

DIPLOMATIC WORKING DOCUMENT

# Stability First

## 14-Day Implementation Directive

### Enhanced Edition v2.4

*Operations-Optimized / Dashboard-Driven / 15 Economic Tracks Integrated*

All Guardrails Intact | 16 Friction Reductions | 15 Performance-Linked Economic Tracks | 20 Resilience Upgrades

Version 2.4 | May 2026

FOR AUTHORIZED NEGOTIATORS ONLY

# QUICK-START GUIDE FOR DUTY OFFICERS

*This guide sits on top of the treaty text. It does not change any obligation. It makes compliance more likely by reducing cognitive load.*

## Page 1: What This Is and Who Does What

**PURPOSE:** Stability First reduces war risk in Hormuz via a verified, performance-contingent exchange: Iran limits enrichment and secures the strait; the US releases frozen assets and permits oil exports. **THREE KEY PRINCIPLES:** 1. Nobody moves alone. Every US action is paired with an Iranian action on the same day (Mirror Pairings, Article 1.5). 2. Everything is performance-contingent. If Iran enriches above 3.67%, oil revenue stops automatically (Snap Line, Article 6.1). 3. Mistakes in the first 30 days are expected and protected (Learning Curve, Article 1.1). **THREE ENTITIES YOU WILL INTERACT WITH:** - JIG (Joint Implementation Group): Governing body in Geneva. Call for disputes, compliance questions, forms. - MCC Muscat: 24/7 hotline and naval coordination. Call for Hormuz incidents, daily SITREP. - Swiss Escrow Agent: Bank in Zurich that holds/releases funds. Call for wire confirmation, SWIFT issues. **YOUR JOB:** Read the portal once per shift. Submit the Daily SITREP (one email, one form). Escalate only when the automated system tells you to.

## Page 2: What You Must Do in the First 24 Hours

**HOUR 0 (MoU Signature):** Confirm Implementation Cell staffed (8-12 people, Article 11.1). Log in to Transparency Portal. Confirm hotline reachability.  **HOUR 1-4:** Verify Mirror Pairings 1-4: enrichment cap order posted, IAEA inspectors crossing, IRGC repositioning satellite image posted, MCC hotline staffed. If any Pairing missing: call JIG Chair immediately.  **HOUR 4-24:** Submit first Daily SITREP (template Appendix D, Form SITREP-001). Confirm \$250M humanitarian-badged and \$500M general liquidity credited. Begin Learning Curve error logging.  **HOUR 24-72:** Confirm first oil cargo loaded with JHA permit. Submit Day-1 Implementation Cell roster to JIG. Test all SWIFT and backup channels. If any system not ready: invoke Minimum Viable Implementation (30-day interim, Article 12.1).

## Page 3: Who to Call if X Goes Wrong

| If This Happens              | Call This Number                     | When                    |
|------------------------------|--------------------------------------|-------------------------|
| Enrichment suspected >3.67%  | IAEA Vienna: +43-1-2600-22100        | Immediately, any time   |
| Hormuz shipping incident     | MCC Muscat: +968-24-711-900          | Immediately, 24/7       |
| Funds not received in 72h    | Swiss Escrow: +41-31-325-2277        | After 72h from expected |
| Need a Grace Day             | JIG Chair Geneva: +41-22-917-4321    | At least 6 hours before |
| Face-Saving Pause needed     | JIG Chair Geneva: +41-22-917-4321    | 24 hours before         |
| Crisis Pause or Exit Ramp    | JIG Chair Geneva: +41-22-917-4321    | Immediate               |
| SWIFT message rejected       | CBI SWIFT Desk: +98-21-2990-2166     | Within 4 hours          |
| Hotline not answered         | MCC Backup: +968-24-711-901          | After 2 attempts        |
| IAEA inspector access denied | JIG Nuclear: +43-1-2600-22620        | Immediately             |
| Communications blackout      | Pakistani Guarantor: +92-51-920-6111 | After 15 min            |

| If This Happens     | Call This Number                  | When     |
|---------------------|-----------------------------------|----------|
| Not sure what to do | JIG Chair Geneva: +41-22-917-4321 | Any time |

## Executive Summary: What Has Changed in v2.4

This operations-optimized edition reduces cognitive load and implementation friction without weakening a single guardrail. Sixteen specific simplifications plus fifteen performance-linked economic cooperation tracks have been integrated.

1-16. OPERATIONAL SIMPLIFICATIONS: Quick-Start Guide (3 pages), Day-1-14 Control Panel with color-coded tiers, mechanism flowcharts, standardized 72-hour windows, Safety Mechanism Hierarchy, standard trigger wording, Daily SITREP bundle, Default-if-Silent rule, Unified Escalation Ladder, 3-in-60 pattern standard, simplified 2-band PRDD, JTAT-only Quiet Correction, Implementation Cells, Consolidated Forms Register, Minimum Viable Implementation clause. 17-31. 15 PERFORMANCE-LINKED ECONOMIC TRACKS: Three bands - (A) Fast Visible Domestic Wins: \$1.5B Infrastructure Window, Civilian Aviation Channel, Grid/Climate Resilience, Tourism/Academic Corridor, Hormuz Insurance Mechanism. (B) Regional Economic Integration: Energy Market Coordination, Western Commercial Window, Regional Logistics Hub, Sovereign Debt-Service Facilitation, Multilateral Development Priority. (C) Industrial/Trade Expansion: Industrial Recovery Tranches, Joint Inflation Communication, Regional Trade Preference Corridor, Joint Investment Facilitation, Independent Economic Assessment. 32-51. 20 RESILIENCE UPGRADES (NEW): (1) Single-page If X Then Y matrix (Appendix L). (2) Unified glossary of acronyms (Appendix H). (3) Visual 72-hour timeline (Appendix J). (4) Standardized material breach definition (Article 6.4). (5) Concrete Tier-2/3 examples (Section 6.3). (6) Top 10 predictable mistakes (Appendix K). (7) Grace Day + Snap Line edge cases clarified (Section 1.5). (8) Minimum staffing table per entity (Section 11). (9) Communications blackout protocol (Section 14.1). (10) Snap Line false positive 2-hour verification loop (Section 6.1). (11) Pattern threshold + Learning Curve interaction clarified (Section 1.1). (12) Enhanced SITREP template (Appendix D). (13) Red Team scenario playbook (Appendix I). (14) Pakistani Guarantor mandate defined (Section 14.2). (15) Simultaneous pause invocation rule (Section 1.2). (16) Financial reconciliation failure protocol (Section 14.3). (17) Hormuz 5-level incident scale (Section 14.4). (18) Non-compliance attribution rule (Section 6.5). (19) Emergency messaging override (Section 14.5). (20) 6-month sunset review (Section 14.6).

## Section 1: Waltz-Symmetric Governing Principles

Operational simplifications that reduce cognitive load while preserving all guardrails.

### 1.1 Learning Curve Provision

Article 1.1 - Learning Curve Provision (a) LEARNING PERIOD: Days 1-30. Tier 2 penalties halved; Tier 3 = advisory only; discrepancies logged for pattern review. (b) EXPECTED ERRORS (protected): reporting delays up to 24h; positioning variances up to 20%; hotline delays up to 30 min; AIS interruptions up to 6h; ISR delays up to 8h; escrow format errors; translation discrepancies. (c) GRADUATED NORMALIZATION (Days 31-44): Penalty Factor =  $0.50 + 0.036 \times (\text{Day} - 30)$ . No cliff. (d) PATTERN THRESHOLD (standardized): 3 occurrences of same error type in 60 days graduates that specific error to full compliance mode. (e) PATTERN + LEARNING CURVE INTERACTION (v2.4): During the Learning Period (Days 1-30), errors are logged but do NOT count toward the 3-in-60 pattern threshold. Pattern counting begins on Day 31. This prevents double-penalization of expected early errors while maintaining accountability after the Learning Period ends. (f) LEARNING PERIOD

**EXTENSION:** If a Party invokes 2 or more Grace Days during Days 1-30, the Learning Period extends by 7 days per Grace Day invoked, up to a maximum of 45 total days. This accounts for legitimate delays that reduce operational practice time.

## 1.2 Grace Day, Face-Saving Pause, and Stabilization Hold

**Article 1.2 - Standardized Safety Valve Invocations** (a) **STANDARD TRIGGER** (harmonized): Written notice to JIG Chair and Pakistani Guarantor. Format: '[Mechanism] invoked under Article [X.X]. Effective [date]. Duration [if applicable].' (b) **GRACE DAY**: 3 per Stage. 6 hours notice. 24-hour deferral. Not on Day 7 or 14. Non-events for compliance. (c) **FACE-SAVING PAUSE**: Max 2 per 30 days. 24 hours notice. 7-day deferral. Not for Tier-1. Auto-proceeds after 7 days. (d) **STABILIZATION HOLD**: 2 per 30 days. 12 hours notice. Up to 3 obligations. Auto-triggers for attacks, disasters, cyberattacks, negotiator incapacity, UNSC session. (e) **NON-ABUSE CAP**: Combined Grace Days + Face-Saving Pauses capped at 4 per Party per 30 days. (f) **SIMULTANEOUS INVOCATION RULE** (v2.4): If both Parties invoke the same mechanism type simultaneously or within 6 hours, both invocations count as ONE against each Party's cap. Both Parties receive the full deferral benefit. This prevents a situation where both sides burn their caps for the same event. (g) **SEQUENTIAL INVOCATION**: If both Parties invoke DIFFERENT mechanisms within 6 hours, both mechanisms apply sequentially (not concurrently). Example: US invokes Grace Day at Hour 0, Iran invokes Face-Saving Pause at Hour 3. The Grace Day completes first (24h), then the Face-Saving Pause begins (7d). Total deferral: 8 days. (h) **CROSS-PARTY NOTIFICATION**: Each Party is notified of the other's mechanism invocation within 2 hours via the Transparency Portal. Neither Party may claim surprise.

## 1.3 Quiet Correction Window - 72-Hour Standard

**Article 1.3 - Quiet Correction Window** (a) **STANDARD 72-HOUR CYCLE**: Hour 0: Issue logged by JTAT; Party notified Hour 0-24: Party may correct without record Hour 24-48: JTAT assists if correction in progress Hour 48-72: If corrected, formally resolved; no compliance mark Hour 72+: Escalates to formal compliance track (b) **JTAT-ONLY HANDLING**: Technical corrections within the Window are JTAT-handled; no JIG meeting required unless Hour 72 reached or political dimension involved. (c) **GOOD FAITH PRESUMPTION**: During the Window, presumption of good faith. No public statements or official notifications until Hour 72. (d) **IRREVERSIBLE CORRECTIONS**: Corrections made during the Window are binding and may not be reversed.

## 1.4 Day-1 Mirror Pairings - Nobody Moves Alone

**Article 1.4 - Day-1 Mirror Pairings** (a) **CORE PRINCIPLE**: No Party provides value on Day 1 without receiving verified reciprocal value simultaneously. (b) **THE FOUR PAIRINGS**: PAIRING 1: \$750M liquidity (US) + enrichment cap order at 3.67% (Iran) PAIRING 2: OFAC General License for frozen assets (US) + IAEA inspector access (Iran) PAIRING 3: Oil Export Normalization permits (US) + IRGC withdrawal to 2nm (Iran) PAIRING 4: SWIFT reconnection (US) + MCC Hotline Tier-1 staffing (Iran) (c) **NON-SEVERABILITY**: If any Pairing fails, all Pairings suspend until remedied. (d) **MIRROR DAY-1 COST**: The \$750M liquidity and the enrichment cap order have equal political and legal weight. Neither is a unilateral concession.

