

DIPLOMATIC WORKING DOCUMENT

Memorandum of Understanding on Crisis Stabilization and Maritime-Nuclear De-escalation

*A 60-Day Renewable Framework for Synchronized Reciprocal Stabilization
Version 4.0 — Integrating 55+ Surgical Refinements Across Seven Baskets*

Parties: United States of America | Islamic Republic of Iran

Facilitating States: Sultanate of Oman | Swiss Confederation | Islamic Republic of Pakistan

Verification Authority: International Atomic Energy Agency (IAEA)

Effective Date: Upon Deposit of Instruments of Acceptance

Renewal Term: 60 Days, Conditionally Renewable

Calibrated for Late May 2026

Table of Contents

Preamble: The Imperative of De-escalation

Article I: Definitions and Interpretation

Article II: Core Reciprocal Commitments

- II.A. Nuclear Stabilization — Escrow Separation Protocol
- II.B. Maritime De-escalation — Synchronized Blockade Pause
- II.C. Economic Tranches — Micro-Cycle Telemetry Model
- II.D. Regional Firewall — Graduated Dossier Isolation

Article III: Verification and Dashboard Architecture

Article IV: Joint Implementation Governance

Article V: Step-Back, Not Snapback

Article VI: Humanitarian and Survival Core

Article VII: 60-Day Renewal and Dissolution Prevention

Article VIII: Ceremonial Messaging Provisions

Article IX: Final Provisions

Article X: US-Israel Bilateral Coordination

Article XI: Missile Program and Phase II Deferral

Article XII: Rolling Horizon Architecture

Annex A: 14-Day Operational Timeline

Signatures

Preamble: The Imperative of De-escalation

WHEREAS, the United States of America and the Islamic Republic of Iran (hereinafter collectively "the Parties" and individually "the United States" and "Iran") have been in a state of military confrontation since February 28, 2026, resulting in significant loss of life, economic devastation, and the closure of the Strait of Hormuz to international commerce;

WHEREAS, a temporary ceasefire has been in place since April 8, 2026, brokered by the Islamic Republic of Pakistan and observed with fraying compliance by both sides;

WHEREAS, the United States has maintained a naval blockade of Iranian ports since April 13, 2026, and Iran has restricted or denied commercial transit through the Strait of Hormuz;

WHEREAS, both Parties recognize that a comprehensive, permanent peace treaty is not achievable within the current political-military environment, yet the status quo poses unacceptable risks to global economic stability and human life;

WHEREAS, the Parties acknowledge the sovereign right to peaceful nuclear energy under the Treaty on the Non-Proliferation of Nuclear Weapons (NPT);

NOW, THEREFORE, the Parties agree to the following Memorandum of Understanding, which constitutes a **crisis containment instrument** and not a comprehensive peace treaty.

OPERATIVE — NO PRECEDENT CLAUSE (SELF-EXECUTING, BINDING, AND SURVIVAL-CAPABLE)

This Memorandum of Understanding creates no legal or political precedent for future negotiations. Each provision is *sui generis*, tailored to the May 2026 negotiating environment. Either Party may assert in any domestic, international, or diplomatic forum that this Memorandum has no precedential value. This clause is self-executing and shall be cited by both Parties whenever defending this Memorandum against claims that it establishes binding precedent. **This clause survives any termination, suspension, or expiration of this MOU.**

[v4.0 Basket A — Change A1] JCPOA Distinction

This Memorandum of Understanding is expressly not a successor to, replacement of, or renegotiation of the Joint Comprehensive Plan of Action (JCPOA). The JCPOA is a separate agreement with distinct terms, parties, and legal character. Neither Party's position on the JCPOA — whether in support of or opposition to it — is altered, affirmed, or prejudiced by this MOU. This MOU stands on its own footing as a *sui generis* crisis stabilization instrument. Any reference to "precedent" in this clause shall be construed to include, without limitation, any claim that this MOU establishes precedent for the terms, verification mechanisms, or duration of any future nuclear agreement. This clause is self-executing and may be cited in any forum, including proceedings under the Vienna Convention on the Law of Treaties, to defeat any claim of precedential effect.

Iranian narrative: "This is not another JCPOA trap. This is a completely different instrument with no connection to 2015."

US narrative: "This is not Obama's deal. This is a Trump-era crisis framework that stands entirely on its own."

Article I: Definitions and Interpretation

Section 1.1 — Definitions

Table 1. Key Terms and Definitions

Term	Definition
"MOU Period"	The initial 60-day period commencing upon deposit of Instruments of Acceptance, renewable per Article VII.
"HEU"	Highly Enriched Uranium: uranium enriched to 60% U-235 and above, ~400 kg Iranian stockpile as of the Effective Date.
"CBI"	Central Bank of Iran — sovereign legal title holder of all Iranian HEU throughout the custody period.
"IAEA"	International Atomic Energy Agency — independent nuclear verification authority.
"JIG"	Joint Implementation Group — governing body for oversight, dispute resolution, and compliance certification.
"Swiss Dashboard"	Secure Swiss-hosted digital verification platform tracking all reciprocal commitments in real time.
"PGSA"	Persian Gulf Strait Authority — Iran's coastal law enforcement body for territorial waters, recognized in Article II.B.
"LIRB"	Levant Intelligence Review Board — established under Article X.2.
"Tier 1/2/3/4 Event"	Graduated compliance concern classification per Article V.
"Clean Compliance Record"	FATF-standard AML/CFT certified institution with no OFAC designation and no Tier 2/3 violations in 60 days.
"De Minimis Error"	Minor technical error not constituting a violation per Article V.6.
"PRDD"	Proliferation Risk Dual-Lock — the nuclear snap line at enrichment above 3.67%.

