

Stability First Enhanced Accord

Version 5.1

*A Sovereignty-Preserving Regional Stability Framework for US-Iran De-escalation,
Strait of Hormuz Governance, and Nuclear Stabilization*

*Incorporating the 30-Day Micro-Pilot, the Neutral Guarantor Triad,
the Phased Verification Architecture, and the Failure-Without-Collapse Operating
System*

With: *Executive Decision Brief · Visual Sequencing Matrix · Cyber Stabilization
Module
Rogue Actor Protocols · Red Team Response Annex · Quick Reference Toolkit*

CALIBRATED FOR

The May 2026 Negotiation Environment — As of May 13, 2026

DRAWING FROM

Stability First Enhanced Accord v1.0 | 14-Day Implementation Directive v2.5

Phase II Maritime Annex v1.2 | Phase II Nuclear Annex v1.2 | RCSA v3.6

STATUS

Integrated Framework — All Blockers Addressed — 42 Enhancements Applied

The Core Exchange

The Stability First Enhanced Accord v5.1 creates a **sequenced, reversible, verified** exchange between the United States and Iran. Neither side moves alone. Every Iranian commitment is matched by a corresponding US commitment, activated simultaneously, verified by the same neutral observers.

IRAN DELIVERS	UNITED STATES DELIVERS
60% Freeze Immediate freeze of all enrichment at or above 60%. Verified by IAEA within 72 hours. Sustained throughout Micro-Pilot.	\$250M Pilot Immediate humanitarian tranche via Swiss escrow (not US-controlled). Humanitarian goods only. Non-reversible.
Hormuz Reopening IRGC-Navy withdraws small craft from transit corridor. Synchronized with US blockade lift on Day 7.	Blockade Lift US naval blockade of Iranian commercial ports lifted, synchronized with Hormuz reopening on Day 7.
Stockpile Transfer Weapons-grade enriched uranium to IAEA custody in Oman by Day 1. Verified by mass spectrometry.	Sanctions Relief Staged asset return: 50% by Day 44, 85% by Day 180. Through non-US channels (no Congress required initially).
1-Year Renewable Cap Moratorium on enrichment above 3.67%, renewable annually for up to 12 years based on performance.	No Precedent Clause Explicit language: this Accord creates no legal or political precedent for future negotiations.

The Timeline at a Glance

Blind escalation	De-	Days -44 to -30 — Unacknowledged parallel pauses: Iran halts centrifuge installation; US pauses secondary sanctions enforcement. No formal agreement required. Creates breathing room.
Micro-Pilot		Days -30 to -1 — 30-day trust-building: Iran freezes 60% enrichment; US releases \$250M via Swiss escrow. Legally non-binding. Reversible with 7 days notice. Builds political capital.
Stage 1: Opening		Days 1-14 — Ceasefire; stockpile to IAEA custody; dual blockade lift; 200+ Hormuz transits; JMA provisional. Irreversible operational facts on the ground.
Stage 2: Deferred Window		Days 15-44 — Negotiate nuclear specifics: 1-year cap ratification; HEU export plan; underground facility protocols; phased IAEA. 7-day Triad extension available for good-faith delays.
Stage Permanent Architecture	3:	Days 45-180 — JHTA treaty; regional security dialogue; full normalization; successor framework (Crescent Compact v2.0) opened. Modular survival: failure in one track does not collapse others.

The Guarantees

Guarantee	Mechanism	Authority
Neither side moves alone	Waltz pairing: every Iranian step matched by US step, same day	Joint Implementation Group (JIG), Geneva
Neutral oversight	Oman (political), Qatar (financial), Switzerland (banking) Triad	Consensus-based; Omani casting vote on procedure
Verification convergence	Five independent channels; no single channel can trigger snapback	IAEA + Pakistan + Oman + Switzerland + National Technical Means
Financial protection	Humanitarian firewall: medical, food, isotope funds cannot be frozen	Triad veto over any freeze decision
No accidental breach	30-day PRDD window + 14-day Triad mediation before any freeze	Triad technical review panel
Technical delays excused	Weather, communications, customs, inspection bottlenecks = not breach	JIG certification
Force majeure protected	Natural disasters, third-party attacks = temporary pause without breach	Triad arbitration within 7 days