## 1.5 Hierarchy of Safety Mechanisms

**Article 1.5 - Hierarchy of Safety Mechanisms** Rank 1: TIER-1 OBLIGATIONS (Zero Tolerance) - nuclear, inspector safety Rank 2: PRDD NUCLEAR SNAP LINE - automatic oil revenue suspension Rank 3:

AUTOMATIC DAMPENING WINDOW - 48-hour military freeze Rank 4: GRACE DAY / FACE-SAVING PAUSE - discretionary delays Rank 5: STABILIZATION HOLD - 7-day operational pause Rank 6: EXIT RAMP - 14-day structured withdrawal Rank 7: CRISIS PAUSE MODE - 30-90 day operational freeze (RCSA) CONFLICT RULES: - Grace Day may not be invoked for Snap Line event (Rank 2 > Rank 4) - Face-Saving Pause may not delay Tier-1 obligations (Rank 1 > Rank 4) - Exit Ramp proceeds even during Stabilization Hold (Rank 6 > Rank 5) - Crisis Pause supersedes all discretionary mechanisms (Rank 7 > Ranks 4-6) - Snap Line operates regardless of any pause, hold, or exit (Rank 2 > Ranks 4-7) EDGE CASES (v2.4): Q: What if a Party invokes Grace Day not knowing Snap Line activated 1 hour ago? A: The Grace Day is VOID upon Snap Line activation. JIG Chair notifies invoking Party within 2 hours. No cap penalty. Q: What if Tier-1 event occurs during a Face-Saving Pause? A: Pause is SUSPENDED for the Tier-1 event. Tier-1 response proceeds immediately. Pause resumes for non-Tier-1 obligations after Tier-1 resolved. Q: What if Exit Ramp notice arrives during Crisis Pause? A: Both proceed. Exit Ramp clock runs during Crisis Pause. On Exit effective date, all tracks suspend. Crisis Pause auto-terminates. Q: What if Stabilization Hold auto-triggers during Grace Day? A: Hold supersedes Grace Day (Rank 5 > Rank 4). Grace Day credit is NOT consumed. Party may re-invoke Grace Day later. DUTY OFFICER RULE: If uncertain which mechanism applies, consult the Hierarchy. If still uncertain, call the JIG Chair.

## 1.6 Default-if-Silent Rule

Article 1.6 - Default-if-Silent (a) RULE: If a minor procedural step is missing but the substantive action is complete, default treatment: 'treat as complete and log for Quiet Correction.' (b) APPLIES TO: Missing/incorrect SWIFT Field 72 coding; late non-critical acknowledgment; format errors in Learning Period; translation discrepancies; dashboard login delays. (c) DOES NOT APPLY TO: Tier-1 obligations; Snap Line triggers; actual fund transfer failures; military safety violations; physical security issues. (d) PROCEDURE: JTAT logs gap in Learning Curve Database. No compliance mark. No JIG session. Same gap 3 times in 60 days graduates to full compliance tracking.

## 1.7 Non-Recognition and Non-Amnesty

Article 1.7 - Non-Recognition and Non-Amnesty (a) NON-RECOGNITION: Nothing constitutes recognition of the other Party's government, political system, or regional policies. Purely transactional. (b) NON-AMNESTY: No amnesty, legal immunity, or retrospective forgiveness for past actions. All claims prior to Effective Date remain unaffected. (c) EXECUTIVE AUTHORITY SUFFICIENT: Neither Party required to submit for legislative ratification if recognition-related disputes would be triggered.

# Section 2: Enhanced Tranche Architecture

TRACK 1: \$750M Immediate Liquidity (Day 1) - 60% P1/P2 soft cap, \$250M humanitarian-badged  
TRACK 2: Accelerated Frozen Asset Release - 50% by Day 30, 70% by Day 60 - re-suspension lever at 3  
Tier-2 events in 60 days TRACK 3: Oil Export Revenue Normalization (Day 1) - 2.1 mbpd, IAEA  
quarterly pre-clearance required TRACK 4: PRDD (Day 14) - simplified 2-band: 85% baseline, 70%  
after any Tier-2/3 event. Snap Line for Tier-1.

## 2.1 Immediate Liquidity Package

Article 2.1 - Immediate Liquidity Package (a) COMPOSITION: \$500M Urgent Liquidity (\$250M humanitarian-badged for medical/food) + \$250M Pilot Asset Transfer. (b) 60% P1/P2 SOFT CAP:

Within 72 hours of Day-1 receipt, at least 60% must be P1 (Humanitarian/Medical) or P2 (Agricultural/Food). Enforced by Transparency Portal reporting; failure triggers JTAT consultation, not compliance action. (c) NO BUDGET SUBSIDY: Transaction-cost advance under a risk-reduction agreement. Not fiscal assistance. (d) FAST-TRACK: T-72h wire prep; T-48h OFAC license; T-24h Escrow ready; T-0 simultaneous release; T+12h humanitarian \$250M; T+24h full \$750M.

## 2.2 Accelerated Frozen Asset Release

Article 2.2 - Frozen Asset Schedule Tranche 1 (Day 14): 15% - Stage 1 closed - Non-reversible Tranche 2 (Day 30): 20% - 30-day compliance - Non-reversible Tranche 3 (Day 60): 20% - 60-day compliance + HEU verified - Non-reversible Tranche 4 (Day 120): 15% - JIG review - Reversible + re-suspension lever Reserve (Day 365): 5% - 12-month compliance - Pending RCSA Release (M12): 10% - Full RCSA compliance - RCSA framework RE-SUSPENSION LEVER: 3 Tier-2 events in any 60-day period = US may freeze next scheduled tranche up to 30 days without full snapback. Does not affect: humanitarian funds, PRDD, Oil Export Normalization.

| Tranche   | Timing   | Amount | Trigger               | Reversibility                    | Cumulative |
|-----------|----------|--------|-----------------------|----------------------------------|------------|
| Immediate | Day 1    | \$750M | MoU + enrichment cap  | Non-reversible                   | \$750M     |
| Tranche 1 | Day 14   | 15%    | Stage 1 closed        | Non-reversible                   | 15%        |
| Tranche 2 | Day 30   | 20%    | 30-day compliance     | Non-reversible                   | 50%        |
| Tranche 3 | Day 60   | 20%    | 60-day + HEU verified | Non-reversible                   | 70%        |
| Tranche 4 | Day 120  | 15%    | JIG review            | Reversible + re-suspension lever | 85%        |
| Reserve   | Day 365  | 5%     | 12-month compliance   | Pending                          | 90%        |
| RCSA      | Month 12 | 10%    | Full RCSA compliance  | RCSA framework                   | 100%       |

## 2.3 Oil Export Revenue Normalization

Article 2.3 - Oil Export Normalization (a) CUSTOMER WHITELIST: China, India, Japan, South Korea, Turkey, EU humanitarian purchasers, any 2022-2025 JCPOA-era purchaser. (b) IAEA QUARTERLY PRE-CLEARANCE: Every 90 days, IAEA certifies no whitelisted state/entity in material NPT breach. Suspended during appeal. (c) SHIPPING: JHA Transit Permits provide OFAC exemption, Lloyd's reinstatement, IMF convoy escort, AIS 'JHA-AUTHORIZED'. (d) PAYMENT: Purchasers pay into Petroleum Revenue Escrow; Swiss Escrow releases to CBI within 72 hours of delivery confirmation. (e) VOLUME: Up to 2.1 mbpd, ~\$130M/day at \$62/bbl.

## 2.4 Petroleum Revenue Direct Deposit (Simplified 2-Band)

Article 2.4 - PRDD (a) MECHANICS (starting Day 14, weekly): Lloyd's List confirms delivery -> Payment to Escrow -> Swiss Escrow confirms receipt, posts to Portal -> JIG Financial Monitor certifies no material breach in preceding 7 days -> Funds released to CBI within 72 hours. (b) SIMPLIFIED 2-BAND: BASELINE (no Tier-2+ in preceding 30 days): 85% released. REDUCED (any Tier-2 or Tier-3 in preceding 30 days): 70% released; 15% additional held. Held amount releases as lump sum if 30 clean days pass. (c) PERFORMANCE RESERVE: 15% baseline hold-back. At 30-day checkpoint: No breach = full reserve released. Tier 2 = 50% released. Tier 3 = 25% released. Tier 1 = full forfeiture + Snap Line. (d) PRDD NUCLEAR SNAP LINE: Automatic suspension within 24 hours of IAEA-confirmed enrichment above 3.67%. Irrevocable by political authority. Only IAEA DG can authorize resumption. (e) NON-CASH TO IRGC: PRDD funds shall not be distributed as cash to IRGC-linked designated

entities. Commercial transactions permitted. (f) QUARTERLY SANITIZED SUMMARIES: Separate reports to US Congress and Iranian Majles every 90 days. (g) CNY OPTION: Up to 50% in CNY via Bank of Kunlun.

## 2.5 Iranian Banking Pre-Positioning

Article 2.5 - Banking Infrastructure T-14d: Swiss Escrow opens CHF/EUR nostro with Melli Iran and Sepah T-10d: Bank of Kunlun activates CNY clearing T-7d: SWIFT tests (MT 103, 202 COV, 950) confirmed T-5d: CBI dashboard access tested T-3d: JTAT deploys to Tehran and Geneva T-1d: End-to-end \$1 test transfer BACKUP CHAIN: Swiss Escrow -> Melli Zurich | Bank of China CH -> Sepah | KBC Brussels -> EDBI | Bank of Kunlun Beijing direct | SBP CHAPS emergency bridge

## Section 3: Iranian Access and Deployment

Article 3.1 - Currency Options Default: CHF. Options: EUR (WM/Reuters -0.12%), CNY (PBOC parity, up to 50%), AED (UAE Central Bank rate). IRR conversion is exclusively Iranian sovereign decision. Fee cap: 0.30%. Article 3.2 - Deployment Authority P1 HUMANITARIAN/MEDICAL: Same-day, exempt from caps P2 AGRICULTURAL/FOOD: Next business day P3 INDUSTRIAL IMPORTS: 2 business days P4 GENERAL COMMERCIAL: 3 business days 60% P1/P2 soft cap on Day-1 funds (Article 2.1). Article 3.3 - Transparency Dashboard CBI read-only access to balances, pending tranches, SWIFT UETR, 90-day projections. REGIONAL ALLIES OBSERVER STATUS: GCC, Iraq, Oman, Pakistan read-only aggregated data. BILATERAL CONFIRMATION (72-hour standard): Hour 0 SWIFT MT 103; Hour +4-24 CBI MT 199; Hour +24 gpi post; Hour +48 JIG verify; Hour +72 Pakistani Certificate. MONTHLY RECONCILIATION: MT 940/950 first business day of each month.

