1. Framework at a Glance

Core Doctrine

"This isn't phased diplomacy; it's calibrated cooperation that adapts in real time."

RAMES operates through four continuous tracks that deepen automatically based on verified performance. No ceremony, no unanimous vote to advance. Progress compounds while preserving exit options.

Element	What It Means for Negotiators
4 Continuous Tracks	Nuclear (wt.3), Security (wt.2), Economic (wt.2), Humanitarian (wt.1). Each deepens independently based on CIS scores.
CIS Score	0 = full compliance; 7+ = regression triggers; 15+ = emergency. Weighted composite across all four tracks.
Auto-Advance	Tracks deepen automatically at 90-day intervals when CIS sub-score stays at or below 4 points. No political vote required.
HLV Protocol (NEW v8.7)	48-hour human inspector review before any CIS-triggered benefit release. Hard deadline prevents obstruction.
Soft Start	90-day observation period after signature. Monitoring active; penalties suspended. Parties calibrate before full scoring.
Manual Overrides	1 deferral + 2 cooling-offs + 4 score reviews per year per party. Strictly limited, transparent, non-cumulative.
Failure Without Collapse	One track failing does not collapse the others. Humanitarian and Economic tracks can survive independent of Nuclear track failure.
Cross-Track Coupling	No track may advance to DEEPENING-2 unless all other tracks are at Regression Rung 1 or better. Prevents cherry-picking.

2. The Four Tracks (Simplified)

Track	Weight	Baseline (Days 1–90)	DEEPENING-1 (Day 91+)	DEEPENING-2 (Day 181+)
1. Nuclear	3 / 8	Cap at 3.67%; IAEA continuous monitoring; 60%-enriched uranium disposition begins	Additional Protocol provisional; Fordow conversion milestone 1; civilian nuclear cooperation framework	Full Additional Protocol ratification; Fordow repurposing operational; Section 123 Agreement in force
2. Security	2 / 8	Affiliated armed group freeze declaration; maritime deconfliction corridor; no new offensive operations	De-escalation annexes activated; JMCC operational; Joint Commission security sub-committee convened	IHTA fully operational; Tripartite Monitoring Mechanism embedded; regional security opt-in opens
3. Economic	2 / 8	\$7B frozen assets released tranche 1; humanitarian conditional cooperation benefits	Oil and trade normalization tranche 1; banking channel expansion; IMESI onboarding framework	Full IMESI integration; trade corridor harmonization; energy grid cooperation operative
4. Humanitarian	1 / 8	Gaza corridors active (320+ tons/day); Lebanon emergency fuel/healthcare; UN access guaranteed	Syrian voluntary return pathways; Lebanon reconstruction fund seeded; monitoring expanded	Full reconstruction framework (IMESI-linked); long-term refugee resettlement; civilian infrastructure rebuilding

Track Independence Rule

Nuclear Track at DEEPENING-2 while Security Track remains at BASELINE: **PERMITTED**.

Economic Track auto-advancing while Humanitarian Track is in Enhanced Monitoring: **PERMITTED**.

Security Track in Regression while Nuclear and Economic advance: **PERMITTED**.

Boundary: No track may advance to DEEPENING-2 while another is in Rung 2 Suspension or worse.

3. Document 0 — The 90-Day Soft Start

First 30 Days Walkthrough

Day	Action	Lead
Day 1	Signature. All tracks activate at BASELINE. Day-One humanitarian sanctions freeze (SF-1) takes effect immediately. \$7B tranche 1 released to IMESI escrow.	All parties
Day 2–7	Joint Commission convenes. IVC monitors positioned. JTC sub-committees formed per Track. HLV inspector pool activated.	Joint Commission Chair
Day 8–14	First verification baseline established. Satellite imagery analysis configured. SWIFT/banking channels tested. Corridor logistics operationalized.	IVC-A / JTC
Day 15–30	First CIS scores published (informative only during Soft Start). Quiet Correction Window opened for any concerns. Public Narrative Kit distributed.	IVC / JCRP

Soft Start Principles

Principle	Rule
Non-punitive observation	Monitoring is active; scores are published; but no Regression Ladder activation and no benefit suspension during Soft Start.
Technical calibration	Parties may dispute methodology, challenge data points, and request IAR audit without penalty.
Political testing	Governments observe domestic reaction, test parliamentary appetite, and gauge media response.
Exit without stigma	Any party may withdraw within 90 days with no formal breach finding. Simply notify Joint Commission and benefits cease.