What Each Side Can Claim

Iranian Domestic Narrative	US Domestic Narrative
• "We ended the war" — Permanent bilateral ceasefire (Day 1) • "Blockade lifted" — US naval blockade removed (Day 7) • "Assets returning" — \$250M immediate; 50% by Day 44; 85% by Day 180 • "Sovereignty preserved" — No precedent clause; NPT rights intact; annual review • "We moved as equals" — Every US concession matched Iranian commitment simultaneously • "Fordow is a scientific achievement" — World-class medical isotope center	• "Hormuz is open" — 200+ transits in 14 days; gas prices falling • "Weapons-grade uranium secured" — Entire 60% stockpile in IAEA custody (Day 1) • "Enrichment capped and verified" — 1-year renewable cap; IAEA continuous monitoring • "Fordow converted" — Most fortified facility now produces cancer medicine • "No bases lost" — All US Gulf bases remain; all GCC treaty obligations preserved • "Congressional oversight" — Tranches 3+ subject to 30-day Congressional review

Failure Containment: What Happens If It Breaks

The single most important design feature of v5.1 is that **failure in any module does not collapse the entire framework**. The Modular Survival Architecture ensures:

If This Fails...	These Survive...	These Pause...
Nuclear talks stall	Ceasefire; Hormuz transit; humanitarian channel; asset tranches 1-2	Further asset releases; SWIFT reconnection; Fordow Phase D
Sanctions relief delayed	Ceasefire; Hormuz transit; IAEA monitoring; humanitarian channel	Further nuclear concessions; enrichment cap renewal
Maritime incidents resume	Ceasefire; nuclear freeze; IAEA monitoring; humanitarian channel	Non-humanitarian transit; asset releases pause pending review
Israel strikes	Humanitarian channel; IAEA monitoring (if inspectors safe); Triad mediation activates	All non-humanitarian tracks; Crisis Pause Mode (30-90 days)
Political crisis in either capital	Humanitarian channel; IAEA monitoring; Hormuz transit	Non-essential tracks; Stabilization Hold (up to 90 days)

Cyber attack on All tracks; Stabilization Hold auto-activates; Digital-dependent verification; 72-
verification analogue backup systems hour recovery window

Minimum Viable Accord (Emergency Fallback): If negotiators reject the full architecture, a stripped-down "Minimum Viable Accord" pathway is available, covering only: (1) ceasefire, (2) Hormuz reopening, (3) humanitarian channel, and (4) enrichment freeze. See Section 8 for details.

Key Risk Factors

Risk	Likelihood	Mitigation
Israeli military strike during 30-day window	High	Tel Aviv Channel for pre-briefings; IAEA data-sharing; US coordination
IRGC hardliner rejection	Medium	Micro-Pilot proves benefits; sovereignty-preserving language; no precedent clause
US Congressional blocking of Tranche 3+	Medium	Non-US channels for initial tranches; 30-day review window; performance-based framing
Proxy spoiler attack (Hezbollah/Houthi)	Medium	Spoiler & Rogue Actor Management section; attribution protocols; regional firewall
Cyber escalation	High	Cyber Operations Stabilization Module; protected infrastructure categories; incident notification windows
Technical delays triggering false breach	Low-Medium	Technical Delay Without Breach clauses; JIG certification; 72-hour grace period

Bottom Line for Decision-Makers: This framework creates a **reversible, verifiable, politically defensible** pathway from ceasefire to normalization. The Micro-Pilot tests trust at low stakes. The modular architecture ensures nothing collapses if one element fails. The neutral guarantor triad provides legitimacy neither side can provide alone. And every provision includes face-saving metrics enabling both governments to claim victory.

"Nuclear Stabilized. Hormuz Open. Sovereignty Preserved. No One Moves Alone."

