

AUTHORIZED NEGOTIATORS ONLY -- CONFIDENTIAL

OPERATIONAL CHOREOGRAPHY FOR PHASE I IMPLEMENTATION

A Minute-by-Minute Sequencing Guide for The Final Steps Accord v4.0

Version:	1.0
Operative Status:	Upon deposit of Instruments of Acceptance
Distribution:	US, Iran, Oman (Secretariat), Switzerland, IAEA, JIG members
Classification:	Confidential -- Not for Public Distribution
Calibrated for:	Late May 2026 negotiation environment

This document is the thin executable layer that translates legal text into operational sequence. It assumes the Accord is signed. It answers only: What happens next, who does it, and how do we know it happened?

Table of Contents

Section 1: Pre-Activation (T-72 hours to T=0)

Section 2: Phase I -- Foundation (Days 1-14)

Day 1 (T+0 to T+24h UTC)

Day 3 (T+48h)

Day 6 -- Pre-Day 7 Certification

Day 7 -- Conditional Review-Based Execution

Day 14 -- Phase I Completion

Section 3: Phase II -- Consolidation (Days 15-44)

Section 4: Phase III -- Normalization (Days 45-120)

Section 5: Crisis Response Choreography

Section 6: Key Decision Points & Handoffs

Section 7: Verification Channels Matrix

Section 8: Pre-Cleared Public Scripts

Appendix: Quick Reference -- Who To Call

Document Change Log

Section 1: Pre-Activation (T-72 hours to T=0)

This section covers the 72-hour window between choreography distribution and Accord activation. No operative commitments activate during this period. The sole purpose is readiness verification: ensuring that all personnel, communications, financial, and verification infrastructure are in place before the T=0 clock starts.

LEGAL BASIS

Article 11 (30-Day Letter of Intent & Binding Timeline); Appendix D (Instruments of Acceptance); Article 6.2 (Day-7 Conditional Review-Based Protocol).

Time	Actor	Action	Verification	Fallback
T - 72h	Joint Secretariat (Muscat)	Distribute final choreography document to all parties via secure diplomatic channel; distribute narrative package to designated spokespeople	Receipt acknowledged by all parties within 6 hours; Dashboard logs distribution	12-hour extension for technical issues; direct Oman FM call to non-responsive party
T - 60h	JIG Technical Committee	Confirm all liaison offices staffed and 24/7 secure communications tested (Muscat, Bern, Tehran, Washington, Vienna)	Dashboard status: GREEN for all five nodes; test message round-trip under 5 minutes confirmed	24-hour extension; backup satellite comms activated if primary fails
T - 48h	Swiss Facilitator	Confirm Swiss escrow account ready for T+0 humanitarian tranche; dual-key HSM tested	Escrow pre-positioning certificate issued; HSM transaction simulation successful	Qatar liquidity backup activated within 12 hours
T - 36h	IAEA Director General	Confirm inspector team deployment schedule; transit visas secured; equipment customs-cleared	Inspector manifest logged; equipment list confirmed; visa copies on file	Political Will Preservation Clause available (Article 1.1) - 7-day extension if visa delays verified
T - 24h	Both Parties	Deposit Instruments of Acceptance with Joint Secretariat (Muscat) under simultaneous deposit protocol	Simultaneous deposit logged; Dashboard timestamped to the second; both parties receive confirmation	Critical: If not simultaneous, both deposits held in escrow. Neither party may unilaterally activate. 4-hour consultation window opens.
T - 12h	Joint Secretariat	Publish final activation notice; all parties confirm readiness status	Dashboard: all nodes GREEN; readiness checklist 100% complete	Any RED node triggers 6-hour remediation or 24-hour delay by mutual consent
T=0	Joint Secretariat	Declare Accord activated; 72-hour ceasefire auto-starts; Phase I clock begins; Dashboard notifies all parties simultaneously	Timestamped activation certificate; all nodes receive simultaneous notification	Activation is irrevocable once both Instruments deposited. Clock runs regardless.

CRITICAL PATH -- T=0

At T=0, three events auto-trigger: (1) the 72-hour ceasefire becomes formally binding; (2) Iran's freeze on HEU movement and enrichment above 60% takes legal effect; (3) the 14-day HEU consolidation clock begins. The \$250M humanitarian tranche release and 5th Fleet stand-off posture are **not** automatic at T=0 -- they are synchronized to T+0 declarations and IAEA confirmation, respectively (Article 1.4).

Section 2: Phase I -- Foundation (Days 1-14)

Phase I establishes the baseline verification architecture. Every commitment in this phase is a prerequisite for Day 7 certification. Nothing in Phase II can activate until the Joint Review Board issues its Day 6 certification. The sequencing is intentionally front-loaded: verification first, reciprocal motion second.