Critical Soft Start Rule

The Minimum Compliance Floor still applies during Soft Start: **no nuclear expansion, no civilian attacks, no aid diversion**. Breaching the floor does not trigger the Regression Ladder but may result in inactive status (not expulsion) if temporarily unmet.

4. CIS Score System

Composite Score Architecture

Track	Weight	Sub-Score Range	% of Composite
Nuclear (Track 1)	3	0 – 20+	37.5%
Security (Track 2)	2	0 – 20+	25.0%
Economic (Track 3)	2	0 – 20+	25.0%
Humanitarian (Track 4)	1	0 – 20+	12.5%

CIS Threshold Table

Sub-Score	Status	Consequence
0 – 2	Full Compliance	Eligible for auto-advance
3 – 4	DEEPENING-1 Threshold	Auto-advance to next depth level
5 – 6	Enhanced Monitoring	Bi-weekly assessments; benefits held at current level
7 – 8	Regression Rung 1 (Advisory)	Advancement frozen; bi-weekly assessments; 30-day remediation
8 – 10	Regression Rung 2 (Suspension)	Benefits suspended; weekly assessments; 60-day remediation
10 – 12	Regression Rung 3 (Rollback)	One-tier automatic rollback; 90-day remediation
≥ 12	Regression Rung 4 (Snapback)	Full snapback to BASELINE; 24–48 hour execution
≥ 15	Framework Emergency	Emergency plenary convened within 48 hours

Dispute Resolution — Contested Data

Tier	Timeline	Action
Tier 1: Technical Challenge	Days 1–14	Written challenge to JTC; 14-day report; freeze on auto-advance/regression for affected Track
Tier 2: IAR Audit	Days 15–30	Independent Actuarial Reviewer conducts 15-day audit; finding is binding for current window
Tier 3: STAP Arbitration	Days 31–60	Standing Technical Arbitration Panel issues binding determination within 30 days; final on technical grounds

5. Regression Ladder & HLV Protocol

Regression Ladder at a Glance

Rung	Trigger	Automatic Consequences	Remediation Window
Rung 1: Advisory	Sub-score 7–8	Advancement frozen; bi-weekly assessments; benefits continue	30 days
Rung 2: Suspension	Sub-score 8–10 or Rung 1 uncured	All benefits SUSPENDED; weekly assessments; cross-track coupling activates	60 days
Rung 3: Rollback	Sub-score 10–12 or Rung 2 uncured	One-tier automatic rollback (DEEPENING-2 → 1 → BASELINE); 90-day curative period	90 days
Rung 4: Snapback	Sub-score ≥12 or severe breach	Full snapback to BASELINE; 24–48 hours; UN Security Council notification (Track 1 only)	90 days
Severe Breach	Weapons-grade diversion, authorized mass-casualty attack, deliberate famine blockade	Activates Rung 4 directly; 24-hour response; bypasses Rungs 1–3	90 days

HLV Protocol — Quick Reference [NEW v8.7]

When HLV Applies

Before any CIS-triggered: benefit release over \$500M, Track advancement, Regression activation, IMESI freeze/unfreeze, sovereign debt default notification.

Phase	Timing	Action
IVC Certification	Hour 0	Technical Certification Package published with raw data, methodology, confidence bands
Inspector Assignment	Hour 0–4	Random assignment from 12-person pool (3 per Track domain, 6+ nationalities)
Inspector Review	Hour 4–44	Data Integrity, Contextual Assessment, Pattern Consistency, Stakeholder Impact, Beneficiary Verification
Determination	Hour 44–48	CLEAR (proceed), HOLD (pause, max 30 days), or ESCALATE (Full JTC Review)

HLV Hard Deadline

No determination within 48 hours = **automatic CLEAR**. Emergency exception: 12 hours with dual inspector verification for Severe Breach Circuit-Breaker.