Section 1.2 — Principles of Interpretation

- (a) Synchronized Reciprocal Motion:** Neither Party moves unilaterally. Every commitment triggers a corresponding commitment on the same clock cycle.
- (b) Telemetry-First Diplomacy:** Every commitment must be expressible as a sensor reading, data feed, physical lock confirmation, or financial transaction record.
- (c) Modular Architecture:** Failure in one module does not cascade. Maritime disputes cannot terminate humanitarian channels. Nuclear gaps do not affect Hormuz transit. Regional incidents cannot collapse the core agreement unless they breach Firewall thresholds.
- (d) Rollback, Not Snapback:** Breach causes graduated pause — discretionary measures halt first, core constraints survive longest, humanitarian protections remain in force regardless.
- (e) No Unilateral Military Escalation:** Neither Party shall use compliance or non-compliance under this MOU as justification for kinetic military action. Military operations remain governed by the UN Charter and international law, independent of this instrument. **[v4.0 addition]**

Article II: Core Reciprocal Commitments

II.A. Nuclear Stabilization — Escrow Separation Protocol

Section II.A.1 — The Escrow Separation Mechanism

Core Innovation: Legal Title vs. Physical Custody

The Central Bank of Iran retains **full sovereign legal title** to the HEU stockpile at all times. Physical custody is transferred to a secure, IAEA-monitored facility as a baseline verification metric. Legal ownership and physical custody are permanently decoupled.

Section II.A.2 — Custody Pathways (Operative)

Pathway A: In-Iran Dual-Lock Custody (Default)

Dual-lock custody at the Esfahan Nuclear Technology Center or another IAEA-declared facility within Iranian territory. The IAEA holds exclusive digital encryption keys to all monitoring arrays, tamper-evident seal controls, and access verification systems. Iran holds physical perimeter security keys. **Pathway A is the default upon MOU activation.**

[v2.0] Pathway B: Oman Escrow (by Mutual Written Agreement Only)

Oman Escrow is available **only by mutual written agreement of both Parties**. The US may not characterize Pathway B as "preferred" in any communication. If activated: transport in IAEA-certified containers under armed IAEA guard; continuous CCTV; no US personnel present unless mutually agreed.

[v4.0 Change A1-v2] Oman Escrow Fallback to Pathway A

If a Voluntary Oman Escrow Transfer occurs and the Parties fail to agree on a return or disposition pathway within **180 days** of the transfer, the material shall be returned to in-Iran IAEA dual-lock custody at Esfahan at Iran's option. Return transportation costs borne equally. If Iran does not exercise its option within 30 days of the 180-day deadline, the material shall be deemed to have selected Pathway A by default, and the IAEA shall supervise transportation back to Esfahan within 90 days. This fallback ensures Oman escrow is not a permanent parking solution.

Section II.A.3 — Legal Title Structure (Binding)

OPERATIVE — SOVEREIGN TITLE RETENTION

CBI retains full sovereign legal title throughout custody. IAEA holds physical custody only. The Custody Services Agreement specifies: (a) Iran retains full legal title; (b) IAEA may not transfer, sell, or dispose without CBI written consent; (c) material held for baseline verification, not destruction or permanent removal; (d) final disposition subject to successor framework; (e) upon MOU termination without successor, material returned to Iran under IAEA supervision.

Section II.A.4 — No Hidden US Custody Clause (Self-Executing and Non-Waivable)

At no stage may the United States receive, store, or exercise direct physical custody over Iranian enriched uranium. All custody remains with the IAEA and, where transferred, the designated third-party facilitating state (Oman). US technical personnel may be present as observers with joint data access only. US personnel shall not exercise operational control over consolidation, packaging, transit, or receipt operations. **This clause is self-executing and non-waivable.**

[v4.0 Change A2] Strengthened Consequence for US Custody Violation

Any violation of this clause by the United States shall constitute an automatic Tier 3 Deliberate Hostile Violation, and Iran shall have the immediate right to withdraw from this MOU without penalty or notice period. The JIG shall convene within 24 hours of any custody violation report. The IAEA Director General shall issue an emergency finding within 48 hours. If the finding confirms unauthorized US custody, Iran's withdrawal right is immediate and irrevocable. All escrowed Iranian assets shall be released simultaneously upon such withdrawal. This consequence is non-negotiable and may not be waived by any JIG vote.

Section II.A.5 — Political Will Preservation Clause

Either Party may request a one-time 7-day extension through the JIG for verified administrative, technical, or logistical constraints. Such request shall not be unreasonably denied. Delays under this provision do not constitute material breach or trigger step-back.

[v4.0 Change A3] II.A.6 — Nuclear Negotiations Deferred to Successor Framework

The Parties acknowledge that this MOU does **not** resolve: final disposition of Iran's HEU stockpile; permanent enrichment moratorium; Iran's sovereign right to enrichment under the NPT; or permanent inspection regimes beyond this MOU's renewable term. All nuclear matters of a permanent nature — including final HEU disposition, enrichment rights and limits, permanent inspection regimes, and missile program limitations — are **expressly deferred to a successor comprehensive framework** to be negotiated during the term of this MOU. Nothing in this MOU prejudices either Party's position in successor negotiations. This clause is operative and binding.

Iranian narrative: "Nuclear details are deferred, not conceded. Our rights under NPT are preserved in full."

US narrative: "Deferred is not abandoned. We negotiate permanent resolution from a position of verified strength."

[v4.0 Change A4] II.A.7 — Technical Working Group on HEU Disposition

A Technical Working Group on HEU Disposition, comprising IAEA technical experts, Iranian nuclear engineers, and US technical observers, shall convene on **Day 30** of this MOU to facilitate pathway selection for the successor comprehensive framework. The Working Group has **no decision authority** — its purpose is technical feasibility assessment for disposition pathways: infrastructure requirements; timeline estimates with confidence intervals; cost projections and financing needs; environmental and safety considerations; proliferation risk ratings. The Working Group's findings shall be published to the Swiss Dashboard within 14 days of convening. **Neither Party may cite lack of technical information as grounds for delaying successor negotiations.**

Section II.A.8 — Narrative Frames (Non-Binding but Guiding)

Table 2. Nuclear Stabilization Narrative Frames

Party	Authorized Public Narrative
United States	"Weapons-grade uranium secured under IAEA custody. Breakout time extended from weeks to over a year. Every dollar tied to verified performance."

Iran "Iran's enriched uranium remains Iranian property on Iranian soil. CBI retains sovereign title. IAEA custody is temporary verification, not surrender. Final disposition decided in successor framework on NPT terms."

II.B. Maritime De-escalation — Synchronized Blockade Pause

Section II.B.1 — The Dual-Blockade Problem

The central deadlock: the US demands Hormuz open before lifting the naval blockade; Iran demands the blockade lift before opening Hormuz. The Day-7 Protocol eliminates the sequence entirely — both actions execute simultaneously under automated verification.