Visual Timeline: Five Phases to Normalization

Phase	Duration	Iranian Commitments	US Commitments
BLIND DE-ESCALATION	Days -44 to -30	• Halt new centrifuge installation • Reduce Hormuz interdiction frequency • Pause proxy attacks on US positions • Stop cyber ops vs Gulf financial infra • Reduce IRGC small-craft presence 30%	• No new sanctions designations • Reduce 5th Fleet close-proximity patrols • No retaliatory strikes on proxy positions • No interdiction of Iran oil to China/India • Process pending humanitarian licenses
TRANSITION TRIGGER: 14 days parallel pauses + IAEA "no observed expansion" + humanitarian transaction confirmed			
MICRO-PILOT	Days -30 to -1	• Freeze all enrichment at/above 60% • IAEA inspectors on-site within 72h • Biweekly IAEA access sustained • IRGC presence reduced 30% • Commit to negotiate full framework	• \$250M humanitarian via Swiss escrow • Partial blockade reduction (Bandar Abbas) • OFAC guidance on humanitarian transactions • 5th Fleet patrol frequency reduced • Open 30-day nuclear negotiation window
TRANSITION TRIGGER: Both sides certify pilot objectives met; 14-Day MoU signed			
STAGE 1: 14-DAY OPENING	Days 1-14	• Ceasefire (all offensive ops cease) • Stockpile to IAEA custody in Oman • Hezbollah/Houthi operational pause • Open Hormuz; withdraw IRGC craft • Begin mine-clearing operations	• Suspend Operation Epic Fury • Issue OFAC general license (\$250M) • Lift naval blockade (synchronized D7) • Suspend Project Freedom • Issue Notice to Mariners: Hormuz open

CLOSING: Both blockades lifted; 200+ vessel transits; IAEA custody verified; ceasefire intact				
STAGE 2: 30-DAY WINDOW	Days 15-44 (+7 ext.)	• Declare 3.67% moratorium framework • Idle high-enrichment centrifuges under seal • Fordow conversion begins (Phase A) • HEU export plan confirmed • Phased IAEA monitoring installed	• First sanctions tranche operative • OFAC aviation licenses issued • 50% frozen assets returned (cumulative) • SWIFT Tier B/C reconnection • Moratorium ratification support	
CLOSING: Moratorium ratified; HEU export confirmed; 50% assets returned; Triad certification				
STAGE 3: PERMANENT	Days 45-180	• Permanent JHTA confirmed • Successor framework engagement • Fordow IMIRC Phases B/C/D • Regional Security Dialogue active • Continuous IAEA monitoring confirmed	• Full sanctions relief tranche • 85% assets returned (Day 180) • Section 123 Agreement framework • Permanent JHTA chair rotation • Crescent Compact v2.0 opened	
CLOSING: JHTA charter ratified; 85% assets returned; successor framework opened; 180-day review				

Key Verification Milestones Across All Phases

Phase	Primary Verifier	What They Verify	Reporting Cadence
Blind De-escalation	IAEA (existing SA)	No observed expansion of enrichment	Biweekly reports to JIG
Micro-Pilot	IAEA + Swiss Escrow	60% freeze sustained; funds received	Weekly to JIG; biweekly public
Stage 1	Pakistan PM + UN Envoy	Ceasefire; stockpile transfer; blockade lift	Daily during 14 days; then weekly
Stage 2	Triad consensus	Moratorium ratification; HEU export; asset return	Weekly to JIG; 30-day comprehensive review
Stage 3	UN SG + JIG	JHTA charter; compliance; successor framework	Monthly; 180-day comprehensive audit

EMERGENCY MINIMUM VIABLE ACCORD: If the full architecture is rejected, a stripped-down emergency version covers only: ceasefire, Hormuz reopening, humanitarian channel, and enrichment freeze. All other elements deferred. See Section 8 for activation protocol.

Table of Contents

Preamble: The May 2026 Moment

Section 1: Core Principles of the Waltz Architecture

- 1.1 Synchronized Reciprocal Motion
- 1.2 Modular Architecture
- 1.3 Sovereignty Preservation
- 1.4 Irreversible Facts on the Ground
- 1.5 Multiple Pathways
- 1.6 Quiet Compliance
- 1.7 Neither Recognition Nor Surrender
- 1.8 Succession Resilience
- 1.9 Crisis-Prepositioning
- 1.10 Reversibility Without Collapse

Section 4: Blind De-escalation & Cyber/Proxy Protocol

- 4.1 Parallel Pause Mechanics
- 4.2 Cyber Operations Stabilization
- 4.3 Proxy Force Stand-Down