PHASE I PHILOSOPHY

Telemetry-First Diplomacy: Every commitment must be expressible as a sensor reading, a data feed, a physical lock confirmation, or a financial transaction record. If it cannot be verified by a neutral machine, it does not belong in the operational text. (Accord Preamble, Three Immutable Principles)

Day 1 (T+0 to T+24h UTC) -- Hour-by-Hour

Time	Actor	Action	Verification	Fallback
T+0	Iran	Declare freeze on HEU movement and enrichment above 60% through diplomatic note to Joint Secretariat; transmit copy to IAEA	OLEM data confirms halt; IAEA issues receipt confirmation within 2 hours	4-hour consultation via JIG if declaration not received; Political Will Preservation Clause available
T+0	United States	Release \$250M humanitarian tranche to Swiss escrow; issue OFAC general license (90 days); declare sanctions designation freeze	Swiss Dashboard confirms escrow deposit within 1 hour; OFAC publishes license; Dashboard logs all three	4-hour consultation if any element missing; tranche release is non-reversible once confirmed
T+0	Both Parties	Activate 24/7 liaison offices (Muscat, Bern, Tehran, Washington, Vienna); designate duty officers	Dashboard confirms each office online within 30 minutes; duty officer names logged	2-hour grace period for technical activation; backup comms protocol if primary fails
T+2h	IAEA	Confirm receipt of Iranian freeze declaration and US escrow deposit; issue combined status report	Dashboard status update: NUCLEAR -- GREEN; ECONOMIC -- GREEN	Status AMBER if either element delayed beyond T+4h
T+4h	5th Fleet / CENTCOM	Transition to pre-stand-off posture: reduce patrols within 8nm of Iranian territorial waters (preparation for full stand-off upon IAEA confirmation)	AIS data; Omani naval observer confirmation	Posture transition is preparatory, not final. Full stand-off requires IAEA confirmation.
T+12h	IAEA Inspector Team	Arrive at declared HEU facility; begin physical inventory under Iranian technician supervision; dual-lock system installation commences	IAEA on-site confirmation photo-timestamped; Dashboard log; Iranian technician presence confirmed	Political Will Preservation Clause: 7-day extension if inspector transit delayed. No foreign military personnel permitted.

T+18h	IAEA	Begin mass spectrometry sampling of HEU stockpile; tamper-evident seal application starts	Spectrometry log initiated; seal serial numbers logged in Dashboard	Technical consultation if equipment calibration issues arise
T+24h	IAEA	Inventory Phase 1 complete; mass spectrometry confirms isotopic composition; interim report issued	IAEA interim report published on Dashboard; isotopic data logged	Extension through JIG if inventory scope exceeds estimate

Day 3 (T+48h) -- Consolidation Checkpoint

Time	Actor	Action	Verification	Fallback
T+48h	IAEA	Complete initial inventory; mass spectrometry sampling underway; dual-lock seal count reported	IAEA Interim Report #1; seal count; spectrometry progress percentage	7-day extension request through JIG if inventory scope exceeds 400kg estimate by >10%
T+48h	United States	5th Fleet full stand-off posture triggered (5nm from Iranian 12nm baseline) -- contingent upon IAEA confirmation that HEU consolidation has begun	AIS data confirms vessel positions; Omani naval observer confirmation; Dashboard: MARITIME - GREEN	Stand-off is conditional, not automatic. If IAEA does not confirm consolidation begun, posture holds at 8nm preparatory stance.
T+48h	IRGC Navy	Transition to agreed stand-off distances: 5nm from CTC outer edge (expanded from initial 3nm baseline learning posture)	Omani naval observer confirmation; satellite imagery; AIS correlation	Technical consultation if vessel positioning disputed; JHTA Maritime Operations Cell adjudicates within 4 hours

ARTICLE 1.4 -- SYNCHRONIZED US COMMITMENT TRIGGER

The 5th Fleet stand-off posture is triggered **only upon IAEA confirmation that HEU consolidation has begun**, not upon Accord activation alone. This is the critical sequencing link: the US military posture responds to verified Iranian nuclear action, not to the political signature. The Joint Review Board will verify this link on Day 6.

Day 6 (Pre-Day 7 Certification) -- The Gate

Day 6 is the most consequential single day of Phase I. The Joint Review Board (Swiss facilitator, Omani mediator, IAEA representative) must certify that all prerequisite milestones are met before either the Hormuz Opening Declaration or the Naval Blockade Lift Declaration can be recommended.

Time	Actor	Action	Verification	Fallback
------	-------	--------	--------------	----------

D6 00:00	Joint Review Board	Convene in Bern (or secure video if travel impossible); begin milestone verification review	Board quorum confirmed: Swiss Chair, Omani mediator, IAEA rep; Dashboard logs convening	Board cannot convene without all three members. If one unavailable, 24-hour delay or designated alternate.
D6 06:00	Joint Review Board	Verify Iranian milestones: (a) HEU consolidation begun -- IAEA confirmed; (b) IRGC at 5nm stand-off; (c) Pathway A custody active; (d) OLEM confirms enrichment freeze above 60%	Each milestone checked against Dashboard data; IAEA on-site reports; Omani naval observer logs	Any single milestone fails: Board issues deficiency notice. 24-hour remediation window opens.
D6 12:00	Joint Review Board	Verify US milestones: (a) \$250M tranche released -- Swiss confirmed; (b) OFAC general license issued; (c) 5th Fleet at stand-off posture; (d) new sanctions designation freeze in effect	Escrow confirmation; OFAC publication; AIS data; Dashboard review	Any single milestone fails: same remediation window. Both parties must pass independently.
D6 18:00	Joint Review Board	Draft certification recommendation: CERTIFY (all milestones met) or HOLD (deficiencies identified)	Draft shared with both parties simultaneously; 6-hour response window	Either party may request technical clarification; Board has 12 hours to respond
D6 23:59	Joint Review Board	Issue final certification to both parties; publish on Dashboard	Certification (or deficiency notice) timestamped and published; both parties receive simultaneous notification	If certification not issued by midnight, both declarations postponed to D7+24h; remediation continues

DAY 6 CERTIFICATION -- THE NON-AUTOMATED GATE

Neither the Hormuz Opening Declaration nor the Naval Blockade Lift Declaration is automatic. The Board certifies whether milestones are met; each party then retains operational discretion over its forces. Either party may decline to execute its declaration even after Board certification. However, the agreed 5nm stand-off distances remain in effect regardless of declaration timing (Article 6.2).

