Stability First Enhanced Accord

Version 5.0

*A Sovereignty-Preserving Regional Stability Framework for US-Iran De-escalation,
Strait of Hormuz Governance, and Nuclear Stabilization*

*Incorporating the 30-Day Micro-Pilot, the Neutral Guarantor Triad,
and the Phased Verification Architecture*

CALIBRATED FOR

The May 2026 Negotiation Environment — As of May 13, 2026

DRAWING FROM

Stability First Enhanced Accord v1.0 | 14-Day Implementation Directive v2.5

Phase II Maritime Annex v1.2 | Phase II Nuclear Annex v1.2 | RCSA v3.6

STATUS

Integrated Framework — All Blockers Addressed

Table of Contents

Preamble: The May 2026 Moment

Section 1: Ten Core Principles of the Waltz Architecture

- 1.1 Synchronized Reciprocal Motion
- 1.2 Modular Architecture
- 1.3 Sovereignty Preservation
- 1.4 Irreversible Facts on the Ground
- 1.5 Multiple Pathways for Every Issue
- 1.6 Quiet Compliance
- 1.7 Neither Recognition Nor Surrender
- 1.8 Succession Resilience
- 1.9 Crisis-Prepositioning
- 1.10 Reversibility Without Collapse

Section 2: Framework Overview & Three-Stage Architecture

- 2.1 The Three Stages at a Glance
- 2.2 The Waltz Philosophy in Practice
- 2.3 Modular Design
- 2.4 From Nuclear-First to Nuclear-Deferred

Section 3: The 30-Day Micro-Pilot Module

- 3.1 Micro-Pilot Architecture
- 3.2 Day-by-Day Micro-Pilot Pairings
- 3.3 Micro-Pilot to Full Accord Transition

Section 4: The Blind De-escalation Protocol

- 4.1 Parallel Pause Mechanics
- 4.2 Unacknowledged Reciprocal Steps
- 4.3 Transition to Formal Architecture

Section 5: Stage One — The 14-Day Opening

- 5.1 Day 1: Ceasefire & Stockpile Transfer
- 5.2 Day 3: Humanitarian Corridor
- 5.3 Day 7: Synchronized Dual Blockade Lift
- 5.4 Day 14: Stage One Closing

Section 6: The 30-Day Deferred Window

- 6.1 The Staggered Enrichment Cap
- 6.2 HEU Stockpile Disposition
- 6.3 Underground Facility Protocols
- 6.4 Phased IAEA Verification
- 6.5 Sanctions Relief Architecture

Section 7: Stage Three — Permanent Architecture

Section 8: The Neutral Guarantor Triad

Section 9: Non-US Economic Channels

Section 10: Maritime Architecture & Hormuz Governance

Section 11: Nuclear Stabilization Architecture

Section 12: Fordow International Scientific Joint Venture

Section 13: Rebranding & Dual-Track Messaging

Section 14: Goldilocks Crisis Protocol

Section 15: Five-Channel Verification & Diluted PRDD

Section 16: What Each Side Wins

Section 17: Safeguards and Protections

Section 18: Crisis Management Architecture

Section 19: Implementation Roadmap

Appendices

Preamble: The May 2026 Moment

"The single most important achievement is the agreement that Iran will never ever have nuclear material that will create a bomb."

— Omani Foreign Minister Badr Albusaidi, May 2026

The Current Reality: May 13, 2026

As of May 13, 2026, the United States and the Islamic Republic of Iran stand at the closest point to a durable agreement since hostilities began on February 28, 2026. After six weeks of military confrontation under the codename **Operation Epic Fury** — triggered by the US decision to strike Iranian nuclear sites, which itself followed Iran's launch of ballistic missiles toward the US military base in Qatar — both sides have exhausted the military escalation ladder and returned to the negotiating table.

The path to this moment has been neither linear nor predictable. Supreme Leader Ayatollah Ali Khamenei was assassinated during the opening phase of hostilities, creating unprecedented succession uncertainty in Tehran. Iran retaliated by striking US bases across the region and blockading the Strait of Hormuz, bringing global energy markets to the brink of collapse. The tit-for-tat cycle continued until both sides faced a shared reality: neither could achieve its maximalist objectives through military means.

Current Military Status: A temporary ceasefire has been in place since April 8, 2026. Pakistan, led by Prime Minister Shehbaz Sharif, has mediated three rounds of talks in Islamabad. The most recent round (May 4-6) produced a preliminary 14-point memorandum of understanding, with both sides agreeing to extend the ceasefire through May 30 to allow for detailed technical negotiations.

The United States and Iran have reached a preliminary understanding that:

- Iran will **freeze enrichment at 60%** (but not yet commit to the full 3.67% cap)
- Iran will **allow IAEA inspectors** to verify the 60% freeze at Natanz and Fordow
- The US will **partially lift sanctions** on Iran's oil and gas sector, permitting limited exports
- Both sides will **negotiate a comprehensive framework** within 30 days, addressing the full nuclear file, Hormuz governance, and regional security
- The Strait of Hormuz **will remain open** for commercial shipping under a joint coordination mechanism

Why This Moment Is Different

Previous negotiation attempts — from the JCPOA (2015) to the Qatar talks (2022) to the Oman channel (2024) — failed because they demanded that one side move first on its core concession. This document is built on the opposite premise: **neither side moves alone**. Every Iranian commitment is matched by a corresponding US commitment, activated simultaneously, verified by the same neutral observers. The metaphor is a waltz: both partners move together. One partner moving alone is stumbling.

What Makes v5.0 Different From Previous Frameworks

Modification 1 — Micro-Pilot: Instead of launching the full agreement, a 30-day pilot where Iran freezes 60% enrichment in exchange for a small, heavily capped humanitarian tranche unfreeze. This mimics the 2013 Joint Plan of Action to build initial trust.

Modification 2 — Blind De-escalation: A period of mutual, unacknowledged parallel pauses creates breathing room without political cost.

Modification 3 — Staggered Cap: The 12-year enrichment cap is replaced with a 1-year renewable cap, tied directly to rolling sanctions relief.

Modification 4 — Diluted PRDD: The 72-hour Snap Line is extended to 30 days with mandatory third-party mediation.

Modification 5 — Neutral Guarantor Triad: Oman (political trust), Qatar (financial leverage), and Switzerland (banking neutrality) oversee escrow and dispute resolution.

Modification 6 — Non-US Channels: Initial economic benefits route through non-US mechanisms that do not require Congressional approval.

Modification 7 — Phased IAEA: Monitoring begins with standard safeguards, scaling up only after economic relief thresholds are met.

Modification 8 — Fordow Joint Venture: International oversight of Fordow is rebranded as a neutral-led scientific achievement.

Modification 9 — Rebranding: Washington sells it as a "regional stability mechanism"; Tehran sells it as a "sovereignty-protecting de-escalation tool."

Modification 10 — Goldilocks Protocol: The 14-day directives remain ready to deploy instantly as an off-ramp during a future crisis.

The v5.0 Philosophy

Every provision in this Accord is governed by a single animating principle: **Synchronized Reciprocal Motion**. Neither party moves alone. Every Iranian commitment is matched by a corresponding US commitment of equivalent weight, on the same timeline, verified by the same neutral observers. The result is a document that Iran can present domestically as sovereignty preserved and revenue secured, while the United States presents the same document domestically as Hormuz open, insurable, and verifiable.

Current Hard Constraints (May 13, 2026)

Constraint	Implication
Khamenei assassination creates leadership transition	Iranian negotiators need demonstrable sovereignty preservation
US naval blockade of Iranian ports (since April 13)	Iran needs blockade lift as immediate, visible win
Hormuz transit down 40%; insurance premiums up 300%	Global energy markets demand urgent resolution
European 40-nation coalition forming	Multilateral legitimacy available but requires Iranian buy-in
Congressional skepticism in both capitals	Executive-only mechanisms preferred; legislative ratification deferred
Precedent of JCPOA collapse (2018)	Both sides need irreversible facts on the ground, not reversible promises
Israeli opposition to any Iranian enrichment	Verification must be intrusive enough for Israeli quiet acquiescence
IAEA verification gap since 2021	inspectors need phased reintroduction, not immediate full deployment

What This Document Is

The Stability First Enhanced Accord v5.0 is the integrated, ready-to-implement architecture that fills the 30-day window opened by the May 6 preliminary understanding. It combines the Stage 1 ceasefire mechanics (from v1.0), the 14-day operational directive (from v2.5), the Hormuz governance architecture (from the Maritime Annex v1.2), and the nuclear stabilization framework (from the Nuclear Annex v1.2) into a single, coherent document. It then applies ten

targeted modifications to address the blockers that have prevented agreement in every previous round.

What This Document Is Not

This is not a comprehensive peace treaty. It does not resolve the ballistic missile question, the Israeli-Palestinian conflict, Lebanese sovereignty, or Iranian proxy relationships across the region. Those matters are reserved for successor frameworks. This Accord creates the stable platform upon which those harder questions can be addressed. It is a bridge — not a destination.

How to Read This Document

Negotiators should read **Section 1 (Principles)**, **Section 2 (Overview)**, and **Section 16 (What Each Side Wins)** first. Technical specialists should then focus on their domain: Maritime (**Section 10**), Nuclear (**Sections 6, 11, 12**), Verification (**Section 15**), Economic (**Sections 8, 9**), or Crisis Management (**Section 18**). The Appendices provide quick-reference tools for use during active negotiation.

Section 1: Ten Core Principles of the Waltz Architecture

Every provision in this Accord is governed by ten foundational principles. These are not aspirational language — they are the structural rules that ensure the agreement survives implementation when duty officers, naval commanders, and treasury officials must act under pressure in real time.

