Levant Corridor:** rail and pipeline infrastructure connecting the Persian Gulf to the Mediterranean; multi-IFI co-financing; bilateral transit agreements.

- **GCC-Levant Energy Network:** Saudi-Jordan-Lebanon-Israel-Palestine-Egypt power and gas interconnection; renewable energy emphasis.
- **Hormuz-to-Suez Maritime Logistics Belt:** port modernization across Iranian, GCC, and Egyptian ports.
- **Trans-regional Digital Backbone:** fiber-optic and undersea cable infrastructure; digital trade facilitation.
- **Water Cooperation Architecture:** Tigris-Euphrates basin commission; Litani-Hasbani-Jordan basin technical cooperation; desalination knowledge-sharing.

Optional Annex 6 — Treaty Resilience and Succession Continuity

[OPTIONAL MODULE] OPTIONAL ANNEX — INDEPENDENT ADOPTION

Resilience provisions below augment those in Point 15 and the Core Treaty. Adoptable independently.

OPT-6.1 Deposit and legal standing

This accord is deposited with the UN Secretary-General upon entry into force as a binding instrument of international law independent of the political continuity of any signatory government. Deposition creates legal standing for enforcement claims in international forums. The Secretary-General's depositary function is technical; substantive dispute resolution remains with the JIG.

OPT-6.2 Minimum implementation team requirement

Each party maintains at all times three designated framework officers registered with the JIG Secretariat: (i) principal negotiator (ministerial/deputy level); (ii) technical implementation officer; (iii) legal/compliance officer. Positions maintained through election transitions with 14-day handover briefings. Vacancy filled within 14 days; benefits continue during vacancy.

OPT-6.3 Iranian signatory architecture

The Iranian instrument is executed collectively: President (signature), Speaker of the Majlis (counter-signature), SNSC Secretary (security certification), Central Bank Governor (financial certification). The state as corporate entity commits. Guardian Council reviews with presumption of conformity. Sealed authentication records released only upon 10-year confidentiality expiry or unanimous JIG consent.

OPT-6.4 U.S. ratification pathway

Senate advice and consent if filed within 180 days. If Congress fails to act, executive-agreement implementation within executive competence while consultations continue. Quarterly compliance certification to Senate Foreign Relations and House Foreign Affairs Committees.

OPT-6.5 Treaty survival in institutional collapse

- **Physically self-executing provisions continue automatically:** IAEA monitoring, third-country fissile custody, Fordow sealed storage, ceasefire obligations, Hormuz coordination.
- **12-month standstill:** sanctions, assets, and moratorium provisions locked at status quo. No new relief; no re-freezing.
- **JIG caretaker administration** through neutral chair and non-collapsed party.
- **Oman operational liaison** with whatever authority controls relevant Iranian facilities.
- **Successor inherits all benefits and obligations** unless formal repudiation — which triggers automatic snapback of lifted sanctions and indefinite third-country custody.
- **JIG convenes within 30 days** of successor recognition to reaffirm or renegotiate milestones.

OPT-6.6 Five-year renewal architecture

Comprehensive review at years five and ten. Options by mutual consent: (a) continue under existing terms; (b) negotiate amendments; (c) convert to a successor comprehensive agreement; (d) transition to maintenance framework with reduced verification frequency. Reviews are natural decision moments aligned with potential electoral cycles. No outcome is mandated.

OPT-6.7 Designated guarantors

Pakistan: permanent convener of Islamabad Working Group; archive-keeper; Senior Coordinator role. **Oman:** Hormuz verification hub; emergency hotline; back-channel facilitation. Guarantor status confers verification and communication authority, not decision-making power. Guarantors may be rotated by JIG decision if compromised.

Closing Statement

RAMES v9.1 is designed for one purpose: to enable the parties to each say, in their own political language and to their own domestic constituencies, that they secured what they came to secure — without requiring any party to acknowledge defeat, capitulation, or the illegitimacy of prior positions.

Structural integrity

Every obligation is paired with a corresponding obligation. No party advances alone. The accord is behaviorally hardened: breach triggers are cumulative, weighted, and require human decision at every escalation step above advisory level. It is technically resilient: the verification fallback ladder prevents accidental escalation; the TSAP prevents exploitation of ambiguity; the Domestic Political Disruption Hold prevents political shocks from collapsing the structure. It is economically incentivized: approximately \$280B+ in structured economic outcomes across all tracks, with performance-based acceleration rewards.

Why each party can adopt this

United States The most comprehensive and verifiable non-proliferation outcome achievable. All Article 51 rights preserved. Congressional review at every major tranche. Emergency fast-track for material breach. Israeli participation in all Iran-related reviews. U.S. firms gain commercially competitive access to a major regional market. Hormuz permanently open.	Islamic Republic of Iran A permanent, internationally registered end to hostilities. Sovereign right to peaceful nuclear energy formally recognized. \$50B in sovereign property returned with escrow protection. Fatwa recognized internationally. 164 IR-1 centrifuges preserved. Fordow becomes a \$200M+/year regional healthcare asset. Domestic political turbulence shielded by Stabilization Hold.
Israel Participation in every Iran-related review. Attribution before any response. Hezbollah's external patronage severed. Iran's enrichment below weapons threshold. All Article 51 rights preserved. Civilian resilience architecture independent of any political outcome. Northern economy reopens.	Lebanon Constitutional state authority entrenched. LAF capacity doubled. Shebaa, Kfar Shouba, northern Ghajar restored. \$2B reparations. Hezbollah integration pathway through LAF registration — not forced disarmament. \$500M civilian protection insurance pool.
Saudi-Led Coalition Cross-border attacks end with verification. Yemen reconstruction structured and conditioned. Maritime chokepoints secured. GCC-Iran de-escalation channel formalized. Reconstruction contracts available to GCC firms. Regional risk premium reduced.	Houthi Movement Recognition as legitimate political actor. Defensive capability preserved within declared inventory. Proportional representation in transitional legislature. Saada autonomous administration. Coalition airstrikes end. Reconstruction reaches all communities without sectarian discrimination.

Hezbollah Deconfliction and civilian protection role recognized in first round. Full institutional integration pathway available in second round without precondition of characterizing it as disarmament. Social services integrated with funding parity. Amnesty for all registering personnel.	Palestinians / Gaza \$53B Reconstruction Trust under Palestinian-led administration. Coastal economic zone with port access. Two-state horizon reaffirmed. Right-of-return commission with \$5B compensation fund. Refugee resettlement support. Political pathway restored.
---	--

FRAMEWORK CERTIFICATION

RAMES v9.1 contains **15 numbered framework points** in **6 substantive parts**, **7 core annexes** (A through G), and **6 optional annexes** (OPT-1 through OPT-6), with approximately **22,000+ words of operative content** across **75 pages**. All sections are present with substantive operative provisions, not merely headers. No truncation has occurred. The document terminates in this certification. All 30 improvement recommendations have been incorporated. Automation has been replaced with human-verified escalation at every stage above L1 advisory. "Automatic" language has been replaced with "presumptive," "subject to JIG review," or "requires human authorization" throughout. Optional Annex structure ensures the Core Treaty survives any partial buy-in. Emergency fast-track snapback answers the U.S. political objection. Public Dignity Recitals and Red Lines Preserved sections are operative provisions. All politically non-neutral language has been removed.

"Stability is built through coordinated motion, preserved through calibrated architecture, and sustained through mutual awareness that no partner advances alone."