Day 7 -- The Synchronized Dual Execution (The 60-Second Window)

Day 7 is the moment the dual-blockade impasse dissolves. If the Joint Review Board has issued certification, both declarations execute within the same 60-second window. This eliminates the sequencing trap entirely -- neither side moves first.

Time	Actor	Action	Verification	Fallback
D7 00:00	Joint Review Board	Confirm certification status; if CERTIFY, transmit execution authorization to both parties simultaneously	Authorization token transmitted to both capitals within 1 second; Dashboard logs exact timestamp	If HOLD status: declarations postponed. Stand-off distances continue. No penalty for postponement.
D7 00:00 + 60s	Iran	Issue Hormuz Opening Declaration; IRGC transmit stand-down orders to all PGSA transit stations; activate dual-branded permit system	Dashboard logs exact timestamp of declaration; stand-down order transmission confirmed; permit system goes live	Auto-void if declaration not issued within 60-second window of US declaration
D7 00:00 + 60s	United States	Issue Naval Blockade Lift Declaration; 5th Fleet transmit stand-down orders; suspend interdiction operations	Dashboard logs exact timestamp; AIS confirms vessel course changes; Omani naval observer confirms	Auto-void if declaration not issued within 60-second window of Iranian declaration
D7 00:15	JHTA Maritime Operations Cell	First JHTA-AUTHORIZED vessel commences transit through Hormuz Transit Zone	Lloyd's List tracking; AIS Global confirms; JHTA Dashboard logs transit authorization	If first transit delayed beyond 2 hours, JHTA Chair consults both parties; technical remediation only
D7 00:30	Both Parties	Activate Concurrent Airspace Stand-Down: Zone Alpha (Strait Corridor), Zone Beta (Coastal Buffer), Zone Gamma (Deep Airspace)	Air traffic control handshakes confirmed; military radar mode changes logged; JHTA Airspace Coordination Cell online	Airspace violations without hostile intent: 72-hour technical consultation window, not automatic step-back
D7 06:00	Both Parties	Issue first 6-hour compliance reports: maritime posture, nuclear status, airspace activity	Dashboard publishes both reports simultaneously	Non-submission logged but does not trigger step-back during 24-hour bright-line period
D7 12:00	JHTA Chair	Certify Day 7 protocol complete; publish transition to standard ROE	JHTA certification published; heightened monitoring transitions to standard compliance cycle	--

THE 24-HOUR BRIGHT-LINE PERIOD (D7 00:00 TO D7 24:00)

The 24 hours following Day-7 execution constitute a **heightened monitoring window**. Any deviation constitutes a protocol violation regardless of intent. Category A violations (vessels within 3nm of exclusion

zones, kinetic action, failure to issue declarations) trigger bilateral suspension: both blockades reactivate, and neither party benefits from the other's compliance during its own non-compliance.

Day 7 -- Iranian Milestone Prerequisites (Article 6.3)

1. **HEU consolidation begun** -- IAEA confirmed, Dashboard logged
2. **IRGC forces at agreed stand-off distances** -- 5nm from CTC outer edge, Omani observer confirmed
3. **Pathway A (or certified Pathway B) custody activated** -- dual-lock seals applied, IAEA certificate issued
4. **Freeze on enrichment above 60% verified by OLEM** -- continuous monitoring confirms no diversion

Day 7 -- US Milestone Prerequisites (Article 6.3)

1. **\$250M humanitarian tranche released via Swiss escrow** -- Swiss Dashboard confirmed
2. **OFAC general license issued** -- published in Federal Register, 90-day duration
3. **5th Fleet transitioned to stand-off posture** -- AIS data confirms 5nm from Iranian 12nm baseline
4. **Freeze on new nuclear-related sanctions designations in effect** -- OFAC confirms no new designations

Day 14 -- Phase I Completion Checkpoint

Time	Actor	Action	Verification	Fallback
D14 00:00	Iran	Complete HEU consolidation; dual-lock custody fully activated (Pathway A default); all 400kg under seal	IAEA custody certificate issued; seal inventory complete; Dashboard: NUCLEAR -- Phase I COMPLETE	7-day extension available via Political Will Preservation Clause (Article 1.1). Not a material breach.
D14 00:00	United States	Tranche 1 asset release: 25% of remaining frozen assets; civilian aircraft parts licenses; agricultural goods authorization	Swiss escrow confirmation; OFAC license publication; Dashboard: ECONOMIC -- Tranche 1 COMPLETE	Tied to IAEA verification of HEU custody. If IAEA has not certified, Tranche 1 holds.
D14 12:00	JIG	Publish Phase I interim assessment; certify compliance baseline for Phase II entry	JIG interim report on Dashboard; compliance scorecard published	If Tier 3 violations detected, Phase II entry delayed pending remediation

Section 3: Phase II -- Consolidation (Days 15-44)

Phase II deepens verification and begins the transition from crisis management to sustainable compliance. Rotor removal, Black-Box sensor deployment, and the HEU disposition pathway selection process dominate this phase. The compliance clock for Performance-Based Graduation starts on Day 15.