Section 5: Stage One — The 14-Day Opening

Section 6: The 30-Day Deferred Window

- 6.1 The Staggered Enrichment Cap
- 6.2 Seven-Day Extension Clause

Section 7: Stage Three & Successor Framework Roadmap

Section 8: Minimum Viable Accord Emergency Fallback

Section 9: The Neutral Guarantor Triad

Section 10: Non-US Economic Channels & SWIFT Pathway

10.1 Tiered Asset Release with Accelerants

10.2 SWIFT Reconnection Pathway

Section 11: Maritime Architecture & Hormuz Governance

11.1 Operational Command-Chain Diagrams

Section 12: Nuclear Stabilization Architecture

Section 13: Fordow Joint Venture & Funding Model

Section 14: Rebranding & Crisis Communications

Section 15: Goldilocks Crisis Protocol

Section 16: Verification & Diluted PRDD

Section 17: What Each Side Wins & Face-Saving Metrics

Section 18: Safeguards, Force Majeure & No Precedent

Section 19: Spoiler & Rogue Actor Management

Section 20: Attribution Uncertainty Protocols

Section 21: Cyber Operations Stabilization

Section 22: Crisis Management & Degraded Compliance

Section 23: Degraded Compliance Operating Mode

Section 24: Enforcement Asymmetry & Risk Mitigation

Section 25: Legally vs Politically Binding Framework

Section 26: US Succession Continuity

Section 27: Domestic Legislative Synchronization

Section 28: Public Communications Crisis Procedures

Section 29: Independent Audit & Review Mechanism

Section 30: Failure Without Collapse End-States

Section 31: Economic Stabilization Metrics

Section 32: Technical Delay Without Breach

Section 33: Implementation Roadmap

Appendices

Preamble: The May 2026 Moment

"The single most important achievement is the agreement that Iran will never ever have nuclear material that will create a bomb."

— Omani Foreign Minister Badr Albusaidi, May 2026

The Current Reality: May 13, 2026

As of May 13, 2026, the United States and the Islamic Republic of Iran stand at the closest point to a durable agreement since hostilities began on February 28, 2026. After six weeks of military confrontation under the codename **Operation Epic Fury** — triggered by the US decision to strike Iranian nuclear sites, which itself followed Iran's launch of ballistic missiles toward the US military base in Qatar — both sides have exhausted the military escalation ladder and returned to the negotiating table.

The path to this moment has been neither linear nor predictable. Supreme Leader Ayatollah Ali Khamenei was assassinated during the opening phase of hostilities, creating unprecedented succession uncertainty in Tehran. Iran retaliated by striking US bases across the region and blockading the Strait of Hormuz, bringing global energy markets to the brink of collapse. The tit-for-tat cycle continued until both sides faced a shared reality: neither could achieve its maximalist objectives through military means.

Current Military Status: A temporary ceasefire has been in place since April 8, 2026. Pakistan, led by Prime Minister Shehbaz Sharif, has mediated three rounds of talks in Islamabad. The most recent round (May 4-6) produced a preliminary 14-point memorandum of understanding, with both sides agreeing to extend the ceasefire through May 30 to allow for detailed technical negotiations.

The United States and Iran have reached a preliminary understanding that:

- Iran will **freeze enrichment at 60%** (but not yet commit to the full 3.67% cap)
- Iran will **allow IAEA inspectors** to verify the 60% freeze at Natanz and Fordow
- The US will **partially lift sanctions** on Iran's oil and gas sector, permitting limited exports
- Both sides will **negotiate a comprehensive framework** within 30 days, addressing the full nuclear file, Hormuz governance, and regional security
- The Strait of Hormuz **will remain open** for commercial shipping under a joint coordination mechanism

What Makes v5.1 Different

v5.1 Enhancement Summary

Building on the solid foundation of v5.0, this version adds **42 targeted enhancements** across six categories:

Category	Enhancements	Key Additions
Political Viability	8	No Precedent Clause, Face-Saving Metrics, Red Team Annex, Messaging Toolkit
Operational Resilience	10	7-Day Extension, Gantt Matrix, Command-Chain Diagrams, Quick Reference
Risk Mitigation	8	Tel Aviv Channel, Force Majeure, Rogue Actor Protocols, Attribution Uncertainty
Technical Safeguards	6	Technical Delay Clauses, Degraded Compliance Mode, Cyber Stabilization Module
Economic Architecture	5	SWIFT Pathway, Tiered Accelerants, Stabilization Metrics, Bonus Tranches
Institutional Design	5	Legally vs Politically Binding, US Succession, Audit Mechanism, Failure End-States

The v5.1 Philosophy

Every provision in this Accord is governed by a single animating principle: **Synchronized Reciprocal Motion**. Neither party moves alone. Every Iranian commitment is matched by a corresponding US commitment of equivalent weight, on the same timeline, verified by the same neutral observers. The result is a document that Iran can present domestically as sovereignty preserved and revenue secured, while the United States presents the same document domestically as Hormuz open, insurable, and verifiable.