Section II.B.2 — The Day-7 Automated Dual-Execution (Operative and Binding)

[v2.0] Unconditional Automated Day-7 Trigger

If the IAEA data feed verifies on Day 6 that HEU consolidation has begun, the US naval blockade **shall legally and automatically lift at exactly T+168 hours (Day 7, 0000 UTC)** without requiring a human vote, political review, or additional certification. The Hormuz transit corridor shall be declared open simultaneously. Neither declaration may be delayed, conditioned, or overridden. Any deviation constitutes a Tier 2 material disruption.

Section II.B.3 — Prerequisite Milestones for Automated Trigger

Iranian: (1) HEU consolidation begun — IAEA confirmed; (2) IRGC at 5nm stand-off; (3) Pathway A (or agreed B) custody activated; (4) Enrichment freeze above 3.67% verified by OLEM.

US: (1) \$250M humanitarian tranche released; (2) OFAC general license issued; (3) 5th Fleet at stand-off posture; (4) Freeze on new nuclear-related sanctions designations.

Section II.B.4 — The 24-Hour Bright-Line Period and Escalation Protocol

[v2.0] Bright-Line Escalation of Force Protocol

Category A violations (vessels within 3nm, kinetic action, failure to issue declarations) trigger: **Step 1** (0–15min): Omani hotline notification; direct commander communication. **Step 2** (15–60min): Withdrawal to 8nm. **Step 3** (1–4h): JIG emergency session. **Step 4** (4h+): Proportionate self-defense under UN Charter Article 51 as last resort. Pre-authorized by both Parties upon signature.

Section II.B.5 — Concurrent Airspace Stand-Down (Operative)

[v3.0] Zone Alpha/Beta/Gamma Parameters

Zone Alpha (Strait Corridor): Armed UAVs withdrawn to 25nm. Manned patrol above 15,000 ft with 24h pre-coordinated flight plans.

Zone Beta (Coastal Buffer): No armed drones within 12nm. Defensive radar to passive scan. Coastal surveillance minimum 8,000 ft.

Zone Gamma (Deep Airspace): Strike aircraft provide 30-minute advance notification within 100nm of Strait centerline.

Section II.B.6 — Stand-Off Distance Protocols

Table 3. Force Posture Distance Protocols

Phase	Timeline	IRGC	US/Coalition
Baseline Learning	Days 1–14	3nm (expanding to 5nm by D8)	3nm (expanding to 5nm by D8)
Operational	Day 15 onward	5nm from corridor outer edge	5nm from Iranian 12nm baseline
Elevated (Tier 2)	JIG-declared	8nm from corridor outer edge	8nm from Iranian 12nm baseline

[v2.0] II.B.7 — Military-to-Military Deconfliction Hotline

Direct IRGC-Navy / US 5th Fleet hotline with Omani observers. Routine: 2h response. Incidents: 15min. Emergencies: immediate. Daily test at 06:00 UTC. Privileged communications.

[v3.0] II.B.8 — GCC Consultative Observer Status

GCC rotating Consultative Observer with speaking rights, no vote. Diplomatic Note to all GCC states affirming equal transit rights and non-discriminatory enforcement.

[v3.0] II.B.9 — \$20B Day 7 Reinsurance Backstop

Activated concurrent with Day 7 execution: DFC \$10B + Lloyd's \$5B + Omani SWF \$5B. First 200 transits automatically covered. Rolling 90-day renewal.

[v3.0] II.B.10 — Maritime Fund 90-Day Circuit Breaker

If budget deadlock exceeds 90 days (30-day mediation + 60-day frozen escrow), baseline distribution (40%/35%/25%) activates automatically as one-time circuit breaker.

[v4.0 Change C1] II.B.11 — Persian Gulf Strait Authority (PGSA) Recognition

The Persian Gulf Strait Authority (PGSA) is recognized as the sole executive coastal law enforcement body within Iranian territorial waters (12-nautical-mile limit). This recognition is formal, unequivocal, and binding. Within Iranian territorial waters, the PGSA retains exclusive authority over: vessel permitting and documentation review; coastal patrol and interdiction; customs and immigration enforcement; security screening of suspect vessels; and coordination with the IRGC-Navy on maritime security matters.

Any multilateral maritime coordination body shall operate in an **advisory and coordinating capacity only**. The PGSA retains final say on any dispute involving Iranian territorial waters. The advisory mandate is explicitly restricted to commercial traffic coordination, maritime safety protocols, and non-binding recommendations.

This recognition is **without prejudice to the rights of any GCC member state under UNCLOS**. Concurrently with MOU signature, the United States and Oman shall issue a Diplomatic Note to all GCC states affirming that GCC vessels enjoy equal transit rights and shall not be subject to discriminatory PGSA enforcement. Any dispute between the PGSA and a GCC member state over transit passage shall be referred to binding mediation by the International Maritime Organization within 14 days.

Iran commits that the PGSA shall not charge tolls for transit passage through the Strait of Hormuz during the term of this MOU. Nothing in this provision shall be construed as a permanent waiver of Iran's position on sovereign rights under international law. The question of transit fees is deferred to the successor comprehensive framework.

Iranian narrative: "International recognition of Iran's coastal sovereignty and the PGSA's lawful authority."

US narrative: "No tolls during the MOU period, with IMO mediation for any disputes."

II.C. Economic Tranches — Micro-Cycle Telemetry Model

Section II.C.1 — Philosophy

Economic normalization is entirely telemetry-driven: financial tranche releases are directly linked to verifiable, automated data points. If verification metrics stall, economic flow freezes proportionally — not completely.

Section II.C.2 — The Eight-Tranche Architecture

Table 4. Graduated 15-Day Micro-Cycle Tranche Model

Tranche	Timing	Amount	Trigger
Pilot	Day 1	\$250M	MOU activation + IAEA facility access within 72h
Tranche 1	Day 15	8.33% of 25% pool	First 100kg HEU in IAEA custody
Tranche 2	Day 30	8.33% of 25% pool	Second 100kg HEU; 30 days compliance
Tranche 3	Day 45	8.33% of 25% pool	All HEU transferred; moratorium declared
Tranche 4	Day 60	8.33% of 25% pool	JIG renewal certification
Emergency Medical	Any time	\$50M	WHO-certified disaster
Oil Revenue	Day 7+	1.0 mb/d ceiling	Blockade pause confirmed; \$80/bbl floor
SWIFT	Day 30+	5 Iranian banks	Sustained compliance; clean compliance record

[v2.0] Clean Compliance Record Definition

No outstanding OFAC designation; no Tier 2/3 in 60 days; certified FATF-standard AML/CFT. Suspension applies only to the specific noncompliant entity — no cascading disconnect.