PHASE II -- CONSOLIDATION: DAYS 15-44

Day	Actor	Action	Verification	Fallback
15	Iran	Rotor removal begins at mothballed facilities (Natanz, Isfahan) under IAEA supervision; sealed in tamper-evident containers	IAEA serial-numbered inventory; container seal photos; Dashboard logs removal count	Technical consultation if rotor count exceeds inventory estimate; 72-hour safety extension available
15	JIG	Compliance clock for Performance-Based Graduation starts; 90-day count begins	Dashboard: COMPLIANCE CLOCK -- Day 1 of 90	Clock resets to 30 days (not zero) for single Tier 2 violation under 7 days. Clock resets to zero for second Tier 2 or any Tier 3.
21	IAEA / Iran	First Black-Box sensors installed at highest-risk facilities designated by joint IAEA-JIG assessment	Encrypted data feed confirmed operational; Vienna node receiving; Geneva backup confirmed	Level 1 alert if installation delayed beyond Day 24; technical consultation, not penalty
21	JHTA / Lloyd's	\$20 billion reinsurance backstop activated upon JHTA certification of 200 authorized transits	JHTA transit count certificate; Lloyd's underwrite confirmation; DFC \$10B + Omani SWF \$5B logged	Backstop activation is conditional on transit volume, not calendar date
30	IAEA	Publish 30-day continuous compliance report; confirm 60% enrichment freeze verified continuous; HEU custody integrity confirmed	IAEA 30-day report on Dashboard; OLEM data: no diversion detected; seal integrity: 100%	If Tier 3 violation detected: step-back consultation within 72 hours
30	Iran / US	HEU disposition pathway selection discussion opens in dedicated nuclear negotiating track	JIG convenes pathway selection session; both parties submit preliminary positions	If either party declines to participate: Day 45 Circuit Breaker prepares to activate (Article 1.6)
30	United States	Expanded civilian trade licenses: agricultural exports expedited; medical isotope cooperation authorized	OFAC license confirmation; trade volume benchmarks published	Licenses are revocable if nuclear compliance falters

44	Iran	Rotor storage complete; sealed containers transferred to UN-monitored facility within Iran; IAEA continuous access established	IAEA mothball completion certificate; UN facility access log; Dashboard: MOTHBALL -- COMPLETE	7-day extension if transfer logistics exceed capacity
44	United States	Tranche 2 asset release: 25% of remaining frozen assets; petrochemical export licenses; metals trade authorization	Swiss escrow confirmation; OFAC license publication	Tied to IAEA mothball completion certificate

ARTICLE 1.6 -- DAY 45 CIRCUIT BREAKER (OPERATIVE)

If the HEU disposition pathway selection process has not produced mutual agreement by Day 45, the JIG shall certify pathway deadlock. Upon certification, **Pathway A (in-Iran downblending to medical-grade LEU at Esfahan) becomes the automatic default.** Pathway A activation is not a breach. It is not a collapse. It is an automatic continuation that keeps the verification architecture intact while negotiations continue. The material stays in Iran. The IAEA retains custody verification. Breakout time remains extended. Both parties retain full Phase II negotiating positions.

PERFORMANCE-BASED GRADUATION -- COMPLIANCE CLOCK RULES (ARTICLE 7.1)

- **90 consecutive days** of IAEA-verified compliance required (no Tier 3 violations; max one Tier 2 violation under 7 days)
- **Single Tier 2 violation (<7 days):** Clock resets to 30 days (not zero) from remediation date
- **Second Tier 2 violation:** Clock resets to zero
- **Any Tier 3 violation:** Clock resets to zero
- Upon JIG certification: sanctions freeze **automatically expands** to cover all nuclear-related sanctions. Non-nuclear sanctions (terrorism, human rights, conventional weapons) reviewed separately for Phase II.

Section 4: Phase III -- Normalization (Days 45-120)

Phase III transitions from crisis stabilization to sustainable architecture. The Day 45 Circuit Breaker resolves the disposition deadlock automatically if negotiations have not converged. SWIFT reconnection, civilian enrichment normalization, and JHTA full operational status mark this phase. The Rolling Horizon Architecture (Article 17) governs continuation beyond Day 120.