1.1 Synchronized Reciprocal Motion

Neither side moves alone. Every Iranian commitment is matched by a corresponding US commitment on the same day or the next sequential day. Every US commitment is matched by a corresponding Iranian commitment. Verification is shared. This is not mere political optics — it is structural. Both governments can credibly claim the other moved first or simultaneously.

Waltz Pairing Example: Enrichment Freeze and Blockade Lift

- Iran:** Freeze all enrichment above 60%; allow IAEA inspectors to verify freeze at Natanz and Fordow
- US:** Partially lift naval blockade on Iranian commercial ports; authorize first humanitarian tranche (\$250M) through Swiss escrow
- Verify:** IAEA confirms 60% freeze within 72 hours; Omani naval observers confirm blockade reduction within 48 hours

1.2 Modular Architecture

The Accord operates through independent modules. Failure in one module does not collapse the others. If nuclear verification encounters a dispute, Hormuz transit continues. If sanctions relief faces a delay, the ceasefire holds. This prevents the total-collapse failure mode that destroyed the JCPOA.

Module	Governing Body	Independent Advancement
Nuclear Stabilization	IAEA + JIG Nuclear Committee	Yes — based on IAEA verification milestones
Maritime Security	JHA Council + Maritime Coordination Cell	Yes — based on transit data
Economic/Sanctions Relief	JIG + Swiss/Qatari Escrow + Triad Guarantors	Yes — based on financial compliance

Humanitarian	UN OCHA + JHA	Yes — cannot be paused by any dispute
Regional Security Dialogue	JIG + expanded membership	Requires core party consent
Civilian Reconstruction	Iranian Fund + World Bank	Yes — based on disbursement metrics

1.3 Sovereignty Preservation

This framework does not supersede any constitution. It does not create supranational authority. It does not impair sovereign defense rights. It does not force alliance realignment. Iran's NPT rights are preserved. US treaty commitments to Gulf partners are preserved. Both governments retain full constitutional authority.

1.4 Irreversible Facts on the Ground

Each stage produces physically irreversible deliverables. Once Iran's weapons-grade stockpile is transferred to IAEA custody in Oman, it cannot be silently returned. Once \$250 million in Iranian assets is transferred, it cannot be clawed back. Once Hormuz is reopened and the JHTA is operating, closure requires a deliberate political decision with visible consequences. These irreversible facts create constituencies for continuation.

1.5 Multiple Pathways for Every Major Issue

Rather than demanding a single solution, the Accord provides modular options for Hormuz governance, nuclear disposition, and verification intensity. Parties select the combination that fits their political constraints. The appendices contain selection guides for rapid decision-making.

1.6 Quiet Compliance

Minor violations are corrected confidentially through the Joint Implementation Group, not through public accusations. The framework distinguishes between technical discrepancies (corrected quietly) and material breaches (addressed formally). This protects domestic political space for both governments.

1.7 Neither Recognition Nor Surrender

Participation in this Accord does not constitute diplomatic recognition where none exists. It does not require either government to acknowledge defeat, capitulation, or unconditional

surrender. Each government may characterize the outcome in terms that serve its domestic political requirements, provided objective benchmarks are met.

1.8 Succession Resilience

The Accord binds institutions, not individuals. Commitments attach to the Office of the President, the Department of State, the Supreme National Security Council, the Central Bank, and the Majlis. Changes of government activate continuity provisions rather than withdrawal procedures.

1.9 Crisis-Prepositioning

Modification 10: Goldilocks Crisis Pre-Positioning

The framework is most likely to be adopted during a crisis that scares both sides but doesn't collapse diplomacy — a maritime insurance spike, a near-miss military encounter, or a leadership transition. The modular 14-day implementation directives and the Micro-Pilot Module remain ready to deploy instantly as an off-ramp the moment such a crisis occurs. All parties maintain standby implementation cells capable of activating within 24 hours.

1.10 Reversibility Without Collapse

Any party may withdraw through a structured notification window, orderly asset disposition, infrastructure handover to host states, and personnel repatriation. Nuclear constraints survive withdrawal as residual obligations. The humanitarian module continues regardless of withdrawal by either party.

Section 2: Framework Overview & Three-Stage Architecture

2.1 The Three Stages at a Glance

The Accord operates as three sequenced stages, each with defined entry conditions, obligations, verification standards, and transition triggers. The architecture is deliberately modular: failure at any stage does not collapse prior stages.

Stage	Duration	Primary Goal	Closing Trigger
Stage 0: Micro-Pilot	Days -30 to -1	Build trust through limited, reversible exchanges	Both sides certify pilot objectives met; 14-Day MoU signed
Stage 1: The Opening	Days 1-14	End the war; transfer stockpile to IAEA; reopen Hormuz	Both blockades lifted; 200+ vessel transits; IAEA custody verified
Stage 2: Deferred Window	Days 15-44	Negotiate nuclear specifics; staggered cap; facility protocols	Moratorium ratified; HEU export confirmed; 50% assets returned
Stage 3: Permanent Architecture	Days 45-180	JHTA treaty; regional security dialogue; full normalization	JHTA charter ratified; 85% assets returned; successor framework opened

2.2 The Waltz Philosophy in Practice

The sequencing follows the Waltz Philosophy of synchronized reciprocal motion. The principle is simple: each commitment by one party is matched by a corresponding commitment by the other; neither party is exposed to defection; verification is shared.

Day	Iranian Action	US Action	Verification
Micro-Pilot D+1	Freeze 60% enrichment; IAEA access	\$250M humanitarian tranche via Swiss escrow	IAEA confirms freeze; CBI confirms receipt
Micro-Pilot D+7	Reduce IRGC-Navy Hormuz presence	Reduce 5th Fleet posture proportionally	Satellite + Omani naval observers
Micro-Pilot D+14	Confirm 60% freeze sustained	Release second humanitarian tranche (\$250M)	IAEA biweekly report
Micro-Pilot D+30	Commit to 1-year 3.67% cap	Open 30-day nuclear negotiation window	JIG certification; Pakistani guarantor

Stage Day 1	1,	Transfer stockpile to IAEA custody; ceasefire	Suspend offensive ops; issue OFAC license	IAEA DG + Pakistani PM + UN Envoy
Stage Day 7	1,	Open Hormuz; withdraw IRGC craft	Lift naval blockade; suspend Project Freedom	Lloyd's List + UN OCHA + JHA
Stage Day 30	2,	Declare 3.67% moratorium framework	First sanctions tranche operative	IAEA continuous monitoring
Stage Day 44	2,	Moratorium ratified; HEU export plan	50% frozen assets returned (cumulative)	JIG + Pakistani + Omani + Swiss
Stage Day 90	3,	Confirm permanent conversion	JHTA Confirm permanent JHTA + chair rotation	UN Secretary-General + JIG
Stage Day 180	3,	Successor framework engagement	Section 123 Agreement framework	180-day compliance review

2.3 Modular Design

Six independent tracks advance at their own pace. Progress in one does not depend on progress in another:

Track Combination Rules: Nuclear Track stabilizes + Economic Track activates = SWIFT reconnection pathway opens. Security Track and Humanitarian Track both advance = Regional Development Fund Stage 2 releases. Any track may be paused for recalibration without affecting other tracks. Humanitarian Track operates at full capacity at all times and cannot be paused.

2.4 From Nuclear-First to Nuclear-Deferred

The Enhanced Accord reflects the real-world diplomatic trajectory that transformed the negotiations between May 3-8, 2026:

Element	April 2026 (Nuclear-First)	May 2026 (Deferred Model)
Precondition for ceasefire	Full HEU export; zero enrichment	Commitment to moratorium framework; specifics deferred
Hormuz reopening	Contingent on nuclear dismantlement	Immediate; synchronized with blockade lift
Asset release	Contingent on nuclear compliance	\$250M pilot on Day 1; tranches during 30-day window
Moratorium duration	US demanded 20 years	1-year renewable cap (staggered approach)
Underground facilities	Immediate dismantlement	Protocols negotiated in 30-day window

Inspections	Unlimited snap inspections	Phased IAEA; standard first, continuous later
-------------	----------------------------	---

Section 3: The 30-Day Micro-Pilot Module

Modification 1: Micro-Pilot Trust-Building Architecture

Instead of launching the full agreement immediately, the Micro-Pilot creates an isolated 30-day pilot where Iran freezes 60% enrichment in exchange for a small, heavily capped humanitarian tranche unfreeze by the US. This mimics the 2013 Joint Plan of Action (JPOA) model that successfully built the trust foundation for the JCPOA. The Micro-Pilot is deliberately limited, reversible, and low-stakes — designed to prove that both sides will keep their word before either commits to irreversible concessions.

3.1 Micro-Pilot Architecture

The Micro-Pilot operates as a standalone, legally non-binding confidence-building arrangement that runs for 30 days prior to the signature of the full 14-Day MoU. It is governed by the same Waltz Philosophy of synchronized reciprocal motion but operates at a smaller scale with lower stakes.