[v3.0] Targeted Bank Isolation Protocol

Flagged bank routed to isolated clearing hub. Clean banks continue uninterrupted. 14-day remediation window. No sector-wide disconnect.

Section II.C.3 — Telemetry-Driven Unlock Mechanics

The Pegging Formula: Econ-to-Nuclear

Total releasable = 25% of frozen assets (US cap). Each 100kg HEU milestone = 8.33%. Oil floor-priced at \$80/bbl. Not a single dollar moves without verified nuclear exposure reduction.

[v3.0] SDR Exchange Rate Floor

Downstream releases denominated in SDR. Real value protected at 2026 USD baseline + CPI. JIG review if SDR depreciates >10%.

[v2.0] Over-Compliance Credit (II.C.6)

Early completion = proportional early release. Credits bankable. Scope credits up to 10% for 20%+ excess.

[v3.0] Dual-Floor Escrow Interest Accrual

Interest at greater of 6-month LIBOR or average US-Iran CPI. Credited to Iranian Civilian Reconstruction Fund upon release. Not subject to clawback or step-back.

Section II.C.4 — Secondary Tariff Carve-Out (Operative)

Transactions through the Swiss Dashboard are exempt from the US 25% global secondary tariff mandate. US Treasury shall issue binding OFAC guidance on Day Zero.

Section II.C.5 — Extraterritorial Litigation Shield

Swiss escrow funds are immune from civil attachment, lawsuits, or judicial forfeiture in Western courts during the MOU period. Both parties agree to oppose third-party litigation reaching escrowed funds.

[v4.0 Change B1] II.C.6 — Qatar Frozen Assets Release Framework (\$12B)

The Parties acknowledge approximately **\$12 billion of Iranian frozen assets** are held in Qatar. The following staged framework applies:

Stage 1 (Days 1–30): The \$250 million humanitarian tranche releases upon MOU activation. Qatar-held assets remain frozen.

Stage 2 (Days 30–60): Upon JIG certification of 30 consecutive days of compliance (no Tier 3 violations, no more than one Tier 2 under 7 days), an additional **\$500 million** shall be released from Qatar-held assets into Swiss escrow, for humanitarian and civilian infrastructure purposes as verified by IAEA-JIG.

Stage 3 (Successor Framework): The remaining ~\$11.25 billion shall be addressed in the successor comprehensive framework, with release conditioned on compliance milestones to be negotiated.

The United States commits to using its best efforts to facilitate Stage 2 release from Qatar, including through OFAC licenses and diplomatic assurances to Qatari financial institutions. Stage 2 is not a precondition for MOU activation but a commitment executed in good faith upon compliance conditions. This provision acknowledges Iran's economic needs while preserving US leverage for the successor framework.

[v3.0] II.C.7 — DFC Dollar-for-Dollar Matching (\$5B cap, \$1B floor)

DFC matches Iranian civilian infrastructure spending dollar-for-dollar. Released upon IAEA-JIG verification. 90-day disbursement; delays trigger LIBOR+2% interest.

II.D. Regional Firewall — Graduated Dossier Isolation

Section II.D.1 — The Problem

Negotiations are derailed when regional proxy strikes collapse the diplomatic table. The Firewall mathematically separates regional incidents from core maritime and nuclear framework.

Section II.D.2 — The Graduated Firewall Ladder (Operative and Binding)

[v2.0] Three-Tier Firewall Architecture

Tier 1 (10–24 casualties): 72-hour diplomatic consultation. No MOU linkage. Israel retains Article 51 self-defense.

Tier 2 (25–49 casualties): JIG advisory opinion. MOU linkage only by mutual written agreement.

Tier 3 (50+ casualties): Presumption of potential linkage, but either party may veto. No automatic step-back at any tier. Attribution standard: "clear and convincing evidence" of state direction. Hearsay or single-source intelligence insufficient.

Section II.D.3 — Joint Investigation Group

Table 5. JIG Attribution Panel

Seat	Nominee	Role
1	US nominee	Evidence presentation
2	Iranian nominee	Evidence presentation
3	Omani mediator (Chair)	Procedural oversight; tie-breaking
4	Pakistani guarantor	Independent assessment
5	IAEA representative	Technical verification

Section II.D.4 — Firewall Breach Consequences

If JIG unanimously certifies state-direction (excluding affected Party): (1) Non-humanitarian tranches freeze within 24h; (2) Survival Core survives; (3) 14-day remediation window; (4) No automatic MOU collapse.

[v2.0] Third-Party Spoiler Protocol

Attribution panel with "clear and convincing evidence" standard. Joint condemnation + UNSC referral + economic measures. Zero penalties for MOU signatories.

[v2.0] Attribution Media Blackout

72-hour blackout during Tier 2/3 deliberations. No official attribution statements. JIG may extend once. Violation = Tier 1 demerit.

[v4.0 Change D1] II.D.5 — Lebanon Front De-escalation Commitment

The Parties commit to comprehensive de-escalation on all fronts, including Lebanon. Iran commits to transmitting immediate, formal instructions to Hezbollah leadership for an **operational pause** concurrent with this MOU: cessation of cross-border rocket and drone attacks into northern Israel; suspension of offensive military operations against IDF positions beyond the immediate defensive engagement zone (500 meters from the Blue Line); no ground incursions into Israeli territory; no new heavy weapons transfers.

Israel, consistent with inherent self-defense under UN Charter Article 51, commits to **suspending offensive air strikes against Hezbollah positions in southern Lebanon** for the duration of this MOU, provided Hezbollah maintains the operational pause. Defensive engagement of forces entering Israeli territory remains permitted.

Verification through four channels: UNIFIL ground patrols; Israeli intelligence via Tel Aviv Channel (sanitized summary to Dashboard); Lebanese Armed Forces liaison reports; and pattern analysis.

