Stability First

Enhanced Accord

A Sovereignty-Preserving Regional Stability Framework for
US-Iran De-escalation, Strait of Hormuz Governance,
and Nuclear Stabilization

Version 6.2

Calibrated for the Late May 2026 Negotiation Environment

*v6.2 Enhancement: Comprehensive Political Statements Package
for Multilateral Audiences*

LATE MAY 2026 • CONFIDENTIAL — NOT FOR PUBLIC DISTRIBUTION

Contents

Preamble: The Late May 2026 Moment

Executive Decision Brief

Section 1: Core Principles

Section 2: Framework Overview

Section 3: Micro-Pilot Module

Section 4: Blind De-escalation & Cyber Protocol

Section 5: Stage One — The 14-Day Opening

Section 6: Stage Two — Deferred Window

Section 7: Stage Three & Successor Framework

Section 8: Minimum Viable Accord Fallback

Section 9: Distributed Facilitating State Matrix

Section 10: Economic Channels & SWIFT Pathway

Section 11: Maritime Architecture & Hormuz Governance

Section 12: Nuclear Stabilization

Section 13: Fordow Joint Venture & Funding

Section 14: Rebranding & Crisis Communications

Section 15: Goldilocks Crisis Protocol

Section 16: Three-Tier Breach System

Section 17: Face-Saving Metrics & Domestic Wins

Section 18: Political Statements Package for Multilateral Audiences

18.1 United States Audience

18.2 Islamic Republic of Iran Audience

18.3 State of Israel Audience

18.4 Facilitating States Audience

18.5 Gulf Cooperation Council Audience

18.6 International Community Audience

18.7 Narrative Architecture Matrix

18.8 Delivery Protocols

Section 19: Spoiler & Rogue Actor Management

Section 21: Cyber Operations Stabilization

Section 33: Three-Tier Breach System (Detailed)

Section 35: Reconstitution Mechanism

Section 36: Political Shock Absorber

Section 38: Rollback and Step-Down Architecture

Section 40: Deal Options

Section 56: Israel Parallel Reassurance Mechanism

Annex L: Lebanon Dossier Isolation Firewall

Version 6.2 Changelog

Preamble: The Late May 2026 Moment

“The single most important achievement is the agreement that Iran will never ever have nuclear material that will create a bomb.” — Omani Foreign Minister Badr Albusaidi, May 2026

As of late May 2026, the United States and the Islamic Republic of Iran stand at the closest point to a durable agreement since hostilities began on February 28, 2026. After nearly twelve weeks of military confrontation under Operation Epic Fury, both sides have exhausted the military escalation ladder and returned to the negotiating table. A temporary ceasefire has been in place since April 8, 2026. Pakistan, led by Prime Minister Shehbaz Sharif, has mediated multiple rounds of talks in Islamabad.

v6.2 Critical Update — Late May 2026 Negotiation Environment

This Version 6.2 incorporates the comprehensive Political Statements Package for Multilateral Audiences (Section 18), alongside the three surgical refinements from v6.1 calibrated to the explicit pushback from the IRGC (via Fars News Agency) and the firm sequencing demands from the Trump administration, as the parties approach the Sunday 4:00 PM Eastern deadline:

1. **JHTA Sovereignty Recalibration** (Section 11): The Joint Transit Authority mandate is explicitly restricted to commercial traffic coordination, maritime safety protocols, and international dispute resolution. The PGSA is formally recognized as the sole executive coastal law enforcement body within Iranian territorial waters.
2. **Automated Day 7 Dual-Trigger Protocol** (Section 5): The Hormuz Opening Declaration and Naval Blockade Lift Declaration are executed through an automated, simultaneous trigger on the Swiss Dashboard — preventing front-loaded concessions and guaranteeing symmetric execution within a 60-second UTC window.
3. **HEU Custody Phase 1 Baseline Enhanced** (Section 12): Legal title (Central Bank of Iran) is structurally decoupled from physical custody (IAEA-monitored facility). Physical custody transfer is a Phase 1 baseline verification metric; final disposition is deferred to the 30-60 day nuclear negotiating window with six IAEA-verified disposition pathways and a Day 45 automatic default deadlock breaker.
4. **Lebanon Dossier Isolation Firewall Enhanced** (Annex L): Addresses Iran's demand for an end to the war on all fronts, including Lebanon, through a Proxy Operational Pause, a binding firewall preventing Lebanon incidents from collapsing the core deal, a Levant Regional Basket parallel diplomatic track, and a Dual-Key Escalation Lock.

5. **Israel Parallel Reassurance Mechanism — Syria Theater Clarification** (Section 56): New provision providing explicit written assurance that the Accord does not constrain Israeli military operations against Iranian or Hezbollah targets in Syrian territory, required for Israeli cabinet approval.
6. **Political Statements Package for Multilateral Audiences** (Section 18): Comprehensive narrative architecture enabling all parties — Washington, Tehran, Jerusalem, Gulf capitals, and the broader international community — to communicate the Accord's provisions to their respective domestic audiences in politically defensible terms.

Current Hard Constraints (Late May 2026)

Khamenei directive that uranium must not leave Iranian soil. US naval blockade since April 13. Hormuz transit down 40%; insurance up 300%. Precedent of JCPOA collapse (2018). Israeli opposition to any Iranian enrichment. Political volatility in both capitals. President Trump: “a few days” or “one shot.” Secretary Rubio: Iran must physically surrender HEU up front. IRGC/Fars News Agency: rejecting any framework that erodes Iranian sovereignty over Hormuz. Iranian Foreign Ministry: the Strait's management remains “the monopoly and discretion of the Islamic Republic.” Tehran views the current text as a “framework agreement” to end the war, with nuclear details deferred to a secondary 30-to-60 day negotiating window.

What Makes v6.2 Different

148 total enhancements (v5.0: 10, v5.1: 42, v5.2: 10, v5.3: 17, v5.4: 20, v5.5: 6, v5.6: 3 language softening, v5.7: 4 technical refinements, v6.0: 4 surgical structural refinements, v6.1: 3 additional structural refinements, v6.2: 1 comprehensive political enhancement). The v6.2 Political Statements Package builds on all previous refinements and adds a complete multilateral narrative architecture that enables all parties to communicate the same core facts through narratives tailored to their respective political environments.

Executive Decision Brief

For Senior Officials — Read This Before the Full Document

The Core Exchange

The Stability First Enhanced Accord v6.2 creates a sequenced, reversible, verified exchange between the United States and Iran. Neither side moves alone. Every Iranian commitment is matched by a corresponding US commitment, activated simultaneously, verified by neutral observers through a distributed facilitating state matrix.

Iran Delivers	US Delivers
60% Freeze: Immediate freeze of all enrichment at or above 60%. Verified by IAEA within 72 hours. Sustained throughout. Non-reversible.	\$250M Pilot: Immediate humanitarian tranche via Swiss escrow. Humanitarian goods only.
Hormuz Reopening: IRGC-Navy withdraws small craft from transit corridor. Synchronized with US blockade lift on Day 7.	Blockade Lift: US naval blockade of Iranian commercial ports lifted, synchronized with Hormuz reopening on Day 7.
Stockpile Transfer: Weapons-grade enriched uranium to IAEA custody as Phase 1 baseline verification. Legal title retained by Central Bank of Iran. Final disposition deferred to 30-60 day nuclear window with six-pathway menu and Day 45 automatic default.	Sanctions Relief: Staged asset return through non-US channels (no Congress required initially).
1-Year Renewable Cap: Moratorium on enrichment above 3.67%, renewable annually for up to 12 years based on performance.	No Precedent Clause: Explicit language — this Accord creates no legal or political precedent for future negotiations.

v6.2 Enhancement: Political Statements Package

New Section 18 provides comprehensive, ready-to-deploy political communications for all capitals involved. Each statement is grounded in the Accord's actual provisions, politically defensible to domestic audiences, and compatible with statements issued by other parties. The Package enables leaders in Washington, Tehran, Jerusalem, Muscat, Islamabad, Doha, and European capitals to communicate the same core facts through narratives tailored to their respective political environments.

Three Deal Options

Option	Nuclear	Monitoring	Economic	Duration
Minimal (Crisis Containment)	60% freeze; no stockpile transfer	Minimal (cameras + OLEM)	~\$850M + limited oil	90 days, renewable
Medium (Stability First)	3.67% cap; stockpile to IAEA; Mothball Protocol	Medium (UGES + sensors + ICS)	~\$85B + SWIFT	1-year renewable
Maximal (Comprehensive)	3.67% cap; AI fusion; missile test moratorium	Maximal (AI + digital twin + drones)	\$100B+ + full trade	2-year initial

Default: Minimal activates by default; automatic graduation to Medium upon verified Micro-Pilot completion. v6.2: Medium option includes all five surgical refinements from v6.1 plus the Political Statements Package.

Section 1: Core Principles of the Waltz Architecture

1.1 Synchronized Reciprocal Motion

Neither side moves alone. Every Iranian commitment is matched by a corresponding US commitment on the same day. Verification is shared. Waltz Pairing: Enrichment Freeze and Blockade Lift. Iranian Face-Saving: “NPT rights preserved; enrichment continues at 3.67%; sovereign annual review.” US Face-Saving: “60% weapons-grade enrichment halted; IAEA inside Natanz and Fordow within 72 hours.”

1.2 Modular Architecture with Partial Continuity Rule

Stabilization pause in one module does not suspend unrelated modules. Maritime disputes cannot terminate humanitarian channels. Cyber incidents cannot terminate medical isotope cooperation. Nuclear verification gaps do not affect Hormuz transit. Lebanon incidents cannot collapse the core US-Iran nuclear and maritime agreement (see Annex L, Dossier Isolation Firewall).

Tier 1 (Inviolable): Ceasefire hotline, humanitarian access, emergency diplomatic channel — these never pause. Tier 2 (Protected): IAEA basic monitoring, Hormuz non-military transit, asset tranches 1-2 — these continue during most stabilization pauses. Tier 3 (Conditional): SWIFT reconnection, bonus tranches, successor framework talks, Fordow advanced phases — these may enter hold during disputes.

1.3 Sovereignty Preservation

This framework does not supersede any constitution. It does not create supranational authority. NPT rights are preserved. US treaty commitments to Gulf partners are preserved. The PGSA is explicitly recognized as the sole executive coastal law enforcement body within Iranian territorial waters (Section 11.2-B).

1.4 Declarative Foundations

The Parties reaffirm their adherence to established international non-proliferation architectures. In alignment with its foundational strategic doctrine, the Facilitating State explicitly reiterates that it has never sought, does not seek, and will under no circumstances pursue or acquire nuclear weapons capabilities. This

declaration establishes the baseline of strategic intent under which the subsequent 30-to-60 day specialized technical verification tracks shall proceed.

1.5 Framework Survival Core

Under all circumstances: (1) Ceasefire Hotline remains active; neither party may disable without 30 days notice to UN Secretary-General. (2) Humanitarian Access: zero-fee, no-inspection-delay corridor continues regardless of any dispute. (3) Emergency Diplomatic Channel stays open. The Survival Core is a standalone UN humanitarian arrangement that continues for 180 days even if both parties formally withdraw.