Parameter	Specification
Duration	30 days (extendable by mutual consent to 45 days)
Legal Status	Politically binding exchange of letters; not a treaty
Iranian Commitment	Freeze all uranium enrichment at or above 60% at Natanz and Fordow
US Commitment	Release \$250M humanitarian tranche via Swiss escrow; partial blockade reduction
Verification	IAEA inspectors verify 60% freeze within 72 hours of pilot start
Escrow	Swiss-based escrow (not US-controlled); released in two \$125M tranches (D+1 and D+14)
Scope	Humanitarian goods only (medicine, food, agricultural inputs)
Reversibility	Either side may terminate with 7 days' written notice; no penalty
Transition	Upon successful completion, Micro-Pilot automatically transitions to Stage 1 (14-Day Opening)

3.2 Day-by-Day Micro-Pilot Pairings

Every action during the Micro-Pilot follows the Waltz pairing structure:

Day	Iranian Deliverable	US Deliverable	Verification
D-30	Letter to IAEA inviting inspectors to verify 60% freeze	Letter to Swiss escrow first \$125M authorizing tranche	IAEA DG confirms invitation received; Swiss bank confirms authorization
D-30+72h	IAEA inspectors on-site at Natanz and Fordow; 60% freeze verified	First \$125M released to CBI humanitarian account	IAEA report to JIG; CBI confirms receipt
D-23	Biweekly IAEA access continues; freeze confirmed sustained	Partial reduction of US naval blockade on one Iranian port (Bandar Abbas)	Satellite imagery; Omani naval observers
D-16	Second biweekly IAEA report confirms sustained freeze	Second \$125M tranche released to CBI	IAEA report; CBI confirms receipt
D-14	IRGC-Navy reduces small-craft presence in Hormuz transit corridor by 30%	US 5th Fleet reduces patrol frequency proportionally	Satellite + AIS tracking; JMA observation
D-7	Joint statement with IAEA confirming "constructive cooperation"	OFAC issues guidance clarifying permissible humanitarian transactions	Public statement; banking compliance confirmation
D-1	Iranian letter committing to negotiate full framework	US letter committing to negotiate full framework	Pakistani guarantor certifies both letters
D-0	Micro-Pilot completes; 14-Day MoU signed; Stage 1 begins		

3.3 Micro-Pilot to Full Accord Transition

The transition from Micro-Pilot to full Accord is designed to be seamless. All Micro-Pilot commitments are "rolled forward" into Stage 1 — they do not need to be renegotiated. The \$250M humanitarian tranche becomes the first tranche of the full Accord's asset return schedule. The IAEA inspectors already on-site become the advance team for the full verification deployment. The partial blockade reduction becomes the first step of the synchronized Day-7 blockade lift.

Design Rationale: The Micro-Pilot addresses the fundamental trust deficit that has prevented every previous agreement. By creating a low-stakes environment where both sides can prove their commitment, it builds the political capital necessary for the more significant concessions required in Stages 1-3. It also creates "sunk costs" of cooperation —

once IAEA inspectors are on the ground and humanitarian funds are flowing, both sides have invested in success.

Section 4: The Blind De-escalation Protocol

Modification 2: "Blind" De-escalation Through Parallel Pauses

Remove the requirement for immediate, formal public agreements. Institute a period of mutual, unacknowledged parallel pauses — Iran quietly halts centrifuge installation while the US quietly pauses certain secondary sanctions enforcement — to create breathing room without political cost. Both sides can claim they have made no concessions while the ground reality moves toward stabilization.

4.1 Parallel Pause Mechanics

The Blind De-escalation Protocol operates as a "pre-Micro-Pilot" phase that can begin even before formal negotiations resume. It requires no signed agreement, no public announcement, and no formal verification. It is designed to break the escalatory spiral by creating facts on the ground that both sides accept without acknowledging.

Domain	Iranian Parallel Pause	US Parallel Pause	Observable Effect
Nuclear	No new centrifuge installation; no additional 60% enrichment	No new sanctions designations; no enforcement actions on existing humanitarian exemptions	IAEA reports "no observed expansion"
Maritime	IRGC-Navy reduces vessel interdiction frequency	5th Fleet reduces close-proximity patrols near Iranian territorial waters	Insurance premiums begin stabilizing
Financial	No cyber operations against Gulf financial infrastructure	No interdiction of Iranian oil shipments to China/India	CBI notes "improved correspondent banking access"
Regional	Proxy forces reduce attacks on US positions in Iraq/Syria	No retaliatory strikes on Iranian-linked positions	US CENTCOM reports "reduced threat environment"

4.2 Unacknowledged Reciprocal Steps

The key innovation of the Blind De-escalation Protocol is that neither side is required to publicly acknowledge the other's pause. This protects domestic political space:

Waltz Pairing: The "Quiet Freeze"

Iran: Quietly instructs AEOI to redirect all enrichment output below 60%; does not announce this publicly

US: Quietly instructs Treasury to process pending humanitarian licenses; does not announce this publicly

Verify: IAEA inspectors (already present under existing Safeguards Agreement) observe the redirection; humanitarian banks note improved processing

4.3 Transition to Formal Architecture

The Blind De-escalation Protocol transitions to the Micro-Pilot Module when the following conditions are met:

1. Both sides have maintained parallel pauses for a minimum of 14 days
2. IAEA confirms "no observed expansion" of the Iranian nuclear program
3. At least one humanitarian transaction has been successfully processed through the Swiss channel
4. The Pakistani guarantor certifies that both sides have "constructively engaged" in backchannel discussions

At this point, the Micro-Pilot Module can be formally launched with the exchange of letters described in Section 3.

Section 5: Stage One — The 14-Day Opening

Stage One is the implementation of the 14-point MoU. It runs for 14 days from signature and produces seven irreversible operational deliverables. By Day 14, the dual blockade is lifted, the Joint Hormuz Authority is operating in provisional mode, the war-fighting domain is closed, the first sovereign asset transfer is complete, and Iran's weapons-grade enriched uranium stockpile is under verified IAEA custody in a third country.

5.1 Day 1: Ceasefire and Stockpile Transfer

At 0000 GMT on Day 1, a permanent bilateral ceasefire takes effect on all US-Iran fronts. The following occur simultaneously:

Waltz Pairing: Day 1 Deliverables

- Iran:** Initiate transfer of 60%-enriched uranium stockpile to IAEA custody in Oman; cease all offensive operations; transmit Hezbollah operational pause; transmit Houthi Red Sea pause; commit to moratorium framework (specifics deferred to 30-day window)
- US:** Suspend Operation Epic Fury offensive operations; issue OFAC general license for \$250M pilot asset transfer; confirm Sovereign Energy Partnership framing; open 30-day nuclear negotiation window
- Verify:** IAEA Director-General confirmation; mass spectrometry; continuous CCTV; Pakistani PM Office + UN Special Envoy + Omani channel + Swiss financial channel concurrent certification

5.2 Day 3: Humanitarian Corridor Opens

On Day 3, the first humanitarian-flagged vessel transits the Strait of Hormuz under Joint Hormuz Authority observation. This is a zero-fee, no-inspection-delay transit for food, medicine, medical equipment, and UN supplies. The humanitarian corridor operates at all maturity levels and **cannot be paused** regardless of disputes in other tracks.

5.3 Day 7: Synchronized Dual Blockade Lift

The single most important mechanical element of Stage One is the synchronized lifting of the dual blockade on Day 7.

Step	UTC Time	Iranian Action	US Action	Verification
1	T-60 min	IRGC Commander transmits stand-by signal to JMA MCC	5th Fleet Commander transmits stand-by signal to JMA MCC	JMA MCC logs both signals; Pakistani guarantor notified
2	T-15 min	IRGC small craft begin orderly withdrawal to 5nm stand-off; AIS positions broadcast	US Navy blockade vessels begin orderly withdrawal to 5nm from Iranian 12nm baseline; AIS broadcast	Lloyd's observer and UN OCHA vessel confirm movements
3	T-2 min	IRGC Commander issues go-confirmation to JMA MCC	5th Fleet Commander issues go-confirmation to JMA MCC	JMA Chair confirms both confirmations received
4	T=0000	Iranian government issues Hormuz opening declaration; IRGC-Navy transmits stand-down orders	US government issues naval blockade lift declaration; 5th Fleet transmits stand-down orders	SIMULTANEOUS within 60-second window; Pakistani guarantor logs
5	T+15 min	First JMA-AUTHORIZED vessel commences CTC transit	US Navy issues Notice to Mariners confirming Hormuz open	Lloyd's List, AIS Global, UN OCHA confirm first transit
6	T+6 hours	IRGC issues first 6-hour compliance status report	US 5th Fleet issues first 6-hour compliance status report	JMA MCC issues first public Daily Transit Report
7	T+24 hours	24-Hour Bright-Line Period ends; standard ROE replaces heightened monitoring		

5.4 Day 14: Stage One Closing

By Day 14, the following must be verified for Stage One to close:

- Both blockades lifted and verified (JMA observation vessels; Lloyd's List; UN OCHA; guarantor naval observers)
- At least 200 cumulative commercial vessel transits in the 14-day period
- IAEA confirms weapons-grade stockpile in secure custody in Oman
- Ceasefire intact with no verified offensive operations by either side
- JMA provisional mode confirmed with operational Maritime Coordination Cell
- First humanitarian corridor transits confirmed
- Binding framework commitment to nuclear moratorium, HEU export, and enhanced inspections registered with JIG (specifics to be negotiated in 30-day window)

Upon verification by Pakistan, Oman, and Switzerland concurrently, Stage One closes automatically and the 30-day deferred window (Stage 2) begins.

Section 6: The 30-Day Deferred Window

Stage Two is the heart of the Enhanced Accord's innovation. It converts the operational stabilization of Stage One into durable economic, institutional, and nuclear measures. By Day 44, the nuclear moratorium is ratified with specific terms, the HEU export logistics are confirmed, underground facility protocols are agreed, half of Iran's frozen sovereign assets have been returned, the first sanctions tranche is operative, and the comprehensive nuclear exchange framework is verified complete.

6.1 The Staggered Enrichment Cap

Modification 3: Staggered 1-Year Renewable Cap (Replacing Immediate 12-Year Demand)

The immediate demand for a 12-year enrichment cap at 3.67% is a non-starter for Tehran. This is replaced with a staggered approach: a 1-year cap, renewable annually for up to 12 years, tied directly to rolling sanctions relief. This protects Iranian perceptions of sovereignty while providing the US with the same cumulative constraint. Each annual renewal is automatic if the preceding year has been certified clean by the IAEA, creating a "ratchet" effect that makes the cap politically easier to maintain than to reverse.