Determination	Code	Effect
CLEAR	HLV-C	Action proceeds within 5 business days
HOLD	HLV-H	Action paused; Hold Memorandum published; Enhanced Monitoring triggered; max 30 days
ESCALATE	HLV-E	Full JTC Review within 72 hours; binding determination; report within 7 days

Anti-Gaming: Max 3 HLV-Holds per 12 months per Track per party. No direct party-to-inspector communication. Inspector compensation from framework budget.

Cost: \$2.4M annually (0.034% of \$7B IMESI baseline). Funded from administrative assessment.

6. Key Optional Annexes

U.S. Alignment Package (Annex OO)

Module	Purpose	Status
NU-Z	72-hour third-party escrow for enriched uranium above 3.67%	Optional
MH-1	"Freedom of Navigation" mandate; boarding triggers Rung 4 snapback	Optional
NC-P	Direct Executive Link; 6-hour no-intermediary hotline	Optional
ER-B	\$7B baseline as performance-secured deposit; monthly CIS-linked tranche release	Optional
PZ-6	IMESI liquidity pool immediate freeze upon verified non-state actor transfer	Optional
PF-9	180-day Preservation Hold (was Deep-Freeze) base extension	Optional
BM-4	1,500km missile inventory cap with monitored storage/technical conversion	Optional
NR-X	Naval off-ramp: Carrier Strike Group reduction linked to Tier 3 Security CIS	Optional
SL-C	Sovereign Debt Encoding with IMF/World Bank registration	Optional
BP-20	Gaza Reconstruction Governance Bridge; civilian-led dual-key over \$500M	Optional

Hardening Modules (Annex NN)

Module	Purpose
IV-X Ghost Verification	Undisclosed secondary monitoring to detect concealment attempts
DR-A Algorithmic Dispute Resolution	AI-assisted pattern analysis for contested data
PF-9 Preservation Hold	Extended framework suspension during leadership transitions
EC-E Development Fund Escrow	Ring-fenced reconstruction funding surviving political shifts
KD-B Kinetic De-Escalation Buffers	Geographic separation protocols preventing accidental military contact
SO-F Shadow Observer Framework	Third-party civilian monitors with direct IVC reporting
AG-3 Humanitarian Protection Shield	Track 4 aid insulated from Track 1/2 regression penalties
NC-P Peace Through Strength Communications	Pre-verified non-inflammatory language for all public statements
SL-C Successor Liability Clause	Registered sovereign debt; successor governments bound

7. New v8.7 Modules

[41] HLV-1: Human-in-the-Loop Verification Protocol

Detailed in Section 5 above. Mandatory 48-hour human inspector review before all CIS-triggered benefit releases. 12-person rotating pool; 3-determination workflow (CLEAR / HOLD / ESCALATE); 12-hour emergency exception for Severe Breach Circuit-Breaker.

[42] Political Language Neutrality Sweep

Original Term	Replacement	Rationale
militia	non-state armed group	"Militia" implies illegitimacy; new term is technically accurate
proxy	affiliated armed group	"Proxy" implies full command and control that is rarely provable
snapback	reversion to baseline	"Snapback" has negative JCPOA connotations
Big Move	Comprehensive Stockpile Transition	Colloquial language undignified for nuclear diplomacy
Deep-Freeze	Preservation Hold	"Deep-freeze" implies inertness; new term conveys active maintenance
air-gap	protection shield	"Air-gap" is jargon that doesn't translate well
Lock-In	Continuity Assurance	"Lock-in" sounds coercive; new term conveys protection
Zero-Out Nuclear	Civilian-Only Nuclear Configuration	"Zero-out" sounds like destruction; new term is accurate
Standoff	Protection Perimeter	"Standoff" implies confrontation; new term is defensive
Reversibility Clause	Adaptive Normalization Protocol	"Reversibility" suggests backsliding; "adaptive" frames intelligent diplomacy
gag rule	confidential resolution period	"Gag rule" implies censorship; politically toxic in U.S. context
War Hawk	advocates of alternative approaches	Pejorative labels undermine framework neutrality
rogue state	non-integrated program	Political designation, not technical description
Hawk Sabotage Shield	Resilience Protection Shield	Removes adversarial framing from defensive mechanism