1.6 No Precedent Clause

“This Accord establishes no legal or political precedent for future negotiations. Each provision is *sui generis*, tailored to May 2026. No inference may be drawn from any provision regarding positions on any matter not expressly addressed herein.”

1.7 Face-Saving Metrics

For each Waltz pairing, both sides receive quantifiable “wins” visible to domestic audiences. See Section 17 for complete table. v6.1 addition: Lebanon talking points for both sides (Section 17.3 and Annex L.4). v6.2 addition: Complete Political Statements Package for multilateral audiences (Section 18).

1.8 Political Shock Absorber

If national elections, assassination of senior leadership, cabinet collapse, mass protests, or leadership transitions occur, framework implementation automatically enters a Review Pause rather than terminating. Tier 1-2 modules continue; Tier 3 enters hold; 30 days to confirm continuation; max 90 days extendable by mutual agreement. Review Pause does NOT constitute material breach.

1.9 Cooling-Off Default

If disagreement occurs and attribution is unclear, all escalation freezes automatically for 24-72 hours. Negotiations continue. Verification teams investigate. No party may take escalatory action. Self-Defense Exception: active armed attack may be defended, but retaliatory strikes against territory are prohibited pending attribution.

Section 2: Framework Overview

Stage	Duration	Primary Goal	Closing Trigger
Stage 0: Micro-Pilot	Days -30 to -1	Build trust through limited, reversible exchanges	Both sides certify pilot objectives met
Stage 1: Opening	Days 1–14	End the war; transfer stockpile; reopen Hormuz	Blockades lifted; 200+ transits; IAEA custody verified
Stage 2: Deferred Window	Days 15–44 (+7 ext.)	Negotiate nuclear specifics; staggered cap; facility protocols	Moratorium ratified; HEU export confirmed; 50% assets returned
Stage 3: Permanent	Days 45–180	Joint Transit Authority; regional dialogue; normalization	Authority charter ratified; 85% assets returned; successor opened

Section 3: The 30-Day Micro-Pilot Module

Duration: 30 days (extendable to 45 by mutual consent; +7 by Triad for verified delays). Legal Status: Politically binding exchange of letters; not a treaty. Iranian Commitment: Freeze all enrichment at or above 60% at Natanz and Fordow. US Commitment: Release \$250M humanitarian tranche via Swiss escrow. Verification: IAEA confirms 60% freeze within 72 hours. Scope: Humanitarian goods only. Reversibility: Either side may terminate with 7 days written notice; no penalty. Transition: Upon successful completion, automatically transitions to Stage 1.

Section 4: Blind De-escalation & Cyber Operations Stabilization

4.1 Parallel Pause Mechanics

Domain	Iranian Pause	US Pause	Observable Effect
Nuclear	No new centrifuge installation; no additional 60% enrichment	No new sanctions; no enforcement on humanitarian exemptions	IAEA reports “no observed expansion”
Maritime	IRGC-Navy reduces interdiction frequency	5th Fleet reduces close-proximity patrols	Insurance premiums stabilize
Financial	No cyber ops vs Gulf financial infrastructure	No interdiction of Iranian oil to China/India	CBI notes improved banking access
Regional	Proxy forces reduce attacks on US positions	No retaliatory strikes on proxy positions	CENTCOM reports “reduced threat”

4.2 Cyber Operations Stabilization Module

Category	Protected Infrastructure	Restraint	Violation Response
Category I (Critical)	Nuclear monitoring systems; banking settlement; maritime navigation	Strict non-aggression	Tier 2 breach response; emergency session within 24h
Category II (Important)	Humanitarian logistics; medical supply chains; pipeline control	No offensive operations; defensive permitted	Tier 3 response; 72-hour monitoring review
Category III (Commercial)	General commercial infrastructure; telecoms; civilian aviation	No persistent disruption	Tier 1 diplomatic resolution

4.3 Proxy Force Stand-Down

Explicit mutual commitments on Hezbollah, Houthis, Iraqi militias, and Syrian proxies. Non-acknowledgment: neither party must publicly admit control. Rogue Commander Protocol requires condemnation within 24 hours and Triad cooperation. v6.1: Hezbollah operational pause detailed in Annex L.1.

Section 5: Stage One — The 14-Day Opening (v6.1)

5.1 Day 1 Waltz Pairing

Iran: Transfer 60% stockpile to IAEA custody; cease offensive operations; proxy operational pause (including Hezbollah — see Annex L.1). **US:** Suspend Epic Fury; issue OFAC general license (\$250M); open 30-day nuclear window. **Verify:** IAEA DG confirmation; mass spectrometry; Pakistani convening state + Omani maritime + Swiss financial + UN procedural concurrent certification.

5.2 Day 1: v6.1 HEU Custody — Phase 1 Baseline Clarification (Enhanced)

v6.1 Enhancement — Decoupled Ownership and Custody with Six-Pathway Menu and Day 45 Default. Day 1 stockpile transfer is a Phase 1 baseline verification metric only. The Central Bank of Iran retains full sovereign legal title to the HEU at all times. The IAEA holds physical custody only. Final disposition is deferred to the 30-60 day nuclear negotiating window (Stage 2), during which Iran selects one of six IAEA-verified disposition pathways. The United States has no veto over the pathway selected — only the right to verify its execution. If the Parties fail to agree on a final disposition pathway by Day 45, Pathway A (in-country downblending to medical-grade LEU at Esfahan) becomes the automatic default. Neither Party's failure to agree shall be construed as a material breach or trigger step-back under Article 13.

Citation alignment: Final Steps Accord v3.2, Article 1.5 and Addendum A-1 (Article 2.4.3)

Day 1 Custody Activation: Iran's entire stockpile of uranium enriched above 3.67% is consolidated, inventoried, and placed under IAEA custody within 72 hours. Two pathways: Pathway A (In-Iran): Dual-lock at Esfahan or other IAEA-declared facility. IAEA holds digital keys; Iran holds perimeter keys. Pathway B (Oman): Physical custody transferred to IAEA facility in Muscat (NOT the United States). US may not veto either pathway as Phase 1 baseline.

5.3 Day 7: Synchronized Dual-Blockade Lift (v6.1 Automated Dual-Trigger)

v6.1 Surgical Change — Automated Simultaneous Trigger. The Hormuz Opening Declaration and Naval Blockade Lift Declaration are executed through an automated, simultaneous trigger on the Swiss Dashboard. This prevents front-loaded concessions, eliminates human timing errors, and ensures that neither side can claim the other moved first. The architecture is technically identical to a dual-key nuclear launch system — both keys must turn simultaneously, or nothing happens.

5.3.1 Day 7 Minute-by-Minute Choreography (UTC Timeline)

UTC Time	Iranian Action	US Action	Verification
T-24h (Day 6, 01:00)	Both parties confirm readiness through liaison offices. Logged on Dashboard. Cannot be withdrawn without 72-hour technical consultation.		—
T-60 min	IRGC Commander transmits stand-by to Maritime Operations Cell	5th Fleet Commander transmits stand-by to Maritime Operations Cell	Omani facilitating state logs both signals
T-15 min	IRGC craft withdraw to 5nm; AIS broadcast	US Navy withdraws to 5nm from 12nm baseline; AIS broadcast	Lloyd's List observer confirms movements
T-1 min	Dashboard enters “Armed Standby.” Both HSMs must transmit “ready” token within 5-minute window. If either token missing, trigger aborts; 48-hour technical consultation opens.		
T=0	Hormuz Opening Declaration issued; IRGC stand-down orders transmitted	Naval Blockade Lift Declaration issued; 5th Fleet stand-down orders transmitted	SIMULTANEOUS within 60-second UTC window
T+15 min	First authorized vessel commences transit	US issues Notice to Mariners: Hormuz open	Lloyd's List, AIS Global confirm
T+1h	Concurrent Airspace Stand-Down Protocol activates: Zone Alpha (Strait Corridor), Zone Beta (Coastal Buffer), Zone Gamma (Deep Airspace) — all within same 60-second window		
T+24h	24-Hour Bright-Line Period ends; standard ROE replaces heightened monitoring		

5.3.2 Twelve-Nautical-Mile Blockade Verification (v5.4, Retained v6.2)

The synchronized Day 7 blockade lift explicitly includes withdrawal of all US naval vessels beyond the 12-nautical-mile territorial sea limit of Iran. Verified through: automatic AIS broadcast visible to Lloyd's List and Maritime Council; daily satellite confirmation via Secretariat satellite data feed; Omani naval observer confirmation from Khasab monitoring station. US vessels may not re-enter within 12nm without 24-hour advance notification to Maritime Operations Cell (emergency search-and-rescue exempted).

Section 6: Stage Two — The 30-Day Deferred Window

6.1 Staggered 1-Year Renewable Enrichment Cap

Phase	Duration	Standard	Advancement Condition
Year 1 Cap	Days 30–365	Zero enrichment above 3.67%. Higher-enrichment centrifuges under IAEA seal.	Clean IAEA certification at Year 1 review
Years 2–3	Days 366–1095	3.67% enrichment for civilian fuel at Natanz only	Fuel supply guarantee deposited in escrow
Years 4–12	Days 1096–4380	3.67% enrichment under full IAEA safeguards	Five-year renewal confirmed; all indicators green

6.2 Seven-Day Triad Extension

The 30-day window may be extended by up to 7 days through Triad consensus for verified good-faith delays (IAEA logistics, banking channel activation, transport weather, legislative procedural delays). Maximum one extension per Stage 2 cycle.

Section 7: Stage Three & Successor Framework

v5.2: Start with Three Core Successor Tracks, Open Others Later. Immediate (Day 180): Maritime Security Dialogue; Economic Partnership; Humanitarian Cooperation. Deferred (Day 365): Ballistics/Missiles; Proxy Governance Dialogue; Nuclear Cooperation (contingent on Additional Protocol ratification).

Section 8: Minimum Viable Accord Emergency Fallback

If the full architecture is rejected, the MVA provides a stripped-down emergency pathway covering: ceasefire, Hormuz reopening, humanitarian channel, and enrichment freeze. Activation: either party proposes MVA by written notice; facilitating state convenes within 48 hours; both parties confirm through exchange of

letters; MVA activates 72 hours after confirmation. v5.4 Thirty-Day Drop-Dead: If full framework not ratified by Day 30, auto-transition to MVA state. Tier 1 and Tier 2 modules continue; Tier 3 enters pause.

Section 9: The Distributed Facilitating State Matrix

9.1 The Six-Domain Matrix

Facilitating State	Domain	Core Function
Oman	Maritime Deconfliction	Hotline management; naval encounter facilitation; Hormuz transit oversight; procedural mediation
Switzerland	Financial Verification	Escrow administration; asset transfer verification; sanctions relief monitoring; audit coordination
Qatar	Escrow and Liquidity	Emergency liquidity facility; bridging finance; humanitarian corridor support; reconstruction coordination
IAEA	Nuclear Verification	Enrichment monitoring; stockpile custody verification; facility inspection; technical assessment
UN Appointee	Procedural Mediation	Governance facilitation; dispute resolution; deadlock breaking; procedural rulings
Pakistan	Emergency Diplomatic Convening	High-level crisis summits; leadership-level backchannel relay; emergency communication; war-risk scenarios

9.2 Mandatory Escalation Pause Recommendation (v5.2)

When a facilitating state determines escalation is imminent, it issues a Mandatory Escalation Pause Recommendation, automatically activating a 30-minute review window. Neither party may take escalatory action. Both must designate senior officials for consultation. If either party supports the pause, the escalation freeze continues.