PHASE III -- NORMALIZATION: DAYS 45-120

Day	Actor	Action	Verification	Fallback
45	JIG	If no HEU disposition pathway agreed: certify deadlock; Pathway A becomes default; downblending order issued	JIG majority vote certification; Dashboard publishes deadlock notice and Pathway A activation order	Not a breach (Article 1.6). Both parties retain full Phase II negotiating positions. Material stays in Iran.
45-52	Iran / IAEA	If deadlock certified: commence Pathway A downblending to medical-grade LEU at Esfahan within 7 days	IAEA on-site confirmation of downblending commencement; spectrometry confirms LEU output	Step-back on non-humanitarian assets if downblending not commenced within 7 days
45-52	Joint Disposition Fund	If Pathway A activated: \$50 million disbursed to Iranian Civilian Reconstruction Fund upon verified downblending completion	Swescrow sub-account disbursement confirmed; IAEA completion verification	If Pathway B, C, or E selected instead: \$100M disbursement upon verified completion
60	Iran	Civilian transition enrichment confirmed at 3.67% ceiling; all higher centrifuges under IAEA seal; Natanz sole operational site	OLEM confirms enrichment ceiling; seal integrity verified; Dashboard: ENRICHMENT -- NORMALIZED	Tier 2 step-back if ceiling exceeded; 72-hour remediation window
60	United States	SWIFT Phase 2 activated: all clean-record Iranian banks reconnected; Tranche 3 asset release (20%)	SWIFT confirms connections; Iranian bank test transactions successful; Swiss escrow confirmation	SWIFT reconnection conditional on 60-day clean compliance record
60	Both Parties	Fordow Joint Venture decision: convert to Global Medical Isotope Production Center or reduced-capacity research facility	Mutual agreement documented; TCC consortium notified if conversion proceeds	Fordow decision deferred to Phase II if no mutual agreement by Day 60
90	JIG	Publish first comprehensive compliance assessment; evaluate Performance-Based Graduation eligibility	90-day Dashboard report; compliance scorecard; JIG certification vote	If graduation denied: compliance clock continues; no penalty for non-graduation

90	Both Parties	If Performance-Based Graduation certified: sanctions freeze expands to all nuclear-related sanctions; non-nuclear sanctions reviewed separately	JIG certification published; OFAC confirms expanded freeze scope; Dashboard updated	If compliance falters after graduation: step-back applies proportionately (Article 13)
120	JIG / IAEA	Continuous monitoring confirms no diversion; JHTA fully operational; Phase I certification complete	IAEA 120-day comprehensive report; JHTA Council confirmation; Dashboard: PHASE I -- COMPLETE	Phase II negotiations begin regardless of Phase I assessment outcome

ROLLING HORIZON ARCHITECTURE -- PHASE I CONTINUATION (ARTICLE 17)

Phase I does not expire on Day 120. The Rolling Horizon Architecture provides conditional auto-renewal: if both parties remain in compliance, Phase I continues indefinitely on a 90-day review cycle. Either party may withdraw with 90 days' notice for Phase I commitments. Funds already released from escrow prior to a Formal Non-Renewal Notice are **not subject to return, clawback, or rescission** under any circumstances (Article 17.4). The "No Cliff" principle ensures humanitarian protections and the Survival Core survive for 180 days after withdrawal.

Section 5: Crisis Response Choreography

This section provides minute-by-minute response protocols for the five most likely crisis scenarios during Phase I. Each protocol is designed to contain escalation, preserve the core agreement, and return to compliance baseline within 72 hours.

LEGAL BASIS

Article 13 (Human-in-the-Loop Governance & Step-Back); Article 16 (US-Israel Bilateral Coordination); Article 18 (No Automatic Military Escalation); Appendix E (Lebanon and Levant Front Stabilization Protocol); Media Blackout Protocol (v4.0).

5.1 HEU Custody Anomaly (Black-Box Level 3-4 Alert)

Timeframe	Actor	Action	Verification
0-15 min	Black-Box Sensor / IAEA	Automatic alert generated; IAEA Vienna node receives; Geneva backup confirms	Alert timestamped; sensor ID logged; severity level auto-classified
15-60 min	IAEA Inspector Team	On-site response: physical inspection of affected facility; seal integrity check	Inspector on-site photo-log; seal check results; Dashboard RED ALERT published
1-4h	IAEA + JIG Technical	Technical assessment: Level 1-2 (maintenance/technical review) or Level 3-4 (compliance/breach indicator)	Classification report; Level 4 triggers enhanced inspection within 72 hours
4-24h	JIG (Level 3)	Enhanced inspection authorized; 72-hour compliance review window; both parties consulted	Enhanced inspection report; JIG consultation minutes logged
24-72h	JIG (Level 4 confirmed)	Tier 2 step-back consideration: non-humanitarian asset releases paused; enhanced monitoring activated	JIG step-back vote; Dashboard publishes step-back scope; 30-day remediation window opens

BLACK-BOX ALERT SEVERITY CLASSIFICATION

- Level 1 (Informational):** Sensor maintenance, scheduled downtime, minor data transmission interruption. No action required.
- Level 2 (Technical Review):** Unscheduled downtime under 4 hours, single anomalous reading without pattern. JIG technical review within 7 days.
- Level 3 (Compliance Review):** Unscheduled downtime over 4 hours, pattern of anomalous readings. IAEA enhanced inspection within 72 hours.
- Level 4 (Breach Indicator):** Evidence of tampering, deliberate disablement, or diversion. Tier 2 step-back consideration.

Only Level 4 triggers potential step-back. Levels 1-3 are managed through technical channels without penalty.