Linkage: Material breach by Iran (Hezbollah offensive action causing 10+ civilian casualties, JIG majority excluding Iran) = Tier 2 disruption. Material breach by Israel (offensive air strike not justified by Article 51, JIG majority excluding Israel) = Tier 2 disruption. **This explicitly addresses Iran's "end of war on all fronts" demand with reciprocal, balanced commitments.**

Article III: Verification and Dashboard Architecture

Section 3.1 — The Swiss Dashboard

Three-track Swiss-hosted dashboard: Nuclear (IAEA), Financial (Swiss FDFA), Maritime (Omani observers). Both parties see the same screen simultaneously.

Section 3.2 — Dual-Key Authentication (Operative)

Simultaneous digital cryptographic keys required from Swiss auditor and state representative. Neither key alone authorizes transactions.

Section 3.3 — AI-Aided Verification Audit

Automated cross-reference of IAEA telemetry against escrow timestamps. Anomaly detection. All outputs published simultaneously to both parties.

Section 3.4 — Air-Gapped Batch Telemetry Protocol

[v2.0] Air-Gapped Batch Delivery

Black-Box Sensors record continuously but store locally on air-gapped servers within each facility. **No real-time external transmission.** Weekly compiled batches encrypted with dual-key IAEA-Iranian encryption, transferred to neutral Swiss hub. Expedited 24-hour delivery for Level 4 anomalies only. "Reasonable request" criteria: specific facility, credible intelligence, non-duplicative, non-harassing.

[v4.0 Change E1] Expanded Air-Gap Technical Specifications

Transfer occurs via **physically secured data carriers or dedicated encrypted channels** isolated from the open internet and from any military or intelligence network accessible by either Party. Secondary Omani hub available if Swiss hub is compromised or inaccessible. The IAEA receives compiled batch data at the neutral hub within 48 hours of each compilation cycle. Data presented in unalterable, signed format.

Iranian narrative: "No real-time foreign surveillance of our military infrastructure — data is compiled and delivered in batches through neutral Swiss servers."

US narrative: "Continuous verification is preserved. Data is unalterable and independently auditable."

[v4.0 Change E2] III.5 — Cryptographic Anti-Spoofing Chain (Expanded)

All telemetry secured using **SHA-3 cryptographic hash chain**. Each data block contains the hash of the previous block, creating an immutable audit trail. Tampering is immediately detectable — the hash chain breaks.

All Dashboard transactions require **dual-key HSM-based digital signatures**. Timestamped and logged in the immutable audit trail. Telemetry includes: cryptographic nonces to prevent replay attacks; timestamp verification (± 5 seconds UTC tolerance); geolocation tagging with satellite cross-verification; device fingerprinting for all originating sensors.

The AI audit layer maintains an ML model trained to detect spoofing patterns: statistical deviations; impossible physical readings; temporal inconsistencies; correlation failures. **Deliberately falsified telemetry = Tier 2 material disruption**. If falsified data would have triggered military response = **Tier 3 Deliberate Hostile Violation**. Suspected tampering triggers forensic review by IAEA and Swiss facilitator; air-gapped backup nodes are the authoritative recovery source.

[v3.0 Basket 1] Manual Verification Override for Sensor Failure

If complete sensor network fails: IAEA on-site inspections at 24h notice; physical seal inspection; independent mass spectrometry; manual cryptographic reporting. Confirmed deliberate compromise = Tier 3 violation.

Alert Severity Classification

Table 6. Black-Box Alert Levels

Level	Description	Response
-------	-------------	----------

Level 1 (Informational)	Scheduled maintenance, minor interruption	No action
Level 2 (Technical Review)	Unscheduled downtime <4h, single anomaly	JIG review within 7 days
Level 3 (Compliance Review)	Unscheduled downtime >4h, pattern anomaly	IAEA enhanced inspection within 72h
Level 4 (Breach Indicator)	Tampering, deliberate disablement, diversion	Tier 2 step-back consideration

Article IV: Joint Implementation Governance

Section 4.1 — The JIG

Governing body: one senior representative from each Party, Swiss facilitator (Chair), Omani maritime mediator, IAEA representative, Pakistani guarantor (binding arbitration on procedural matters).

Section 4.2 — Facilitating State Matrix

Table 7. Distributed Facilitating State Responsibilities

State	Domain	Core Function
Oman	Maritime Deconfliction	Hotline; naval encounter facilitation; Hormuz oversight; HEU escrow if Pathway B; LIRB host
Switzerland	Financial Verification	Escrow; asset transfer verification; sanctions relief monitoring; Dashboard hosting
Pakistan	Emergency Diplomatic	Crisis summits; leadership backchannel; binding arbitration
IAEA	Nuclear Verification	Enrichment monitoring; custody verification; facility inspection

Section 4.3 — Escrow Multi-Signature Requirement

3 of 4 facilitating state signatures required (Oman, Switzerland, Pakistan, IAEA certification). No single state may unilaterally block.

Section 4.4 — Mandatory Escalation Pause

30-minute automatic review window when any facilitating state determines escalation is imminent. If either party supports the pause, freeze continues minimum 48 hours.

Section 4.5 — Human-in-the-Loop Governance

No automated system triggers punitive consequences without human confirmation by two JIG members. Exception: PRDD Nuclear Snap Line (enrichment above 3.67%) triggers automatic oil revenue suspension within 24h.

[v2.0] JIG Annual Public Report

Annual unclassified report: compliance status, violations, economic benefits, regional incidents, recommendations. Israeli 500-word caveat right (no intel sources, no Iranian names); Iran gets equal-length response. Neither caveat binding.

Article V: Step-Back, Not Snapback

Section 5.1 — Philosophy

Snapback creates perverse incentives — if a single violation collapses everything, the violator has nothing left to lose. Graduated, proportional, reversible responses preserve incentives for return to compliance. Prior gains remain in place.

Section 5.2 — Four-Tier Graduated Response

[v2.0] Proportional Step-Back

Tier 1 (Technical): 72h consultation, 48h grace. No penalty.

Tier 2 (Material): Base 25% reduction. Proportionality Rule: $<7 \text{ days} = 10\%$ only. 30-day remediation.

Tier 3 (Deliberate): Base 50% reduction. 90-day remediation. Earn-back requires 90-day sustained compliance + IAEA certification + JIG majority.

