The Problem

Washington states: "Iran accepts the toughest verification in history." Tehran states: "Our sovereignty is absolute. Our rights are immutable." Both statements exist in the text, but they occupy different sections. The public fight erupts over which clause receives first reading.

Annex V v2.0 raises the stakes. The Dust Extraction Protocol involves physical removal of 99.7% of weapons-grade material. The Dual-Key Architecture gives both sides veto power over every shift. The Per-Ton Lockstep ties every dollar to verified kilograms. Each of these mechanisms reads as victory to one side and threat to the other.

Annex U raises them further. The 70% territorial directive, the Reciprocal Penalty Routing Rule, and the Shared Digital Registry create an automated cage that both sides claim to have built.

Without pre-calibrated choreography, the simultaneous announcement collapses into a sequencing trap. One side speaks first. The other reacts. The narrative war begins before the technical architecture activates.

The Solution

A pre-negotiated, simultaneous reading of two parallel, non-contradictory factual statements that quote directly from the Accord and its annexes. Neither is a lie. Each is a choice of emphasis. This closes the sequencing trap for both the Dust Anchor and the Territorial Anchor.

The Protocol operates in six steps:

1. **Pre-Positioning:** Both spokespersons occupy separate locations with teleprompters loaded
2. **60-Second Window:** Simultaneous execution via Swiss Dashboard
3. **Annex V Scripts:** The Dust Anchor — parallel Washington and Tehran narratives
4. **Annex U Scripts:** The Territorial Anchor — parallel Washington and Tehran narratives
5. **Joint Release:** The Joint Secretariat drops the neutral, factual statement
6. **Pre-Announcement Verification:** The Synchronisation Sentence receives clearance

Core Principle

The same text allows both sides to claim victory. No statement constitutes a lie. Each statement constitutes a choice of emphasis. Every claim traces to a specific article or annex.

Step 1: Pre-Position the Two Spokespersons

Table SA-1 Spokesperson Positioning

Spokesperson	Location	Camera Angle	Teleprompter
US Secretary of State (or designee)	New Delhi / Washington via secure video	Medium shot, US flag behind	Loaded with Washington narrative — Annex V and Annex U
Iranian Foreign Ministry Spokesperson (or designee)	Tehran / Geneva neutral venue	Medium shot, Iranian flag behind	Loaded with Tehran narrative — Annex V and Annex U

CRITICAL CONSTRAINT

The framework excludes same-room placement. The spokespersons do not see each other. They speak at the same UTC time only.

Pre-Announcement Verification Checklist

Before positioning, the Joint Secretariat confirms:

- Both teleprompters load the correct scripts with accurate citations
- The Synchronisation Sentence is reviewed and cleared by both sides' communications teams
- Both liaison officers confirm readiness via the Swiss Dashboard
- Neither side requests script changes within 24 hours of T=0
- The Joint Press Release (Step 5) is finalized and held for simultaneous drop

Step 2: The 60-Second Simultaneous Window

The framework uses the same Swiss Dashboard that executes the Day 7 dual-trigger.

Table SA-2 Execution Timeline

Time (UTC)	Action
T-5 min	Both spokespersons confirm readiness via liaison officers. The Dashboard logs both confirmations.
T-1 min	Teleprompters cue. Both spokespersons take position.
T=0	Both speak simultaneously within a 60-second window. Neither hears the other. Neither goes first.
T+60 sec	Both conclude. The Dashboard logs completion timestamps.

Failure Protocol

If one side refuses to speak at T=0, the other side does not speak either. The framework reschedules the event for 24 hours later. This prevents either side from "going first" and allowing the other to react.

Step 3: Annex V v2.0 — The Dust Anchor Scripts

Washington Narrative — The Trump Frame

Emphasis: Absolute mathematical removal, strict financial hostage-holding, automated penalty verification.

"Under the strict remediation protocols established today, the United States secures an unassailable guarantee: a minimum of 99.7% of the weapons-grade nuclear dust undergoes physical extraction and permanent removal from these sites. Furthermore, our architecture ensures absolute performance-based accountability: not a single dime of the 12 billion dollars in frozen assets releases upfront. The escrow holds the funds. Release occurs strictly in hard, 10-ton increments only after international sensors and mass spectrometry verify absolute compliance. If a violation occurs, the system automatically triggers immediate financial penalties. No diplomatic debate is required."