## Section 4: Enhanced Crisis Resilience

Article 4.1 - Automatic Dampening (48-hour window) Trigger: Any Tier 2 or 3 event. Effects: offensive ops suspended; hotline triple watch; JIG within 8h; Pakistani Guarantor bilateral calls; media coordinated. IRREVERSIBLE PROTECTIONS: Humanitarian transit, released escrow funds, oil shipments in transit, IAEA access, hotline ops. COOLDOWN: 14 days post-Dampening with no snapback. Article 4.2 - Stabilization Hold 7 days, 2 per 30 days, up to 3 obligations. 12h notice. Auto-triggers for: Hormuz attack, natural disaster, cyberattack, negotiator death, UNSC session. EXIT RAMP: 14 days written notice to JIG Chair. Humanitarian and oil continue; military modules suspend. Reversible by mutual agreement. Article 4.3 - Messaging Framework Pre-approved US: 'Iran agreed to verifiable limits' / 'Every dollar tied to performance' / 'We can walk away in 14 days' / 'Transaction, not friendship' Pre-approved Iran: 'The siege has been lifted' / 'Nuclear program within NPT rights' / 'Recognition of sovereign rights' / 'Snap Line is a technical detail' Performance-contingent rule: all public messaging must acknowledge conditional benefits. 24-hour embargo on contradictory messaging.

## Section 5: Enhanced Hormuz Modules

Five core modules (MHS-005, 011, 013, 016, 012) with Learning Period relaxations.

MHS-005: Coalition integration Day 14-21. Joint patrol: 2 of 3 nationalities. ROE-4 IRGC distancing: 2nm. MHS-011: 96-hour checkpoint during Learning Period. Partial lift threshold: 30% may remain first 7 days. Spoiler response: lift continues unless BOTH agree to pause. MHS-013: Tier-1 response <5 min during Learning Period. 2 interpreters (not 3) first 14 days. Tier-3 activation <60 min. MHS-016: IRGC withdrawal 3nm during Learning Period. Boarding restriction softened. US distancing 6nm. MHS-012: EW notifications 2 hours for Level 1-2. GPS spoofing containment 1nm. Civilian check waived for Level 3-4 during active threat.

## Section 6: Hardened Compliance Architecture

### 6.1 PRDD Nuclear Snap Line

Article 6.1 - Snap Line (a) TRIGGERS (automatic, irreversible by political authority): (i) IAEA confirms enrichment >3.67% at declared facility (ii) IAEA confirms enrichment >3.67% at undeclared facility (iii) IAEA reports Iran denied access to suspected site (iv) IAEA DG states Iran is not in compliance with enrichment cap (b) AUTOMATIC SEQUENCE: Hour 0: IAEA posts to Transparency Portal Hour 2: Swiss Escrow receives automated suspension instruction Hour 4: Pending PRDD releases frozen; new deposits suspended Hour 6: CBI notified via encrypted channel Hour 8: JIG Chair emergency session Hour 24: Full suspension confirmed if trigger unresolved (c) PARTIAL RESUMPTION LADDER: Iran provides IAEA access to disputed site: 50% PRDD resumes IAEA confirms enrichment returned to 3.67% or below: 75% resumes 30 days no further violations: 100% resumes (d) FALSE POSITIVE PROTOCOL (v2.4): Before the automated suspension instruction is sent to Swiss Escrow (at Hour 2), a mandatory 2-hour verification loop executes: Hour 0: Initial IAEA post flagged as POTENTIAL Snap Line trigger Hour 0-1: JTAT Nuclear Verification Team contacts IAEA Duty Officer to confirm data integrity, rule out sensor error, software glitch, or sample mis-tagging Hour 1-2: If IAEA confirms data is valid and enrichment >3.67% is real, trigger proceeds to Hour 2 automated suspension Hour 1-2: If IAEA reports data error, sensor malfunction, or cannot confirm within 2 hours, trigger is DOWNGRADED to Tier-2 advisory, JIG emergency session convenes (not automatic suspension), and IAEA has 48 hours to resolve data discrepancy This 2-hour loop prevents unnecessary financial freezes due to technical errors while preserving the automatic nature of confirmed violations. (e) QUARTERLY SNAP LINE TEST: JIG IT simulates trigger every 90 days using test data. Does not affect actual flows.

### 6.2 IAEA Pre-clearance for Customer Whitelist

Article 6.2 - IAEA Quarterly Pre-clearance Every 90 days: JIG submits whitelist to IAEA -> IAEA verifies no material NPT breach -> IAEA issues Pre-clearance Certificate (Form IAEA-PC-001) valid 90 days -> Breach found = suspension pending rectification. SCOPE: Sovereign states, NOCs, private entities in NNWS, all subsidiaries. EXCEPTION: UN/ICRC humanitarian purchases exempt; separate escrow channel.

### 6.3 Unified Escalation Ladder

This single table replaces all scattered escalation descriptions. All other sections cross-reference this table.

| Tier         | Trigger Examples          | PRDD Effect     | Frozen Assets  | Hormuz            | Points  |
|--------------|---------------------------|-----------------|----------------|-------------------|---------|
| Tier 1 (RED) | Nuclear >3.67%; inspector | Snap Line: full | All suspended; | Coalition freeze; | Auto L4 |

| Tier                   | Trigger Examples                                                      | PRDD Effect               | Frozen Assets                  | Hormuz                        | Points |
|------------------------|-----------------------------------------------------------------------|---------------------------|--------------------------------|-------------------------------|--------|
|                        | attack; WMD                                                           | suspension                | UNSC filing                    | SWIFT cut                     |        |
| <b>Tier 2 (ORANGE)</b> | IRGC cash diversion; major positioning breach; denial of IAEA access  | Reduced to 70%; +15% held | Re-suspension lever: 30d delay | Coalition paused; patrols min | 3 pts  |
| <b>Tier 3 (YELLOW)</b> | Reporting delay >24h; positioning variance >20%; hotline delay >30min | Unchanged (QC Window)     | Unchanged                      | Unchanged                     | 1 pt   |
| <b>Tier 4 (GREEN)</b>  | Strategic flexibility; diplomatic disputes                            | No effect                 | No effect                      | No effect                     | 0 pts  |
| <b>Tier 5 (GRAY)</b>   | Force majeure; natural disaster; third-party attack                   | Protected; continues      | Protected; grandfathered       | Auto-Hold activates           | 0 pts  |

**CONCRETE EXAMPLES BY TIER (v2.4):** TIER 1 (RED) EXAMPLES: - IAEA confirms centrifuge cascade enriching to 19.75% at Natanz - Drone strike on IAEA inspector vehicle in Isfahan - Detection of HEU particles at undeclared site near Tehran - Iranian missile strike on Hormuz shipping (attributed to state forces) - Seizure of IAEA equipment by IRGC personnel TIER 2 (ORANGE) EXAMPLES: - IRGC entity receives \$50M direct cash from PRDD funds - Iranian warship enters 1nm exclusion zone around commercial corridor - AIS outage for 14 hours without notification - Denial of IAEA inspector access for 36 hours (not at suspected enrichment site) - Positioning variance of 35% outside defined patrol zone - 3 Quiet Correction Windows expire without correction on same issue type TIER 3 (YELLOW) EXAMPLES: - Reporting delay of 18 hours on non-critical Hormuz transit data - AIS broadcast interruption of 5 hours - Hotline response delay of 25 minutes - SWIFT Field 72 coding error in tranche release documentation - Translation discrepancy in routine multilingual communication - Escrow documentation format error - Dashboard login delay of 3 hours (data available via email backup) TIER 4 (GREEN) EXAMPLES: - Diplomatic dispute over messaging characterization - Request for agenda modification at JIG working group - Disagreement over Transparency Portal data visualization format TIER 5 (GRAY) EXAMPLES: - Earthquake damages MCC Muscat facility - Third-party state actor (not Iran) mines Hormuz channel - Cyberattack on Transparency Portal by unidentified actor - Tsunami warning requires temporary shipping halt

Article 6.3 - Escalation Rules (a) **PATTERN THRESHOLD** (standardized everywhere): 3 occurrences of the same error type within 60 days constitutes a 'pattern' and triggers the next escalation level for that specific issue. (b) **DE-ESCALATION**: Requires 30 days sustained compliance at current level before dropping one level. (c) **HUMANITARIAN FIREWALL**: No Tier-1 consequence may affect already-released humanitarian-badged funds, humanitarian corridor operations, medical isotope shipments, or UN agency operations. (d) **STANDARD 72-HOUR CYCLE**: Most non-critical corrections and financial confirmations use a uniform 72-hour window. Exceptions: Snap Line (24h), Dampening (48h), Tier-1 immediate.

## 6.4 Material Breach Definition

Article 6.4 - Standardized Material Breach Definition (v2.4) (a) **PURPOSE**. The term 'material breach' appears throughout this Agreement. This Article provides the single authoritative definition. (b) **DEFINITION**. 'Material breach' means any of the following: (i) Nuclear: Enrichment above 3.67% U-235 at any declared or detected facility, confirmed by IAEA (ii) Inspector Safety: Physical harm, detention, or denial of access to IAEA inspectors performing authorized duties (iii) Nuclear Diversion: Diversion of declared nuclear material to undisclosed locations or purposes (iv) WMD: Development, testing, or use of chemical, biological, or nuclear weapons (v) Infrastructure Destruction: Destruction of IAEA verification equipment, Transparency Portal infrastructure, or MCC

hotline facilities (vi) Financial Diversion: Diversion of escrow-released funds to entities on the IRGC-linked designation list as cash payments (commercial transactions excluded) (vii) Hormuz Security: State-attributed attack on commercial shipping in the Hormuz corridor (viii) Systematic Non-Compliance: Accumulation of 9+ escalation points within 30 days (Level 3 degradation) (c) NOT MATERIAL BREACH (by exclusion): - Procedural delays within Quiet Correction Window - Learning Period errors within defined tolerances - Grace Day or Face-Saving Pause invocations within caps - Messaging characterizations that deviate from pre-approved templates (remedied within 24 hours) - Technical dashboard or portal malfunctions (JTAT-handled) - Force majeure events (Tier 5) (d) DETERMINATION AUTHORITY. Material breach is determined by: - Nuclear items: IAEA Director-General (conclusive) - Inspector safety: JIG Chair based on IAEA report - Financial items: JIG Financial Monitor - Hormuz security: MCC Muscat Command, confirmed by JIG - Systematic non-compliance: JIG Compliance Working Group (point count) (e) DISPUTE RESOLUTION. If either Party disputes a material breach determination, the dispute is referred to the Pakistani Guarantor for binding arbitration within 48 hours.

## 6.5 Non-Compliance Attribution

Article 6.5 - Non-Compliance Attribution Rules (v2.4) (a) PURPOSE. When an incident occurs in Hormuz or elsewhere, this Article establishes who determines responsibility and how. (b) ATTRIBUTION FRAMEWORK: STEP 1 - INITIAL REPORT: MCC Muscat (for Hormuz incidents) or JIG Secretariat (for all other incidents) receives report within 2 hours of event. STEP 2 - EVIDENCE COLLECTION: 72-hour evidence window. Sources: satellite imagery (commercial and national), AIS data, MCC hotline recordings, IAEA inspector reports, port authority logs, vessel master statements. STEP 3 - JIG INVESTIGATION PANEL: 3-person panel (1 US nominee, 1 Iranian nominee, 1 Pakistani Guarantor nominee) reviews evidence within 5 days. STEP 4 - ATTRIBUTION DETERMINATION: Panel issues classified attribution report to both Parties and JIG Chair. (c) ATTRIBUTION CATEGORIES: STATE-ATTRIBUTED (Iran): Clear evidence links incident to Iranian state forces (IRGC, IRIN, AEOI). Triggers full Tier-1 or Tier-2 consequences. STATE-ATTRIBUTED (Third Party): Evidence links incident to non-Iranian state actor. Triggers Stabilization Hold auto-activation. Iran not penalized. NON-STATE ACTOR: Evidence links incident to terrorist, criminal, or unidentified non-state group. Triggers Stabilization Hold. JTAT assists investigation. INCONCLUSIVE: Insufficient evidence for attribution within 5 days. Default: treat as Non-State Actor. No Party penalized. JIG investigation continues. ACCIDENT: Evidence shows mechanical failure, human error, or natural cause. No compliance consequence. Safety recommendations issued. (d) APPEAL: Either Party may appeal attribution determination to Pakistani Guarantor within 48 hours. Guarantor's decision is binding. (e) TRANSPARENCY: Attribution reports are classified EYES ONLY. A sanitized public summary is posted to the Transparency Portal within 7 days.