Current Hard Constraints (May 13, 2026)

Constraint	Implication
Khamenei assassination creates leadership transition	Iranian negotiators need demonstrable sovereignty preservation

US naval blockade of Iranian ports (since April 13)	Iran needs blockade lift as immediate, visible win
Hormuz transit down 40%; insurance premiums up 300%	Global energy markets demand urgent resolution
European 40-nation coalition forming	Multilateral legitimacy available but requires Iranian buy-in
Congressional skepticism in both capitals	Executive-only mechanisms preferred; legislative ratification deferred
Precedent of JCPOA collapse (2018)	Both sides need irreversible facts on the ground, not reversible promises
Israeli opposition to any Iranian enrichment	Verification must be intrusive enough for Israeli quiet acquiescence
IAEA verification gap since 2021	Inspectors need phased reintroduction, not immediate full deployment

What This Document Is

The Stability First Enhanced Accord v5.1 is the integrated, ready-to-implement architecture that fills the 30-day window opened by the May 6 preliminary understanding. It combines four source documents (v1.0 core framework, v2.5 operational directive, Maritime Annex v1.2, Nuclear Annex v1.2) into a single coherent document, then applies 42 targeted enhancements to address every major blocker that prevented agreement in previous rounds.

What This Document Is Not

This is not a comprehensive peace treaty. It does not resolve the ballistic missile question, the Israeli-Palestinian conflict, Lebanese sovereignty, or Iranian proxy relationships across the region. Those matters are reserved for successor frameworks, specifically the **Crescent Compact v2.0: Ballistics/Missiles** module. This Accord creates the stable platform upon which those harder questions can be addressed. It is a bridge — not a destination.

Furthermore, this Accord **creates no legal or political precedent** for future negotiations. The No Precedent Clause (Section 1.11) explicitly protects both sides from domestic accusations of creating a slippery slope.

How to Read This Document

Senior officials: Read the Executive Decision Brief (preceding pages), Section 1 (Principles), and Section 17 (What Each Side Wins). **Technical specialists:** Focus on Maritime (Section 11),

Nuclear (Sections 12-13), Verification (Section 16), Economic (Sections 9-10), or Crisis Management (Sections 19-24). **Negotiators in the field:** Use Appendix J (Quick Reference) during active negotiation. The Appendices provide comprehensive quick-reference tools for all operational scenarios.

Section 1: Core Principles of the Waltz Architecture

Every provision in this Accord is governed by twelve foundational principles. These are not aspirational language — they are the structural rules that ensure the agreement survives implementation when duty officers, naval commanders, and treasury officials must act under pressure in real time.

1.1 Synchronized Reciprocal Motion

Neither side moves alone. Every Iranian commitment is matched by a corresponding US commitment on the same day or the next sequential day. Every US commitment is matched by a corresponding Iranian commitment. Verification is shared. This is not mere political optics — it is structural. Both governments can credibly claim the other moved first or simultaneously.

Waltz Pairing Example: Enrichment Freeze and Blockade Lift

Iran: Freeze all enrichment above 60%; allow IAEA inspectors to verify freeze at Natanz and Fordow

US: Partially lift naval blockade on Iranian commercial ports; authorize first humanitarian tranche (\$250M) through Swiss escrow

Verify: IAEA confirms 60% freeze within 72 hours; Omani naval observers confirm blockade reduction within 48 hours

1.2 Modular Architecture

The Accord operates through independent modules. Failure in one module does not collapse the others. If nuclear verification encounters a dispute, Hormuz transit continues. If sanctions relief faces a delay, the ceasefire holds. This prevents the total-collapse failure mode that destroyed the JCPOA.

1.3 Sovereignty Preservation

This framework does not supersede any constitution. It does not create supranational authority. It does not impair sovereign defense rights. It does not force alliance realignment. Iran's NPT rights are preserved. US treaty commitments to Gulf partners are preserved. Both governments retain full constitutional authority.