Tier 4 (Snap Line): Full PRDD suspension within 24h. Irrevocable by political authority. Only IAEA DG can authorize resumption.

All step-back beyond Tier 4 requires JIG majority vote (excluding affected Party).

Section 5.3 — Rolling 90-Day Compliance Window

[v3.0] Rolling Compliance (No Fixed Reset)

Tier 2 violation reduces compliance percentage by 10 days per violation day, capped at 30-day reduction. Clock does not reset to zero. Gaming becomes mathematically difficult.

Section 5.4 — Good-Faith Consultation Credit

[v3.0] Early Engagement Incentive

Initiating consultation within 24 hours of anomaly = 75% penalty reduction for 14 days. No public attribution until 48h window expires. Once per 90 days, bankable.

Section 5.5 — Learning Curve Provision

Days 1–30: Tier 2 penalties halved; Tier 3 advisory only. Expected errors logged but no step-back. **Days 31–44:** Graduated normalization (penalty factor = $0.50 + 0.036 \times (\text{Day}-30)$). **Day 45+:** Full compliance mode.

Section 5.6 — Earnback

[v4.0 — Reinforced from Source Documents] Earnback Architecture

Any paused obligation restores fully through **90 days of verified clean compliance**. Earnback is automatic upon IAEA certification — no political negotiation required.

Compliance Clock Rules: Single Tier 2 violation (<7 days) resets clock to 30 days (not zero) from remediation date. Second Tier 2 violation = reset to zero. Any Tier 3 violation = reset to zero. A minor, quickly-cured violation does not wipe out months of compliance; a second violation or serious breach does.

Performance-Based Graduation: Upon JIG certification of 90 consecutive days of clean compliance (no Tier 3; max one Tier 2 <7 days), sanctions freeze automatically expands to cover all nuclear-related sanctions. Non-nuclear sanctions (terrorism, human rights) reviewed separately for Phase II. If compliance falters after graduation, step-back applies proportionately. **This is not a sunset — it is a merit badge. Iran earns its way into broader relief.**

Section 5.7 — De Minimis Error Buffer

[v2.0] Protected Errors

Single-day OLEM interruption <2h (resolved within 24h); reporting delay <12h; equipment malfunction (not deliberate tampering); scheduled maintenance with 48h notice; hotline test failure resolved within 4h. 5-in-30 pattern rule prevents abuse.

Section 5.8 — Anti-Gaming Prohibition

[v3.0] Gaming Register

Prohibited: timing compliance to exploit grace periods; systematic de minimis abuse; technical disputes to delay; consultation window stalling. Three instances in 180 days = 90-day de minimis suspension + enhanced disclosure. Quarterly Gaming Register published on Dashboard.

Article VI: Humanitarian and Survival Core

Section 6.1 — The Survival Core

Under all circumstances, the following remain in force regardless of any dispute, step-back, or non-renewal:

1. **Ceasefire Hotline:** 24/7 diplomatic hotline; neither party may disable without 30 days' notice to UN Secretary-General;
2. **Humanitarian Corridor:** Zero-fee, no-inspection-delay for medical supplies, food, emergency goods;
3. **Emergency Diplomatic Channel:** Pakistani guarantor backchannel remains open;
4. **Inspector Safety:** IAEA personnel safety is inviolable.

The Survival Core continues for **365 days** after any termination notice and automatically renews for successive 365-day periods unless both Parties agree in writing to terminate. The Guarantor Matrix may extend by majority vote even if one Party objects.

Section 6.2 — Emergency Humanitarian Override

\$50 million permanently unfreezable for WHO-certified disasters. Immune to step-back, tier penalties, or non-renewal.

Section 6.3 — Non-Humiliation Doctrine

Neither Party shall require the other to: renounce its nuclear program; apologize; permit media at verification sites; characterize compliance as "submission"; or require constitutional change.

[v2.0] Survival Core Funding (\$50M escrow, \$25M each)

Swiss-administered, non-suspendable. Replenishment at \$10M floor. LIBOR+2% on delinquent advances.

[v3.0] Independent Legal Effect and Severability

Survival Core provisions are severable and survive any invalidity, suspension, or termination of other provisions. Independently enforceable under international law.

Article VII: 60-Day Renewal and Dissolution Prevention

Section 7.1 — Initial MOU Period

This MOU enters into force upon deposit of Instruments of Acceptance in Muscat and remains in force for an initial period of **60 days**.

Section 7.2 — Conditional Auto-Renewal

Automatically renews for successive 60-day periods unless either Party issues a Formal Non-Renewal Notice at least **14 days** prior to expiration. A Non-Renewal Notice does not constitute breach, does not trigger step-back, and does not prejudice successor negotiations.

[v2.0] Political Shock Automatic Extension

One-time 30-day extension for national elections, leadership transition, cabinet collapse, assassination, national emergency, or mass protests. Only one per Party per MOU period.

[v3.0] Expedited Withdrawal with Liquidated Damages

30 days' notice + 10% of remaining escrow (capped at \$250M). No clawback of funds already released. HEU remains under IAEA custody during notice period.

[v4.0 — Dissolution Prevention] VII.3 — Mandatory Dissolution Consultation

Before any Non-Renewal Notice can be issued, the contemplating Party must participate in a 30-day Mandatory Dissolution Consultation convened by the Guarantor Matrix. During this consultation:

- (a) The Guarantor Matrix shall identify specific compliance concerns and propose remedial measures;
- (b) Either Party may request technical working groups to address specific implementation difficulties;
- (c) The Guarantor Matrix may, by majority vote, extend the MOU for up to 90 additional days to allow remedial measures to take effect;
- (d) All Phase I benefits continue during the consultation period;
- (e) The Survival Core continues regardless of consultation outcome.

A Non-Renewal Notice issued without completing the Mandatory Dissolution Consultation is procedurally invalid. The Guarantor Matrix shall not certify the notice, and the MOU shall continue as if the notice was not issued. This provision ensures that withdrawal is a deliberate, informed decision — not an impulse driven by temporary political pressure or isolated incidents.