[43] Annex AC: Abraham Accords Expansion Protocol

Element	Description
Purpose	Structured pathway for regional states to accede to normalization framework. Reframes as "Regional Security Cooperation Architecture."
SEWN	Shared Early Warning Network: sensor deployment, data fusion through bilateral infrastructure, regional fusion node (Oman/Jordan), Track 1 BASELINE compliance gate
Accession Pathway	Expression of Interest → Baseline Requirements → 90-Day Technical Negotiation → RAMES Integration (Track 2 accelerated to DEEPENING-1) → 180-Day SEWN Onboarding
Economic Dividends	IMESI funding priority, development finance facilitation, tourism/heritage programs, technology partnerships, U.S. commercial bidding requirement

[44] Annex CT-1: Counterterrorism Intelligence Cooperation

Parameter	Specification
Location	Amman, Jordan
Personnel	Max 50; proportional from parties; advisory ≤20%
Mandate	Analysis and dissemination ONLY — no operations, no arrests, no lethal action

Data	Sanitized biometrics (PII removed); travel patterns; financial patterns; metadata only
Safeguards	No domestic political targeting; annual human rights audit; 30-day withdrawal right; 36-month data retention; 3-member Civil Liberties Review Board
Budget	\$8–12M annually; dedicated CT trust fund

[45] Annex AD: Integrated Air Defense Cooperation

Phase	Trigger	Delivery
Phase 1	Track 1 DEEPENING-1	Data link infrastructure and training only
Phase 2	DEEPENING-2 + 90 days sustained	Defensive system hardware (THAAD/equivalent); 18–24 month timeline
Phase 3	Long-term cooperation	Full interoperability; joint exercise program

Defensive-Only Constraint: All systems defensive-only. No offensive integration. Annual technical audit confirms configuration. No transfer to non-framework third parties without unanimous approval.

[46] Framework Alignment Enhancements

- Enhanced U.S. commercial participation in IMESI infrastructure projects
- Explicit "civilian exclusivity" governance for Gaza reconstruction (no armed group participation)
- Strengthened Hormuz Open Mandate with U.S. vessel protection clause
- Bushehr civilian electricity reference in Strategic Energy Partnership
- "Burden-sharing" narrative for naval off-ramp (regional self-sufficiency)
- Digital trade facilitation protocols for IMESI corridors

8. Political Language Guide

Framework Communications Doctrine

1. **Describe, don't diagnose:** Use technical descriptions ("uranium enrichment above internationally recognized levels") not political characterizations ("proliferation behavior")
2. **Party-neutral voice:** No provision applies to a specific named country. All provisions apply symmetrically.
3. **Forward-looking framing:** Emphasize what the framework *enables* not what it *prevents*
4. **Domestic legitimacy respect:** Never characterize any party's internal political processes negatively
5. **Avoid zero-sum language:** Use "mutual verification," "reciprocal assurance," "shared monitoring"

Track Framing for Public Communications

Track	Internal Name	Public Framing
Track 1	Nuclear	"Verified restraint that expands civilian opportunity"
Track 2	Security	"Coordinated de-escalation, not unilateral disarmament"
Track 3	Economic	"Performance-unlocked prosperity"
Track 4	Humanitarian	"Autonomous relief — insulated from political friction"

Pre-Approved Narratives (from Public Narrative Kit NC-2)

Scenario	Message
Signing day	"Today we chose calibrated cooperation over zero-sum confrontation. Each party's commitments are verified, reciprocal, and reversible if performance changes."
Track advancement	"Track performance has met verified thresholds and cooperation has naturally deepened. No government announced capitulation — only verified compliance."
Regression concern	"The framework has built-in feedback mechanisms. A concern was flagged; technical teams are reviewing; quiet correction is the default response."
Partial failure	"One track is paused for technical clarification. Three tracks continue. This is by design — calibrated cooperation, not all-or-nothing diplomacy."

9. Quick Reference Tables

Manual Override Windows (MO-1)

Type	Count/Year	Duration	Effect
Temporary Deferral	1	14 days	Freezes deadline; does not freeze benefits
Cooling-Off Period	2	30 days each	Pauses scoring; benefits continue at current level
Score Review	4	N/A	Requests IAR audit of specific sub-score calculation

Strictly limited, transparent, non-cumulative. Cannot be used for consecutive evaluation windows.