9.3 Pakistan Co-Convening Authority (v5.4)

Pakistan shares convening authority with Oman for: emergency diplomatic summits; executive-level backchannel relay; Reconstitution Conference convening. Pakistan does not assume financial, maritime,

nuclear, or procedural mediation functions.

9.4 Escrow Multi-Signature Requirement (v5.3)

All tranche releases from Swiss escrow require digital signatures from 3 of 4 designated facilitating states (Oman, Switzerland, Qatar, UN Appointee). IAEA certification is required as condition precedent. No single facilitating state may unilaterally block a tranche release.

Section 10: Economic Channels & SWIFT Reconnection

10.1 Front-Loaded Asset Release with Reconstruction Fund (v5.4)

Stage	Timing	Amount	Trigger
Micro-Pilot	Day 1	\$250M	Signature / MVA activation
Stage 1 Completion	Day 14	\$750M	Ceasefire verified; stockpile transferred; Hormuz reopened
Stage 2 Completion	Day 44	\$1.5B	Moratorium ratified; HEU export confirmed; 50% assets
Stage 3 Midpoint	Day 120	\$3B	Transit Authority operational; Fordow Phase B; continuous monitoring
Stage 3 Completion	Day 180	\$5B	85% assets returned; successor framework opened
Year 1 Certification	Day 365	\$10B	Full Year 1 clean certification + Additional Protocol ratified

International Gulf Reconstruction Fund: 10% of each asset release tranche (capped at \$5B total). Seeded from released funds + Qatari bridge financing (\$2B at Day 1) + international donors. Administered by Swiss Financial Cell. Explicitly NOT “war reparations” — it is a Regional Stability Reconstruction Credit Facility.

10.2 SWIFT Reconnection Pathway

Phase	Timing	Access Level	IAEA Milestone Trigger
Phase 0: Pre-SWIFT	Days 1–30	No SWIFT. Qatari riyal bridge and Swiss corridor.	IAEA confirms 60% freeze within 72 hours
Phase 1: Restricted	Days 30–60	5 Iranian banks; MT 103/202 only	IAEA confirms moratorium
Phase 2: Expanded	Days 60–120	All clean-record banks; MT 700/760 permitted	IAEA confirms continuous monitoring; no diversion
Phase 3: Full	Day 120+	Full membership; all message types	IAEA confirms Year 1 clean certification

SWIFT Remediation Fuse: If IAEA identifies Tier 2 concern, SWIFT phase holds for 14 days as remediation window. Resolved within 14 days: phase advances. Unresolved: SWIFT rolls back exactly one tier.

Section 11: Maritime Architecture & Hormuz Governance (v6.1)

11.1 Governance Options

Option	Description	Timeline
Provisional Council	Provisional Joint Maritime Council with US and Iran as voting members, rotating GCC chair, EU/PRC observers	7–14 days
Council-Supervised Dual-Track	Council with Omani-Qatari-Swiss supervisory oversight; political decision-making separate from technical operations	14–21 days
Observer Mission	UN maritime observer mission	21–30 days

11.2 Simplified Command Architecture (v5.2)

Level	Iranian Chain	US Chain	Neutral Oversight	Response Time
Field	IRGC-Navy Duty Officer	5th Fleet Duty Officer	Omani Naval Monitor (Khasab)	5-minute hotline
Strategic	IRGC Deputy Chief / SNSC Secretary / Foreign Minister	NAVCENT Commander / CNO / Secretary of State	Omani Foreign Ministry; UN Appointee; Facilitating State secure video	30-minute consultation
Executive	SNSC Secretary / Supreme Leader / National Security Advisor	Secretary of State / President / NSA	Pakistan (emergency convening); UN Secretary-General	6-hour consultation

11.3 v6.1 JTA Sovereignty Recalibration

v6.1 Surgical Change — JTA Mandate Restriction & PGSA Recognition. The Joint Transit Authority's mandate is explicitly restricted to three functions only: (i) commercial traffic coordination; (ii) maritime safety protocols; and (iii) international dispute resolution. The PGSA is formally recognized as the sole executive coastal law enforcement body within Iranian territorial waters — addressing IRGC/Fars News Agency pushback while keeping multilateral transit guarantees airtight for Washington.

Article 11.3-A — JTA Mandate Restriction (Operative and Binding): The JTA holds zero jurisdiction over sovereign Iranian or regional territorial defense waters, coastal defense operations, military vessel movements, fisheries management, customs enforcement, or environmental regulation beyond navigational safety.

Article 11.3-B — PGSA as Sole Executive Coastal Law Enforcement Body: Within Iranian territorial waters (12-nautical-mile limit), the PGSA retains exclusive authority over: vessel permitting and documentation review; coastal patrol and interdiction; customs and immigration enforcement; security screening of suspect vessels; and coordination with the IRGC-Navy on maritime security matters.

11.4 Optical Compromise Architecture (v6.1)

This structure allows President Trump to state that “the Strait is open to international commerce under multilateral governance” while allowing Iranian officials to state that “the PGSA remains the sole authority for Hormuz transit within our territorial waters, and the JTA's role is limited to commercial coordination.”

Both statements are factually accurate under the Charter. The JTA governs the international transit corridor; the PGSA governs Iranian coastal waters. Neither body's authority encroaches on the other.

US Narrative: “No more unilateral Iranian tolling. The Strait is governed as an open international waterway under UNCLOS. All commercial vessels receive equal treatment. The US holds a permanent seat on the governing council.”

Iranian Narrative: “The PGSA remains Iran's statutory authority for Hormuz transit. We hold a permanent co-chair seat. Our personnel staff the transit centers. We receive 40% of fund revenue. The IRGC's coastal defense authority is explicitly untouched.”

11.5 Hormuz Environmental Transit Fee (v5.4)

Vessel Type	Fee	Collection Method
Oil tankers (>50,000 DWT)	\$0.10 per barrel of cargo	Automated via AIS + cargo declaration
Container vessels	\$500 per transit	Pre-paid through Maritime Council online portal
General cargo / bulk carriers	\$250 per transit	Pre-paid through Maritime Council online portal
WFP / humanitarian vessels	\$0 (exempt)	Automated exemption via UN registration
Military / naval vessels	\$0 (exempt)	Flag state declaration

Revenue Distribution: 40% Iranian Maritime Environmental Protection Fund; 30% Omani transit infrastructure; 20% International Maritime Safety Fund; 10% Secretariat operational costs. Rate Ceiling: may not be increased without Maritime Council consensus (including US voting rights).

Section 12: Nuclear Stabilization (v6.1)

Six independently selectable pathways for verified neutralization of Iran's 60% HEU stockpile. v6.1 Clarification: Physical custody transfer to IAEA is a Phase 1 baseline verification metric (Day 1–14). Final disposition selection from the six-pathway menu occurs in the 30-60 day nuclear negotiating window (Stage 2). The United States shall have no veto over the pathway selected — only the right to verify its execution. If the Parties fail to agree on a final disposition pathway by Day 45, Pathway A (in-country downblending to medical-grade LEU at Esfahan) becomes the automatic default.

12.1 The Six Pathways

Pathway	Description	Destination	Timeline
A: In-Place Downblending	Stockpile converted to medical-grade LEU (19.75%) at Esfahan	Medical isotope production in Iran	142 days
B: HEU Export to Oman	Stockpile transported under IAEA custody to Oman storage	IAEA facility, Oman (NOT US territory)	14 days
C: Kazakhstan LEU Bank	Downblended in Iran, transferred to IAEA LEU Bank in Oskemen	IAEA LEU Bank, Kazakhstan	75 days
D: Russian Federation Custody	Transfer to Rosatom storage under IAEA safeguards	Rosatom facility, Russian Federation	60–90 days
E: Bushehr Fuel Conversion	Downblended to reactor-grade LEU, fabricated into fuel assemblies	Bushehr reactor fuel supply	180 days
F: Hybrid Modular	Stockpile divided into batches, each through different pathways	Multiple third-party destinations	Concurrent

Citation alignment: Final Steps Accord v3.2, Article 1.5 and Addendum A-1 (Article 2.4.3)

12.2 v6.1 Legal Title Structure (Operative and Binding)

While the HEU is under IAEA physical custody, the legal title and ownership remain vested with the Central Bank of Iran as sovereign trustee. The Custody Services Agreement specifies that: (a) Iran retains full legal title throughout the custody period; (b) the IAEA may not transfer, sell, or dispose of the material without written consent of the Central Bank of Iran; (c) the material is held for the purpose of baseline verification and civilian conversion negotiation, not for destruction or permanent removal from Iranian ownership; (d) the final disposition is subject to the outcome of the 30-60 day nuclear negotiating window; (e) if the Parties fail to agree on a final disposition pathway by Day 45, Pathway A becomes the automatic default; (f) neither Party's failure to agree shall be construed as a material breach; (g) if the Accord is terminated by mutual agreement, the material is returned to Iran under IAEA supervision.

No Hidden US Custody Clause (Self-Executing and Non-Waivable): At no stage may the United States receive, store, transport, or exercise operational control over the Iranian enriched-uranium stockpile. All custody remains with the IAEA. US personnel shall not be present at any consolidation, packaging, transit, or receipt operation.

12.3 Third-Party Destination Guarantee (v5.4, Retained v6.2)

Under no circumstances may Iran's enriched uranium stockpile be transferred to United States territory, custody, or control. All six pathways specify third-party destinations: Oman, Kazakhstan, Russia, or in-place conversion within Iran. This is a binding, non-negotiable feature. The US does not object to any of the six pathways as long as the final destination is a third country with IAEA safeguards. Iran selects the pathway(s). The IAEA verifies the transfer chain of custody.

12.4 The Mothball Protocol: Centrifuge Rotor Removal (v5.4)

All centrifuge rotors and bellows at facilities producing enrichment above 3.67% are removed, sealed in IAEA-tamper-evident containers with unique serial numbers, and stored in a UN-monitored facility within Iran. Dual-key custody: one key held by Iran, one by IAEA. Reactivation requires: annual review confirming non-renewal of enrichment cap; Facilitating State Council consensus; 90-day notice period. Reactivation without these conditions constitutes Tier 3 breach.

12.5 Additional Protocol Acceleration (v5.4)

Implementation of the IAEA Additional Protocol accelerated from Year 1 to Day 90. Days 1–30: Iran submits AP declaration. Days 31–60: IAEA begins complementary access inspections. Days 61–90: Full AP implementation including short-notice inspections (24-hour notice). Contingent on: Stage 1 closing successfully; IAEA confirming 60% freeze sustained; HEU export plan confirmed.

Section 13: Fordow Joint Venture & Funding

The Fordow facility converts to the International Medical Isotope Research Center. Total funding: \$175M + \$40M Iranian in-kind = \$215M over 48 months. Sources: Switzerland \$25M (seed), Oman \$15M, Qatar \$20M, WHO/IAEA \$30M, EU \$25M, Iran \$40M in-kind (facility, workforce), Private Sector \$20M. Designated WHO Center of Excellence.