[v4.0 — Dissolution Prevention] VII.4 — Re-Entry Path

If the MOU expires without renewal, **either Party may request re-entry within 90 days of expiration.** Re-entry is at the same status as at expiration — no renegotiation of terms required. The Guarantor Matrix shall certify re-entry within 14 days if: (a) the requesting Party confirms its intent to resume all obligations; (b) the IAEA confirms that any HEU under custody remains secured; (c) the Swiss Dashboard is reactivated within 7 days.

Re-entry does not require a new Instrument of Acceptance. The MOU simply resumes from its paused state, with all prior compliance credits and banked over-compliance credits restored. **This provision prevents the MOU from becoming a "one-shot" that, if missed, is gone forever.** Diplomatic windows can reopen. Political circumstances can change. The architecture remains standing.

Section 7.5 — Performance-Based Graduation

Upon JIG certification of 90 consecutive days of clean compliance (no Tier 3; max one Tier 2 <7 days), either Party may propose graduation to a successor framework. Graduation is voluntary — neither Party is obligated.

Section 7.6 — Political Shock Absorber

National elections, leadership transitions, mass protests, or cabinet collapse trigger automatic Review Pause: Tier 1–2 continue; Tier 3 holds; 30 days to confirm continuation; max 90 days extendable. Review Pause is NOT material breach.

Section 7.7 — Grace Days and Safety Valves

Table 8. Safety Valve Mechanisms

Mechanism	Cap	Notice	Effect
Grace Day	3 per 60 days	6 hours	24-hour deferral
Face-Saving Pause	2 per 60 days	24 hours	7-day deferral; auto-proceeds
Stabilization Hold	2 per 60 days	12 hours	Up to 3 obligations paused
Crisis Pause	1 per 180 days	Written	30–90 day freeze; Survival Core continues

Combined Grace Days + Face-Saving Pauses capped at 4 per Party per 60-day period. Simultaneous invocation by both Parties counts as ONE against each cap.

Article VIII: Ceremonial Messaging Provisions

Section 8.1 — Dual Rebranding Architecture

Table 9. Authorized Public Messaging Frameworks

Party	Designation	Key Themes
United States	"Framework for Peace and Prosperity in the Gulf"	Weapons-grade uranium secured; Strait reopened; every dollar tied to performance; 60-day walkaway
Iran	"International Recognition of Iran's Sovereign Rights"	Siege lifted; NPT rights preserved; coastal sovereignty recognized; nuclear details deferred not conceded

Section 8.2 — 72-Hour Media Blackout (Binding)

From Day Zero: official communication restricted to pre-approved boilerplate through Swiss facilitator. No unilateral statements. Joint communique after 72 hours.

Section 8.3 — Performance-Contingent Messaging

All public characterizations must acknowledge conditional, performance-contingent benefits. 24-hour embargo on contradictory messaging after joint statements.

Section 8.4 — Messaging Override Protocol

Either Party may deviate for: domestic crisis; third-party misinformation; terrorist attack. Valid 14 days, renewable once. JIG Media Working Group notified within 4 hours.

Article IX: Final Provisions

Section 9.1 — Non-Recognition and Non-Amnesty

Purely transactional. No recognition of government, political system, or regional policies. No amnesty or retrospective forgiveness. Executive authority sufficient — no legislative ratification required.

Section 9.2 — Dispute Resolution

(1) Technical Consultation (72h) via JIG; (2) Senior Official Consultation (48h); (3) Binding Arbitration by Pakistani Guarantor (operational matters binding; political matters advisory).

Section 9.3 — Amendments

Mutual written agreement only, with JIG Chair certification that all core guardrails (Survival Core, Escrow Separation, Firewall, Snap Line) are preserved.

Section 9.4 — Confidentiality

Operative text confidential until both Parties agree to public release. Narrative framing provisions (Article VIII) may be released to domestic audiences without operative technical details.

Section 9.5 — Governing Law

International law, UN Charter, UNCLOS, NPT. Does not create Vienna Convention treaty obligations but shall be observed in good faith.

Section 9.6 — Entry into Force

Deposit of Instruments of Acceptance in Muscat under simultaneous deposit protocol. Activation irrevocable once both Instruments deposited.

[v4.0 — Military Strike Discouragement] IX.7 — Kinetic Action Notification Protocol

Any Party contemplating kinetic military action against the other Party's territory, facilities, or forces — other than acts of immediate self-defense under UN Charter Article 51 — shall provide 48-hour advance notification through the JIG before any strike is executed. The notification shall include: the proposed target category (not specific coordinates); stated justification; estimated scope and duration; and requested JIG response timeline.

Upon receipt of such notification:

- (a) The **Mandatory Escalation Pause** activates automatically for 48 hours;
- (b) The **Guarantor Matrix convenes an Emergency Diplomatic Session** within 6 hours;
- (c) The **Survival Core enters enhanced protection mode** — hotline staffing doubled, humanitarian corridor patrols increased;
- (d) The **Swiss facilitator issues a confidential assessment** to both Parties within 24 hours on whether the proposed action would constitute material breach of this MOU;
- (e) If either Party requests, the **Pakistani guarantor shall convene a leadership-level backchannel call** within 12 hours.

This protocol does not restrict either Party's inherent right to self-defense under UN Charter Article 51. It creates a mandatory diplomatic window for action that is not immediate self-defense — the category into which most contemplated strikes fall. The 48-hour pause has three purposes: (1) prevent emotionally driven escalation; (2) create space for face-saving alternatives; (3) demonstrate to domestic audiences that all diplomatic options were exhausted before kinetic action.

Failure to provide the 48-hour notification before non-defensive kinetic action shall constitute a Tier 2 material disruption, regardless of the military outcome or justification. This makes the diplomatic pause procedurally cheaper than the kinetic alternative.

Article X: US-Israel Bilateral Coordination

[v3.0 Basket 5] X.1 — Pre-Decision Consultative Window

24-hour pre-decision notification to Israel before any US Firewall vote or veto. Israel may submit 2,000-word assessment appended to JIG record. Failure to notify = procedurally invalid. Israel gets transparency with teeth. Iran sees nothing.

[v3.0 Basket 5] X.2 — Levant Intelligence Review Board (LIRB)

Permanent members: US, Israel, Oman. Rotating: UK, France. No Iranian participation. Reviews Hezbollah/IRGC-Quds Force intelligence. "Reasonable suspicion" standard. Emergency session within 12 hours of Tier 2/3 incident. Preliminary finding to US Secretary of State within 24 hours. Sanitized summary shared with Iran during 72h consultation.