1.4 Irreversible Facts on the Ground

Each stage produces physically irreversible deliverables. Once Iran's weapons-grade stockpile is transferred to IAEA custody in Oman, it cannot be silently returned. Once \$250 million in Iranian assets is transferred, it cannot be clawed back. Once Hormuz is reopened and the Joint Transit Authority is operating, closure requires a deliberate political decision with visible consequences.

1.5 Multiple Pathways for Every Major Issue

Rather than demanding a single solution, the Accord provides modular options for Hormuz governance, nuclear disposition, and verification intensity. Parties select the combination that fits their political constraints.

1.6 Quiet Compliance

Minor violations are corrected confidentially through the Joint Implementation Group, not through public accusations. Technical discrepancies are corrected quietly; material breaches are addressed formally.

1.7 Neither Recognition Nor Surrender

Participation in this Accord does not constitute diplomatic recognition where none exists. It does not require either government to acknowledge defeat, capitulation, or unconditional surrender.

1.8 Succession Resilience

The Accord binds institutions, not individuals. Commitments attach to the Office of the President, the Department of State, the Supreme National Security Council, the Central Bank, and the Majlis. Changes of government activate continuity provisions rather than withdrawal procedures. See Section 26 for US-specific succession language.

1.9 Crisis-Prepositioning

The framework is most likely to be adopted during a crisis that scares both sides but doesn't collapse diplomacy. The modular 14-day implementation directives and the Micro-Pilot Module remain ready to deploy instantly as an off-ramp.

1.10 Reversibility Without Collapse

Any party may withdraw through a structured notification window, orderly asset disposition, infrastructure handover to host states, and personnel repatriation. Nuclear constraints survive withdrawal as residual obligations. The humanitarian module continues regardless of withdrawal.

1.11 No Precedent Clause

NEW in v5.1: Explicit No Precedent Guarantee

Article 1.11: "This Accord, and all protocols, annexes, and implementation mechanisms associated with it, establish **no legal or political precedent** for any future negotiations between the Parties or between either Party and any third state. Each provision is sui generis, tailored to the specific circumstances of May 2026. No inference may be drawn from any provision in this Accord regarding the positions of either Party on any matter not expressly addressed herein."

Rationale: This clause protects both governments from domestic accusations of creating a "slippery slope." US negotiators can state: "This is a one-time arrangement tailored to the specific crisis of May 2026; it creates no template for future agreements." Iranian negotiators can state: "This Accord is unique to the current circumstances; it imposes no enduring obligation beyond what is expressly agreed."

Application: The No Precedent Clause applies to all textual interpretations by the Joint Implementation Group, all arbitration decisions by the Triad, and all public statements by either Party regarding the Accord.

1.12 Face-Saving Metrics

NEW in v5.1: Quantifiable Domestic Wins for Every Waltz Pairing

For each major Waltz pairing, both sides receive quantifiable "wins" visible to domestic audiences. These metrics enable public claims of strength while the underlying cooperation proceeds.

Waltz Pairing	Iranian Face-Saving Metric	US Face-Saving Metric
Enrichment Freeze → Blockade Lift	"NPT rights preserved; enrichment continues at 3.67%; sovereign annual review"	"60% weapons-grade enrichment halted; IAEA inside Natanz and Fordow within 72 hours"
Hormuz Reopening → Asset Release	"200 Hormuz transits verified in 14 days; Iranian ports fully operational"	"Freedom of navigation restored; gas prices begin falling within one week"
Stockpile Transfer → Humanitarian Tranche	"Sovereign asset held in trust by IAEA; not surrendered to any single power"	"Entire 60% stockpile in third-country custody; mass spectrometry verified"
1-Year Cap → Sanctions Relief	"Sovereign annual review; renewable only if US keeps its word"	"Performance-based annual renewal; ratchet effect locks in trajectory"
Fordow Conversion → Scientific JV	"Iranian scientists lead world-class cancer medicine factory"	"Most fortified enrichment plant permanently converted to peaceful use"
JHTA Governance → Permanent Seat	"Permanent Iranian co-equality; chair authority in alternating years"	"International authority prevents unilateral Iranian closure"

Usage: Each metric is pre-cleared with both capitals before public release. The Joint Media Working Group maintains a database of approved metrics for each implementation milestone.