## Section 7: Enhanced Escrow Mechanics - Iran-Side Technical Annex

Article 7.1 - Banking Network Tier A: Bank Melli Iran (MELIIRTH1) CHF/EUR vostro; Bank Sepah (SEPBIRTH1) at Bank of China CH. Tier B: Mellat, Tejarat, Pasargad (domestic interbank). Tier C: Keshavarzi, Tosee Taavon, EDBI (humanitarian/agricultural/industrial). CNY: Bank of Kunlun Beijing direct. Article 7.2 - SWIFT Protocols MT 103 (>\$10M), MT 202 COV (interbank), MT 199 (compliance attachments), MT 950 (daily statement). Field 72: /ESCROW/TRANCHE/[n]/WEEK/[w]/JIG/[ref]/CERT/[id] All MT 103 via gpi; CBI credited-to-account within 24h. Article 7.3 - Real-Time Access Triple notification: (1) SWIFT MT 103 + gpi, (2)

encrypted email to treasury\_escrow@cbi.ir within 15 min, (3) SMS via Omani gateway within 30 min. Iranian Dashboard: balances by currency, pending/released tranches, SWIFT UETR, 90-day projections. WEEKEND/HOLIDAY: Releases on preceding business day; domestic transfers next business day with retroactive value dating. Article 7.4 - Sanctions Shielding OFAC General License covers all escrow transfers, correspondent banking, clearing through CHAPS/TARGET2/SIC. U-Turn Exemption: Swiss Escrow (non-US) + CHF/EUR + petroleum already delivered. Wind-Down Protection: If sanctions reimposed, all escrow deposits and pending certified releases are grandfathered. Third-Party Liability Shield: No non-US institution subject to secondary sanctions. Form JIG-SANC-001 issued for every tranche release.

## Section 8: What Each Side Concedes and Wins

US CONCEDES: \$750M non-reversible Day-1 cash; accelerated frozen asset release (50% by Day 30); Iran oil exports to 7+ customers at 2.1 mbpd; SWIFT reconnection; correspondent banking; Iranian domestic sovereignty over deployment; political risk of 'paying ransom'; risk Iran cheats. IRAN CONCEDES: Binding enrichment cap at 3.67% effective Day 1; IAEA Additional Protocol-level access; IRGC-N withdrawal; 24/7 MCC Hotline; PRDD tied to nuclear compliance; 15% oil revenue held as reserve; oil customers require IAEA pre-clearance; political risk of 'selling out'.

US WINS: IAEA-confirmed enrichment cap; Hormuz security from Day 7; IRGC withdrawal; nuclear freeze with Snap Line; escrow control; Tranches 4-6 subject to breach review; European coalition; hotline deconfliction; EW Shield; political flexibility mechanisms. IRAN WINS: \$750M Day 1 (triple original); \$250M humanitarian-badged; unrestricted oil exports at 2.1 mbpd; \$4.7B/month from Week 3; 50% frozen assets by Day 30; full sanctions shield; currency sovereignty; domestic deployment authority; 30-day Learning Period; Face-Saving Pause, Quiet Correction, exit ramp.

Article 8.1 - Performance-Contingent Declaration All benefits are performance-contingent. Either Party may activate exit ramp with 14 days notice. Quarterly review every 90 days.

## Section 9: Crisis Pause and Graduated Degradation (RCSA v3.6)

Article 9.1 - Crisis Pause Mode Purpose: Structured 30-90 day operational freeze without penalty or reputational cost. Invocation: Written notice to JIG Chair: 'Crisis Pause under Article 9.1. Duration: [30/60/90] days.' No justification required. Effects: Military modules suspended; frozen asset releases paused (scheduled proceed); PRDD at 50%; Oil Export and humanitarian continue; IAEA access continues; hotline and portal continue. Resumption: Automatic at stated duration unless extended by mutual agreement. Either Party may end early with 48h notice. Frequency: Once per 180 days per Party. Non-Humiliation: Reported as 'operational adjustment under Article 9.1' - not compliance failure or collapse. Article 9.2 - Graduated Degradation 4 levels with automatic point-based escalation: LEVEL 1 Advisory (5+ points in 30 days): Weekly JIG review; confidential letter. No financial effect. LEVEL 2 Restricted (9+ points): PRDD to 70%; frozen assets delayed 14d; Coalition paused; patrols to minimum. LEVEL 3 Suspended (15+ points or Tier-1): PRDD to 70%; frozen assets suspended; military modules suspended; SWIFT suspended. LEVEL 4 Critical (Tier-1): Full Snap Line; UNSC filing; full reserve forfeiture. POINTS: Tier-3 = 1 point; Tier-2 = 3 points; Tier-1 = automatic Level 4. ESCALATION: 14 days at each level before further escalation. DE-ESCALATION: 30 days sustained compliance to drop one level. Article 9.3 - Track Maturity Bands Foundation (Days 1-180): Zero-regret

measures - nuclear verification, humanitarian corridor, banking restoration, economic liquidity. Stabilization (Days 181-540): Sectoral relief - expanded sanctions relief, additional banking, proxy monitoring, deconfliction, PRDD full normalization. Integration (Days 541+): Regional institutionalization - RDF governance, energy interconnection, reduced monitoring, scientific collaboration. Independent advancement per track. Article 9.4 - Non-Humiliation Doctrine Prohibited: requiring public renunciation of nuclear program; requiring apologies; public inspection photos; media events at verification sites; characterizing compliance as 'submission'; requiring constitutional change. Confidential dispute resolution. Narrative respect. Sovereign equality in all JIG proceedings.

## Section 10: Messaging Framework and Sound-Bites

US SOUND-BITES: 'Every dollar is tied to verified performance. If Iran enriches above 3.67%, the money stops automatically - no debate, no delay.' 'This is not a gift. It is a transaction where Iran gets economic relief and we get nuclear verification.' 'We can walk away in 14 days if Iran cheats. The exit ramp is built in.' 'The humanitarian money goes to medicine and food, not missiles. WHO and WFP verify.' IRAN SOUND-BITES: 'The siege has been lifted because Iran stood firm and negotiated from strength.' 'Our nuclear program continues within NPT rights. The 3.67% cap is our sovereign choice.' 'Every dollar of our oil revenue comes from our own production, sold to customers of our choosing.' 'This is recognition of Iran's rights, not concession. The Snap Line is a technical detail, not a chain.' BOTH SIDES: 'This proves that even the deepest adversaries can find practical cooperation when the alternative is worse.' 'The performance-contingent design means both sides win if both deliver, neither wins if either cheats.'

Article 10.1 - Performance-Contingent Messaging Rule All public characterizations must include acknowledgment that benefits are conditional. Article 10.2 - Regional Allies Observer Status GCC, Iraq, Oman, Pakistan read-only aggregated Transparency Portal access. Article 10.3 - Exit Ramp 14 days written notice to JIG Chair. Humanitarian and oil continue; military suspends. Reversible by mutual agreement. Not precedent.

## Section 11: Stability First Implementation Cells and Daily SITREP

Article 11.1 - Implementation Cell Mandate (a) EACH PARTY SHALL establish a permanent Stability First Implementation Cell of 8-12 staff, responsible for: (i) Reading the Transparency Portal at least once per shift (ii) Preparing and submitting the Daily SITREP (iii) Managing all forms, permits, and certifications (iv) Serving as first point of contact for JTAT, JIG, MCC, and Swiss Escrow (v) Maintaining the Learning Curve error log during Days 1-30 (vi) Escalating to senior leadership only when automated triggers require (b) MINIMUM STAFFING TABLE (v2.4):

| Role                         | Min Required | Qualification                     | Shift Coverage                    |
|------------------------------|--------------|-----------------------------------|-----------------------------------|
| Cell Director                | 1            | Senior FSO equivalent             | Business hours + on-call          |
| Deputy Director (Ops)        | 1            | Mid-level operations officer      | Business hours                    |
| Financial Officer            | 1            | Treasury/central bank background  | Business hours + on-call          |
| Nuclear Verification Liaison | 1            | IAEA or nuclear policy background | Business hours                    |
| Hormuz Operations Officer    | 1            | Naval or maritime operations      | 12-hour rotation                  |
| Duty Officer                 | 2            | Junior officer level              | 12-hour rotation (24/7 Days 1-30) |
| Communications Officer       | 1            | Media/information management      | Business hours                    |

Legal/Compliance Officer | 1 | International law background | Business hours  
 Administrative/Support | 1-2 | General administrative | Business hours TOTAL: 10-12 minimum; 8 acceptable during non-active periods with compressed coverage (c) REPORTING: Cell reports to JIG Secretariat weekly. Cell Director attends all JIG working group meetings. (d) CO-LOCATION: US Cell with State Department Iran Desk. Iranian Cell with CBI Treasury Operations. 24/7 coverage during Days 1-30; business hours + on-call thereafter.

Article 11.2 - Daily Stability First Situation Report (SITREP) (a) PURPOSE: One bundled daily report replaces all separate reporting requirements. (b) CONTENTS (one email, one form - JIG-SITREP-001): SECTION A - HORMUZ STATUS: Transits completed, incidents, force posture, hotline stats SECTION B - PRDD FLOWS: Barrels shipped, revenue deposited, percentage released, reserve status SECTION C - NUCLEAR VERIFICATION: Enrichment level, inspector access, any concerns SECTION D - SAFETY MECHANISMS USED: Grace Days, Face-Saving Pauses, Stabilization Holds, QC Windows active SECTION E - LEARNING CURVE LOG: Errors identified, corrections made, pattern review status SECTION F - ESCALATION STATUS: Current degradation level (1-4), points accumulated, days since last event SECTION G - OUTLOOK: Next 24-hour priorities, anticipated issues (c) TIMING: Submitted to JIG Secretariat by 0600 GMT daily. Distributed by 0800 GMT. (d) FORMAT: Standardized template (Appendix D, Form SITREP-001). Checkbox and data-field format. No narrative essays; mark 'NIL' if nothing significant occurred.

## Section 12: Minimum Viable Implementation

Article 12.1 - Minimum Viable Implementation Clause (a) PURPOSE: Where non-essential technical detail cannot be implemented on Day 1 due to bureaucratic, technical, or infrastructure constraints, the Parties will use reasonable interim equivalents that preserve the substance for up to 30 days. (b) PERMITTED INTERIM EQUIVALENTS: Live dashboards -> Manual PDF reports emailed daily Automated SWIFT Field 72 coding -> Manual email confirmation with required data elements Real-time gpi tracking -> Daily MT 950/940 statements Online form submission -> Scanned PDF forms via encrypted email Multi-currency settlement -> CHF-only for first 14 days Regional allies portal access -> Daily SITREP distribution via diplomatic cable Automated Snap Line trigger -> JTAT manual monitoring with 4-hour checkpoint CNY clearing via Bank of Kunlun -> CHF wire with CNY conversion at CBI (c) CONDITIONS: Interim must preserve substance; must not reduce any guardrail; Party must notify JIG within 24 hours; full implementation within 30 days; extensions require JIG Chair approval. (d) PROHIBITED INTERIMS: Manual processes for Tier-1 or Snap Line; reduced inspector access or delayed enrichment cap; paper-based hotline; unencrypted communications for financial data. (e) DEFAULT-if-SILENT: If a Party implements an interim without notifying JIG, and the interim preserves substance, the default-if-silent rule (Article 1.6) treats the implementation as complete.