Phase	Duration	Enrichment Standard	Condition for Advancement
Year 1 Cap	Days 30-365	Zero enrichment above 3.67%. All higher-enrichment centrifuges under IAEA seal.	Clean IAEA certification at Year 1 review; no material breach
Year 2-3 Cap	Years 2-3	3.67% enrichment for civilian fuel-cycle purposes at Natanz only	Fuel supply guarantee deposited in escrow; Section 123 Agreement framework operative
Years 4-12	Years 4-12	3.67% enrichment under full IAEA safeguards; RCSA architecture	RCSA five-year renewal confirmed; all compliance indicators at green
Year 13+	Year 13 onward	Civilian enrichment under IAEA Additional Protocol	Full compliance history; regional security dialogue active

Why This Works: The staggered approach transforms a politically explosive "12-year surrender" into a sequence of manageable one-year decisions. Each year's renewal is tied to verified US compliance on sanctions relief, creating a direct incentive for both sides to maintain the arrangement. Iran can claim it has "preserved its sovereign right to review

the arrangement annually." The US can claim it has "locked in a 12-year trajectory through performance-based renewal." Both claims are factually accurate.

6.2 HEU Stockpile Disposition

The disposition of Iran's transferred weapons-grade material is negotiated during the 30-day window. The stockpile was transferred to IAEA custody in Oman during Stage 1; the 30-day window finalizes the export logistics:

Element	Day 1 Status	30-Day Window Outcome
Stockpile location	IAEA custody, Oman	Confirmed; export destination selected
Export destination	Deferred	Oman (default), Russia, Kazakhstan, or neutral third country
Transport method	Deferred	IAEA-secured convoy; route confirmed
Timeline for export	Deferred	Finalized; typically 14-30 days from Day 44
Final disposition	Deferred	Down-blending, fuel fabrication, or long-term IAEA custody

6.3 Underground Facility Protocols

The status of Iran's underground enrichment facilities is negotiated during the 30-day window:

Facility	Landing Zone	Rationale
Fordow	Convert to International Medical Isotope Research Center (IMIRC); enrichment ceases permanently	Eliminates most sensitive facility; creates civilian asset
Natanz	Open-fuel-cycle research campus; 3.67% civilian enrichment under IAEA monitoring	Preserves NPT rights; civilian-only post-moratorium
Pickaxe Mountain	Zero new installation rule; IAEA continuous monitoring at access points; no centrifuge installation for 12 years	Eliminates justification for preemptive military strike

6.4 Phased IAEA Verification

Modification 7: Phased IAEA Dual-Key Monitoring

The demand for continuous, immediate dual-key monitoring is too intrusive for initial Iranian acceptance. Instead, verification begins with standard IAEA safeguards (already required under Iran's NPT obligations), scaling up to continuous monitoring only after a specific threshold of economic relief has successfully reached Iran. This "verification ladder" creates a phased relationship between Iranian cooperation and international confidence.

Phase	Timing	IAEA Presence	Trigger for Next Phase
Phase 1: Standard Safeguards	Days 1-30	Regular IAEA inspections at declared sites; no additional measures	IAEA confirms 60% freeze sustained; first economic tranche received
Phase 2: Enhanced Access	Days 30-60	Additional inspectors; unannounced access to declared sites; environmental sampling	Second economic tranche received; Fordow conversion begins
Phase 3: Continuous Monitoring	Days 60-180	24/7 cameras at Natanz and Fordow; real-time data transmission; dual-key systems	50% assets returned; oil export normalization active
Phase 4: Full Additional Protocol	Year 2+	Complete implementation; Additional complementary access; Protocol wide-area environmental sampling	Year 1 clean certification; Section 123 Agreement signed

6.5 Sanctions Relief Architecture

Approximately \$100-120 billion in Iranian sovereign assets remains frozen across multiple jurisdictions. The 30-day window finalizes the tranche structure:

Tranche	Timing	Amount	Trigger	Reversibility
Pilot (Stage 1)	Day 1	\$250M	Signature	Non-reversible
Tranche 1 (Stage 2)	Day 30	25% minus pilot	Stage 1 closed; IAEA custody verified; moratorium framework committed	Non-reversible
Tranche 2 (Stage 2 close)	Day 44	25%	30-day compliance; nuclear moratorium ratified; HEU export plan confirmed	Non-reversible

Tranche 3 (Stage 3)	Day 120	20%	JHTA remediation dialogue opened	operational; window; 30-day Stage 3	Non-reversible
Tranche 4 (Stage 3 close)	Day 180	15%	180-day compliance; exchange maintained	nuclear	Subject to JIG material-breach review
Reserve	Day 365	10%	12 months sustained compliance		Held pending material-breach determination
RCSA Framework	Year 2-3	Remainder	Full RCSA Phase 2-3 compliance		RCSA risk appetite framework

All economic benefits flow through non-US mechanisms (Swiss escrow, Qatari financial channel) that do not require explicit Congressional approval for the initial tranches. See Section 9 for full details.

Section 7: Stage Three — Permanent Architecture (Days 45-180)

Stage Three converts the provisional arrangements into permanent architecture and opens the broader regional dialogue. It is the bridge to the comprehensive successor framework.

7.1 The Joint Hormuz Transit Authority (JHTA)

On Day 90, the provisional Joint Hormuz Authority converts to the permanent Joint Hormuz Transit Authority (JHTA) by treaty.

Member	Status	Role
Islamic Republic of Iran	Permanent voting member	Senior permanent seat; chair authority in alternating years
United States	Permanent voting member	Permanent seat; co-chair authority in alternating years
Sultanate of Oman	Permanent voting member	Tiebreaker authority; host nation
State of Qatar	Permanent voting member	Financial oversight authority; escrow co-guarantor
GCC Rotating Chair	Observer (speaking rights, no vote)	Annual rotation; regional advisory
European Union	Observer (speaking rights, no vote)	Chairs Environmental and Safety Subcommittee
PRC	Observer (speaking rights, no vote)	Technical observer; largest Gulf-oil importer
UN Secretary-General Appointee	Neutral chair	Non-voting; tie-breaking on procedural matters

7.2 Regional Security Dialogue

Stage Three produces a Regional Security Dialogue framework establishing parameters for confidence-building measures: ballistic-missile range notification protocols, regional non-proliferation architecture, proxy operational monitoring mechanisms, and verification architecture including satellite monitoring and JIG-facilitated incident review.

7.3 Full Normalization Path

By Day 180, the successor framework — RCSA v3.6, Crescent Compact v1.7, or RAMES v9.1 — is formally opened for negotiation. Day 180 deliverables:

- Permanent JHTA charter ratified and in force
- 85% of frozen assets returned (cumulative)
- Successor framework negotiations opened
- Section 123 Agreement (civilian fuel supply guarantee) negotiation framework established
- Regional Security Dialogue active with agenda agreed
- Fordow conversion to IMIRC underway

Section 8: The Neutral Guarantor Triad

Modification 5: Neutral Guarantor Coalition

Relying solely on mechanical enforcement or the IAEA is insufficient. This Accord establishes a guarantor triad consisting of Oman (political trust), Qatar (financial leverage), and Switzerland (banking neutrality) to oversee escrow management, dispute resolution, and verification coordination. The triad provides the political legitimacy that neither the US nor Iran can provide alone.

8.1 Triad Composition and Mandate

Member	Primary Role	Specific Mandate	Host Infrastructure
Sultanate of Oman	Political Trust Facilitator	Primary mediator between US and Iran; hosts JHTA Secretariat in Muscat; chairs dispute resolution panels; maintains backchannel communications	JHTA Secretariat (Muscat); Maritime Coordination Cell (Khasab)
State of Qatar	Financial Leverage Coordinator	Co-guarantor of all escrow arrangements; provides parallel financial channel (Qatari riyal-based); hosts emergency liquidity facility; monitors sanctions relief implementation	Qatar Financial Centre (Doha); Emergency Liquidity Facility
Switzerland	Banking Neutrality Guardian	Primary escrow agent for all asset transfers; SWIFT coordination hub; IAEA financial support; binding arbitration venue (Geneva)	Swiss Escrow Bank (Zurich); JIG Secretariat (Geneva)

8.2 Triad Decision-Making

The Triad operates on a consensus basis for major decisions and majority vote for operational matters. Each member has one vote. In the event of deadlock, the Omani representative (as political facilitator) holds a casting vote on procedural matters only.

Waltz Pairing: Triad Escrow Release

Swiss: Escrow agent confirms IAEA compliance certificate received; funds ready for release

Omani: Political facilitator confirms no outstanding disputes between parties

Qatari: Financial coordinator confirms recipient banking channel operational

Result: Triad joint authorization for release; funds transferred within 72 hours

8.3 Dispute Resolution Through the Triad

When disputes arise, the following escalation pathway applies:

1. **Level 1:** Bilateral resolution through JIG working groups (target: 72 hours)
2. **Level 2:** Triad-facilitated mediation (target: 7 days)
3. **Level 3:** Binding Triad arbitration in Geneva (target: 30 days)
4. **Level 4:** UN Security Council referral (last resort only)

Section 9: Non-US Economic Channels

Modification 6: Decouple U.S. Politics from Sanctions Relief

Because U.S. domestic politics make guaranteed sanctions relief difficult, initial economic benefits are routed entirely through non-US mechanisms that do not require explicit Congressional approval. These include a heavily modified INSTEX-style channel (Euro-denominated humanitarian trade), a Swiss humanitarian banking corridor, and a Qatari emergency liquidity facility. The President's existing executive authority over foreign asset freezes and OFAC licensing is sufficient for the initial tranches. Congressional notification is provided but approval is not required until Tranche 3 (Day 120).

9.1 Swiss Humanitarian Banking Corridor

The Swiss corridor is the primary channel for all humanitarian and initial economic transactions. It operates through the Swiss National Bank's correspondent network, bypassing US financial intermediaries for the first two tranches.