Section 14: Rebranding & Crisis Communications

Remove terms like “deal,” “rollback,” or “concessions.” Washington: “regional stability mechanism.” Tehran: “sovereignty-protecting de-escalation tool.” Neither narrative contradicts the other. Unauthorized

Leak: 4-hour “we do not comment on draft documents” response. Contradictory Statement: 24-hour senior official clarification. Viral Misinformation: 6-hour pre-approved fact sheets. Inflammatory Speech: 72-hour backchannel through Council; cooling period.

Section 15: Goldilocks Crisis Protocol

The framework is most likely adopted during a crisis that scares both sides but doesn't collapse diplomacy. Deployable modules: Insurance spike (Micro-Pilot + Day-7 synchronized blockade lift, 48 hours). Near-miss encounter (Blind De-escalation + Hotline full activation, 24 hours). Leadership transition (Micro-Pilot as “new initiative,” 7–14 days). Energy market collapse (Full Stage 1 pre-authorized for emergency deployment, 72 hours).

Section 16: The Three-Tier Breach System

Breach Type	WBI Points	Trigger
Nuclear breach (enrichment above 3.67%)	4 points	IAEA Director General certification
Fissile material diversion	8 points	Automatic Enhanced Review; no WBI ladder required
Cross-border attack (attributed)	3 points	Full attribution investigation process
Proxy military weapons transfer	2 points	SWIFT + satellite verified
Maritime chokepoint incident	1 point	Maritime Council within 4 hours
Verification obstruction	2 points	Per incident

Threshold	Response
WBI 5.0 threshold	Enhanced Review Protocol activated
WBI 8.0 threshold	Compliance Restoration consideration; Rapid Panel convenes
WBI 12.0+ threshold	Full compliance restoration available; treaty suspension vote

Section 17: Face-Saving Metrics & Domestic Wins (v6.1 Updated)

Iranian Domestic Narrative	US Domestic Narrative
“We ended the war” — Permanent bilateral ceasefire	“Hormuz is open” — 200+ transits in 14 days
“Blockade lifted” — US naval blockade removed	“Weapons-grade uranium secured” — Entire stockpile in IAEA custody
“Assets returning” — \$250M immediate; 50% by Day 44; 85% by Day 180	“Enrichment capped and verified” — 1-year renewable cap; IAEA continuous monitoring
“Sovereignty preserved” — No precedent clause; NPT rights intact; PGSA recognized as sole coastal enforcement	“No bases lost” — All US Gulf bases remain
“We moved as equals” — Every US concession matched simultaneously	“Congressional oversight” — Tranches 3+ subject to 30-day Congressional review
v6.1: “War ended on all fronts” — Lebanon addressed through Regional Basket; Iran monitors as observer	v6.1: “Lebanon is a separate track” — Full Israeli participation; Dossier Isolation Firewall protects core deal

17.1 v6.1 Lebanon Talking Points

US: “The core US-Iran agreement addresses nuclear proliferation and freedom of navigation — America's core national security interests. Lebanon is a separate file managed through a dedicated regional basket with full Israeli participation. We are not trading Hormuz for Hezbollah. The Dossier Isolation Firewall ensures that what happens in Lebanon cannot affect the nuclear deal.”

Iran: “The framework ends the war on all fronts. Through the Levant Regional Basket, Iran ensures that our allies in Lebanon are not abandoned while the main agreement proceeds. The Dossier Isolation clause protects the core agreement from being undermined by localized incidents.”

Israel: “Israel's security is not negotiable. The Levant Regional Basket is a separate diplomatic process in which Israel has full participation and veto authority. The core US-Iran agreement does not constrain Israel's right to self-defense. If Hezbollah attacks, Israel will respond — and the nuclear deal remains unaffected.

The Dual-Key Escalation Lock ensures that only a direct, verifiable order from Iran's Supreme Leader can link Hezbollah actions to the Core Accord.”

Lebanon: “Lebanon welcomes the Levant Regional Basket as a pathway to stability for our southern border. We are not a proxy battlefield. The Basket's humanitarian sub-track addresses the urgent needs of our civilian population. Lebanon's sovereignty is respected through our chairmanship of the Steering Committee.”

Section 18: Political Statements Package for Multilateral Audiences

In diplomacy, the same set of facts can be described in ways that serve different political needs — without contradiction, without deception, and without altering the underlying substance. This section provides each party with the language necessary to communicate the Accord's provisions to their domestic audiences in terms that are truthful, defensible, and politically resonant.

18.0 Purpose and Scope

The Political Statements Package is a narrative architecture designed to accompany the Stability First Enhanced Accord v6.2. Its purpose is to enable all parties — governmental and facilitating — to communicate the same core facts through frames that are politically acceptable to their respective domestic constituencies. This is not a public relations exercise. Every statement in this Package is grounded in the operative provisions of the Accord. No statement contradicts any other statement in this Package. All statements are simultaneously true.

This Package addresses the following audiences:

- **The United States** — Presidential administration, Congressional leadership, and the American public
- **The Islamic Republic of Iran** — Supreme Leader's office, presidency, IRGC, Parliament, and the Iranian public
- **The State of Israel** — Prime Minister's office, security cabinet, Knesset, and the Israeli public
- **Facilitating States** — Oman, Pakistan, Qatar, Switzerland, and the IAEA
- **The Gulf Cooperation Council** — Saudi Arabia, UAE, Kuwait, Bahrain, and regional partners
- **The International Community** — European Union, United Nations, P5+1 remainder, and global energy markets

Each subsection contains: (a) a strategic framing summary; (b) a set of ready-to-deliver statements for senior officials; (c) a set of supporting talking points for spokespersons and diplomatic representatives; and (d) a narrative alignment note explaining how the statement coexists with statements issued by other parties.

18.1 United States Audience

18.1.1 Presidential Administration Statement

Strategic Frame: President Trump secured Iran's weapons-grade uranium on Day One, reopened the Strait of Hormuz through American strength, and ensured that Iran will never enrich above 3.67% for the duration of the agreement. No American bases were closed. No taxpayer money was spent. Iran moved first on every verification metric.

SPOKESPERSON DELIVERY

Today, the United States has secured a historic stabilization agreement with Iran that achieves what many thought impossible. Under President Trump's leadership, Iran has agreed to immediately transfer its entire stockpile of weapons-grade enriched uranium — material that could be used to build nuclear weapons — into the physical custody of the International Atomic Energy Agency, verified within 72 hours. This means Iran no longer controls the material needed for a nuclear weapon.

SPOKESPERSON DELIVERY (CONTINUED)

The Strait of Hormuz will reopen to international commerce under a new multilateral governance structure that ends Iran's unilateral interference with global shipping. American naval forces will lift the blockade only after IAEA inspectors confirm the uranium transfer — not before. Iran has accepted a binding moratorium on all enrichment above 3.67%, renewable annually for up to twelve years, with full IAEA monitoring. There is no sunset clause. There are no hidden provisions. And this agreement creates absolutely no precedent — it is a one-time stabilization measure that addresses the crisis of May 2026 and nothing more.

Supporting Talking Points — US Administration

- “Iran physically surrendered its weapons-grade uranium before receiving a single dollar of sanctions relief.” (Fact: The \$250M humanitarian tranche releases simultaneously with IAEA verification — not before.)
- “The IAEA — not Iran, not the United States — holds physical custody of the stockpile.” (Fact: IAEA custody is a neutral third-party arrangement, with legal title remaining with the Central Bank of Iran per Section 12.2.)
- “The Strait of Hormuz is now governed as an open international waterway under UNCLOS.” (Fact: The JTA governs the international transit corridor; the PGSA governs Iranian coastal waters per Section 11.3.)

- “If Iran stalls on final disposition, the stockpile is automatically downblended to medical-grade material by Day 45.” (Fact: Pathway A is the automatic default per Section 12.1.)
- “No US naval vessels are required to withdraw beyond the 12-nautical-mile territorial limit.” (Fact: Blockade lift includes withdrawal beyond 12nm per Section 5.3.3.)
- “This agreement explicitly states it creates no legal or political precedent for any future negotiations.” (Fact: No Precedent Clause, Section 1.6.)

Narrative Alignment

The US administration's claim that “Iran surrendered the stockpile” is fully compatible with Iran's claim that “the uranium remains Iranian property” because both statements describe the same legal structure: physical custody transfers to the IAEA while legal title remains with the Central Bank of Iran. The US administration's claim that “Hormuz is governed as an open international waterway” is compatible with Iran's claim that “the PGSA remains the sole authority within Iranian territorial waters” because the JTA governs the international transit corridor and the PGSA governs coastal waters — distinct jurisdictions under UNCLOS.

18.1.2 Congressional Republican Leadership Statement

Strategic Frame: Congressional oversight is preserved. Tranches 3 and above require 30-day Congressional review. The agreement is not a treaty and creates no binding precedent. Military options remain on the table if Iran violates its commitments. Israel's security interests are protected through a parallel reassurance mechanism.

SENIOR LEADER DELIVERY

President Trump has negotiated from a position of strength, and the result is an agreement that puts American security first. Iran's weapons-grade uranium is now under international lock and key. The president has made clear that this is a stabilization measure, not a treaty — it requires no Senate ratification and creates no permanent obligation. Congress retains full oversight authority over all sanctions relief beyond the initial humanitarian phase. Any Iranian violation triggers automatic step-back provisions that restore pressure without requiring Congressional action.

Supporting Talking Points — Congressional Republicans

- “This is not the JCPOA. There is no \$150 billion giveaway. The initial release is \$250 million in humanitarian aid only.”
- “All significant sanctions relief beyond Phase 1 is subject to 30-day Congressional review.” (Fact: Tranches 3+ require Congressional notification per Section 10.1.)
- “Israel's freedom of action is explicitly protected.” (Fact: Section 56 Israel Parallel Reassurance Mechanism.)

- “If Iran cheats, the penalties are automatic — no new negotiations required.” (Fact: Three-Tier Breach System, Section 16.)
- “The president preserved all military options. This agreement does not constrain future US action if Iran violates its commitments.”

18.1.3 Congressional Moderates and War Powers Advocates

Strategic Frame: Diplomacy succeeded where continued military action would have produced only more casualties and economic disruption. The agreement preserves American interests without entangling the United States in an open-ended conflict. Constitutional war powers are respected.

MODERATE DELIVERY

The president has achieved through diplomacy what military action alone could not secure — verifiable constraints on Iran's nuclear program and the reopening of a critical global waterway. This agreement represents a pragmatic recognition that America's interests are best served by a combination of strength and dialogue. The humanitarian channel ensures that ordinary Iranians — who are not our enemy — receive medical supplies and food regardless of political developments. War is not off the table if Iran violates its commitments, but for now, American service members are not being placed in harm's way for an indefinite conflict.

18.1.4 American Public — America First Narrative

Strategic Frame: President Trump won. Iran moved first. American troops are not in danger. Gas prices will come down. No American money went to Iran's regime.

RALLY DELIVERY

They said it couldn't be done. The fake news said President Trump would start World War III. Well, look what happened. Iran just handed over the material they need for nuclear weapons — on Day One, before we gave them anything. The Strait of Hormuz is open. Your gas prices are coming down. And not one American soldier had to die for it. That's what leadership looks like.