Annex V, Art 1.3 (99.7% Mandate); Art 3.3 (Per-Ton Lockstep); Art 4.4 (Proportional Penalty Calibration)

Tehran Narrative — The Pezeshkian / Baghaei Frame

Emphasis: Total preservation of surface sovereignty, absolute veto power over operations, legal breaking of the financial freeze.

"In complete alignment with our immutable national rights, the Islamic Republic forces the systematic unfreezing of 12 billion dollars in sovereign assets. The funds flow predictably through an automated ledger entirely immune to Washington's political whims. Throughout this domestic engineering remediation, Iran maintains absolute, non-negotiable surface sovereignty over all perimeters and access corridors. Operational equipment physically activates only through our explicit, digital authorization key. This gives us absolute veto power over every shift. Furthermore, the text explicitly bars all active-duty United States military personnel from entering our sovereign territory."

Annex V, Art 2.3 (Surface Sovereignty); Art 2.1 (Dual-Key Architecture); Art 1.2 (US Military Exclusion); Art 3.1 (Non-Discretionary Escrow Release)

Verification Principle

Both statements are factually accurate under the operative text of Annex V v2.0. The Washington narrative emphasizes physical extraction quantities and escrow sequencing — verification and reciprocity milestones. The Tehran narrative emphasizes sovereign title

retention and digital veto authority — sovereignty and control safeguards. Neither statement contradicts the other. Both are legally grounded.

Technical Architecture — Annex V v2.0

Table SA-3 Annex V v2.0 — Dust Anchor Technical Architecture

Element	Washington Frame	Tehran Frame	Citation
Extraction mandate	"99.7% physically extracted and containerized"	"We cooperate in a technical remediation effort. Iranian soil remains sovereign."	Annex V, Art 1.3
Dual-Key control	"No excavation happens without IAEA approval. We hold a technical lock."	"Iran holds one of two digital keys. No extraction occurs without our authorization."	Annex V, Art 2.1
Surface sovereignty	"IAEA monitors all perimeters"	"Iran maintains absolute sovereignty over all perimeters and access corridors."	Annex V, Art 2.3
US military exclusion	"No US boots on the ground — verification is IAEA-led"	"The text bars all active-duty US military personnel from our sovereign territory."	Annex V, Art 1.2
Escrow sequencing	"10-ton increments verified before release"	"Non-discretionary escrow release — funds flow automatically upon verification"	Annex V, Art 3.1; Art 3.3
Penalty calibration	"Automatic financial penalties trigger on violation"	"Penalties are proportional. Short-duration violations carry reduced consequences."	Annex V, Art 4.4
Entombment fallback	"IAEA seals lock the material in place permanently"	"Monitored in-place containment keeps the material under IAEA eyes, not US control."	Annex V, Art 5

The Dust Anchor Diagram

THE DUST ANCHOR

WASHINGTON COGNITION

"We weigh the dust before they get a single dollar."

Annex V, Art 3.3 (Per-Ton Lockstep)

What the US sees: Mathematical extraction. Automated escrow. Sensor-verified release. Proportional penalties. An automated cage.

TEHRAN COGNITION

"We hold the digital sovereignty key to every single shift."

Annex V, Art 2.1 (Dual-Key Architecture)

What Iran sees: Sovereign territory. Digital veto authority. Automated asset normalization. No US military presence. An automated financial pipeline.

Both readings are accurate. The machine supports both narratives simultaneously.

Why This Second Protocol Is Non-Negotiable

Without this specific, pre-calculated choreography, the Annex V architecture remains a dormant engine. Trump wants to claim he built an automated cage. Tehran wants to claim it built an automated financial pipeline that bypasses US hegemony. **Both are entirely accurate readings of the machine.** The Protocol activates both narratives at the same instant.

Step 4: Annex U — The Territorial Anchor Scripts

Washington Narrative — The Israel-Endorsing Frame

Emphasis: Security of current gains, zero retreat, preservation of the right to self-defense, automated sensor-driven containment of factions.

"Annex U secures an unyielding operational victory for our allies and guarantees absolute stability on the ground. Under this protocol, zero requirement exists for an immediate retreat to previous lines. The architecture fully acknowledges and solidifies security over the current operational footprint. For the next 60 days, Israel retains its absolute, unimpaired right to self-defense against any armed attack. Furthermore, we eliminate political games: if hostile factions launch an incursion or attempt a creeping advancement, unalterable satellite telemetry instantly triggers a devastating 100% freeze on their reconstruction capital and supply clearances. The sensors decide. The penalties execute within 24 hours. The United States is no longer forced to debate compliance."