Parameter	Specification
Operating Bank	Swiss escrow agent designated by JIG (minimum CHF 50B tier-1 capital)
Currencies	Swiss Franc (CHF) 40%; Euro (EUR) 35%; Chinese Yuan (CNY) up to 25%
US Dollar Component	Capped at 15% of any single transaction
Authorization	US Treasury OFAC general license (existing executive authority)
Verification	Triad joint authorization required for each release
Scope	Humanitarian (P1), agricultural (P2), civilian industrial (P3)

9.2 Qatari Emergency Liquidity Facility

Qatar provides a parallel emergency liquidity facility denominated in Qatari riyals and Euros, accessible within 48 hours of any Swiss channel disruption.

Parameter	Specification
Facility Size	2billioninitialcapacity; expandableto5 billion

Access Conditions	Triad certification that Swiss channel is disrupted
Repayment	Repaid from oil export revenues once Track 3 is active
Interest Rate	LIBOR + 1.5% (concessional terms)

9.3 Modified INSTEX Channel

A modified version of the Instrument in Support of Trade Exchanges (INSTEX) operates as the primary channel for European-Iranian trade, particularly in pharmaceuticals, medical equipment, and food products.

9.4 Congressional Notification Timeline

Tranche	Amount	Congressional Requirement
Pilot (Day 1)	\$250M	Notification only (executive authority)
Tranche 1 (Day 30)	~25%	Notification only (executive authority)
Tranche 2 (Day 44)	~25%	Notification only (executive authority)
Tranche 3 (Day 120)	~20%	30-day Congressional review window required
Tranche 4+	Remainder	Full Congressional consultation required

Section 10: Maritime Architecture & Hormuz Governance

The negotiation over Hormuz governance often becomes stuck on a single question: "Who controls the Strait?" This binary framing produces deadlock. The Maritime Architecture dismantles this binary by providing multiple governance, security, and economic options.

10.1 Governance Pathways

Option	Description	Timeline
G-1: JMA Provisional Council	Establish provisional Joint Maritime Authority with US and Iran as permanent voting members, rotating GCC chair, EU/PRC as observers. Council meets in Muscat.	7 days
G-2: Triad-Supervised Council	JMA Council with Omani-Qatari-Swiss triad holding supervisory authority over all decisions; neither US nor Iran can unilaterally block.	14 days
G-3: Dual-Track Governance	Separate political decision-making from technical operations. Political disputes do not disrupt transit operations.	21 days
G-4: IMO-Mandated Observer Mission	UN International Maritime Organization observer mission without operational command authority.	30 days

10.2 Security Pathways

Option	Description	Required
S-1: Synchronized Blockade Lift	Day-7 Dual Both blockades lift at identical UTC timestamp within 60-second window	Required
S-2: Omani-Hosted Confliction Hotline	24/7 De-Tri-lingual (English, Farsi, Arabic) hotline with 5-minute Tier-1 response mandate	Required
S-3: Unmanned Picket Line	Autonomous sensor network providing real-time transit corridor monitoring	Recommended
S-4: Naval Encounter Conduct	Code of INCSEA-adapted rules of engagement preventing accidental escalation	Required
S-5: IRGC-Navy Force Adjustment	Posture Reciprocal 5nm stand-off distance from commercial transit corridor	Required

10.3 Economic Pathways

Option			Description
E-1: \$20B Reinsurance Backstop			US DFC + Chubb + Lloyd's sovereign reinsurance reducing war-risk premiums from 2.5% to 0.25%
E-2: Tiered Commercial Transit Toll			~\$500M annually; 45% to Iranian Civilian Reconstruction Fund
E-3:	Iranian Revenue Participation		Contractually defined, auditable percentage of all JHTA transit fees
E-4:	Humanitarian Zero-Toll Fast Track		Insulated from all snapbacks; no fees for humanitarian/Hajj vessels

10.4 Symmetric Stand-Off Architecture

The single most politically sensitive element of maritime de-confliction is the stand-off distance mandate. The solution is not to negotiate a number that satisfies both parties. The solution is to apply the same number symmetrically:

Phase	IRGC Stand-Off from CTC	US/Coalition Stand-Off from Iranian 12nm Baseline
Learning Period (Days 1-14)	3nm (expanding to 5nm by Day 8)	3nm (expanding to 5nm by Day 8)
Operational (Day 15+)	5nm	5nm
Elevated Posture (Tier 2)	8nm	8nm

The Symmetry Lock: The stand-off schedules are structurally identical by design. Any future amendment to the IRGC table automatically requires an equivalent amendment to the US/Coalition table, and vice versa. The JMA Council may not amend one table without simultaneously amending the other. This provision is non-waivable.

10.5 The 24/7 De-Confliction Hotline

Tier	Response Time	Participants	Trigger
Tier 1 (Operational)	5 minutes	IRGC-Navy duty officer; US 5th Fleet duty officer; Omani monitor	Vessel in exclusion zone; weapons deployment; AIS anomaly

Tier 2 (Senior Military)	15 minutes	IRGC Senior Commander; JMA MCC Chair	NAVCENT	Tier-1 failure; weapons deployment above stand-off zone
Tier (Ministerial)	3 30 minutes	Iranian FM/SNSC Secretary; US Secretary of State; Omani FM chairs		Tier-2 failure; active kinetic exchange; mine detonation

Section 11: Nuclear Stabilization Architecture

The nuclear architecture is the framework's most sensitive component. The Enhanced Accord's innovation is that these options are negotiated during the 30-day deferred window rather than imposed as preconditions.

11.1 The Modular Pathway Menu

Six independently selectable pathways are provided for the verified neutralization of Iran's 60% HEU stockpile. Each constitutes a legally self-contained, standalone agreement.

Pathway	Description	Timeline	Best For
A: In-Place Downblending	Entire stockpile converted to medical-grade LEU (19.75%) through in-place downblending at Esfahan at minimum 3.5 kg/day. Iran retains sovereign custody. No transfer required.	142 days	Iranian domestic politics preclude physical transfer; US accepts chemical neutralization
B: HEU Export to Oman	Entire stockpile consolidated, packaged, transported under IAEA chain-of-custody to IAEA-controlled storage in Oman. Neither US nor Iran controls.	14 days (custody transfer)	Rapid removal priority; Iran accepts neutral third-country custody
C: Kazakhstan LEU Bank	Stockpile downblended in Iran, then transferred to IAEA LEU Bank in Oskemen. Maximum physical separation.	75 days	US requires maximum separation; Iran accepts international custody
D: Russian Federation Custody	Transfer to Rosatom-operated storage under IAEA safeguards. Leverages existing infrastructure and experience.	60-90 days	Speed paramount; Iran accepts Russian custody
E: Bushehr Fuel Conversion	HEU downblended to reactor-grade LEU and fabricated into fuel assemblies for Bushehr NPP. Converts liability into productive asset.	180 days	Iran prioritizes economic utilization of nuclear material
F: Hybrid Modular	Stockpile divided into batches, each processed through different pathways simultaneously. Maximum flexibility.	Concurrent	Parties cannot agree on single pathway; "test" multiple methods

11.2 Enrichment Caps and Centrifuge Controls

Facility	Permitted Activity	Cap Level	New Installation
----------	--------------------	-----------	------------------

Natanz (above-ground)	Civilian research enrichment	3.67%	No new centrifuges
Natanz (underground)	Sealed / monitoring only	0%	No
Pickaxe Mountain	No enrichment; monitoring only	0%	No
Fordow IMIRC	Downblending cascade only	19.75% output	No
Esfahan Tunnel	Downblending until complete, then sealed	19.75% protocol	during No
All other sites	No enrichment	0%	No

11.3 Pickaxe Mountain Lock Protocol

Pickaxe Mountain represents the single greatest near-term proliferation risk. Its depth (approximately 100 meters beneath granite) potentially places it beyond the reach of the largest currently deployed conventional bunker-buster munitions.

Waltz Pairing: Pickaxe Mountain Transparency

Iran: Permits IAEA baseline mapping of all tunnels within 45 days; freezes all construction; accepts continuous monitoring at all access points

US: Pledges no preemptive military action against Pickaxe Mountain for duration of moratorium; provides satellite data to IAEA for monitoring

Verify: IAEA conducts comprehensive survey; deposits baseline with UN; continuous seismic and environmental monitoring

11.4 The 15-Day Micro-Cycle Sequencing Engine

The core anti-deadlock principle: neither the United States nor Iran is ever exposed to more than 15 days of unreciprocated compliance risk. Each Micro-Cycle consists of a defined nuclear deliverable by Iran followed by a defined sanctions relief action by the United States.

Cycle	Days	Nuclear Deliverable (Iran)	Economic Release (US)
Cycle 1	Day 15-20	IAEA certifies pathway commenced; Natanz cap confirmed	SWIFT Tier B/C reconnection; Tranche 1 (15%)
Cycle 2	Day 30-45	IAEA certifies Fordow cascades sealed; pathway operations confirmed	Track 3 oil export (2.1 mbpd); Tranche 2 (20%)
Cycle 3	Day 45-60	12-Year Moratorium ratified; IAEA continuous monitoring locked in	SWIFT Tier A; first PRDD release; Tranche 3 (20%)

Cycle 4	Day 60+	IAEA certifies processed	100	kg	milestone	Tranche cleared	4	(15%);	Performance	Reserve
------------	------------	--------------------------------	-----	----	-----------	--------------------	---	--------	-------------	---------

Section 12: Fordow International Scientific Joint Venture

Modification 8: Reframe Fordow as International Scientific Achievement

Instead of framing international oversight of Fordow as a restriction or dismantlement, this Accord rebrands and funds it as an international scientific joint venture led by neutral nations, allowing Iran to claim it as a technological achievement rather than a concession. The facility becomes the International Medical Isotope Research Center (IMIRC) — a WHO-recognized center of excellence for medical radioisotope production.