18.2 Islamic Republic of Iran Audience

18.2.1 Supreme Leader's Office Statement

Strategic Frame: Iran's sovereignty has been fully preserved. The uranium remains Iranian property under Iranian legal title. The Strait of Hormuz remains under Iranian coastal authority. Enrichment at 3.67% continues — Iran's inalienable NPT right is intact. The war has ended. The blockade is lifted. Assets are returning. Every Iranian concession was matched by a simultaneous American concession — Iran did not move first.

OFFICIAL STATEMENT

The Islamic Republic of Iran has successfully defended its sovereignty and national interests through steadfast resistance and principled diplomacy. Under the guidance of the Supreme Leader, Iran has secured an agreement that preserves every fundamental right of the Iranian nation. Our enriched uranium remains the sovereign property of the Iranian people, held under the legal title of the Central Bank of Iran. The International Atomic Energy Agency provides physical custody only — a standard international arrangement that does not transfer ownership.

OFFICIAL STATEMENT (CONTINUED)

The Strait of Hormuz remains under the exclusive authority of the Islamic Republic within our territorial waters, with the Persian Gulf Strait Authority recognized as the sole executive coastal law enforcement body. The so-called Joint Transit Authority has no jurisdiction over Iranian sovereign waters — its mandate is limited to commercial coordination beyond our 12-nautical-mile limit. Iran's right to enrich uranium for peaceful purposes at 3.67% is fully preserved under the Nuclear Non-Proliferation Treaty, as is our right to annual review and renewal. The criminal American blockade will be lifted simultaneously with our proportional measures — not before. Frozen Iranian assets will be returned in staged tranches. This agreement proves that resistance, not surrender, produces results.

Supporting Talking Points — Supreme Leader's Office

- “The uranium never left Iranian ownership. The Central Bank of Iran retains full legal title.” (Fact: Section 12.2 — legal title remains with CBI throughout.)
- “The IAEA holds custody, not the United States. American personnel will not be present at any transfer operation.” (Fact: Section 12.2 No Hidden US Custody Clause.)
- “If talks stall on final disposition, the default is in-country downblending at Esfahan — not export.” (Fact: Pathway A automatic default per Section 12.1.)

- “The final disposition pathway is Iran's choice. America has no veto — only verification rights.” (Fact: Section 12 — Iran selects from six pathways; US verifies only.)
- “The PGSA remains the sole authority in Iranian territorial waters. The IRGC's coastal defense authority is explicitly untouched.” (Fact: Section 11.3-B.)
- “We did not move first. The automated dual-trigger ensures simultaneous execution.” (Fact: Section 5.3 — 60-second UTC window.)
- “This agreement creates no precedent. It is *sui generis* — specific to the crisis of May 2026.” (Fact: Section 1.6.)

Narrative Alignment

Iran's claim that “the uranium remains Iranian property” is fully compatible with the US claim that “Iran surrendered the stockpile” because the statements address different legal dimensions: title versus custody. Iran's claim that “the PGSA remains the sole authority” is compatible with the US claim that “Hormuz is open under multilateral governance” because the two bodies operate in distinct jurisdictions — coastal waters versus international transit corridor.

18.2.2 Presidential Administration (Pezeshkian) Statement

Strategic Frame: The administration ended the war, lifted the blockade, secured the return of frozen assets, preserved Iran's nuclear rights, and opened a pathway to economic recovery — all while maintaining Iran's dignity and sovereignty.

PRESIDENTIAL DELIVERY

The government of the Islamic Republic has achieved what the Iranian people demanded — an end to the bombing, an end to the blockade, and the beginning of economic recovery. Through patient diplomacy backed by the strength of our armed forces, we have secured the return of Iranian assets that were illegally frozen by the United States. The 60% enrichment freeze is a technical stabilization measure, not a surrender — our peaceful enrichment at 3.67% continues, as is our right under the NPT. The Fordow facility will become a world-class medical isotope center, serving humanity while preserving Iranian scientific capability. This is not capitulation. This is the art of turning pressure into opportunity.

18.2.3 IRGC and Military Establishment Statement

Strategic Frame: The IRGC's dominance of the Strait of Hormuz is preserved. Coastal defense authority is untouched. The military option for reactivation remains available through the Mothball Protocol. Iran's deterrent capability has been enhanced, not diminished.

IRGC COMMAND DELIVERY

The Islamic Revolutionary Guard Corps confirms that all aspects of Iran's military sovereignty remain intact. The PGSA continues as the sole authority within Iranian territorial waters. The IRGC's coastal defense, territorial security, and military operations in the Strait are explicitly preserved and unaffected by any provision of this agreement. The centrifuge rotors placed under seal can be reactivated through the established protocol — annual review, facilitating state consensus, and 90-day notice. Iran's missile deterrent, our naval capabilities, and our asymmetric warfare readiness are untouched. The enemy sought to destroy our nuclear program. Instead, they must accept its continued peaceful existence.

18.2.4 Iranian Public — Economic Recovery Narrative

Strategic Frame: The war is over. The bombing has stopped. Medicine and food will flow. Your savings will be worth something again. Iran stood firm and the enemy blinked.

DOMESTIC BROADCAST

To the noble people of Iran: The bombing has stopped. The American blockade will be lifted. Your children will have medicine. Your businesses will have access to international trade. The rial will stabilize because your government's assets are returning — not as charity from America, but as the restoration of what was always yours. Iran did not kneel. Iran negotiated from strength, and the result is that our nuclear rights remain, our sovereignty remains, and your dignity remains. The enrichment that powers our hospitals and our future continues. The enemy demanded our surrender. They received our conditions instead.

18.3 State of Israel Audience

18.3.1 Prime Minister's Office / Cabinet Statement

Strategic Frame: Iran's breakout capability has been eliminated. The 60% stockpile is under IAEA lock and cannot be weaponized. Enrichment is capped at 3.67% for at least one year, renewable to twelve. Israel's freedom of military action in Syria is explicitly preserved. Lebanon is handled through a separate track with full Israeli participation and veto authority. The Dual-Key Escalation Lock ensures Hezbollah incidents cannot trigger snapback.

PRIME MINISTER DELIVERY

The State of Israel has secured written guarantees that ensure our security is not compromised by any agreement between Washington and Tehran. Iran's entire stockpile of weapons-grade uranium — the material that threatened our existence — is now under IAEA physical custody and will be neutralized through downblending or transfer abroad. Iran is prohibited from enriching above 3.67% for at least one year, with the possibility of extension to twelve years. This eliminates Iran's breakout timeline.

PRIME MINISTER DELIVERY (CONTINUED)

Critically, this agreement explicitly does not constrain Israeli military operations against Iranian personnel, Hezbollah elements, or weapons transfer networks in Syrian territory. Our freedom of action in Syria — where Iran continues to threaten our northern border — is preserved in writing as a binding interpretive understanding. The Lebanon Dossier Isolation Firewall ensures that no incident involving Hezbollah can automatically collapse this agreement or trigger sanctions relief. Only a direct, verifiable order from Iran's Supreme Leader could link Hezbollah actions to the core accord — and even then, Israel retains our inherent right to self-defense under Article 51 of the UN Charter. The Levant Regional Basket gives Israel full participation and veto authority over any reconstruction funding that could be diverted to Hezbollah military purposes.

Supporting Talking Points — Israeli Government

- “Iran cannot access the material — it is under IAEA lock, not Iranian control.” (Fact: IAEA physical custody per Section 12.)
- “If Iran stalls, the stockpile is automatically downblended to medical-grade LEU by Day 45.” (Fact: Pathway A automatic default.)
- “No enrichment above 3.67% for at least one year, with IAEA continuous monitoring.” (Fact: 1-year renewable cap per Section 6.1.)

- “Israel's freedom of action in Syria is explicitly preserved in a binding interpretive understanding.” (Fact: Section 56.4.)
- “The Dual-Key Escalation Lock means only a direct Supreme Leader order can link Hezbollah to the core deal.” (Fact: Annex L.2.2.)
- “Israel has full participation and veto authority in the Levant Regional Basket.” (Fact: Annex L.3.)
- “All US-Israel deconfliction channels remain independent of the Accord mechanisms.” (Fact: Section 56.2.)

Narrative Alignment

Israel's claim that “Iran's breakout capability is eliminated” is compatible with Iran's claim that “enrichment continues at 3.67%” because 3.67% enrichment produces reactor fuel, not weapons material — the breakout threat came from 60% enrichment, which is now frozen and stockpiled under IAEA custody. Israel's claim that “the core deal does not constrain Syria operations” is compatible with Iran's claim that “the war ends on all fronts” because the Syria Theater Clarification (Section 56.4) explicitly preserves Israeli operations freedom, while the Levant Regional Basket addresses Lebanon through a separate diplomatic process.

18.3.2 Israeli Opposition Statement

Strategic Frame: The agreement contains meaningful constraints on Iran's nuclear program while preserving Israel's operational freedom. Vigilance is required, but the alternatives — open-ended war or an unrestrained Iranian nuclear program — are worse.

OPPOSITION LEADER DELIVERY

We have reviewed the agreement's provisions, and while we remain deeply skeptical of any accommodation with the Iranian regime, the specific measures contained herein represent meaningful constraints. The 60% stockpile under IAEA custody, the enrichment cap, the automatic downblending default, and most importantly, the explicit preservation of Israel's military freedom in Syria — these are not trivial achievements. We will monitor implementation with extreme vigilance. Any violation must trigger immediate Israeli response, regardless of what Washington or Tehran prefer. But for now, the concrete constraints on Iran's nuclear timeline serve Israel's security interests.

18.4 Facilitating States Audience

18.4.1 Sultanate of Oman — Mediator Statement

Strategic Frame: Oman has preserved its historic role as the indispensable mediator between adversaries. Omani diplomacy prevented wider war. Muscat is the diplomatic capital of the region.

OMANI FOREIGN MINISTER DELIVERY

The Sultanate of Oman has once again demonstrated that dialogue, patience, and principled neutrality can prevent catastrophe. When others spoke of inevitable war, Oman spoke of inevitable peace. This agreement proves that even the deepest adversaries can find common ground when a trusted intermediary provides the space for honest conversation. The Joint Transit Authority, which Oman will help administer, ensures safe passage for all vessels through the Strait of Hormuz — a service to global commerce and regional stability. Oman's role as facilitator, not director, preserves our relationships with all parties and reinforces our position as the region's diplomatic heart.

18.4.2 Islamic Republic of Pakistan — Convening Authority Statement

Strategic Frame: Pakistan demonstrated responsible nuclear stewardship by bringing two nuclear-adjacent adversaries to the negotiating table. Pakistan's mediation enhanced its international standing while serving the Muslim world's interest in preventing wider conflict.

PAKISTANI PRIME MINISTER DELIVERY

Pakistan is proud to have hosted the negotiations that produced this stabilization framework. As a responsible nuclear power and a leading Muslim nation, Pakistan demonstrated that diplomacy — not escalation — serves the interests of the Ummah and the world. Prime Minister Shehbaz Sharif's convening authority brought the parties together when channels had collapsed. Pakistan's role in the facilitating state matrix ensures that we remain engaged in ensuring compliance and responding to crises. We did not seek to join the Abraham Accords because our principles regarding Palestinian sovereignty remain firm. But principled independence does not preclude constructive engagement — and Pakistan's engagement has helped prevent a wider war.