5.2 Hezbollah Attack (10+ Civilian Fatalities)

Timeframe	Actor	Action	Verification
0 - 2h	Both Parties	72-hour Media Blackout Protocol auto-invoked; all designated spokespeople stand down	Blackout confirmation from both capitals; Dashboard logs invocation
0 - 4h	Tel Aviv Channel	US-Israel bilateral consultation; factual situation report shared; Israeli position documented	Tel Aviv Channel comm log; situation report timestamped
4 - 24h	SEAC Lead	Attribution evidence collection: signal intelligence, forensic analysis, pattern correlation	SEAC preliminary assessment; evidence package secured
24 - 72h	JIG	Attribution vote: JIG majority (not UNSC unanimity) determines whether attack meets 10-casualty threshold for core Accord linkage	JIG vote result published; majority threshold documented
72h+	JIG	If direct Supreme Leader order confirmed: Tier 2 step-back on core Accord. If attribution ambiguous or non-state actor: Levant Regional Basket handles separately; core Accord protected by Dossier Isolation Firewall	Attribution conclusion documented; step-back scope (if any) published; firewall separation confirmed

5.3 Media Leak During Blackout

Timeframe	Actor	Action	Verification
0 - 1h	JIG Chair	Confirm leak source classification: junior official (Tier 1) or senior official / ministerial (Tier 2)	Source classification report; leak content analysis
1 - 4h	JIG	Tier 1 (junior): written warning to offending party; no financial penalty. Tier 2 (senior official): JIG considers 5% reduction in next tranche release for 30 days	Tier classification logged; penalty (if any) documented; offending party notified
4 - 72h	JIG	Tier 3 (deliberate ministerial leak): Tier 2 step-back consideration; leak investigation mandated	Step-back vote (if triggered); investigation mandate published
72h	Both Parties	Blackout lifts automatically unless JIG votes to extend by mutual consent	Dashboard: blackout status -- LIFTED

5.4 Legislative Delay on Phase II

Timeframe	Actor	Action	Verification
Day 120	Both Parties	Phase II Commitments require Senate advice and consent (US) and Majles legislation (Iran). 120-day legislative window opens.	Legislative clock starts; JIG logs domestic process commencement
Day 120 - 240	JIG	Automatic 120-day Phase I extension while legislative processes advance. Phase I commitments remain fully operative.	Dashboard: Phase I -- EXTENDED; legislative progress reports quarterly
Day 240	JIG	If either legislature delays beyond 120 days without substantive cause: JIG assesses obstruction under Appendix D.3-A	JIG obstruction assessment published; interim disbursement to non-delaying party authorized
Ongoing	Both Parties	Neither party may use legislative delay to terminate Phase I. Phase I continues regardless of Phase II legislative status.	Continuity confirmation published quarterly

5.5 Maritime Incident (Collision or Close-Quarters)

Timeframe	Actor	Action	Verification
0-15 min	JHTA Maritime Operations Cell	Incident alert; both parties notified simultaneously; collision coordinates logged	AIS data replay; incident report timestamped; both liaison officers alerted
15 min - 1h	Omani Navy	Neutral observer dispatched; stand-off distances verified for both parties	Omani observer on-scene report; distance measurement confirmed
1-4h	JHTA Chair	Technical investigation: fault determination; ROE review; no political linkage to nuclear track	Technical investigation report; firewall separation confirmed
4-24h	JHTA Council	If kinetic action occurred: 72-hour stand-down extension; enhanced monitoring; both parties consulted	Council resolution; monitoring enhancement order
24h+	JHTA Council	If deliberate hostile action confirmed: JIG consultation; step-back consideration limited to maritime track only (Modular Architecture)	JIG consultation log; modular isolation confirmed -- nuclear track unaffected

ARTICLE 18 -- NO AUTOMATIC MILITARY ESCALATION

At no point does any compliance dispute in this choreography authorize the use of military force. The No Automatic Military Escalation Clause (Article 18) explicitly decouples compliance penalties from use-of-

force authorization. Article 51 self-defense rights are preserved for both parties. Step-back is economic and diplomatic, never military. This is the foundation of the choreography's crisis containment architecture.

Section 6: Key Decision Points & Handoffs

This section identifies the six critical decision gates where a human judgment determines the path forward. Each decision point specifies who decides, what inputs they require, what outputs they produce, and the hard deadline.

Decision Point	Decision Maker	Inputs Required	Output	Deadline
Day 6 Certification	Joint Review Board (Swiss + Oman + IAEA)	Milestone confirmations from Iran (4), US (4), IAEA custody report, Omani naval observer logs, OLEM data	CERTIFY (both proceed) or HOLD (24h remediation)	Day 6, 23:59 UTC
Day 7 Simultaneous Execution	US President / Iranian Supreme Leader (operational discretion retained)	Board certification; liaison officer confirmation; military readiness status	Both declarations issued within 60s window, or both postponed	Day 7, 00:00-00:01 UTC
Day 45 Pathway Deadlock	JIG majority vote	Negotiation status reports from both parties; IAEA technical assessment of Pathway A readiness	DEADLOCK certified (Pathway A auto-default) or EXTENSION granted	Day 45, 23:59 UTC
Performance-Based Graduation	JIG certification vote	90-day compliance record; IAEA comprehensive report; Tier violation log; seal integrity data	GRADUATION (sanctions freeze expands) or CONTINUE (clock extends)	Day 90 assessment
Hezbollah Attribution	JIG majority vote	SEAC evidence package; Tel Aviv Channel input; casualty count verification; signal intelligence	DIRECT ORDER confirmed (Tier 2 step-back) or NON-STATE / AMBIGUOUS (Levant Basket only)	72 hours from incident
Rolling Horizon Renewal	JIG + IAEA joint assessment	Compliance data; 90-day review cycle data; both party renewal confirmations	AUTO-RENEWAL (continues) or STABILIZED HOLD (90-day notice period begins)	Day 150, 240, 330, etc.