12.1 Joint Venture Structure

Parameter	Specification
Legal Form	International joint venture under Swiss law; registered in Geneva
Governance	International Scientific Advisory Board: 2 Iranian + 3 international members (1 Swiss, 1 Omani, 1 WHO-nominated)
Management	Joint Managing Director: Iranian scientist + international deputy
Funding	International consortium: 40% Iran, 30% WHO/IAEA, 15% EU, 15% GCC
Production Mandate	Molybdenum-99 (Mo-99) for cancer diagnosis; Iodine-131; Xenon-133
Workforce	All Iranian nuclear scientists retained and retrained for medical isotope production
Conversion Timeline	Phase A (cessation): 30 days Phase B (purge): 45 days Phase C (infrastructure removal): 90 days Phase D (IMIRC activation): 36 months
Reconversion Lock	Unanimous ISAB consent + IAEA certification of legitimate civilian need + fuel supply assurance from 2+ NSG states

12.2 Iranian Domestic Narrative

Iranian negotiators may accurately state: "We converted our most advanced nuclear facility into a world-class cancer medicine factory. We are now the primary supplier of medical isotopes for the entire Middle East and beyond. This is not surrender — it is scientific leadership."

12.3 US Domestic Narrative

US officials may accurately state: "The Fordow facility — Iran's most fortified enrichment plant — has been permanently converted to exclusively peaceful medical isotope production. The facility that was designed to produce weapons-grade uranium is now producing cancer diagnostic materials under full international supervision."

Section 13: Rebranding & Dual-Track Messaging

Modification 9: Rename and Rebrand the Framework

Remove terms like "deal," "rollback," or "concessions." Washington sells this as a "regional stability mechanism" that prevents Iranian nuclear weapons while opening Hormuz. Tehran sells it as a "sovereignty-protecting de-escalation tool" that preserves NPT rights while ending the US blockade. Neither narrative contradicts the other because both are factually grounded in the same document.

13.1 Prohibited and Approved Terminology

Prohibited Term	US Alternative	Iranian Alternative
"Nuclear deal"	"Regional stability mechanism"	"Sovereignty-protecting de-escalation framework"
"Rollback"	"Civilian redirection"	"Scientific reorientation"
"Concessions"	"Reciprocal stabilization measures"	"Sovereign choices for peace"
"Capitulation"	"Verified compliance architecture"	"International cooperation"
"Sanctions relief"	"Performance-based economic normalization"	"Return of sovereign assets"
"Inspections"	"Transparency measures"	"International cooperation protocols"
"Dismantlement"	"Peaceful conversion"	"Scientific upgrade"
"Moratorium"	"Civilian-grade commitment"	"Sovereign energy partnership"

13.2 Dual-Track Messaging Framework

Element	US Framing	Iranian Framing
14-Point MoU	"Framework for ending the war and securing nuclear commitments"	"Path to peace with sovereignty preserved; nuclear details negotiated, not imposed"
30-day window	"Time to get the nuclear details right through verified compliance"	"Space to negotiate as equals, not under bombardment"

Stockpile transfer to Oman	"Weapons-grade material removed from Iranian territory under international control"	"Sovereign asset held in trust under IAEA supervision, not surrendered to any single power"
1-year renewable cap	"Performance-based annual renewal ensuring sustained compliance"	"Sovereign annual review preserving our right to evaluate the arrangement"
Fordow conversion	"Most sensitive facility permanently neutralized for peaceful use"	"Iranian scientists lead world-class medical research center benefiting all humanity"
JHTA governance	"International authority prevents unilateral Iranian closure"	"Permanent Iranian co-equality replacing decades of American unilateralism"
Asset return tranches	"Tranche architecture with Congressional oversight at every step"	"Irreversible return of sovereign property held hostage for decades"

13.3 Messaging Discipline Rules

1. All public characterizations must include acknowledgment that benefits are conditional on performance
2. 24-hour embargo on contradictory messaging from either side
3. Pre-approved sound-bites only; deviations require JIG Media Working Group notification within 4 hours
4. Messaging override permitted for domestic crises (natural disaster, terrorist attack) for up to 14 days
5. Neither side may characterize the other's commitments as "concessions" or "defeat"

Section 14: Goldilocks Crisis Protocol

Modification 10: Pre-Position for a "Goldilocks" Crisis

The framework is most likely to be adopted during a crisis that scares both sides but doesn't collapse diplomacy — a maritime insurance spike, a near-miss military encounter, or a leadership transition. The Goldilocks Protocol keeps the modular 14-day implementation directives and Micro-Pilot module ready to deploy instantly as an off-ramp the moment such a crisis occurs.

14.1 Crisis Triggers and Response

Crisis Type	Characteristics	Deployable Module	Deployment Timeline
Maritime Insurance Spike	War-risk premiums exceed 5% of cargo value; commercial shipping halts	Micro-Pilot + Day-7 Synchronized Blockade Lift (pre-negotiated, ready to activate)	48 hours
Near-Miss Military Encounter	Naval vessels from either side come within firing range; hotline activated	Blind De-escalation Protocol + S-2 Hotline Full Activation	24 hours
Leadership Transition	New leader in either capital needs immediate foreign policy win	Micro-Pilot (presents as "new initiative" rather than inherited deal)	7 days
Regional Spoiler Attack	Third party (terrorist, proxy, criminal) attacks Hormuz shipping	JMA Emergency Protocol + Triad Attribution Investigation	Immediate
Energy Market Collapse	Brent crude exceeds 120/bbl; US gasoline prices exceed 5/gallon	Full Stage 1 (14-Day Opening) pre-authorized for emergency deployment	72 hours

14.2 Standby Implementation Cells

Each party maintains a permanent standby Implementation Cell of 8-12 staff responsible for maintaining readiness to deploy the 14-Day Directive within 24 hours of crisis trigger. Cell

staffing:

Role	Min Required	Qualification
Cell Director	1	Senior FSO equivalent; business hours + on-call
Deputy Director (Ops)	1	Mid-level operations officer; business hours
Financial Officer	1	Treasury/central bank background; business hours + on-call
Nuclear Verification Liaison	1	IAEA or nuclear policy background; business hours
Maritime Operations Officer	1	Naval or maritime operations; 12-hour rotation
Duty Officer	2	Junior officer level; 12-hour rotation (24/7 during activation)
Communications Officer	1	Media/information management; business hours
Legal/Compliance Officer	1	International law background; business hours

14.3 Crisis Pause Mode

Either party may invoke Crisis Pause Mode at any time: written notice to JIG Chair specifying duration (30/60/90 days). No justification required. Effects:

- Military modules suspended; frozen asset releases paused (humanitarian and oil continue)
- PRDD at 50%; IAEA access continues; hotline and portal continue
- Resumption automatic at stated duration unless extended by mutual agreement
- Non-humiliation: reported as "operational adjustment" — not compliance failure

Section 15: Five-Channel Verification & Diluted PRDD

Verification is the spine of the Accord. No single verification channel can either trigger or block compliance determinations on its own. Every material finding requires convergent evidence from at least two independent channels.

15.1 The Five Verification Channels

Channel	Active	Coverage	Reporting Authority
Pakistani Mediator	Throughout	Bilateral diplomatic channel; ceasefire compliance; major commitment certification; crisis hotline	Pakistani Prime Minister's Office and designated envoy
Omani Technical	Throughout	Maritime operations; JMA observation; hotline; mine clearance; nuclear custody facility oversight	Omani Foreign Ministry and JMA Secretariat Director
Swiss Financial	Throughout	Asset transfer verification; sanctions relief implementation; escrow management; banking reconnection	Swiss Federal Department of Foreign Affairs
IAEA	From Day 1	Nuclear exchange verification: stockpile custody, enrichment moratorium, Fordow conversion, environmental sampling	IAEA Director General; reports to JIG and UNSC
National Technical Means	Throughout	Satellite imagery, signals intelligence, national capabilities; used as backstop and discrepancy detector	US, partner intelligence services; discrepancies referred to JIG

15.2 Diluted PRDD "Kill Switch"

Modification 4: Dilute the PRDD Snap Line from 72 Hours to 30 Days

The original 72-hour Petroleum Revenue Direct Deposit (PRDD) Snap Line freeze gave the US too much immediate leverage and created an unacceptable risk of accidental financial disruption. The diluted version extends the freeze window to 30 days and introduces a mandatory dispute resolution phase mediated by the Triad before any funds are frozen. This preserves US leverage while eliminating the risk of technical glitches or false positives triggering unintended economic damage.

Parameter		Original (v1.0-2.5)	Diluted (v5.0)
Freeze window	trigger	72 hours	30 days
Trigger authority		Automatic upon IAEA non-compliance notice	IAEA notice + Triad dispute resolution
Dispute resolution		None (automatic)	Mandatory 14-day Triad mediation before freeze
False positive protection		2-hour verification loop	30-day window + Triad technical review
Humanitarian firewall		No freeze affects humanitarian funds	Expanded: no freeze affects humanitarian, medical isotope, or JHTA operational funds
Restoration		Only IAEA DG can certify	IAEA DG + Triad consensus required

15.3 Graduated Degradation Ladder

Tier	Trigger		PRDD Effect		Frozen Assets	Maritime
Tier 1 (RED)	Nuclear	>3.67%; inspector attack; WMD	Full suspension after 30-day Triad review		All suspended; UNSC filing	Coalition freeze; SWIFT cut
Tier 2 (ORANGE)	IRGC	cash diversion; major positioning breach	Reduced to 70%; +15% held		Re-suspension lever: 30d delay	Coalition paused; patrols min
Tier 3 (YELLOW)	Reporting delay	>24h; positioning variance	Unchanged Window)	(QC	Unchanged	Unchanged
Tier 4 (GREEN)	Strategic flexibility; diplomatic disputes		No effect		No effect	No effect
Tier 5 (GRAY)	Force majeure; natural disaster		Protected; continues		Protected	Auto-Hold activates

15.4 Risk Appetite Framework

Tier	Level	Example Triggers	Response
1	Zero Tolerance	Nuclear weapons-related activity; diversion of fissile material; attack on IAEA inspectors	Immediate snapback; highest escalation
2	Minimal Tolerance	Enrichment above agreed limits by >20%; obstruction of IAEA access >72 hours	Snapback presumed but rebuttable; 30-day Triad review
3	Managed Tolerance	Technical reporting delays; minor centrifuge discrepancies	Graduated response: technical assistance, extended timeline

4	Strategic Flexibility	Political disagreements; domestic legislative delays	Snapback prohibited; diplomatic and guarantor-led resolution required
5	Absorbed Risk	Force majeure; natural disasters affecting compliance	No penalties; automatic Trigger Dampening Window activated

15.5 Joint Implementation Group

The JIG is the central coordination body for Stages 2 and 3, hosted in Geneva. Membership:

- **Permanent members:** United States, Iran, Pakistan, Oman, Qatar, Switzerland
- **Observers:** EU, UN Special Envoy, IAEA DG representative
- **Chair:** Swiss representative (neutral chair for all financial/asset decisions)

Material-breach determinations require majority of permanent members (4 of 6), with Pakistan and Oman both required for any nuclear-related determination. The Triad members (Oman, Qatar, Switzerland) collectively hold a veto over any financial freeze decision.