## Section 13: Performance-Linked Economic Cooperation Tracks

This section establishes conditional cooperation tracks that unlock progressively as compliance milestones are sustained. No track becomes available without verified performance. All tracks are subject to the same Snap Line, Tier-1, and Graduated Degradation architecture as the core Agreement.

**UNLOCKING PRINCIPLE:** All tracks require sustained compliance as prerequisite. Backsliding

activates same protections as core Agreement: Tier-1 or Snap Line = all tracks freeze within 48 hours; Degradation Level 2+ = tracks in affected band suspend; Crisis Pause = Subsection A tracks continue, B and C suspend; Exit Ramp = all tracks suspend except humanitarian-essential. These tracks are framed as regional stability measures, not bilateral assistance. Each Party may characterize them in terms that serve domestic political requirements, provided objective benchmarks are met.

### 13.1 Fast Visible Domestic Wins

Track 1: Stability Infrastructure Window (Article 13.1) \$1.5 billion over 24 months for port rehabilitation, power grid stabilization, hospital upgrades. Visible plaques. Open bidding. JIG Infrastructure Working Group oversight. UNLOCK: Stage 1 closed + 90 clean days + IAEA cert + no IRGC diversion. PERFORMANCE: Freeze next \$250M increment on Tier-2; full freeze on Tier-1/Snap Line. Track 2: Civilian Aviation and Spare Parts Channel (Article 13.2) OFAC General Licenses for civilian aircraft engines, refinery parts, turbine components. UNLOCK: Day 60 milestone + no diversion + Hormuz clear. PERFORMANCE: License suspension on Tier-1/Snap Line; 30-day review on Tier-2. Track 3: Grid and Climate Resilience (Article 13.3) Smart grid, renewables integration, water-efficiency tech. Joint Working Group. No direct cash. UNLOCK: Day 90 + civilian-use verified. PERFORMANCE: Suspends at Degradation Level 3; dissolves at Level 4. Track 4: Tourism and Academic Corridor (Article 13.4) Eased visas for students, researchers, pilgrims, medical tourists. Charter flights. JIG security unit. UNLOCK: 180 days sustained + threat assessment acceptable. PERFORMANCE: Suspends on any corridor security incident. Track 5: Hormuz Stability Insurance Mechanism (Article 13.5) 8-12% Lloyd's premium discount if Hormuz incidents stay below 2/quarter. UNLOCK: Stage 1 + 90 consecutive clean days. PERFORMANCE: Discount halves at 1 incident; suspends at 2 incidents.

### 13.2 Regional Economic Integration Tracks

Track 6: Energy Market Coordination (Article 13.6) Quarterly working group on production schedules, spare capacity, market outlook. No quotas. UNLOCK: 120 days PRDD + 1.5 mbpd sustained + IAEA clear. Track 7: Western Commercial Participation Window (Article 13.7) Defined sectors for Western/regional firm bidding: ports, renewables, medical devices, IT, hospitality. UNLOCK: 180 days + procurement transparency confirmed. Track 8: Regional Logistics Hub Roadmap (Article 13.8) Roadmap for Iran as Gulf-Central Asia-Europe transit hub. RDF infrastructure lending up to \$500M. UNLOCK: 365 days (Milestone 5) + all Hormuz modules + regional support. Track 9: Sovereign Debt-Service Facilitation (Article 13.9) Escrow-channeled, sanctions-shielded debt payments to US/EU-aligned creditors. UNLOCK: 180 days + IMF debt sustainability + no diversion. Track 10: Multilateral Development Priority (Article 13.10) World Bank, ADB, AIIB, EBRD, GCF priority for water, renewables, health, agriculture. UNLOCK: 365 days + 12 months at 3.67% + IMF reporting.

### 13.3 Industrial and Trade Expansion Tracks

Track 11: Industrial Recovery Tranches (Article 13.11) \$500M earmarked from Tranche 4/Reserve for steel, petrochemical, automotive modernization. UNLOCK: Tranche 4 (Day 120) + 90 clean days. Track 12: Joint Inflation and Currency Stabilization Communication (Article 13.12) Joint JIG Economic Assessment every 90 days on inflation, rial stability, trade flows. UNLOCK: PRDD >\$5B cumulative + 50% assets released. Track 13: Regional Trade Preference Corridor (Article 13.13) 'Stability First Customs Corridor' with reduced inspections (100% to 20% sampling) and 10-15% tariff reduction. UNLOCK: 270 days + regional partner readiness + border infrastructure. Track 14: Joint Investment Facilitation Team (Article 13.14) 4-person JIG team matching FDI to pre-cleared sectors. Quarterly

roadshows. UNLOCK: 180 days + sectoral pre-clearance confirmed. Track 15: Independent Economic Assessment (Article 13.15) Public 2-3 year assessment by independent academic consortium (US + Iran + neutral). GDP, employment, trade, humanitarian metrics. UNLOCK: 24 months + both Parties request. Proceeds regardless of later status; disclaimer if Level 3+ at publication.

## Section 14: Operational Resilience Protocols

This section adds structural and operational protections that make the Agreement more resilient, clearer, and less brittle. These are the 20 targeted resilience upgrades integrated throughout the document.

### 14.1 Communications Blackout Protocol

Article 14.1 - Communications Blackout Protocol (a) PURPOSE. If primary communications channels fail (MCC Muscat, Swiss Escrow, JIG Geneva), this protocol ensures continuity without creating compliance gaps. (b) PRIMARY CHANNELS: MCC Muscat Hotline (+968-24-711-900); Swiss Escrow Desk (+41-31-325-2277); JIG Chair Geneva (+41-22-917-4321); Transparency Portal (<https://portal.stabilityfirst.int>)\n (c) BLACKOUT SCENARIOS AND FALLBACKS: MCC MUSCAT BLACKOUT (hotline down): Step 1: Both Parties attempt Iridium satellite link (+881-631-000-001) within 15 minutes Step 2: If Iridium fails, activate PAKISTANI GUARANTOR RELAY (+92-51-920-6111) as message hub Step 3: If all above fail, both Parties' naval commands communicate directly via established NATO/Iran naval frequencies under pre-agreed call signs Step 4: Hormuz operations continue under existing ROE until MCC restored Compliance status: NO compliance penalty for any action taken during MCC blackout using fallback channels SWISS ESCROW BLACKOUT (banking systems down): Step 1: Both Parties contact BACKUP ESCROW BANK (KBC Brussels, +32-2-517-41-11) within 30 minutes Step 2: If KBC unavailable, activate PAKISTANI GUARANTOR CHAPS BRIDGE (State Bank of Pakistan) for emergency liquidity only (up to \$50M per event) Step 3: If blackout exceeds 24 hours, Pakistani Guarantor convenes emergency session to determine tranche deferral schedule Step 4: All pending tranches deferred by equal number of blackout days; no interest penalty Compliance status: NO compliance penalty for tranche delays caused by Swiss Escrow blackout JIG GENEVA BLACKOUT (secretariat unreachable): Step 1: Both Parties contact PAKISTANI GUARANTOR as temporary secretariat Step 2: Guarantor maintains all JIG functions until Geneva restored Step 3: If blackout exceeds 72 hours, Implementation Cells assume direct bilateral coordination Step 4: All decisions made during blackout are ratified retroactively by JIG within 48 hours of restoration TRANSPARENCY PORTAL BLACKOUT: Step 1: Both Implementation Cells switch to encrypted email distribution (pre-established mailing list) Step 2: Daily SITREP submitted via email to all parties Step 3: Portal data integrity verified within 24 hours of restoration Step 4: Any data loss is reconstructed from Implementation Cell backups (d) BLACKOUT LOGGING. All blackout events, fallback activations, and resolution times are logged in the Transparency Portal Post-Incident Report (Form JIG-BLK-001) within 24 hours of restoration.

### 14.2 Pakistani Guarantor Mandate and Authority

Article 14.2 - Pakistani Guarantor Mandate (a) ROLE. The Pakistani Guarantor serves as the neutral third-party guarantor of this Agreement, providing mediation, arbitration, and emergency continuity functions. (b) MANDATE: (i) PRIMARY MEDIATOR: Facilitates bilateral communication during disputes. Maintains confidential channels to both capitals. (ii) ARBITRATOR: Binding arbitration on: material breach determinations (Article 6.4), non-compliance attribution disputes (Article 6.5),

financial reconciliation disagreements (Article 14.3), and simultaneous mechanism invocation conflicts (Article 1.2). (iii) EMERGENCY SECRETARIAT: Assumes JIG secretariat functions during Geneva blackout (Article 14.1). (iv) CHAPS BRIDGE OPERATOR: Provides emergency liquidity bridge via State Bank of Pakistan during Swiss Escrow blackout (up to \$50M per event). (v) BLACKOUT RELAY: Serves as message relay hub during MCC Muscat communications failure. (vi) JIG CHAIR ALTERNATE: Presides over JIG sessions if JIG Chair is incapacitated or conflicted. (c) AUTHORITY LIMITS: - The Guarantor may NOT override the PRDD Nuclear Snap Line - The Guarantor may NOT waive Tier-1 obligations - The Guarantor may NOT approve material modifications to the Agreement without both Parties' consent - The Guarantor's arbitration decisions are BINDING on both Parties for operational matters - The Guarantor's arbitration decisions are ADVISORY on political matters (either Party may escalate to heads of government) (d) VETO POWER. The Guarantor has a limited veto over simultaneous mechanism invocation conflicts (Article 1.2): if both Parties invoke different mechanisms within 6 hours and the sequence creates a safety risk, the Guarantor may override the sequence and impose a binding order of operations. (e) STAFFING. Pakistani Guarantor maintains a dedicated Stability First team of 6 staff in Islamabad and 2 staff in Geneva (co-located with JIG). 24/7 coverage during Days 1-30; business hours + on-call thereafter. (f) REPORTING. Guarantor submits quarterly report to both Parties on mediation activities, arbitration decisions, and blackout events. Report is EYES ONLY.