DECISION AUTHORITY -- NO SINGLE-PARTY VETO ON CORE ARCHITECTURE

The Joint Review Board has three members (Swiss, Omani, IAEA). Routine operational decisions require three affirmative votes. Governance amendments require unanimous consent from Seats 1-3 (Iran, US, Oman). No amendment may pass over the simultaneous objection of both Iran and the United States. The JHTA Council has seven seats; the GCC Consultative Observer has speaking rights but no vote. The JIG certification votes operate on majority (not unanimity) to prevent deadlock.

Section 7: Verification Channels Matrix

Every commitment in the Accord has three verification layers: primary (real-time, automated), secondary (independent, human), and tertiary (fallback, archival). This matrix is the backbone of Telemetry-First Diplomacy.

Commitment	Primary Verification	Secondary Verification	Tertiary (Fallback)
HEU consolidation & custody	IAEA on-site inspectors; dual-lock seal digital logs; mass spectrometry	Black-Box sensor encrypted feed to Vienna/Geneva; seal photo archive	Satellite imagery (thermal/IR); independent spectroscopy audit
Enrichment freeze above 60%	OLEM (Online Enrichment Monitor) continuous data feed	IAEA unannounced inspections; environmental sampling	Seismic correlation; satellite thermal anomaly detection
IRGC naval stand-off distances	Omani naval observer real-time positioning reports	AIS (Automatic Identification System) vessel tracking data	Commercial satellite imagery; coalition radar logs
5th Fleet stand-off posture	AIS data from US naval vessels; Omani observer confirmation	Coalition partner vessel positioning reports	Commercial satellite SAR imagery
Escrow releases	Swiss Dashboard real-time transaction logging; dual-key HSM	Central Bank of Oman manual audit; quarterly reconciliation	IMF SDR transaction records; bilateral bank confirmation
Sanctions designation freeze	OFAC publication monitoring; automated designation watch	JIG quarterly sanctions review; Iranian financial institution reports	UN sanctions committee records; SWIFT message analysis
Hezbollah operational pause	UNIFIL patrol reports; southern Lebanon observation posts	Israeli intelligence assessments; LAF liaison officer reports	SEAC pattern analysis; signal intelligence correlation
JHTA transit authorization	JHTA AIS-AUTHORIZED beacon tracking; Lloyd's List correlation	Omani port authority transit logs; vessel documentation audit	Independent maritime traffic monitoring (MarineTraffic, etc.)
Rotor removal & mothball	IAEA serial-numbered inventory; tamper-evident container tracking	UN-monitored facility access logs; quarterly physical audit	Environmental sampling for UF6 traces; satellite imagery of facility status
Airspace stand-down	Military radar mode-change confirmation; ATC handoff records	JHTA Airspace Coordination Cell monitoring; civilian ATC correlation	Commercial ADS-B tracking; third-party air traffic monitoring
Black-Box sensor integrity	Encrypted data feed continuity; automatic anomaly detection	IAEA quarterly physical sensor inspection; cryptographic audit	Independent electromagnetic spectrum analysis; facility power consumption monitoring
Missile/drone deployment pause	Satellite imagery (SAR/optical) of launch site activity	Signal intelligence; HUMINT from regional partners	Open-source intelligence (OSINT) pattern analysis

Section 8: Pre-Cleared Public Scripts

These scripts are pre-cleared for immediate use by designated spokespeople. They are drawn from the Narrative Package v4.0 and synchronized to the choreography timeline. Each script has both a Washington frame and a Tehran frame. Use only the frame appropriate to your capital.

8.1 T=0 -- Accord Activation

Washington Frame:

"The United States has secured a verified freeze on Iran's weapons-grade uranium enrichment. Within 14 days, Iran's entire HEU stockpile will be under IAEA lock and key. This is not trust -- it is verification. The \$250 million humanitarian release demonstrates that American pressure produced concrete Iranian nuclear concessions before any sanctions relief reached Tehran."

Tehran Frame:

"The Islamic Republic has entered a time-limited stabilization framework that preserves our full sovereign rights. Iran's enriched uranium remains Iranian property under Iranian legal title. IAEA custody is a verification step, not surrender. The \$250 million release is humanitarian relief -- not a concession. We retain full negotiating positions for Phase II."

8.2 Day 7 -- Strait Opening

Washington Frame:

"The Strait of Hormuz is open to international commerce. The US naval blockade is lifted because Iran verifiably froze its enrichment and consolidated its HEU stockpile. Our military retains full operational discretion. The JHTA provides multilateral advisory coordination with a permanent American seat. This is the result of maximum pressure producing verifiable Iranian concessions."

Tehran Frame:

"The Persian Gulf Strait Authority remains the sole coastal enforcement authority. The JHTA is advisory and non-binding. Iran holds a permanent co-chair seat with veto power. The IRGC's territorial defense authority is explicitly preserved. The Strait is open because Iran chose to open it -- not because any blockade was imposed on us."