Section 16: What Each Side Wins

This section provides the diplomatic framing that enables each government to defend the Accord to its domestic audience. Every claim below is factually supportable from the text of the Accord.

16.1 What the United States Wins

Win	Specific Deliverable	Day Verified
Strait of Hormuz reopened	200+ commercial vessel transits per 14-day period; gas-pump prices begin falling	Day 14
Operation Epic Fury succeeded	Offensive operations transition to JMA convoy support; President can credibly claim operation achieved its objective	Day 7
Freedom of navigation guaranteed	JHTA Charter formally guarantees transit in international law; Iran cannot unilaterally close	Day 90
Weapons-grade stockpile secured	Entire 60%-enriched stockpile in IAEA third-country custody, verified by mass spectrometry	Day 1 initiated; Day 14 verified
1-year renewable enrichment cap	Performance-based annual renewal ensuring sustained Iranian compliance; IAEA continuous monitoring	Day 44 ratified
Fordow permanently converted	Fortified Fordow facility producing medical isotopes, not enriching uranium; under international JV management	Day 60 begins
No basing concessions	All US Gulf bases remain; all treaty obligations to GCC partners preserved; no troop withdrawals	Day 1
Congressional oversight preserved	Each asset tranche from Tranche 3 forward subject to 30-day Congressional review window	Throughout
Israeli security backstop	Weapons-grade stockpile secured; moratorium in force; continuous IAEA monitoring	Day 1 onward

Recommended US Domestic Messaging: "We secured the opening of Hormuz, the elimination of Iran's weapons-grade uranium from its territory, a performance-based enrichment cap with automatic renewal tied to verified compliance, and the conversion of Fordow to a cancer medicine factory. We got Iranian assets returned in tranches with Congressional review at every step. We didn't give up a single base. American forces remain in the region. And we did it without losing another American life."

16.2 What Iran Wins

Win		Specific Deliverable	Day Verified
War ends permanently		Permanent bilateral ceasefire; war-fighting domain closed within 14 days	Day 1
US naval blockade lifted		Synchronized with Hormuz reopening on Day 7; Iranian commercial ports restored	Day 7
Permanent governance seat	JHTA	Permanent voting seat with chair authority on alternating years; formal Iranian co-equality	Day 90
Return of sovereign assets		\$250M Day 1; cumulative 50% by Day 44; cumulative 85% by Day 180	Staged through Day 180
Comprehensive sanctions relief		Humanitarian Day 1; SWIFT Tier B/C Day 30; oil export normalization Day 30; petrochemicals Day 120	Staged
NPT rights preserved		Enrichment continues at 3.67% under sovereign annual review; civilian nuclear rights fully preserved	Throughout
Missile untouched	program	Ballistic missile file entirely deferred to Stage 3 Regional Security Dialogue	Day 1
Constitutional governance preserved		No requirement on Iranian internal governance; Supreme Leader succession unaffected	Day 1
Reconstruction revenue		45% of JHTA transit fees to Iranian Civilian Reconstruction Fund; World Bank trustee oversight	Day 45

Recommended Iranian Domestic Messaging: "We have ended the war. The American naval blockade of our ports has been lifted. Our frozen sovereign property is returning. The Strait of Hormuz is governed by an international authority on which Iran holds a permanent seat — replacing decades of American unilateralism. We have chosen to redirect our nuclear program toward guaranteed civilian energy leadership. Our NPT rights remain inviolable; our sovereignty is intact. The arrangement is subject to our sovereign annual review — and we negotiated every detail as equals, not under bombardment."

16.3 What the Region Wins

Stakeholder	Key Benefit
Saudi Arabia & Gulf States	Predictable energy transit; reduced nuclear threat; GCC representation on JHTA; no new concessions required

Israel	Weapons-grade stockpile secured; enrichment cap with IAEA monitoring; Hezbollah operational pause; quiet acquiescence
Pakistan	Confirmed primary mediator role; institutionalized guarantor status; strengthened bilateral relationships
Oman	JHTA secretariat in Muscat; Maritime Coordination Cell in Khasab; IAEA custody facility; permanent institutional centrality
Qatar	Emergency liquidity facility host; financial guarantor status; strengthened Gulf diplomatic role
France/EU	40-nation coalition finds legitimate institutional home; EU chairs Environmental and Safety Subcommittee
China & India	Predictable energy supply; IHTA technical observer status; documented role in stabilization
Global Markets	20% of global oil and gas returns to predictable transit; Brent crude stabilization

Section 17: Safeguards and Protections

Key Safeguard 1: Failure Without War

Framework failure does not restore war conditions. If the Accord collapses, the bilateral ceasefire remains in force unless explicitly renounced by either party. The 150-day inertia buffer means no instant sanctions snapback.

Key Safeguard 2: Stabilization Holds

When a specific Accord measure becomes domestically untenable in either capital, that measure can be placed on Stabilization Hold for up to 90 days. During the Hold: all other obligations remain in force. Maximum two Stabilization Holds per stage. Nuclear exchange steps are not eligible for Hold.

Key Safeguard 3: Emergency Ambiguity Authority

The Triad chair possesses Emergency Ambiguity Authority — the capacity to introduce controlled procedural ambiguity that prevents immediate escalation when clarification would inflame domestic public opinion.

Key Safeguard 4: Costed Withdrawal

Any party may withdraw through a six-month notification window, orderly asset disposition, infrastructure handover to host states, and personnel repatriation. Nuclear constraints survive withdrawal as residual obligations.

Key Safeguard 5: Fuel Supply Guarantee Survival

If the US triggers sanctions snapback on non-nuclear grounds, the fuel supply guarantee remains in force unless the JIG determines a nuclear material breach.

Key Safeguard 6: Non-Recognition

Participation in this Accord does not equal diplomatic recognition or alliance. The US and Iran remain adversaries in many domains.

Key Safeguard 7: Succession Resilience

The Accord binds institutions, not individuals. Changes of government activate continuity provisions rather than voiding the framework.

Key Safeguard 8: Triad Override Protection

No single party may trigger a financial freeze, suspend maritime operations, or block humanitarian flows without Triad consensus. This prevents unilateral sabotage of the framework.

Section 18: Crisis Management Architecture

The Accord operates in an environment where incidents will occur. The de-escalation architecture is designed to absorb incidents without triggering reflexive escalation.

18.1 The 24-Hour Cooling-Off Rule

When an incident occurs, no escalatory action by either party may be taken within the first 24 hours. The window is used for Pakistani guarantor backchannel review, fact-gathering by JMA observation assets, and discrepancy assessment. Self-defense rights are preserved where an active armed attack is in progress.

18.2 Five Independent De-escalation Pathways

Pathway	Trigger	Duration	Authority
Crisis Lock	10+ fatalities; verified direct military clash; critical infrastructure attack	14 days; extendable to 42	JIG majority; Pakistan facilitates
Third-Party Spoiler Attribution	Third-party attack or spoiler activity	30-day investigation	JIG-convened panel; neutral technical expert chair
Military Deconfliction	Any military incident in or near JHTA corridor	Permanent 24/7 hotline	Oman-hosted; 2-hour mandatory response
Regional Firewall	Third-party regional escalation threatening framework	Immediate emergency session	JIG; Pakistan facilitates
Direct Executive Link	Imminent crisis requiring head-of-state communication	6-hour consultation	Pakistan Prime Minister as initial relay

18.3 Maritime De-Escalation Protocols

Maritime Incident Hotline: 24/7 Omani-hosted hotline linking IRGC-Navy, US Fifth Fleet, Iranian Navy, and JMA Maritime Coordination Cell. 2-hour mandatory response window.

Vessel Harassment Parameters: Approach within 100 meters at speed; illumination with targeting radar; simulated attack maneuvers. Any harassment triggers immediate hotline and 24-hour JIG notification.

No-Seizure Zone: Commercial vessels in JHTA corridor international waters may not be seized by any party without prior JMA notification.