Section 2: Framework Overview & Three-Stage Architecture

2.1 The Three Stages at a Glance

Stage	Duration	Primary Goal	Closing Trigger
Stage 0: Micro-Pilot	Days -30 to -1	Build trust through limited, reversible exchanges	Both sides certify pilot objectives met; 14-Day MoU signed
Stage 1: The Opening	Days 1-14	End the war; transfer stockpile to IAEA; reopen Hormuz	Both blockades lifted; 200+ vessel transits; IAEA custody verified
Stage 2: Deferred Window	Days 15-44 (+7 ext.)	Negotiate nuclear specifics; staggered cap; facility protocols	Moratorium ratified; HEU export confirmed; 50% assets returned
Stage 3: Permanent Architecture	Days 45-180	Joint Transit Authority treaty; regional dialogue; full normalization	JHTA charter ratified; 85% assets returned; successor framework opened

2.2 The Waltz Philosophy in Practice

The sequencing follows the Waltz Philosophy of synchronized reciprocal motion. The principle is simple: each commitment by one party is matched by a corresponding commitment by the other; neither party is exposed to defection; verification is shared.

2.3 Minimum Viable Accord Fallback

NEW in v5.1: Emergency Stripped-Down Pathway

If negotiators reject the full architecture as too ambitious, the **Minimum Viable Accord (MVA)** provides a stripped-down emergency pathway covering only four essential elements:

1. **Ceasefire:** Immediate bilateral cessation of offensive operations
2. **Hormuz Reopening:** Synchronized dual blockade lift within 7 days
3. **Humanitarian Channel:** Zero-fee, no-inspection-delay transit for food, medicine, UN supplies
4. **Enrichment Freeze:** Iran freezes all enrichment at or above 60%; IAEA verifies within 72 hours

Activation Protocol: Either party may propose MVA mode by written notice to the Triad. The Triad convenes within 48 hours. If both parties confirm, the MVA activates within 72 hours of confirmation. All MVA commitments are legally binding and subject to the same verification architecture as the full Accord.

Graduation: The MVA automatically graduates to the full Accord when: (a) both parties confirm MVA objectives met; (b) the Triad certifies 14 consecutive days of compliance; (c) neither party objects within the 7-day review window.

Face-Saving: The MVA is framed as an "emergency humanitarian stabilization measure" rather than a comprehensive agreement. Both sides can claim they have not committed to the full framework while still achieving the four most critical stabilization elements.

Section 3: The 30-Day Micro-Pilot Module

Modification 1: Micro-Pilot Trust-Building Architecture

Instead of launching the full agreement immediately, the Micro-Pilot creates an isolated 30-day pilot where Iran freezes 60% enrichment in exchange for a small, heavily capped humanitarian tranche unfreeze by the US. This mimics the 2013 Joint Plan of Action (JPOA) model that successfully built the trust foundation for the JCPOA.

Parameter	Specification
Duration	30 days (extendable by mutual consent to 45 days; or by Triad consensus for verified good-faith delays)
Legal Status	Politically binding exchange of letters; not a treaty
Iranian Commitment	Freeze all uranium enrichment at or above 60% at Natanz and Fordow
US Commitment	Release \$250M humanitarian tranche via Swiss escrow; partial blockade reduction
Verification	IAEA inspectors verify 60% freeze within 72 hours of pilot start
Escrow	Swiss-based escrow (not US-controlled); released in two \$125M tranches (D+1 and D+14)
Scope	Humanitarian goods only (medicine, food, agricultural inputs)
Reversibility	Either side may terminate with 7 days written notice; no penalty
Transition	Upon successful completion, Micro-Pilot automatically transitions to Stage 1

Section 4: Blind De-escalation & Cyber/Proxy Protocol

Modification 2: "Blind" De-escalation Through Parallel Pauses

Remove the requirement for immediate, formal public agreements. Institute a period of mutual, unacknowledged parallel pauses to create breathing room without political cost.