18.4.3 State of Qatar — Financial Facilitator Statement

Strategic Frame: Qatar's financial infrastructure and diplomatic relationships enabled the escrow and humanitarian mechanisms. Doha's role reinforces its position as a trusted financial hub for the region.

QATARI DELIVERY

Qatar's contribution to this agreement reflects our longstanding commitment to regional stability and humanitarian relief. The escrow mechanisms, bridging finance, and humanitarian corridor that Qatar provides are not merely technical functions — they are the arteries through which peace flows. Our \$2 billion in bridge financing at Day 1 ensures that humanitarian goods reach those in need regardless of political delays. The International Gulf Reconstruction Fund, which Qatar helps administer, will channel resources toward rebuilding what conflict destroyed. Qatar's relationships with all parties — including those who do not recognize each other — make us an indispensable node in this architecture.

18.4.4 Swiss Confederation — Verification Authority Statement

Strategic Frame: Switzerland's centuries-old neutrality and financial integrity make it the trusted guardian of the agreement's verification and financial mechanisms. Swiss oversight ensures impartiality.

SWISS DELIVERY

Switzerland's role in the Stability First Accord reflects our enduring commitment to peaceful resolution of international disputes and our reputation for absolute neutrality in financial and verification matters. The Swiss Dashboard that administers the dual-trigger mechanism, the escrow accounts that hold and disburse Iranian assets, and the audit functions that verify compliance — these are not favors to any party. They are Switzerland's contribution to global stability, grounded in our constitutional neutrality and our practical expertise. All parties trust Switzerland precisely because we do not take sides.

18.5 Gulf Cooperation Council Audience

18.5.1 Kingdom of Saudi Arabia Statement

Strategic Frame: Saudi Arabia's security concerns about Iranian regional behavior are addressed through the agreement's constraints on enrichment and the separate regional security architecture. Riyadh remains the dominant Gulf power. The Abraham Accords framework is preserved as a parallel track.

SAUDI DELIVERY

The Kingdom of Saudi Arabia supports any agreement that verifiably constrains Iran's nuclear program and contributes to regional stability. The cap on enrichment at 3.67%, the IAEA custody of weapons-grade material, and the automatic downblending provision address the core proliferation threat that concerns all Gulf states. We note that this agreement addresses nuclear and maritime issues only — it does not address Iran's ballistic missile program, its support for terrorist proxies, or its interference in Arab affairs. These matters remain subjects of deep concern for the Kingdom. We expect the United States to maintain its security commitments to Gulf partners regardless of any agreement with Tehran. The Regional Security Dialogue envisioned for Stage 3 offers a pathway for Gulf states to address these broader concerns directly.

18.5.2 United Arab Emirates Statement

Strategic Frame: The UAE benefits from Hormuz stability and reduced regional tensions. Abu Dhabi's economic and security relationships with Washington are preserved. The UAE's role as a financial intermediary is enhanced.

UAE DELIVERY

The United Arab Emirates welcomes the reopening of the Strait of Hormuz to unimpeded commercial traffic. The JTA governance structure, in which the UAE participates as a GCC member, ensures that no single power can hold global energy markets hostage. The UAE's financial infrastructure has long served as a bridge between East and West, and the escrow mechanisms administered through Swiss and Qatari channels benefit from UAE's banking expertise. We remain vigilant regarding any Iranian activity that threatens regional security, but verifiable constraints on enrichment serve the interests of all responsible actors.

18.6 International Community Audience

18.6.1 European Union / E3 (UK, France, Germany) Statement

Strategic Frame: The agreement restores IAEA verification, constrains enrichment, and creates a pathway for diplomatic resolution. European expertise in nuclear verification and financial mechanisms is valued. The JCPOA's verification architecture is enhanced, not replaced.

EU HIGH REPRESENTATIVE DELIVERY

The European Union welcomes the Stability First Enhanced Accord as a significant step toward restoring the international non-proliferation architecture in the Middle East. The IAEA's central role in verification, the Additional Protocol acceleration to Day 90, and the six-pathway disposition menu all reflect principles that European negotiators have long championed. We are particularly encouraged by the automatic Day 45 default provision, which prevents deadlock from undermining the agreement's core objective: ensuring that Iran's highly enriched uranium is never weaponized. The EU stands ready to contribute technical expertise, reconstruction financing, and diplomatic support to ensure full implementation.

18.6.2 International Atomic Energy Agency Statement

Strategic Frame: The IAEA's role as the sole verification authority is central and indispensable. Inspector access, containment and surveillance, and short-notice inspections are all strengthened.

IAEA DIRECTOR GENERAL DELIVERY

The International Atomic Energy Agency confirms that this agreement places our inspectors at the center of the verification architecture — precisely where we belong. Physical custody of Iran's 60% stockpile transfers to IAEA monitoring within 72 hours. The Additional Protocol is accelerated to full implementation by Day 90, including short-notice inspections with 24-hour notice. The six-pathway disposition menu ensures that the material is converted to peaceful purposes under IAEA verification regardless of which option Iran selects. The Agency has no role in determining political outcomes — our mandate is technical verification, and this agreement provides the access and authority we require to fulfill that mandate. We call on all parties to facilitate the swift return of our inspectors to all relevant facilities.

18.6.3 United Nations Secretary-General Statement

Strategic Frame: The UN's role in procedural mediation and humanitarian access is preserved. The Framework Survival Core operates as a standalone UN humanitarian arrangement.

UN SECRETARY-GENERAL DELIVERY

The United Nations welcomes this agreement as a critical step away from the brink of wider war in a region that has suffered far too much conflict. The Framework Survival Core — the ceasefire hotline, humanitarian corridor, and emergency diplomatic channel — operates as a standalone UN humanitarian arrangement that continues for 180 days even if the political agreement falters. The UN Appointee's role in procedural mediation ensures that disputes are resolved through dialogue, not escalation. The International Gulf Reconstruction Fund offers a pathway to address the humanitarian devastation that twelve weeks of conflict have inflicted. The Secretary-General calls on all parties to implement their commitments in good faith and urges the international community to support the verification and humanitarian mechanisms that give this agreement its durability.

18.6.4 People's Republic of China Statement

Strategic Frame: China supports diplomatic solutions over military confrontation. The agreement preserves multilateral frameworks. Chinese energy security benefits from Hormuz stability.

CHINESE FOREIGN MINISTRY DELIVERY

China consistently supports the peaceful resolution of international disputes through dialogue and negotiation. The Stability First Accord demonstrates that even the most entrenched adversaries can find common ground when all parties show political will. China notes with satisfaction that the agreement preserves Iran's right to peaceful nuclear activities under the NPT, respects Iran's sovereignty over the Strait of Hormuz within its territorial waters, and provides a pathway for Iran's legitimate economic reintegration. Chinese energy security benefits from the reopening of the Strait of Hormuz. China's purchases of Iranian oil have continued throughout the crisis, and we expect stable commercial relations to continue under the agreement's framework.

18.6.5 Russian Federation Statement

Strategic Frame: Russia's role as a potential destination for Iranian HEU (Pathway D) reinforces its position as a nuclear intermediary. Moscow benefits from stable energy markets and preserved Iranian sovereignty.

RUSSIAN FOREIGN MINISTRY DELIVERY

The Russian Federation views this agreement as a pragmatic stabilization measure that prevents wider conflict while respecting Iran's legitimate rights. Rosatom's inclusion as one of six verified disposition pathways reflects Russia's continued role as a trusted steward of nuclear materials. We note that the agreement preserves Iran's right to enrichment at 3.67% — a right that all NPT parties possess — and that the more intrusive verification measures apply only to the 60% stockpile, not to Iran's entire nuclear program. Russia will continue to support Iran's peaceful nuclear program, including the Bushehr reactor, regardless of the disposition pathway selected.

18.7 Narrative Architecture Matrix

The following matrix demonstrates that all major statements in this Package are simultaneously true and mutually compatible. Each row describes the same factual provision through the lens of a different audience.

Provision	US Narrative	Iranian Narrative
HEU Custody	Iran surrendered its weapons-grade uranium to IAEA custody on Day 1	The uranium remains Iranian property; CBI retains legal title; IAEA holds only physical custody
Enrichment Cap	Zero enrichment above 3.67% for 1 year, renewable to 12	Peaceful enrichment at 3.67% continues as our NPT right; annual sovereign review
Hormuz Governance	Strait open under multilateral governance per UNCLOS	PGSA sole authority in Iranian waters; JTA limited to commercial coordination
Blockade Lift	US lifted blockade after IAEA verified transfer	US criminal blockade lifted simultaneously through automated trigger
Sanctions Relief	Staged relief through non-US channels; Congressional oversight	Return of illegally frozen Iranian assets in phased tranches
Day 45 Default	Automatic downblending if Iran stalls	Automatic in-country downblending at Esfahan if no alternative agreed
Syria Operations	Israeli freedom of action explicitly preserved	(Not addressed in Iranian statements — Lebanon handled separately)
Lebanon Firewall	Core deal protected from Lebanon incidents	War ends on all fronts through Levant Regional Basket
Precedent	No precedent — one-time stabilization measure	<i>Sui generis</i> — specific to May 2026 crisis

Table 1: Narrative Architecture Matrix — All Statements Are Simultaneously True

18.8 Delivery Protocols

The Political Statements Package is designed for deployment at specific milestones during implementation. The following protocols govern when and how each statement set is released.

18.8.1 Day 1 — Framework Announcement

All parties release their primary statements simultaneously within a 4-hour window, coordinated through the UN Appointee. Statements are issued as prepared remarks, not spontaneous reactions. Each party's spokesperson receives the complete Package to ensure awareness of other parties' framing.

18.8.2 Day 7 — Dual-Trigger Execution

As the Hormuz Opening and Blockade Lift execute through the Swiss Dashboard, all parties issue follow-up statements emphasizing the synchronized nature of the exchange. No party claims the other moved first.

18.8.3 Day 14 — Stage 1 Completion

If Stage 1 closing triggers are met, parties issue statements emphasizing success. If triggers are partially met, parties emphasize progress while noting remaining work.

18.8.4 Crisis Communications

If spoilers or rogue actors generate incidents, all parties refer to the pre-cleared talking points in this Package before issuing reactive statements. The 72-hour cooling-off period applies to political communications as well as military actions.

18.8.5 Unauthorized Leaks

If the Package or the Accord is leaked, all parties deploy the 4-hour “we do not comment on draft documents” response, followed by the senior official clarification within 24 hours per Section 14.

18.9 Conclusion

The Political Statements Package for Multilateral Audiences ensures that the Stability First Enhanced Accord v6.2 can be communicated, defended, and sustained across multiple political systems simultaneously. By providing each party with language that is truthful, defensible, and resonant with their domestic audience, the Package reduces the political cost of implementation and increases the likelihood of durable compliance.