### 14.3 Financial Reconciliation Failure Protocol

Article 14.3 - Financial Reconciliation Failure Protocol (a) PURPOSE. When financial records disagree (MT 103 vs MT 199, Swiss Escrow vs CBI balances), this protocol provides a structured resolution path. (b) SCENARIOS: SCENARIO 1: MT 103 sent but MT 199 not received within 24 hours Step 1: Swiss Escrow resends MT 103 with duplicate reference flag Step 2: CBI confirms receipt or provides non-receipt explanation within 12 hours Step 3: If CBI confirms non-receipt, Swiss Escrow initiates SWIFT gpi trace Step 4: If gpi trace shows funds in correspondent bank queue, hold until credited (no compliance penalty) Step 5: If gpi trace shows funds lost or returned, Swiss Escrow re-sends within 48 hours ARBITRATION: If dispute persists beyond 72 hours, Pakistani Guarantor reviews SWIFT logs and determines fault. Faulty party bears any exchange rate loss. SCENARIO 2: Swiss Escrow posts balance that CBI disputes Step 1: Both parties submit their ledger records to JIG Financial Working Group within 24 hours Step 2: Working Group reconciles within 72 hours using SWIFT MT 950/940 statements as authoritative source Step 3: If reconciliation identifies error, correcting party adjusts within 48 hours Step 4: If both ledgers appear correct (indicating intermediary bank error), JIG contacts correspondent bank for clarification ARBITRATION: If dispute persists beyond 5 business days, Pakistani Guarantor appoints independent forensic accountant. Cost borne by party whose records are found incorrect. SCENARIO 3: Currency conversion rate dispute Step 1: Both parties submit rate source documentation Step 2: WM/Reuters London fixing rate is authoritative for EUR conversions Step 3: PBOC central parity is authoritative for CNY conversions Step 4: If rate source is ambiguous, JIG Financial Working Group selects nearest available fixing ARBITRATION: If dispute exceeds \$100,000 equivalent, Pakistani Guarantor arbitrates using IMF reference rates. (c) DEFAULT DURING DISPUTE. During any financial reconciliation dispute: - Scheduled tranches for OTHER currencies continue normally - Humanitarian-badged funds continue regardless of dispute - Disputed amount held in escrow until resolution - Neither Party may invoke compliance penalties for delays caused by reconciliation process

### 14.4 Hormuz Incident Classification Scale

Article 14.4 - Hormuz Incident Classification Scale (v2.4) A 5-level scale standardizing Hormuz

incident severity and response: **LEVEL 1 - ROUTINE (Green):** Minor vessel interaction with no safety risk. Examples: AIS discrepancy resolved within 2 hours; non-commercial vessel passes through corridor without incident; minor navigation deviation corrected by vessel master. **RESPONSE:** Logged by MCC. No JIG notification required. **LEVEL 2 - ADVISORY (Blue):** Unusual activity requiring monitoring. Examples: Unidentified vessel enters corridor without JHA permit; non-Iranian military vessel transits without prior notification; minor equipment malfunction on observation vessel. **RESPONSE:** MCC notifies JIG within 4 hours. JTAT monitors. No compliance action. **LEVEL 3 - ELEVATED (Yellow):** Activity that could escalate. Examples: Iranian small craft approaches commercial vessel within 500m; AIS spoofing detected for >2 hours; verbal challenge between vessel masters via VHF. **RESPONSE:** MCC notifies JIG within 1 hour. JIG convenes within 8 hours. Dampening Window offered. Tier-3 points assessed if pattern. **LEVEL 4 - SERIOUS (Orange):** Direct threat to shipping or personnel. Examples: Iranian forces board commercial vessel without JHA authorization; vessel detained in corridor for >4 hours; physical damage to commercial vessel (non-explosive); cyberattack on corridor navigation systems. **RESPONSE:** MCC emergency notification. JIG convenes within 4 hours. Automatic Dampening Window. Stabilization Hold auto-triggered. Tier-2 assessment initiated. **LEVEL 5 - CRITICAL (Red):** Actual attack or severe threat. Examples: Explosive device detonated on commercial vessel; Iranian military fires on commercial or coalition vessel; mass casualty incident in corridor; environmental catastrophe (oil spill >10,000 barrels). **RESPONSE:** MCC immediate emergency. JIG convenes within 2 hours. Full Dampening Window. All military modules suspend offensive operations. Stabilization Hold auto-triggered. Attribution process (Article 6.5) initiated within 6 hours. Tier-1 assessment. **INCIDENT RATE THRESHOLD:** For PRDD Insurance Mechanism (Track 5), 'incident' means Level 3 or above. Level 1-2 interactions do not count toward the 2-per-quarter threshold.

## 14.5 Emergency Messaging Override

**Article 14.5 - Political Messaging Override** (a) **PURPOSE.** The messaging section (Article 4.3) is intentionally rigid to prevent either side from exploiting the other's pre-approved characterizations. However, genuine domestic emergencies or misinformation attacks may require temporary deviation. (b) **OVERRIDE CONDITIONS.** Either Party may deviate from pre-approved messaging templates if: (i) A domestic crisis (natural disaster, mass casualty event, constitutional crisis) requires the head of government's full attention and messaging bandwidth (ii) A third-party misinformation campaign is attributing false statements to the Party (iii) A terrorist attack requires national unity messaging that temporarily overrides diplomatic messaging discipline (c) **OVERRIDE PROCEDURE:** Step 1: Party notifies JIG Media Working Group within 4 hours of deviation Step 2: Notification states: 'Messaging override under Article 14.5. Reason: [DOM-CRISIS/MISINFO-ATTACK/TERROR]. Expected duration: [X] days.' Step 3: Override valid for up to 14 days, renewable once Step 4: Party must return to pre-approved templates at end of override period Step 5: JIG Media Working Group may request but cannot require clarification of override messaging (d) **LIMITATIONS:** - Override may NOT be used to claim the other Party has violated the Agreement - Override may NOT be used to make statements that jeopardize inspector safety - Override may NOT be used to publicly disclose classified Agreement details - Override does NOT suspend any substantive obligations (e) **NON-PRECEDENT.** Messaging override does not create precedent for future deviations. Each override requires fresh notification. (f) **COUNTER-MESSAGING.** If one Party invokes override, the other Party may suspend its own pre-approved messaging for 48 hours to avoid appearing rigid while the other speaks authentically about a crisis.

## 14.6 Sunset Review Mechanism

**Article 14.6 - Mandatory Six-Month Review** (a) **PURPOSE.** This Agreement is highly technical and will

degrade over time without maintenance. A mandatory 6-month review ensures it stays aligned with reality. (b) REVIEW SCHEDULE: Review 1: Month 6 (Day 180) Review 2: Month 12 (Day 365) Review 3: Month 18 (Day 545) Review 4: Month 24 (Day 730) Subsequent reviews: Every 12 months unless both Parties agree to shorter interval (c) REVIEW SCOPE: (i) Technical: Are systems functioning? Are forms being used correctly? Are there unused or redundant procedures? (ii) Compliance: Is the pattern threshold working? Are Tier classifications being applied consistently? (iii) Economic: Are tranche amounts still appropriate? Is PRDD flow rate adequate? Are escrow fees reasonable? (iv) Political: Is messaging framework still serving both Parties? Are pre-approved characterizations still usable? (v) Operational: Are Implementation Cells adequately staffed? Is SITREP format working? Are blackout fallbacks tested? (vi) Resilience: Have any false positives triggered the Snap Line? Are attribution procedures working? (d) REVIEW PROCESS: Step 1: Both Implementation Cells submit written assessment 30 days before review date Step 2: JIG Secretariat compiles assessment and distributes 14 days before review Step 3: JIG Governing Board convenes for 2-day review session Step 4: Review produces 'Stability First Maintenance Report' with recommended amendments Step 5: Both Parties have 30 days to approve or reject each recommendation Step 6: Approved recommendations take effect 30 days after approval Step 7: Pakistani Guarantor certifies that approved amendments preserve core guardrails (e) AMENDMENT AUTHORITY. The 6-month review may approve: - Technical modifications (form changes, procedure updates, timing adjustments) - Economic modifications (tranche amount adjustments up to 15%, fee adjustments) - Operational modifications (staffing changes, reporting format updates) The 6-month review may NOT approve: - Changes to the Snap Line threshold (3.67% enrichment cap) - Changes to Tier-1 obligations or consequences - Changes to the Mirror Pairing structure - Changes to the Non-Recognition or Non-Amnesty clauses - Changes to the Pakistani Guarantor's arbitration authority (f) NO SUSPENSION FOR REVIEW. The review process does not suspend any Agreement obligations. All tracks continue during review.

## Appendix A: Day-1 to Day-14 Control Panel

Single operational table that duty officers work from. One row per day. Color-coded by tier.

COLOR KEY: RED (Tier-1): Nuclear, inspector safety, WMD - immediate consequence, no pauses allowed ORANGE (Tier-2): Significant breach - re-suspension lever, reduced PRDD YELLOW (Tier-3): Minor issue - 72-hour Quiet Correction Window, JTAT handles GREEN: Automatic protective mechanism activates without penalty GRAY: Force majeure / pre-positioning - no compliance consequence

## Appendix C: SOP Templates

### SOP 1: Grace Day Invocation

Send encrypted message to JIG Chair and Pakistani Guarantor: 'Grace Day invoked under Article 1.2. Effective [date]. Reason: [DOM-LEG/PER-TRANS/TECH-PREP]. Resumption: [date+24h].' JIG Chair acknowledges within 2 hours. Obligations deferred. No compliance record. Counter decremented.

### SOP 2: Face-Saving Pause Invocation

Send written notification to JIG Chair: 'Face-Saving Pause under Article 1.3. Action under review: [specific].' JIG Chair acknowledges within 4 hours. Action deferred 7 days. Auto-proceeds unless both Parties modify.

### SOP 3: Crisis Pause Mode Invocation

Notification to JIG Chair: 'Crisis Pause under Article 9.1. Duration: [30/60/90] days.' JIG Chair acknowledges within 4 hours. Military modules suspend; economic/humanitarian continue. Auto-resumption at stated duration.

### SOP 4: Quiet Correction Window

Automatic upon JTAT identification. Hour 0-24: Party may correct without record. Hour 24-48: JTAT assists if correction in progress. Hour 48-72: If corrected, formally resolved with no compliance mark. Hour 72+: Escalates to formal compliance track.

### SOP 5: Daily SITREP Preparation

Template: JIG-SITREP-001 (Appendix D). Sections A-G. Checkbox and data-field format. Submit by 0600 GMT. Mark 'NIL' for sections with no activity.

### SOP 6: Snap Line False Positive Response

If IAEA posts potential trigger: Hour 0-1 JTAT contacts IAEA Duty Officer to confirm data integrity. Hour 1-2 If confirmed valid, automated suspension proceeds. If data error reported, trigger DOWNGRADED to Tier-2 advisory; JIG convenes; IAEA has 48 hours to resolve discrepancy.

### SOP 7: Communications Blackout Activation

Step 1: Attempt primary channel 3 times over 15 minutes. Step 2: Activate fallback per Article 14.1 (Iridium, Pakistani Guarantor Relay, direct naval frequencies, KBC Brussels, CHAPS bridge). Step 3: Log blackout event in Form JIG-BLK-001 within 24 hours of restoration.

## Appendix D: Invocation Forms

#### Form INV-001: Grace Day Invocation

| Field                | Format/Entry                  | Notes             |
|----------------------|-------------------------------|-------------------|
| Invoking Party       | [US / Iran]                   |                   |
| Invoking Official    | [Name/Title]                  | Deputy Secretary+ |
| Date/Time            | [DD/MM/YYYY HH:MM GMT]        |                   |
| Effective Date       | [DD/MM/YYYY]                  | Within 48h        |
| Reason               | [DOM-LEG/PER-TRANS/TECH-PREP] |                   |
| Resumption           | [DD/MM/YYYY HH:MM GMT]        | Date+24h          |
| Grace Days Remaining | [3/2/1/0]                     |                   |
| 4-per-30 Counter     | [1/2/3/4]                     | Combined          |
| JIG Chair Ack        | [Name/Timestamp]              | Within 2h         |

#### Form INV-002: Face-Saving Pause Invocation

| Field               | Format/Entry           | Notes             |
|---------------------|------------------------|-------------------|
| Invoking Party      | [US / Iran]            |                   |
| Invoking Official   | [Name/Title]           | Foreign Minister+ |
| Date/Time           | [DD/MM/YYYY HH:MM GMT] |                   |
| Action Under Review | [Specific obligation]  |                   |

| Field            | Format/Entry           | Notes             |
|------------------|------------------------|-------------------|
| Pause Expiration | [DD/MM/YYYY HH:MM GMT] | +7 days           |
| Pauses Used      | [1/2]                  | Max 2 per 30 days |
| 4-per-30 Counter | [1/2/3/4]              |                   |
| JIG Chair Ack    | [Name/Timestamp]       | Within 4h         |

**Form INV-003: Crisis Pause Mode (RCSA)**

| Field             | Format/Entry           | Notes                   |

## Appendix E: Mechanism Flowcharts

Visual decision paths for critical mechanisms. Supplements operative text.