[v3.0 Basket 5] X.3 — Israeli Caveat Right

500-word caveat in JIG Annual Report. No intel sources, no Iranian names. Iran gets equal-length response. Neither caveat binding.

[v3.0 Basket 5] X.4 — Mutual Standstill Understanding (Separate, Deniable)

Israel commits no preemptive strike against Iranian nuclear facilities during MOU term, unless IAEA certifies Tier 3 Deliberate Hostile Violation involving fissile material diversion or weaponization. US commits to join Israel in coordinated response within 72 hours of such certification. Deniable by US in any diplomatic forum involving Iran. Terminates with MOU expiration or 30 days' notice.

Section X.5 — Non-Veto Clause (Operative and Binding)

Nothing in this Article grants Israel any right to veto, suspend, or impede this MOU. Israel is not a party to this MOU. The LIRB is advisory only. The Standstill Understanding is a separate bilateral document, not annexed, not binding on Iran, not admissible in any proceeding involving Iran.

Article XI: Missile Program and Phase II Deferral

[v4.0 Change G1] Missile Program Acknowledgment

The Parties acknowledge that this MOU does **not** address Iran's ballistic missile program, drone capabilities, or conventional military forces. These matters are **expressly deferred to the successor comprehensive framework (Phase II)**.

During the term of this MOU, Iran commits to **no new offensive deployment of ballistic missiles or combat drones to regional proxy forces**. This deployment pause is verified through satellite surveillance, signals intelligence, and regional observer reports. Nothing in this provision requires dismantlement of existing inventories, prohibits domestic testing of short-range defensive systems, or limits Iran's sovereign right to maintain conventional military forces.

The United States acknowledges that this deployment pause is a **temporary confidence-building measure** and does not constitute a permanent limitation on Iran's defense capabilities. Permanent missile program limitations are reserved for Phase II negotiations, in which Iran retains its full sovereign position.

Neither Party may cite the absence of missile program provisions as evidence of any position in Phase II negotiations.

Article XII: Rolling Horizon Architecture

[v4.0 Change G2] Phase I to Phase II Transition Mechanism

This MOU is a **Phase I crisis stabilization instrument**. Phase II (successor comprehensive framework) shall address: final HEU disposition; permanent enrichment limits; permanent inspection regimes; missile program limitations; full sanctions relief; and regional security architecture.

Negotiations for Phase II shall commence no later than Day 30 of this MOU, regardless of Phase I certification status. These negotiations run in parallel to Phase I implementation. Either Party may propose draft Phase II text at any time; the other Party shall respond within 30 days. Failure to engage in Phase II negotiations in good faith shall be logged as a Tier 1 technical dispute but shall not delay Phase I benefits.

Phase II activation requires: (a) JIG certification of 60 consecutive days of IAEA-verified compliance (no Tier 3 violations, no more than one Tier 2 <7 days); and (b) mutual written agreement of both Parties. **Phase II is not automatic — either Party may decline without penalty.**

If Phase II is not activated by Day 180 (end of second renewal period), the Parties shall convene a Joint Review Conference to assess compliance, identify gaps, and determine whether conditions exist for continued Phase I extensions. The **Rolling Executive Option** permits indefinite Phase I extensions via 60-day executive decrees without legislative ratification.

This rolling horizon architecture ensures that the MOU continues only so long as both Parties are in verified compliance, with orderly withdrawal procedures available at all times — **and with a built-in mechanism to force both Parties back to the negotiating table rather than allowing complete dissolution.**

Annex A: 14-Day Operational Timeline

Table 10. Day-by-Day Implementation Chronology

Day	Iranian Action	US Action	Verification
Day 0 (T+0)	Freeze HEU movement above 3.67%; activate liaison offices; deposit Survival Core escrow (\$25M)	Release \$250M humanitarian tranche; issue OFAC license; freeze sanctions designations; deposit Survival Core (\$25M)	OLEM confirms halt; IAEA receipt within 2h; Swiss Dashboard confirms
Day 1	IAEA access facility; begin inventory; IRGC withdraw to 3nm; activate air-gap telemetry; establish military hotline	5th Fleet to 8nm stand-off; NPT acknowledgment; tariff carve-out; DFC matching announced	IAEA on-site; AIS data; Omani logs; air-gap initialized; hotline test at 06:00 UTC
Day 2–6	Spectrometry sampling; dual-lock seals; IRGC to 5nm; weekly telemetry batch; PGSA coordination	5th Fleet at 5nm upon IAEA confirmation; monitor Dashboard; reinsurance facility armed	Interim reports; seal serials; Dashboard: NUCLEAR—GREEN; hash chain initialized
Day 6	IAEA confirms consolidation begun; all Iranian milestones verified	All US milestones verified; 5th Fleet confirms 5nm stand-off	Automated trigger armed: Blockade lift at T+168h guaranteed
Day 7	Hormuz Opening Declaration; IRGC stand-down; airspace protocols; military hotline active	Blockade Pause Declaration; 5th Fleet stand-down; activate \$20B reinsurance	60-second UTC window; Lloyd's List confirms; 24h Bright-Line with escalation protocol
Day 8–13	HEU custody maintained; enrichment freeze; Hormuz transit; telemetry batches; GCC liaison	Stand-off posture; humanitarian transactions; oil waiver (\$80 floor); SWIFT review; LIRB briefing	Daily SITREP; Weekly IAEA reports; Dashboard green; first telemetry received Switzerland
Day 14	HEU consolidation complete; IAEA custody certificate; Tranche 1 eligible; over-compliance review	Tranche 1 release (8.33%); NPT affirmation; first JIG review; escrow interest accrual begins	IAEA DG certification; escrow confirmation; media blackout ends; joint communicate

Day	Technical Working Group on US observers at Working Group; Working Group findings published
30	HEU Disposition convenes; draft Phase II text may be to Dashboard within 14 days; Phase II negotiations commence proposed; Qatar Stage 2 compliance certification for Stage 2 assessment

End of Annex A — Full operational choreography in classified Implementation Directive

Signatures

IN WITNESS WHEREOF, the undersigned, being duly authorized by their respective governments, have signed this Memorandum of Understanding.