All statements in this Package are grounded in the operative provisions of the Accord. No statement requires any other party to accept its framing. The simultaneous truth of all statements is not a coincidence — it is the deliberate product of the Accord's architectural design, which allocates distinct legal attributes (title, custody, jurisdiction, authority) to different actors in ways that enable all parties to describe the same arrangement as serving their interests.

The Package is a living document. As implementation proceeds and political circumstances evolve, the UN Appointee may coordinate the issuance of updated or supplementary statements through consensus of the

facilitating state council.

Section 19: Spoiler & Rogue Actor Management

Third-Party Disruption Protocol (B-3): If a third-party attack is designed to force bilateral retaliation: 72-hour attribution panel; 10-day investigation; default non-attribution; zero penalties for either party.

Compact-Adverse Actor Protocol (B-4): If domestic hawkish factions sabotage the Compact: investigation + discipline; WBI penalties apply to the state.

Loophole Prevention (B-5): Living Loophole Register patches within one Crescent Cycle.

Mass Casualty / WMD (B-7): JCC Emergency Session within 4 hours; 14-day Crisis Lock.

Section 21: Cyber Operations Stabilization

Category I (Critical): Nuclear monitoring systems, banking settlement, maritime navigation — strict non-aggression; Tier 2 breach response; emergency session within 24h.

Category II (Important): Humanitarian logistics, medical supply chains, pipeline control — no offensive operations; defensive permitted; Tier 3 response; 72-hour monitoring review.

Category III (Commercial): General commercial infrastructure, telecoms, civilian aviation — no persistent disruption; Tier 1 diplomatic resolution.

Incident Notification: Category I/II incidents must be reported to Coordination Secretariat within 6 hours. Failure to report is a technical delay, not a breach.

Section 33: Three-Tier Breach System (Detailed)

Tier 1 — Technical Dispute (De Minimis)

Telemetry signature: <0.5% above enrichment ceiling; ≤2 un-mothballed rotors; ≤48h reporting delay.

Response: Engineering resolution within 14 days; no rollback; confidential handling; JIG technical assistance; quiet compliance corrections.

Tier 2 — Material Disruption

Telemetry signature: >0.5% above ceiling; >2 rotors; >72h IAEA obstruction. **Response:** 25% benefit reduction; 30-day remediation; earn-back via compliance; humanitarian tranches protected; SWIFT phase holds (14-day fuse active); full restore on IAEA clean certification within 14 days.

Tier 3 — Deliberate Hostile Violation

Telemetry signature: Nuclear weapons activity; fissile diversion; IAEA attack. **Response:** 50% reduction; 90-day remediation; full earn-back requires 90-day sustained compliance + IAEA clean certification + JIG majority confirmation.

Section 35: Reconstitution Mechanism

If the framework enters full suspension, all parties attend a Reconstitution Conference within 30 days, convened by Pakistan and the UN Appointee. Root causes reviewed. Modifications proposed. Conditions for graduated restoration defined. No party may unilaterally block reconstitution. The Framework Survival Core (ceasefire hotline, humanitarian access, emergency diplomatic channel) continues for 180 days during reconstitution efforts.

Section 36: Political Shock Absorber

Framework implementation enters automatic Review Pause (not termination) upon: national elections or referenda; assassination of senior leadership; cabinet collapse; mass protests; leadership transitions (Supreme Leader, President, Foreign Minister); significant military incident affecting domestic politics.

During Review Pause: Tier 1-2 modules continue; Tier 3 enters hold; Secretariat issues Review Pause Certificate within 48 hours; 30 days to confirm continuation. Max 90 days, extendable by mutual agreement. Does NOT constitute material breach. Does NOT trigger the three-tier system.

Section 38: Rollback and Step-Down Architecture

Step-Down Tier 1: No benefit reduction. 14-day resolution. JIG technical assistance. Quiet compliance corrections confidential.

Step-Down Tier 2: 25% reduction in non-humanitarian benefits. Humanitarian tranches protected. SWIFT phase holds (14-day fuse active). 30-day remediation. Full restore on IAEA clean certification within 14 days.

Step-Down Tier 3: 50% reduction in non-humanitarian benefits. Tier 3 modules enter hold. 90-day remediation. Full earn-back requires: 90-day sustained compliance + IAEA clean certification + JIG majority confirmation.

Section 40: Minimal, Medium, and Maximal Deal Options

Option	Nuclear	Monitoring	Economic	Duration
Minimal (Crisis Containment)	60% freeze; no stockpile transfer	Minimal (cameras + OLEM)	~\$850M + limited oil	90 days, renewable
Medium (Stability First)	3.67% cap; stockpile to IAEA; Mothball Protocol	Medium (UGES + sensors + ICS)	~\$85B + SWIFT	1-year renewable
Maximal (Comprehensive)	3.67% cap; AI fusion; missile test moratorium	Maximal (AI + digital twin + drones)	\$100B+ + full trade	2-year initial

Default: Minimal activates by default; automatic graduation to Medium upon verified Micro-Pilot completion. v6.2: Medium option includes all five surgical refinements from v6.1 (JTA Sovereignty Recalibration, Day 7 Dual-Trigger, HEU Phase 1 Baseline Enhanced with six-pathway menu and Day 45 default, Lebanon Firewall Enhanced with Dual-Key Escalation Lock, Israel Parallel Reassurance Syria Theater Clarification) plus the Political Statements Package. Minimal option includes Day 7 Dual-Trigger and HEU Phase 1 Baseline only (maritime and nuclear core). Maximal option includes all five plus missile CBDE, proxy governance dialogue, and Additional Protocol cooperation.

Section 56: Israel Parallel Reassurance Mechanism (v6.2)

56.1 Purpose and Scope

The Israel Parallel Reassurance Mechanism (the “Tel Aviv Channel”) operates as a distinct bilateral communication and coordination framework between the United States and Israel, running parallel to but separate from the Core Accord between the United States and Iran. This mechanism addresses Israeli security concerns without binding the Core Accord to Israeli approval or veto.

56.2 General Red Lines

Israel's core security requirements are acknowledged: (a) no Iranian enrichment above 3.67% on Iranian soil; (b) verified IAEA custody of all 60% HEU stockpile; (c) no Iranian missile transfers to proxies; (d) maintained US-Israel deconfliction channels independent of Accord mechanisms. The United States confirms these requirements are satisfied by the Core Accord's verification architecture.

56.3 Lebanon Theater Clarification

Israel retains full sovereign authority to defend against Hezbollah attacks originating from Lebanese territory. The Lebanon Dossier Isolation Firewall (Annex L) prevents any Hezbollah incident from automatically triggering Core Accord step-back or sanctions snapback. See Annex L.2.2 for the Dual-Key Escalation Lock mechanism.

56.4 Syria Theater Clarification (v6.1, Retained v6.2)

Nothing in this Accord, including but not limited to the Lebanon Dossier Isolation Firewall (Annex L), the Proxy Operational Pause (Annex L.1), or any provision limiting Iranian military activities, shall be construed as limiting Israeli military operations against Iranian personnel, Hezbollah elements, or weapons transfer networks operating in or transiting through Syrian territory. Such operations remain governed exclusively by existing US-Israel deconfliction channels and are not subject to the dispute resolution, step-back, or sanctions snapback provisions of this Accord. Israel retains the full and unfettered right to self-defense under Article 51 of the UN Charter with respect to threats emanating from Syrian territory. The Parties acknowledge this clarification as a binding interpretive understanding of the Accord's geographic scope.

Citation alignment: This is a new provision, not yet in any public document, but required for Israeli cabinet approval.

56.5 Consultation Requirements

The United States shall provide Israel with 48-hour advance notification of any Core Accord provision that may affect Israeli security interests, including but not limited to: proxy force stand-down protocols affecting Hezbollah; maritime arrangements in the Eastern Mediterranean; nuclear verification protocols that may reveal Israeli intelligence capabilities. Israel may request, through the Tel Aviv Channel, written clarification of any Accord provision within 72 hours of such notification.

56.6 Non-Derogation

Nothing in this Section 56 shall be construed as: (a) granting Israel veto authority over Core Accord provisions; (b) making Israeli approval a condition precedent to Accord activation or continuation; (c) subjecting Core Accord dispute resolution to Israeli participation; or (d) limiting the United States' authority to negotiate and implement the Core Accord in accordance with US sovereign discretion.

Annex L: Lebanon Dossier Isolation Firewall & Levant Front Stabilization Protocol (v6.2)

Operational Context: Iran's Foreign Ministry, via spokesperson Esmail Baghaei, has explicitly stated that Tehran's fixed position is an end to the war on all fronts, including Lebanon. Tehran refuses to sign a standalone deal that stops bombing on Iranian soil while allowing the active conflict between Israel and Hezbollah in southern Lebanon to continue. The United States and Israel have historically sought to keep Lebanon separate from core US-Iran negotiations. This annex provides a structural compromise that prevents the entire deal from collapsing over the Lebanon front while respecting both sides' core requirements.

L.1 Proxy Operational Pause: Hezbollah De-escalation Protocol

Purpose: To satisfy the US and Israeli requirement that pulling back US forces and opening Hormuz does not result in immediate escalation on Israel's northern border, Iran transmits immediate, formal instructions to Hezbollah leadership for an operational pause concurrent with the main Accord timeline. This pause is not disarmament, surrender, or political concession — it is a structured, time-limited operational de-escalation.

Phase	Hezbollah Operational Parameters	Verification	US/Israel Reciprocal
Phase 1: Days 1–30	Cessation of cross-border rocket and drone attacks into northern Israel. Suspension of offensive military operations against Israeli positions. Defensive positions in southern Lebanon maintained but not reinforced. No new weapons transfers from Iran to Hezbollah via Syria or maritime routes.	UNIFIL patrol confirmation; Israeli military intelligence (via Tel Aviv Channel); IDF liaison reports; satellite surveillance	Israel suspends offensive air strikes against Hezbollah positions in southern Lebanon for 30 days. IDF maintains defensive posture only. No ground incursions.
Phase 2: Days 31–90	Continued cessation of offensive operations. Hezbollah forces remain in defensive positions. No infiltration attempts across the Blue Line. Weapons transfers from Iran remain suspended.	Monthly UNIFIL verification report; ICRC monitoring; SEAC pattern analysis of supply routes	Israel extends air strike moratorium contingent on verified Hezbollah restraint for 90 days. Gradual relaxation of naval interdiction.
Phase 3: Days 91–180	Exploration of structured de-escalation through Levant Regional Basket (Section L.3). Hezbollah may engage in political and humanitarian activities. Military posture remains defensive.	Regional Basket monitoring cell; UN Special Coordinator quarterly assessment	Israeli restrictions reviewed at Day 180 milestone. If 180 consecutive days verified, Israel considers further confidence-building measures.

L.1.1 Non-Compliance Consequences

If any channel reports significant Hezbollah offensive action: (1) 24-hour verification window — all four channels confirm; (2) if confirmed, Iran has 72 hours to transmit renewed de-escalation instructions through the Oman back-channel; (3) if Iran de-escalates within 72 hours, pause resumes with enhanced monitoring; (4) if Iran does not de-escalate, Israel may resume defensive air strikes limited to specific positions involved — not blanket escalation; (5) under no circumstances does a Hezbollah incident trigger WBI accumulation against Core Accord (see Dossier Isolation Firewall, Section L.2).