18.4 Communications Blackout Protocol

If primary communications channels fail, the following fallback sequence activates:

1. Attempt primary channel 3 times over 15 minutes
2. Activate Iridium satellite link
3. If Iridium fails: activate Pakistani Guarantor Relay
4. If all digital channels fail: naval commands communicate via pre-agreed NATO/Iran naval frequencies
5. Stabilization Hold auto-activated for cyberattack on verification infrastructure

Section 19: Implementation Roadmap

19.1 Pre-Signature Phase (T-5 Days to T-0)

Day	Action	Responsible
T-5	Both governments confirm Micro-Pilot agreement; designate senior officials	Heads of Government
T-4	Omani Foreign Ministry confirms Muscat facilities ready; JMA provisional charter drafted	Oman
T-3	Swiss financial channel confirms escrow architecture; IAEA confirms Oman custody facility readiness	Switzerland / IAEA
T-2	Pakistani guarantor confirms mediation team; Qatari facility confirms liquidity readiness	Pakistan / Qatar
T-1	Both governments issue internal instructions to military commands for ceasefire compliance	Military Commands
T-0	Micro-Pilot letters exchanged; 60% freeze begins; first IAEA inspectors deploy	Foreign Ministers

19.2 Critical Success Factors

- Speed in Micro-Pilot:** The first 30 days must produce visible, reversible but credible deliverables. Delays erode political capital.
- Speed in Stage One:** The first 14 days must produce visible, irreversible deliverables. Delays in Stage One erode political capital for both governments.
- Israeli Coordination:** The single highest-risk scenario is a coordinated Israeli military strike on Iranian nuclear facilities during the 30-day window. The architectural response is to complete the moratorium ratification and HEU export plan as rapidly as feasible and provide Israeli leadership with sufficiently detailed advance briefings.
- Domestic Political Protection:** Both governments need immediate, visible wins. The \$250M pilot, Hormuz reopening, and ceasefire must be communicated as achievements on Day 1.
- Verification Credibility:** The five-channel verification system must be fully operational by Day 7. Any perception that verification is one-sided will collapse Iranian participation.
- 30-Day Window Discipline:** The nuclear specifics must be negotiated within the 30-day window. Extensions erode credibility and invite spoiler activity.

- 7. Triad Reliability:** The Oman-Qatar-Switzerland triad must demonstrate operational readiness from Day 1. Any Triad failure undermines the entire architecture.
- 8. Successor Framework Readiness:** By Day 90, the RCSA v3.6 or successor negotiation framework must be ready to open. The Stability First Enhanced Accord v5.0 is a bridge, not a destination.

19.3 Estimated First-Year Costs

Item	Estimated Cost	Funding Source
JHTA Secretariat (Muscat)	\$12M	JHTA transit toll revenues
Maritime Coordination Cell (Khasab)	\$4M	JHTA transit toll revenues
IAEA Oman custody facility operations	\$8M	IAEA regular budget + voluntary contributions
Mine clearance operations (6-month)	\$25M	International Maritime Safety Fund
Insurance backstop facility	\$20B (liability contingent)	US DFC + Chubb + Lloyd's market
Iranian Civilian Reconstruction Fund (Year 1)	\$200M	45% of JHTA transit toll revenues
JIG Geneva Secretariat	\$3M	Switzerland + proportional party contributions
IMIRC conversion technical assistance	\$45M	WHO + IAEA + EU consortium

Appendices

Appendix A: 180-Day Sequencing Matrix — Waltz Pairings at a Glance

Day	US Moves	Iran Moves	Verification
Micro-Pilot D+1	\$125M to Swiss escrow; OFAC guidance	60% freeze order; IAEA invitation	IAEA confirms freeze within 72h
Micro-Pilot D+14	Second \$125M tranche; partial blockade reduction	Biweekly IAEA access sustained; IRGC presence reduced 30%	IAEA report; satellite confirmation
Micro-Pilot D+30	Open 30-day nuclear negotiation window	Commit to 1-year 3.67% cap framework	JIG certification; Pakistani guarantor
Stage 1, Day 1	Suspend offensive ops; \$250M OFAC license	Cease offensive ops; stockpile to IAEA custody; Hezbollah/Houthi pause	Pakistan PM + UN Envoy + Oman + Swiss
Stage 1, Day 3	OFAC humanitarian license issued	First humanitarian-flagged vessel cleared	Lloyd's List + UN OCHA + JMA
Stage 1, Day 7	Lift naval blockade; suspend Operation Epic Fury	Open Hormuz; withdraw IRGC craft; begin mine-clearing	JMA observation; Lloyd's List; UN OCHA
Stage 1, Day 14	Stage 1 closing certification	Stage 1 closing certification	Pakistan + Oman + Qatar + Swiss
Stage 2, D+15	Welcome IAEA full redeployment; begin moratorium negotiations	Issue IAEA invitation for declared sites; continuous monitoring installed	IAEA DG confirms; satellite corroborates
Stage 2, D+30	First sanctions OFAC aviation licenses	Declare 3.67% moratorium framework; idle higher-enrichment centrifuges under seal	IAEA continuous monitoring; JIG certification
Stage 2, D+44	Process third asset tranche (50% cumulative); confirm SWIFT reconnection	Moratorium ratified; HEU export plan confirmed; IMIRC Summit framework	JIG closing certification; Stage 3 automatic
Stage 3, D+60	Commence full sanctions relief tranche	Fordow conversion begins (Phase A)	JIG verification
Stage 3, D+90	Confirm permanent JHTA conversion	Confirm permanent JHTA; first chair rotation	UN Secretary-General + JIG

Stage D+180	3, Process fifth asset tranche (85% cumulative)	Confirm Stage 3 compliance; successor framework opening	JIG closing certification
--------------------	--	--	----------------------------------

Appendix B: The 30-Day Window Negotiation Agenda

Period	Priority Issues	Target Outcomes
Days 15-18	1-year cap terms; annual renewal mechanism; violation consequences	Principled agreement on staggered cap architecture
Days 19-22	HEU export logistics; destination; transport timeline	Confirmed export plan with IAEA
Days 23-26	Underground facility protocols; Fordow JV timeline; Natanz parameters; Pickaxe Mountain lock	Facility protocols agreed and documented
Days 27-30	Phased inspections regime; IAEA scaling timeline; standard-to-continuous transition triggers	Inspection framework ratified
Days 31-36	Sanctions relief sequencing; asset return tranches; SWIFT reconnection; non-US channels	Economic package agreed
Days 37-40	Triad operational procedures; dispute resolution protocols; Crisis Pause mechanics	Governance framework agreed
Days 41-44	Final ratification; concurrent certification; Stage 2 closing	All elements verified and operative

Appendix C: Glossary of Key Terms

Term	Definition
Accord	This document; the Stability First Enhanced Accord v5.0
Blind De-escalation	Mutual, unacknowledged parallel pauses creating breathing room without formal agreement
Deferred Window	The 30-day period (Days 15-44) for negotiating nuclear specifics
Dual Blockade	Iranian Hormuz restrictions plus US naval blockade on Iranian ports
Goldilocks Crisis	A crisis that scares both sides but doesn't collapse diplomacy — optimal adoption window
HEU	Highly Enriched Uranium (enriched to 60% U-235 in Iran's current stockpile)
JHTA	Joint Hormuz Transit Authority (permanent successor to JMA)
JIG	Joint Implementation Group — central coordination body in Geneva
JMA	Joint Maritime Authority (provisional Hormuz governance body)

Micro-Pilot	30-day trust-building pilot with 60% enrichment freeze for humanitarian tranche
Mirror Pairing	Waltz-structured simultaneous commitment by both parties on same day
Moratorium	1-year renewable cap on enrichment above 3.67%
PRDD	Petroleum Revenue Direct Deposit (diluted from 72h to 30-day freeze window)
RCSA	Regional Comprehensive Stability Architecture (successor framework)
Staggered Cap	1-year renewable enrichment cap, extending annually to 12 years based on performance
Triad	Neutral Guarantor Coalition: Oman (political), Qatar (financial), Switzerland (banking)
Waltz Philosophy	Synchronized reciprocal motion: neither party moves alone; every step paired

Appendix D: The 10 Modifications at a Glance

#	Modification		Section	Primary Benefit
1	30-Day Module	Micro-Pilot	Section 3	Builds trust through limited, reversible exchanges before full commitment
2	Blind Protocol	De-escalation	Section 4	Creates breathing room without political cost of formal concessions
3	Staggered Renewable Cap	1-Year	Sections 6, 11	Replaces politically explosive 12-year demand with manageable annual decisions
4	Diluted PRDD Snap Line		Section 15	Extends 72h freeze to 30 days with Triad mediation; eliminates accidental disruption
5	Neutral Guarantor Triad		Section 8	Oman-Qatar-Switzerland coalition provides legitimacy neither side can provide alone
6	Non-US Channels	Economic	Section 9	Routes initial benefits through mechanisms not requiring Congressional approval
7	Phased Verification	IAEA	Sections 6, 11	Starts with standard safeguards, scales to continuous monitoring based on performance
8	Fordow Scientific Venture	Joint	Section 12	Rebrands oversight as international achievement; preserves Iranian scientist employment
9	Dual-Track Rebranding		Section 13	Washington: "regional stability mechanism"; Tehran: "sovereignty-protecting de-escalation tool"
10	Goldilocks Protocol	Crisis	Section 14	Pre-positions 14-day directives for instant deployment during future crisis off-ramp

Document Certification

This document, the **Stability First Enhanced Accord v5.0**, reflects the diplomatic trajectory of May 2026, when negotiators transitioned from a failed "Nuclear First" model to a comprehensive "Waltz Architecture" built on synchronized reciprocal motion, neutral guarantor oversight, and phased implementation. The 10 modifications incorporated in this version address every major blocker that prevented agreement in the JCPOA, the Qatar talks, the Oman channel, and the April 2026 Islamabad round.

The Micro-Pilot builds trust. The Blind De-escalation creates space. The staggered cap protects sovereignty. The diluted PRDD prevents accidents. The Triad provides legitimacy. The non-US channels bypass politics. The phased IAEA reduces intrusiveness. The Fordow JV reframes conversion. The rebranding enables domestic defense. The Goldilocks Protocol ensures readiness.

Every provision is paired. No party moves alone. The waltz continues as long as both partners step together.

"Nuclear Stabilized. Hormuz Open. Sovereignty Preserved."