IMESI Economic Architecture

Instrument	Amount	Condition
Baseline Release (Tranche 1)	\$7B	Upon signature; performance-secured deposit model
Milestone-Linked Tranches	\$10B–\$20B	Activates at full DEEPENING-2 success across all tracks
Humanitarian Escrow Expansion	\$2B	Conditional on corridor tonnage and access metrics
Mutual Pain Index	Variable	Both parties breaching = proportional shared cost
15-Year Oil Moratorium	Architecture	Long-term pricing stability mechanism

Arms Control Summary

Domain	Cap/Restriction	Verification
Ballistic Missiles	1,500km range cap; excess to monitored storage or technical conversion	IMIRC + satellite + JTC quarterly
Naval Forces	Carrier Strike Group reduction linked to Tier 3 Security CIS achievement	JMCC maritime logs + satellite
Cyber Operations	48-hour Silent Consultation Window before public attribution	Independent cyber forensics panel
Coastal Defense	Exempt from 1,500km cap; non-ballistic, short-range only; declaration required	Declaration + spot inspection

Verification Integrity Challenge Window (VIU)

Step	Action	Timeline
Pattern of Concern Published	IVC publishes preliminary assessment to all parties	Day 0
Confidential Consultation	48-hour mandatory window before public designation; technical clarification only	Days 0–2
Public Designation	If quiet correction fails, formal designation published with evidence package	Day 3+
Challenge Right	Any party may challenge designation within 4 days; freezes public CIS impact	Days 3–7

Entry Protocol Checklist

Day	Milestone	Verifier
Day 1	Signature; all tracks at BASELINE; \$7B tranche 1 to escrow; SF-1 sanctions freeze active	Joint Commission
Day 7	IVC monitors positioned; JTC sub-committees formed; HLV pool activated	IVC Chair
Day 14	First verification baseline; banking channels tested; corridors operational	JTC / IVC-A
Day 30	First CIS scores (informative); Public Narrative Kit distributed; Quiet Correction Window open	IAR / JCRP
Day 60	Mid-Soft Start review; Strategic Imbalance Review if needed	Joint Commission

10. Negotiator Checklist

Before the Table

Item	Check
Read Document 0 (5-page simplified framework)	☐
Understand your party's Track weights and deepening triggers	☐
Identify which optional annexes your capital wants activated	☐
Prepare domestic ratification timeline (90-day Soft Start buffer)	☐
Confirm Manual Override allocation strategy (1 deferral + 2 cooling-offs + 4 reviews per year)	☐
Review Political Language Guide (Section 8) for approved terminology	☐
Pre-position IVC monitor access arrangements	☐

At the Table

Item	Check
Confirm Cross-Track Coupling Clause is understood (DEEPENING-2 gate)	☐
Clarify which HLV Events your capital considers high-sensitivity	☐
Verify Minimum Compliance Floor (no nuclear expansion, no civilian attacks, no aid diversion)	☐
Negotiate specific annex activation sequence (which annexes trigger at signature vs. DEEPENING-1)	☐
Confirm IMESI escrow release schedule and performance-secured deposit terms	☐
Agree on mediator authority boundaries (convening only; no substantive decisions)	☐
Secure commitment to Quiet Correction Window as DEFAULT response	☐

Signature to Day 90

Item	Check
Submit letter of interest for any annex accession (Annex AC pathway)	☐
Designate JTC representatives (2 per party; non-ministerial technical experts)	☐
Establish direct executive link (6-hour consultation capability)	☐
Submit cultural heritage site nominations (20 per party; 5km buffer zones)	☐
Confirm SEWN sensor hosting if applicable (Annex AC)	☐
Schedule first Strategic Imbalance Review if Track progress diverges	☐

Remember

"Reciprocity Builds Resilience."

This framework is designed to survive domestic political transitions, external shocks, and temporary setbacks. The architecture preserves dignity for all parties, creates vested economic stakeholders, and ensures that no single failure collapses the entire structure. Use the Manual Overrides, respect the Quiet Correction Window, and trust the HLV Protocol to keep algorithmic decisions human-accountable.

All modules are optional. All activate only by Joint Commission consensus. All provisions apply symmetrically.