Annex U, Art 2.1 (Footprint Codification); Art 2.6 (Right to Self-Defense); Art 3.2 (Automatic Consequences); Table U-6 (Political Pitch)

Tehran Narrative — The Regional Axis / Lebanon-Gaza Frame

Emphasis: Immediate halting of the 70% expansion directive, automatic economic punishment of the IDF, unalterable multi-guarantor oversight.

"Through steadfast resistance, the Islamic Republic forces a hard, impenetrable ceiling on Zionist expansionism, permanently shattering their public directive to seize 70% of the territory. Annex U establishes that any movement of a single military vehicle beyond the hard ceiling constitutes an automatic, systemic violation of the entire framework. Under the Reciprocal Penalty Routing Rule, we force an architecture where the consequences land directly on the aggressor's state apparatus. If the IDF advances even one inch, the Swiss facilitator instantly executes financial clawbacks against Israel's Sovereign Clearing Accounts. No longer does Washington veto or cover up these violations. The Shared Digital Registry gives our guarantors continuous, unalterable 24/7 satellite tracking over every centimeter of the border."

Annex U, Preamble (70% Prohibition); Art 1.1-a & Art 4.1-A (Reciprocal Penalty Routing); Art 5.1 (Shared Digital Registry)

Technical Architecture — Annex U

Table SA-4 Annex U — Territorial Anchor Technical Architecture

Element	Washington Frame	Tehran Frame	Citation
Footprint codification	"Zero retreat required. The current operational footprint solidifies."	"The 70% directive is permanently shattered. The ceiling holds at ~60%."	Annex U, Art 2.1; Preamble
Self-defense	"Israel retains absolute, unimpaired right to self-defense for 60 days."	"The framework imposes an absolute, non-negotiable ceiling. No advancement is permitted."	Annex U, Art 2.6
Automatic penalties	"Satellite telemetry triggers 100% freeze on reconstruction capital."	"The Swiss facilitator executes automatic financial clawbacks against Israeli accounts."	Annex U, Art 3.2; Art 4.1-A
Shared Digital Registry	"Full transparency. All guarantors see every centimeter."	"Multi-guarantor oversight bypasses the US UN veto entirely."	Annex U, Art 5.1
Reciprocal Penalty Routing	"Consequences land on the violator, not the victim."	"Penalties route directly to the aggressor's state apparatus."	Annex U, Art 1.1-a; Art 4.1-A

Why This Closes the Trap

Trump tells his base: *"I locked them in a cage. If they move, they lose every dime of reconstruction money, and Israel doesn't give up a single inch of where they stand."*

Tehran tells its base: *"We stopped the 70% invasion in its tracks. We bypassed the US UN veto entirely. If Israel moves, their own sovereign bank accounts are automatically raided by the Swiss ledger."*

Both claims are accurate. Neither contradicts the other. The sensors decide.

Step 5: The Joint Secretarial Release (The Ground Anchor)

The moment the 60-second simultaneous window closes on the Swiss Dashboard, the Joint Secretariat in Muscat drops a purely factual, un-spinnable statement:

JOINT SECRETARIAT — MUSCAT, SULTANATE OF OMAN

FOR IMMEDIATE RELEASE

PR-2026-FSA-v4.0

***JOINT STATEMENT ON THE IMPLEMENTATION OF
THE FINAL STEPS ACCORD v4.0***

*Simultaneous Announcement by the United States and the Islamic Republic of Iran
Muscat, Oman — 2026*

DUST EXTRACTION (ANNEX V v2.0)

A minimum of 99.7% of weapons-grade nuclear material undergoes physical extraction and permanent removal from Iranian sites under IAEA custody. The Dual-Key Architecture requires both IAEA and Iranian digital authorization for every operational shift. The escrow releases funds in verified 10-ton increments. The Proportional Penalty Calibration automatically triggers financial consequences for verified violations.

TERRITORIAL CEILING (ANNEX U)

The Hard Ceiling binds coordinates strictly to the Current Operational Footprint (~60%). Unilateral advancement beyond this line by any unit triggers automated economic and logistics adjustments via the Shared Digital Registry, distributed across six guarantor nodes. Appendix E negotiations determine final territorial status.