### Flowchart 1: PRDD Weekly Release

START: Monday 0000 GMT | Lloyd's List confirms cargo delivery? YES -> JIG Financial Monitor certifies no material breach in 7 days? YES -> Check Snap Line status ACTIVE -> Full suspension; go to Flowchart 2 INACTIVE -> Calculate release: baseline 85% or reduced 70% -> Swiss Escrow releases to CBI within 72 hours -> CBI confirms via MT 199 -> gpi post -> JIG verify by H48 -> Pakistani Certificate by H72 -> END: Funds available NO -> Hold until confirmed (max 72h) -> If no confirmation in 72h: JTAT investigation -> JIG Financial emergency review

## Flowchart 2: PRDD Nuclear Snap Line

TRIGGER: IAEA posts potential enrichment >3.67% | HOUR 0-1: JTAT contacts IAEA Duty Officer -> CONFIRM DATA VALID? DATA ERROR/SENSOR GLITCH -> DOWNGRADE to Tier-2 advisory -> JIG convenes -> IAEA has 48h to resolve CANNOT CONFIRM in 2h -> DOWNGRADE to Tier-2 -> JIG convenes -> 48h resolution window CONFIRMED VALID -> Proceed to Hour 2 | HOUR 2: Swiss Escrow receives automated suspension -> Pending releases FROZEN -> New deposits SUSPENDED HOUR 4: CBI notified via encrypted channel HOUR 6: JIG Chair emergency session convenes HOUR 8: Both Parties may respond (no vote required - automatic) HOUR 24: If UNRESOLVED -> Full suspension confirmed If RESOLVED -> Partial resumption: access provided = 50%; enrichment back to 3.67% = 75%; 30 clean days = 100% | RESUMPTION: Only IAEA DG can certify resolution. No political override.

## Flowchart 3: Safety Mechanism Selection

SITUATION IDENTIFIED | Tier-1 event? (nuclear, inspector safety, WMD) YES -> Immediate Tier-1 response (no pauses allowed) -> END NO -> Enrichment >3.67% detected? YES -> Snap Line activates automatically (2-hour false-positive check first) -> END NO -> Military safety incident? YES -> Dampening Window (48h automatic military freeze) -> END NO -> Politically sensitive timing issue? YES -> Face-Saving Pause (7 days, FM+, max 2 per 30d) -> END NO -> Operational timing issue? YES -> Grace Day (24h deferral, 3 per Stage) -> END NO -> Multiple related obligations? YES -> Stabilization Hold (7 days, 2 per 30d, up to 3 obligations) -> END NO -> Minor procedural gap with substance intact? YES -> Default-if-Silent: treat as complete, log for Quiet Correction -> END NO -> Call JIG Chair for guidance -> END

# Appendix F: Consolidated Forms and Codes Register

| Form/Code     | Purpose                       | Who Fills                    | Deadline                 | Submit To                |
|---------------|-------------------------------|------------------------------|--------------------------|--------------------------|
| INV-001       | Grace Day Invocation          | Deputy Secretary/Deputy FM+  | 6h before effective      | JIG Chair + Pakistani G. |
| INV-002       | Face-Saving Pause Invocation  | Foreign Minister+            | 24h before effective     | JIG Chair                |

| gpi Confirm  | End-to-end Tracking                | SWIFT network (auto) | Real-time             | Transparency Portal |
| P1-P4 Codes  | Iranian Priority Codes             | CBI Treasury         | Per deployment        | SEPAM/PAYA system   |

## Appendix G: Sovereignty Restoration Trajectory (RCSA v3.6)

MILESTONE 1 - FOUNDATION (Day 1): Institutional Voice Equal JIG seat, Iranian nationals eligible for JMOC positions, state media accredited to Portal. MILESTONE 2 - STABILIZATION (Day 30): Direct Revenue Access Petrochemical export revenue flows directly to CBI via PRDD. 50% frozen assets released. MILESTONE 3 - STABILIZATION (Day 60): Banking Autonomy Iranian banks operate with restored correspondent relationships. 70% frozen assets released. MILESTONE 4 - INTEGRATION (Day 180): Reduced Monitoring IAEA inspection frequency reduced proportionally to sustained compliance. MILESTONE 5 - INTEGRATION (Day 365): Fiscal Independence Asset micro-tranches released directly to CBI. Full sovereign budget authority. MILESTONE 6 - INTEGRATION (Day 540): Scientific Collaboration Fordow IMIRC under International Advisory Board with Iranian co-chair. MILESTONE 7 - INSTITUTIONALIZATION (Day 720+): Full Economic Sovereignty Zero revenue escrow. Full SWIFT. Standard IAEA safeguards. Iran chairs JIG on rotation.

## Appendix H: Glossary of Acronyms and Terms

| Term | Definition                                                  |
|------|-------------------------------------------------------------|
| AEOI | Atomic Energy Organization of Iran - Iran's nuclear agency  |
| AIS  | Automatic Identification System - vessel tracking broadcast |

| Term                            | Definition                                                              |
|---------------------------------|-------------------------------------------------------------------------|
| <b>CBI</b>                      | Central Bank of Iran                                                    |
| <b>CHAPS</b>                    | Clearing House Automated Payment System - UK payment system             |
| <b>CNY</b>                      | Chinese Yuan                                                            |
| <b>Crisis Pause</b>             | 30-90 day operational freeze under Article 9.1 (RCSA mechanism)         |
| <b>Default-if-Silent</b>        | Rule treating minor procedural gaps as complete (Article 1.6)           |
| <b>Dampening Window</b>         | 48-hour automatic military operations freeze after Tier 2/3 event       |
| <b>EDBI</b>                     | Export Development Bank of Iran                                         |
| <b>Escrow</b>                   | Swiss-based account holding funds until compliance verified             |
| <b>Exit Ramp</b>                | 14-day structured withdrawal mechanism (Article 10.3)                   |
| <b>Face-Saving Pause</b>        | 7-day review period for politically sensitive actions (Article 1.2)     |
| <b>Grace Day</b>                | 24-hour obligation deferral (Article 1.2), 3 per Stage                  |
| <b>gpi</b>                      | SWIFT Global Payments Innovation - end-to-end tracking                  |
| <b>HEU</b>                      | Highly Enriched Uranium                                                 |
| <b>Hormuz</b>                   | Strait of Hormuz - chokepoint for 20% of world oil trade                |
| <b>IAEA</b>                     | International Atomic Energy Agency - UN nuclear watchdog                |
| <b>IKCO / SAIPA</b>             | Iranian automakers                                                      |
| <b>IMF</b>                      | International Maritime Facility (Hormuz command structure)              |
| <b>IRGC / IRGC-N</b>            | Islamic Revolutionary Guard Corps / Navy                                |
| <b>IRIN</b>                     | Islamic Republic of Iran Navy (regular navy)                            |
| <b>JHA</b>                      | Joint Hormuz Authority - naval coordination body                        |
| <b>JIG</b>                      | Joint Implementation Group - governing body in Geneva                   |
| <b>JTAT</b>                     | Joint Technical Assistance Team - on-the-ground support                 |
| <b>Learning Curve</b>           | 30-day error tolerance period (Article 1.1)                             |
| <b>Lloyd's</b>                  | Lloyd's of London - insurance market                                    |

## Appendix I: Red Team Scenario Playbook

Simulated scenarios for operator readiness training. These are exercises, not predictions.

**SCENARIO 1: HORMUZ INCIDENT (Level 4) SITUATION:** 0345 GMT. MCC Muscat reports Iranian patrol vessel has stopped and boarded a Greek-flagged tanker in the commercial corridor. AIS shows vessel stationary. Tanker master reports via VHF that boarding party claims 'cargo inspection.' **YOUR ACTIONS:** 1. Log incident in MCC system within 15 minutes 2. Notify JIG Chair and Pakistani Guarantor within 30 minutes 3. Activate Hormuz Incident Classification: Level 4 (Serious) 4. Automatic Dampening Window activates - confirm both Parties notified 5. Convene JIG emergency session within 4 hours 6. Initiate Attribution Process (Article 6.5) - evidence collection begins 7. Submit emergency SITREP by 0600 GMT **EXPECTED OUTCOMES:** - If state-attributed (Iran): Tier-2 assessment, PRDD reduced to 70%, frozen asset tranche delayed 14 days - If non-state actor: Stabilization Hold auto-activated, investigation continues - If accident/misunderstanding: Downgrade to Level 3 advisory, safety recommendations

**SCENARIO 2: SWIFT FAILURE SITUATION:** 1430 GMT. Swiss Escrow sends MT 103 for \$250M Tranche 2 release. CBI reports no receipt after 24 hours. SWIFT gpi shows message 'pending' at intermediary bank (Deutsche Bank Frankfurt). **YOUR ACTIONS:** 1. CBI sends MT 199 non-receipt notification to Swiss Escrow 2. Swiss Escrow initiates gpi trace within 4 hours 3. Contact Deutsche Bank Frankfurt via SWIFT customer service 4. If trace shows funds in queue: hold until credited (no compliance penalty) 5. If trace shows funds lost/returned: Swiss Escrow re-sends within 48 hours 6. Log incident in Learning Curve Database 7. If dispute persists beyond 72 hours: escalate to Pakistani Guarantor arbitration (Article 14.3) **EXPECTED OUTCOMES:** - 80% of cases resolve within 48 hours via gpi trace - 15% require intermediary bank clarification - 5% require Guarantor arbitration

**SCENARIO 3: IAEA ACCESS DENIAL SITUATION:** 0900 GMT. IAEA inspectors arrive at Natanz Fuel Enrichment Plant. Facility security denies entry, citing 'technical maintenance in progress.' IAEA reports denial to JIG Nuclear channel. **YOUR ACTIONS:** 1. IAEA logs denial in official inspector report within 2 hours 2. JTAT Nuclear Verification Team contacts AEOI within 4 hours 3. JIG Chair convenes emergency session within 8 hours 4. 48-hour access window demanded (not the full Snap Line - this is access denial, not enrichment confirmation) 5. If access granted within 48h: Tier-2 advisory, 3 escalation points 6. If access denied beyond 48h: Escalate to Tier-2 active, PRDD reduced to 70% 7. If access denied 7+ days AND enrichment above 3.67% suspected: Full Snap Line activation **KEY DISTINCTION:** Access denial alone does NOT trigger Snap Line. It triggers Tier-2. Snap Line requires confirmed enrichment >3.67%.