8.3 Day 45 -- Pathway A Default (if deadlock certified)

Washington Frame:

Iran receiving the \$100 million bonus available for more transparent pathways. The compliance architecture holds. Iran's enrichment remains frozen. Breakout time stays extended."

Tehran Frame:

"Pathway A is an Iranian choice, not a penalty. Downblending HEU to medical isotopes at Esfahan serves Iran's civilian nuclear program and global health objectives. The \$50 million Joint Disposition Fund disbursement is a welcome investment in our civilian infrastructure. The material stays in Iran. Our sovereignty is intact. Negotiations for Phase II continue on a basis of equality."

8.4 Day 90 -- Performance-Based Graduation

Washington Frame:

"Iran earned this expanded sanctions relief through 90 consecutive days of verified compliance -- not through promises, through performance. The partial sanctions freeze expands to cover all nuclear-related sanctions. This is a merit badge, not a gift. If Iran cheats afterward, we take it back through proportionate step-back."

Tehran Frame:

"The expanded sanctions relief recognizes Iran's consistent compliance with our commitments. The 90-day record demonstrates that Iran implements its obligations in good faith. The 30-day reset provision protected us from disproportionate penalties for minor technical issues. This is a performance-based system that treats Iran fairly."

8.5 Crisis -- Media Blackout Invocation

Both Capitals (simultaneous):

"Both parties have agreed to a temporary communications pause to prevent premature statements that could complicate ongoing technical consultations. We will resume public comment when the facts are established. No inference should be drawn from this pause."

Appendix: Quick Reference -- Who To Call

This appendix provides 24/7 contact protocols for every scenario a floor team or military commander might encounter at 3 AM. Response times are binding commitments under the choreography, not aspirational targets.

Issue	Primary Contact	Backup Contact	Response Time	Contact Method
HEU custody anomaly	IAEA Director General (Vienna)	JIG Chair (Muscat)	2 hours	Secure diplomatic line; IAEA emergency protocol; Dashboard RED ALERT function
Maritime incident / collision	JHTA Maritime Operations Cell (Muscat)	Omani Navy Operations Center	15 minutes	JHTA dedicated hotline; INMARSAT; AIS emergency broadcast
Attribution deliberation (Lebanon)	SEAC Lead (Bern)	Swiss Facilitator	4 hours	Secure video link; encrypted diplomatic cable
Escrow dispute / release failure	Swiss Facilitator (Bern)	Qatar Central Bank (liquidity backup)	6 hours	Swiss escrow secure portal; HSM override protocol
Black-Box sensor alert	IAEA Vienna Duty Officer	IAEA Geneva Backup Node	30 minutes	Automated alert system; IAEA emergency line
Media leak during blackout	JIG Chair (Muscat)	Joint Secretariat Duty Officer	1 hour	Secure diplomatic line; Dashboard leak report function
Airspace violation	JHTA Airspace Coordination Cell	Omani Air Force CIC	15 minutes	Military hotline; ATC emergency frequency
Senior official leak (Tier 2)	JIG Chair (Muscat)	Swiss Facilitator	4 hours	Secure diplomatic line; classified cable
Legislative delay obstruction	JIG Legal Committee Chair	Joint Secretariat	24 hours	Formal JIG session; legal opinion request
Rolling Horizon renewal question	JIG Chair (Muscat)	IAEA Director General	48 hours	JIG quarterly session; bilateral consultations
Joint Disposition Fund disbursement	Swiss Facilitator	Joint Secretariat (Muscat)	6 hours	Swescrow sub-account portal; IAEA verification receipt
Day 7 simultaneous execution failure	Joint Review Board Chair (Swiss)	JIG Chair (Muscat)	15 minutes	Emergency secure conference; all parties simultaneously

24/7 DUTY OFFICER ROTATION

All primary contacts maintain a 24/7 duty officer rotation during Phase I. The Joint Secretariat in Muscat serves as the permanent coordination hub. If the primary duty officer does not respond within the binding response time, the backup contact auto-activates. If both fail, the JIG Chair intervenes directly through foreign minister-level channels.

Document Change Log

Version	Date	Author	Changes
1.0	25 May 2026	Joint Secretariat, Muscat	Initial choreography document synchronized to The Final Steps Accord Phase I v4.0 operative text. Covers T-72h through Day 120, crisis response protocols, decision points, verification matrix, pre-cleared scripts, and 24/7 contact directory.

DOCUMENT GOVERNANCE

This choreography document is a living operational manual. Amendment requires unanimous JIG consent. Updates are distributed through the Joint Secretariat with 24-hour implementation unless otherwise specified. All parties shall maintain a current version at all liaison offices. Discrepancies between this choreography and the operative Accord text are resolved in favor of the Accord text.

BOTTOM LINE

This choreography document is **not a renegotiation** -- it is an **execution manual**. It assumes the Accord is signed and answers only: *what happens next, who does it, and how do we know it happened?*

It is:

- **Minute-by-minute** (for critical windows like Day 7)
- **Day-by-day** (for Phase I milestones)
- **Crisis-responsive** (for attribution, leaks, delays)
- **Verification-forward** (every action has a witness)

This is the document a floor team or military commander can use at 3 AM when something goes sideways. It is the difference between an agreement that lives in a drawer and an agreement that lives in motion.