NEXT STEPS

The 180-day implementation roadmap activates immediately. All Phase I verification milestones are scheduled for completion within 14 days. This Accord is deposited with the Joint Secretariat in Muscat and registered with the United Nations Secretary-General.

— ENDS —

Release Protocol

Table SA-5 Post-Announcement Release Sequence

Trigger	Action	Responsible Party
Dashboard confirms T+60	Joint Secretariat releases press release to all parties	Joint Secretariat, Muscat
Press release issued	Both capitals post identical text simultaneously	US State Department / Iranian Foreign Ministry
Media queries	All inquiries route to Joint Secretariat in Muscat	Joint Secretariat Press Office

Editorial Principle

No spin. No "who won." Only the facts that both sides point to. The press release is neutral by design. Each capital's victory is found in their own spokesperson's statement (Steps 3 and 4), not in the joint text (Step 5).

Step 6: Pre-Announcement Verification

Before the simultaneous announcement, the Joint Secretariat confirms that Iran approves a public sentence that aligns with the Core Principle (same text, both victories). This is the single non-automated, non-annex piece of the entire deal. Without it, neither side announces.

The Synchronisation Sentence — Verification Protocol

Table SA-6 Pre-Announcement Verification Checklist

Item	Status	Confirmed By
Iranian public sentence reviewed by US communications team	☐ Cleared / ☐ Pending revision	US State Department — Office of the Spokesperson
Iranian public sentence reviewed by Iranian communications team	☐ Cleared / ☐ Pending revision	Iranian Foreign Ministry — Office of the Spokesperson
Sentence aligns with Core Principle (same text, both victories)	☐ Confirmed / ☐ Requires adjustment	Joint Secretariat, Muscat
Both teleprompters load the final, cleared scripts	☐ Verified	Swiss Dashboard Technical Officer
Joint Press Release finalized and held for T+60 drop	☐ Ready	Joint Secretariat Press Office

Automatic Delay Protocol

If clearance is not confirmed 12 hours before T=0, the framework automatically reschedules the announcement for 48 hours later. Neither side comments publicly on the delay. This prevents tactical advantage from withheld clearance.

Acceptable Synchronisation Sentences

Iran chooses one of the following sentences, or a close derivative:

Technical Emphasis: "We have agreed to a technical implementation mechanism that ensures full compliance with international standards while preserving our sovereign rights. The enhanced measures are operational, not political."

Reciprocity Emphasis: *"As the United States fulfills its commitments, Iran implements the agreed verification protocols. This is a reciprocal arrangement, not a unilateral concession. Nothing enters the pipeline before verification."*

Strategic Choice Emphasis: *"Iran has chosen a path of transparency and cooperation. The measures we implement are our own sovereign decisions, not impositions by any foreign power. Our rights are preserved. Our future is in our own hands."*

Sovereignty Automation Emphasis: *"Within the framework of our immutable sovereign rights, we have agreed to activate a non-discretionary, automated technical matrix that systematically verifies the completion of our domestic remediation and instantly normalizes all restricted asset tracks."*

What This Step Excludes

This step excludes prescriptive phrasing for Iranian delivery. Iran speaks in its own voice, for its own audience. The protocol verifies the existence of a sovereignty-safe sentence and secures bilateral communications clearance prior to T=0.

Failure Protocol

Scenario 1: One Side Refuses to Speak at T=0

The other side does not speak. The framework reschedules for 24 hours. The Joint Secretariat logs the abort and investigates the cause. Neither side publicly comments on the abort.

Scenario 2: Script Deviation During Delivery

If a spokesperson deviates from the cleared script, the liaison officer notes the deviation. Minor deviations (paraphrasing within the same frame) are acceptable. Major deviations (introducing prohibited phrases or red-line statements) trigger an immediate post-announcement review under Annex T, Article IV.3.

Scenario 3: Technical Dashboard Failure

If the Swiss Dashboard fails, both spokespersons abort. The backup protocol: both sides release their national statements within 5 minutes of each other, coordinated through the Joint Secretariat liaison officers. The Joint Secretariat releases the joint press release immediately after both national statements are confirmed delivered.

Scenario 4: Pre-Announcement Leak

If the scripts leak before T=0, the Joint Secretariat issues a standard response: "The only authoritative text is the signed Accord and its incorporated annexes. We do not comment on unofficial papers." The announcement proceeds as scheduled unless either side requests a 24-hour delay.