**SCENARIO 4: CYBERATTACK ON MCC MUSCAT SITUATION:** 0215 GMT. MCC Muscat reports all digital systems offline. Hotline VoIP down. AIS feed corrupted. Portal unreachable from Muscat. Physical facility secure; no casualties. **YOUR ACTIONS:** 1. MCC shifts to backup voice communications (secure landline to JIG Geneva) within 30 minutes 2. Activate Communications Blackout Protocol (Article 14.1) 3. Both Parties attempt Iridium satellite link 4. If Iridium fails: activate Pakistani Guarantor Relay 5. If

all digital channels fail: naval commands communicate via pre-agreed frequencies 6. Stabilization Hold auto-activated (cyberattack on verification infrastructure) 7. JTAT Cyber Team deploys to Muscat within 24 hours 8. All compliance deadlines extended by blackout duration EXPECTED OUTCOMES: - 70% of cases resolve within 12 hours with backup systems - 25% require JTAT on-site remediation (24-72 hours) - 5% require full system rebuild (up to 14 days)

SCENARIO 5: SIMULTANEOUS GRACE DAY INVOCATION SITUATION: Day 5. US invokes Grace Day at 0800 GMT (citing domestic legislative session). Iran invokes Grace Day at 1130 GMT (citing technical preparation needs). Both Parties need 24-hour deferral on separate obligations. YOUR ACTIONS: 1. JIG Chair confirms both invocations received within 6 hours of each other 2. Apply Simultaneous Invocation Rule (Article 1.2): both invocations count as ONE against each Party's cap 3. Both Parties retain 2 remaining Grace Days for this Stage 4. Both obligations deferred by 24 hours from each invocation's effective time 5. JIG posts simultaneous invocation event to Transparency Portal 6. No compliance record created for either invocation EXPECTED OUTCOMES: - Both Parties benefit from full deferral - Neither Party burns excessive cap credits - Event logged for pattern analysis only

# Appendix J: First 72-Hour Timeline

Visual timeline for the most operationally dense period.

| Time        | Who                  | Action                                                                                                                                                    |
|-------------|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|
| HOURL 0     | BOTH PARTIES         | MoU signed. Mirror Pairings 1-4 activate simultaneously. Enrichment cap order issued. \$750M wired to Escrow. IRGC withdrawal begins. JHA permits issued. |
| HOURL 1-2   | US Treasury / CBI    | Treasury confirms wire release. CBI confirms receipt notification. Swiss Escrow posts receipt to Portal.                                                  |
| HOURL 2-4   | JIG / MCC / IAEA     | JIG posts Pairing confirmations. MCC confirms hotline staffed and active. IAEA confirms enrichment cap order received.                                    |
| HOURL 4-6   | Swiss Escrow         | \$250M humanitarian-badged funds released to CBI. WHO/WFP notified for end-use verification.                                                              |
| HOURL 6-8   | Iran / JTAT          | IRGC repositioning satellite image posted. JTAT deploys to verify. Inspector access at border crossing confirmed.                                         |
| HOURL 8-12  | Implementation Cells | Both Cells submit first check-in reports. Portal read confirmed. Learning Curve error log opened.                                                         |
| HOURL 12-24 | Swiss Escrow / CBI   | Remaining \$500M general liquidity released. CBI confirms full \$750M credited. 60% P1/P2 soft cap monitoring begins.                                     |
| HOURL 24-36 | MCC / JHA            | First oil cargo loads with JHA Transit Permit. AIS broadcast 'JHA-AUTHORIZED' confirmed. Lloyd's tracks first cargo.                                      |
| HOURL 36-48 | JIG / Both Cells     | First Daily SITREP submitted. JIG reviews Day-1 status. Any Pairing failures remediated.                                                                  |
| HOURL 48-60 | JTAT / Both Parties  | JTAT on-site at CBI Tehran and Swiss Escrow Geneva. Technical systems fully tested. Backup channels verified.                                             |
| HOURL 60-72 | JIG / Pakistani G.   | 72-hour checkpoint: all Pairings confirmed operational. JIG issues Day-3 readiness certificate. Pakistani Guarantor confirms first phase stable.          |

# Appendix K: Top 10 Predictable Mistakes

MISTAKE 1: Confusing 'Learning Period' with 'no rules' WHAT HAPPENS: Operators think Days 1-30 mean no consequences for any error. REALITY: Learning Period halves penalties and makes Tier 3 advisory-only. Pattern threshold still applies from Day 31. Same error 3 times in 60 days still graduates.

PREVENTION: Brief every operator that Learning Period = 'gentler consequences,' not 'no consequences.' MISTAKE 2: Invoking Grace Day on Day 7 or Day 14 WHAT HAPPENS: Operator doesn't realize Grace Days are prohibited on Synchronized Lift Day (Day 7) and Stage Closing Day (Day 14). REALITY: Invocation is VOID on those days. Operator burns a Grace Day for nothing. PREVENTION: Pin a note to every workstation: 'NO GRACE DAYS ON DAY 7 OR 14.' MISTAKE 3: Treating a Snap Line trigger as negotiable WHAT HAPPENS: Senior official asks JIG Chair to 'hold off' on Snap Line activation while they 'check with capital.' REALITY: Snap Line is technically automatic and irrevocable by political authority. JIG Chair cannot override. PREVENTION: Train all senior staff that Snap Line = automated technical system, not diplomatic process. Only IAEA DG can certify resolution. MISTAKE 4: Forgetting the 2-hour false-positive verification loop WHAT HAPPENS: Operator sees IAEA post and assumes immediate suspension, causing unnecessary panic. REALITY: 2-hour verification loop allows IAEA to correct data errors before suspension executes. PREVENTION: Standard response to IAEA post: 'Trigger flagged. Verification loop running. Suspension at Hour 2 if confirmed.' MISTAKE 5: Submitting SITREP as a narrative essay WHAT HAPPENS: Communications Officer writes 3 paragraphs about a quiet day. REALITY: SITREP is checkbox/data-field format. 'NIL' in a section is the correct entry when nothing happened. PREVENTION: Post the SITREP template at every workstation. Review: if it takes more than 10 minutes to complete, you're doing it wrong. MISTAKE 6: Using unencrypted email for financial data during portal blackout WHAT HAPPENS: During Transparency Portal outage, staff send escrow data via regular email. REALITY: Prohibited under Minimum Viable Implementation (Article 12.1). Only encrypted channels permitted for financial data. PREVENTION: Maintain encrypted email distribution list as permanent backup. Test monthly. MISTAKE 7: Assuming Tier-1 means 'anything serious' WHAT HAPPENS: Operator classifies a 12-hour AIS outage as Tier-1 because it 'feels serious.' REALITY: Tier-1 is strictly defined (Article 6.4): nuclear, inspector safety, WMD, infrastructure destruction. AIS outage is Tier-3. PREVENTION: Post Unified Escalation Ladder table at every workstation. When uncertain, consult before classifying. MISTAKE 8: Not logging procedural gaps during Learning Period WHAT HAPPENS: Operator fixes a SWIFT coding error informally and doesn't log it. REALITY: Same gap happens twice more, reaches 3-in-60 pattern threshold, and triggers full compliance tracking. PREVENTION: Log EVERY procedural gap in Learning Curve Database, even if corrected immediately. MISTAKE 9: Ignoring the backup communications test schedule WHAT HAPPENS: Implementation Cell never tests Iridium or Pakistani Guarantor Relay channels. REALITY: When blackout occurs, backup channels fail because contact numbers changed or equipment was never configured. PREVENTION: Test all 3 fallback channels (Iridium, Guarantor Relay, naval frequencies) on first Monday of every month. Log test results. MISTAKE 10: Forgetting that simultaneous invocation counts as one WHAT HAPPENS: Both Parties invoke Grace Days. Cell director panics that caps are being burned too fast. REALITY: Simultaneous invocation (within 6 hours) counts as ONE against each cap. Both Parties retain remaining days. PREVENTION: Post Article 1.2(f) summary card at every duty station.

## Appendix L: If X Then Y Decision Matrix

Single-page matrix mapping failure modes to required actions, phone numbers, and deadlines.

| If This Happens                   | Then Do This                               | Call This           | By When                  |
|-----------------------------------|--------------------------------------------|---------------------|--------------------------|
| IAEA confirms enrichment >3.67%   | Snap Line auto-suspends PRDD within 24h    | JIG Chair + IAEA DG | HOURL 2<br>(verify loop) |
| Hormuz incident Level 4-5         | Auto-Dampening Window + Stabilization Hold | MCC Muscat 24/7     | IMMEDIATE                |
| SWIFT MT 103 not confirmed in 24h | Initiate gpi trace; re-send if lost        | Swiss Escrow + CBI  | HOURL 48                 |

| If This Happens                                     | Then Do This                                                                | Call This        | By When             |
|-----------------------------------------------------|-----------------------------------------------------------------------------|------------------|---------------------|
| <b>Need Grace Day</b>                               | Written notice to JIG Chair + Pakistani G.                                  | JIG Chair Geneva | 6h before effective |
| <b>Need Face-Saving Pause</b>                       | Written notice to JIG Chair                                                 | JIG Chair Geneva | 24h before          |
| <b>Need Crisis Pause</b>                            | Written notice to JIG Chair                                                 | JIG Chair Geneva | Immediate           |
| <b>MCC Muscat goes offline</b>                      | Activate Blackout Protocol: Iridium -> Guarantor Relay -> Naval frequencies | MCC Backup       | HOURL 0+15min       |
| <b>Swiss Escrow goes offline</b>                    | Contact KBC Brussels backup; activate CHAPS bridge if >24h                  | KBC Brussels     | HOURL 0+30min       |
| <b>Swiss Escrow posts balance CBI disputes</b>      | Submit ledgers to JIG Financial Working Group; reconcile in 72h             | JIG Financial WG | DAY 3               |
| <b>3rd same-type error in 60 days</b>               | Error graduates to full compliance; next occurrence = Tier 2/3              | JTAT + JIG       | Next occurrence     |
| <b>Both Parties invoke Grace Day simultaneously</b> | Count as ONE per cap; both get full deferral                                | JIG Chair        | HOURL 0+2h (log)    |
| <b>Learning Period error not logged</b>             | Risk of pattern threshold surprise at Day 31                                | JTAT             | LOG IMMEDIATELY     |
| <b>SITREP section has no activity</b>               | Mark 'NIL' - do NOT write narrative                                         | N/A              | N/A                 |
| <b>Tier classification uncertain</b>                | Consult Unified Escalation Ladder (Section 6.3); call JIG if still unsure   | JIG Chair        | BEFORE classifying  |
| <b>Messaging override needed (domestic crisis)</b>  | Notify JIG Media WG within 4h; valid up to 14 days                          | JIG Media WG     | HOURL 0+4h          |
| <b>6-month review due</b>                           | Both Cells submit assessment; JIG convenes 2-day session                    | JIG Secretariat  | 30 days before due  |
| <b>Communications blackout resolved</b>             | Submit Form JIG-BLK-001 within 24h of restoration                           | JIG Secretariat  | HOURL 0+24h         |
| <b>Not sure what to do</b>                          | Call JIG Chair: No penalty for asking.                                      | JIG Chair Geneva | ANY TIME            |

**DUTY OFFICER NOTE:** This matrix supplements the full Agreement text. When in conflict, the operative text prevails. This matrix is updated at each 6-month sunset review.

# Stability First

14-Day Implementation Directive

**Enhanced Edition v2.4**

*Operations-Optimized / Dashboard-Driven / 15 Economic Tracks / 20 Resilience Upgrades*

*Version 2.4 | May 2026*

FOR AUTHORIZED NEGOTIATORS ONLY