L.2 Dossier Isolation Firewall: Lebanon Non-Linkage Clause

Trigger	Category	Lebanon Impact	Core Accord Impact	Rationale
Hezbollah rocket fire into Israel	Israeli defensive response; Regional Basket activation	NONE — Core Accord unaffected	Localized border friction; Core Accord addresses nuclear and maritime	
Israeli air strike on Hezbollah position	Regional Basket de-escalation; UNIFIL coordination	NONE — Core Accord unaffected	Israel retains sovereign right to self-defense	
IDF ground incursion into Lebanon	Major Regional Basket emergency session; UNSC consultation	NONE — stepback prohibited by Firewall	Ground incursion is escalatory but does not violate US commitments	
Iranian weapons transfer to Hezbollah	SEAC attribution; Hezbollah Regional Basket censure	NONE — proxy activity outside Core Accord scope	Proxy activity governed by existing protocols, not Core Accord WBI	
Hezbollah attack on US personnel	Full SEAC investigation; US retains right to self-defense	NONE — unless attack explicitly linked to Iranian government directive	Sole exception: explicit government directive triggers Category B review	

L.2.1 Firewall Architecture

Three levels: (1) **Legal level** — Exchange of Letters explicitly lists “incidents in the Levant theater involving non-state actors” as excluded from material breach triggers under Section 33 WBI scoring; (2) **Technical level** — Dashboard maintains separate tracks for “Core Accord Compliance” and “Regional Security Incidents.” Lebanon incidents logged only on Regional Security track. WBI algorithms reference only Core Compliance track; (3) **Political level** — both capitals issue pre-cleared talking points confirming Lebanon file is managed through separate mechanisms (Section 17.1).

L.2.2 Escalation Ceiling (v6.1 Enhanced)

Even if the Levant situation deteriorates significantly (major Israeli ground operation, large-scale Hezbollah rocket campaign, civilian mass casualty event), the Firewall remains in force. Core Accord can only be affected if: (a) UN Security Council determines grave breach of international humanitarian law and (b) JCC

unanimously determines breach is directly linked to a Core Accord commitment violation. This dual threshold is virtually impossible to meet.

Notwithstanding any other provision, in the event of a Hezbollah-originated attack causing 25 or more civilian fatalities in Israel, Israel retains its inherent right to self-defense. Such an attack, however, shall not be attributed to Iran for the purpose of triggering step-back or sanctions snapback under the Core Accord unless the UN Security Council explicitly determines, within 72 hours, that the attack was conducted pursuant to a direct, verifiable order from the Supreme Leader of Iran. Absent such a finding, the Core Accord's military and economic provisions remain in full force.

Citation alignment: Crescent Compact v3.1, Annex K.2.2 (Dual-Key Escalation Lock)

L.3 Levant Regional Basket: Parallel Track

Element	Mandate	Participants	Timeline
Basket Steering Committee	Overall direction of Levant de-escalation; dispute resolution; escalation management	Lebanon (chair), Israel, US, Iran (observer), UN Special Coordinator, Oman (facilitator)	Convenes within 14 days of Core Accord activation
Border Monitoring Cell	Blue Line incident verification; cross-border firing attribution; civilian protection	UNIFIL (lead), Lebanese Armed Forces, IDF liaison, ICRC observer	Operational from Day 1; reports weekly
Humanitarian Sub-Track	Civilian protection in southern Lebanon; IDP return; infrastructure repair; medical corridors	ICRC (lead), UN OCHA, WHO, Lebanese Ministry of Health, donor states	Activates immediately; pre-authorized \$75M fund
Political Sub-Track	Long-term Israel-Lebanon stability; UN Resolution 1701 implementation; maritime boundary demarcation	UN Special Coordinator (lead), Lebanon, Israel, US, France	Convenes at Day 60
Economic Sub-Track	Reconstruction financing for southern Lebanon; energy infrastructure; port rehabilitation	World Bank (lead), EU, Saudi Arabia, UAE, Iran (through proxy reconstruction fund)	Convenes at Day 90; contingent on 60 days of verified border quiet

L.3.1 Iranian and Israeli Participation

Iran: Observer state, not full member. Interests represented by Oman (primary) and UN Special Coordinator (secondary). Iran may fund reconstruction through proxy reconstruction fund without direct engagement with Israeli officials. Framed domestically as “monitoring the situation to protect our allies.”

Israel: Full member of Steering Committee with full voting rights, veto authority over reconstruction funding diversion to Hezbollah military purposes, and right to suspend participation without affecting Core Accord.

L.3.2 Graduation Pathway

If the Levant Regional Basket achieves 180 consecutive days of verified border quiet, it may graduate to a standalone Israel-Lebanon Framework Agreement brokered by the UN. Core Accord does not depend on this graduation — the two frameworks operate on fully independent timelines.

L.4 Narrative Architecture for Lebanon

US TALKING POINTS

The core US-Iran agreement addresses nuclear proliferation and freedom of navigation — America's core national security interests. Lebanon is a separate file managed through a dedicated regional basket with full Israeli participation. We are not trading Hormuz for Hezbollah. The Dossier Isolation Firewall ensures that what happens in Lebanon cannot affect the nuclear deal.

IRANIAN TALKING POINTS

The framework ends the war on all fronts. Through the Levant Regional Basket, Iran ensures that our allies in Lebanon are not abandoned while the main agreement proceeds. The Dossier Isolation clause protects the core agreement from being undermined by localized incidents.

ISRAELI TALKING POINTS

Israel's security is not negotiable. The Levant Regional Basket is a separate diplomatic process in which Israel has full participation and veto authority. The core US-Iran agreement does not constrain Israel's right to self-defense. If Hezbollah attacks, Israel will respond — and the nuclear deal remains unaffected. The Dual-Key Escalation Lock ensures that only a direct, verifiable order from Iran's Supreme Leader can link Hezbollah actions to the Core Accord.

LEBANESE TALKING POINTS

Lebanon welcomes the Levant Regional Basket as a pathway to stability for our southern border. We are not a proxy battlefield. The Basket's humanitarian sub-track addresses the urgent needs of our civilian population. Lebanon's sovereignty is respected through our chairmanship of the Steering Committee.

L.5 Summary: The Lebanon Bridge

The Lebanon annex bridges the fundamental disagreement between Iran (which demands an end to the war on all fronts) and the US/Israel (which want Lebanon kept separate). It does so by: (1) creating a structured Hezbollah operational pause that gives Israel immediate security benefits; (2) building an absolute firewall that prevents Lebanon incidents from collapsing the core deal, now reinforced with the Dual-Key Escalation Lock; (3) establishing a parallel regional basket that addresses Lebanon on its own timeline with its own participants; and (4) providing each side with narrative frames that allow them to claim the outcome they need. Iran can say the war ends on all fronts. The US can say Lebanon is a separate track. Israel can say its security is protected, including explicit self-defense rights and an almost impossible attribution standard for Iran. And the Dossier Isolation Firewall ensures that if any of these claims prove hollow, the Core Accord survives.

Version 6.2 Changelog

Version 6.2 builds upon all previous versions and introduces one comprehensive enhancement: the Political Statements Package for Multilateral Audiences (Section 18).

Version 6.2 — Late May 2026

One comprehensive political enhancement adding Section 18 to the Accord: The Political Statements Package for Multilateral Audiences provides ready-to-deploy narrative architecture for Washington, Tehran, Jerusalem, Muscat, Islamabad, Doha, European capitals, and the broader international community. Key features:

- Strategic framing summaries for each audience that align with their domestic political requirements
- Ready-to-deliver spokesperson statements for: US Presidential Administration, Congressional Republicans, Congressional moderates, MAGA base; Iranian Supreme Leader's office, Presidential administration, IRGC, Iranian public; Israeli Prime Minister's office, Opposition; Oman, Pakistan, Qatar, Switzerland; Saudi Arabia, UAE; EU/E3, IAEA, UN, China, Russia
- Supporting talking points grounded in operative Accord provisions
- Narrative alignment notes explaining how each statement coexists with statements from other parties
- The Narrative Architecture Matrix demonstrating simultaneous truth compatibility
- Delivery protocols for Day 1, Day 7, Day 14, crisis communications, and unauthorized leak scenarios
- All 148 enhancements from previous versions retained

Version 6.1 — Late May 2026

Three additional structural refinements building on v6.0: (1) Enhanced HEU Custody Language with Six-Pathway Menu and Day 45 Default Deadlock Breaker (Section 5.2 and 12.1) — Iran selects from six IAEA-verified disposition pathways during the 30-60 day nuclear negotiating window; Pathway A (in-country downblending to medical-grade LEU at Esfahan) becomes automatic default if no agreement by Day 45; neither party's failure to agree is a material breach (Final Steps Accord v3.2, Article 1.5 and Addendum A-1). (2) Dual-Key Escalation Lock added to Lebanon Dossier Isolation Firewall (Annex L.2.2) — Hezbollah-originated attacks causing 25+ civilian fatalities in Israel shall not be attributed to Iran for step-back or snapback purposes unless UNSC explicitly determines within 72 hours that the attack was pursuant to a direct, verifiable order from Iran's Supreme Leader; Israel retains inherent right to self-defense (Crescent Compact v3.1, Annex K.2.2). (3) Israel Parallel Reassurance Mechanism — Syria Theater Clarification (new

Section 56.4) — explicit binding interpretive understanding that the Accord does not constrain Israeli military operations against Iranian personnel, Hezbollah elements, or weapons transfer networks in Syrian territory; governed exclusively by existing US-Israel deconfliction channels; required for Israeli cabinet approval.

Previous Versions

v6.0 (May 13, 2026): Four surgical structural refinements for Sunday 4:00 PM Eastern deadline: (1) JTA Sovereignty Recalibration (Section 11.3) — explicit mandate restriction to 3 functions, PGSA recognized as sole coastal enforcement within Iranian territorial waters, PGSA-JTA Interface Protocol, Optical Compromise Architecture; (2) Automated Day 7 Dual-Trigger (Section 5.3) — 5-step technical architecture preventing front-loaded concessions within 60-second UTC window; (3) HEU Phase 1 Baseline Decoupling (Section 12.2) — legal ownership (CBI) decoupled from physical custody (IAEA), disposition deferred to 30-60 day nuclear window; (4) Lebanon Dossier Isolation Firewall (Annex L) — Proxy Operational Pause across 3 phases, Dossier Isolation Firewall with 5 trigger categories, Levant Regional Basket with 5 elements, narrative architecture for 4 audiences. Updated preamble, executive brief, face-saving metrics, and deal options.

v5.0-v5.7 (March–May 2026): Progressive enhancement from 10 to 147 total enhancements including Political Shock Absorber, Reconstitution Mechanism, Goldilocks Protocol, Distributed Facilitating State Matrix, Front-Loaded Asset Release, International Gulf Reconstruction Fund, Pre-Agreed Asset Valuation (\$100B), Pakistan Co-Convening Authority, Hormuz Environmental Transit Fee, 12nm Blockade Verification, Mothball Protocol, Additional Protocol Acceleration, Thirty-Day Drop-Dead, and numerous technical refinements.

The Stability First Enhanced Accord v6.2 — 148 total enhancements — all blockers addressed.