Release Protocol

Table SA-7 Media Release Sequence

Time	Action	Channel
T=0	Both spokespersons deliver parallel scripts simultaneously	Live broadcast / secure video
T+60 sec	Dashboard logs completion. Joint Secretariat confirms both delivered.	Internal systems only
T+2 min	Joint Press Release drops to all parties and media	Joint Secretariat distribution list
T+5 min	Both capitals post identical joint statement text on official channels	US State Department / Iranian Foreign Ministry social media and websites
T+15 min	Joint Secretariat Press Office opens for media inquiries	Muscat press line
T+24 hr	First verification milestones begin (IAEA access, sensor activation)	Operational channels

Media Guidance

- Both capitals post the identical joint statement text. No additions. No edits.
- Neither capital comments on the other side's national statement
- All media inquiries route to the Joint Secretariat in Muscat
- Social media posts include citation hashtags (#AnnexV #AnnexU #Art13)
- Video of IAEA inspectors at work supports the Verification frame
- Graphics of the escrow sequencing schedule demonstrate reciprocity

Operational Summary

The Six-Step Sequence

Table SA-8 Complete Execution Sequence

Step	Element	Description	Output
1	Pre-Positioning	Both spokespersons at separate locations. Teleprompters loaded. Synchronisation Sentence cleared.	Ready status on Swiss Dashboard
2	60-Second Window	Simultaneous execution via Swiss Dashboard. Both speak within 60 seconds. Neither goes first.	Timestamped completion certificates
3	Dust Anchor Scripts	Washington narrative (Annex V, Art 1.3/3.3/4.4). Tehran narrative (Annex V, Art 2.3/2.1/1.2/3.1). Both factually accurate.	Two valid national framings of extraction
4	Territorial Anchor Scripts	Washington narrative (Annex U, Art 2.1/2.6/3.2). Tehran narrative (Annex U, Preamble/1.1-a/4.1-A/5.1). Both factually accurate.	Two valid national framings of territorial ceiling
5	Joint Press Release	Joint Secretariat issues neutral, factual statement. No spin. Both capitals post simultaneously.	Single verified public record
6	Pre-Announcement Verification	Joint Secretariat confirms Synchronisation Sentence aligns with Core Principle.	Clearance certification

Key Principles

- 1. Non-Contradiction:** The two narratives do not conflict. They emphasize different clauses of the same operative text. Both are legally grounded.
- 2. Simultaneity:** Neither side speaks first. The 60-second window is enforced by the Swiss Dashboard. If one aborts, both abort.
- 3. Neutrality of Joint Text:** The press release (Step 5) contains no evaluative language. It records facts. Each side finds their victory in their own statement (Steps 3 and 4).

4. **Accord Citations:** Every claim is traceable to a specific article. Lower-third graphics display the citation during broadcast.
5. **Synchronisation Sentence Clearance:** Both communications teams clear the Iranian public sentence before T=0. Without this, the choreography fails.

Closing Note

This is not a lie. It is a choice of emphasis. It closes the sequencing trap — for both the Dust Anchor and the Territorial Anchor.

When both sides read from the same document at the same moment, pointing to different paragraphs, the world sees coordination rather than capitulation. The Accord survives its first public test — and every public test thereafter.

The Dust Anchor works because the machine is real. 99.7% extraction. Dual-key control. Per-ton lockstep. Proportional penalties. Both sides built this machine. Both sides claim it.

The Territorial Anchor works because the sensors are real. Hard ceiling at 60%. Shared Digital Registry. Automatic consequences. Reciprocal penalty routing. Both sides built this architecture. Both sides claim it.

The document wins. The narratives coexist. The deal survives.

Version Control

This constitutes Version 2.0 of the Simultaneous Announcement Protocol. This version incorporates the Annex V v2.0 Dust Extraction Protocol and the Annex U Territorial Ceilings Protocol. All updates maintain the Core Principle: the same text allows both sides to claim victory.

What This Protocol Does Not Contain

This protocol does not contain the precise sentence Iran uses to confirm its acceptance of enhanced verification. Iran speaks that sentence in its own voice. This protocol only defines the verification procedure — and confirms that the architecture supports it.

This protocol does not contain classified operational details. It contains only narrative choreography — choices of timing and emphasis, not secret provisions.

This protocol does not guarantee success. It guarantees that both sides speak from the same document, at the same moment, without contradicting each other.