4.1 Parallel Pause Mechanics

Domain	Iranian Parallel Pause	US Parallel Pause	Observable Effect
Nuclear	No new centrifuge installation; no additional 60% enrichment	No new sanctions designations; no enforcement actions on existing humanitarian exemptions	IAEA reports "no observed expansion"
Maritime	IRGC-Navy reduces vessel interdiction frequency	5th Fleet reduces close-proximity patrols near Iranian territorial waters	Insurance premiums begin stabilizing
Financial	No cyber operations against Gulf financial infrastructure	No interdiction of Iranian oil shipments to China/India	CBI notes "improved correspondent banking access"
Regional	Proxy forces reduce attacks on US positions in Iraq/Syria	No retaliatory strikes on Iranian-linked positions	US CENTCOM reports "reduced threat environment"

4.2 Cyber Operations Stabilization Module

NEW in v5.1: Cyber Conflict De-escalation Protocol

Cyber conflict is one of the most likely escalation vectors but was barely addressed in previous versions. The Cyber Operations Stabilization Module establishes protected infrastructure categories, mutual restraints, and incident notification procedures.

Category		Protected Infrastructure	Restraint Obligation	Violation Response
Category I (Critical)		Nuclear monitoring systems (IAEA cameras, sensors, data links); banking settlement systems (SWIFT, CHIPS, TARGET2); maritime navigation systems (AIS, GPS augmentation, lighthouses)	Strict non-aggression: no reconnaissance, no probing, no disruption	Tier 2 (Orange) PRDD response; Triad emergency session within 24 hours
Category II (Important)		Humanitarian logistics networks; medical supply chains; oil/gas pipeline control systems	No offensive operations; defensive monitoring permitted	Tier 3 (Yellow) response; 72-hour JIG review
Category III (Commercial)		General commercial infrastructure; telecommunications; civilian aviation systems	No persistent disruption; no ransomware; short-duration probes not considered violation	Tier 4 (Green) diplomatic resolution

Incident Notification Window: Any cyber incident affecting Category I or II infrastructure must be reported to the Joint Implementation Group within **6 hours** of detection. The report must include: affected system, observed impact, suspected origin (if known), and remediation steps taken. Failure to report within 6 hours constitutes a technical delay (see Section 32), not a breach.

Cyber De-escalation Hotline: A dedicated 24/7 cyber incident hotline operates through the Swiss JIG Secretariat in Geneva. staffed by cyber specialists from both parties plus neutral observers. Response time: 30 minutes for Category I; 2 hours for Category II; 24 hours for Category III.

4.3 Proxy Force Stand-Down

NEW in v5.1: Proxy and Paramilitary Pause Protocol

The Blind De-escalation Protocol is extended to include explicit mutual commitments regarding proxy forces and paramilitary groups.

Actor	Iranian Commitment	US Commitment	Verification
Hezbollah (Lebanon)	Operational pause: no attacks on Israeli or US targets; no weapons transfers across Syrian border	No retaliatory strikes on Hezbollah positions; no targeted killings of Hezbollah commanders	UNIFIL reporting; Israeli intelligence (via Tel Aviv Channel, Section 18); Lebanese Armed Forces observation
Houthis (Yemen)	Red Sea shipping pause: no attacks on commercial or military vessels; no missile launches toward Saudi Arabia or UAE	No coalition airstrikes on Houthi leadership; no naval blockade of Hodeidah	UNVIM reporting; Saudi/UAE intelligence; commercial shipping AIS data
Iraqi Militias (PMF)	No attacks on US diplomatic or military facilities; no rocket strikes on Baghdad Green Zone	No strikes on PMF commanders or positions; no drone operations over PMF-controlled areas	Iraqi government reporting; US CENTCOM; UNAMI
Syrian Proxies	No attacks on US positions in eastern Syria; no IED attacks on US supply convoys	No strikes on Iranian Revolutionary Guard positions in Syria; no targeted killings of IRGC officers	Russian military police reporting (via backchannel); UN observer mission; satellite monitoring

Non-Acknowledgment: Neither party is required to publicly acknowledge the proxy pause. Iran can state it exercises no control over independent militias. The US can state it continues counterterrorism operations against threats. The verification channels (UNIFIL, UNVIM, UNAMI) provide independent confirmation without requiring either party to admit control.

Rogue Commander Protocol: If a proxy element violates the pause without authorization, the party with the closest relationship to that element is obligated to: (a) publicly condemn the attack within 24 hours; (b) cooperate with Triad attribution investigation; (c) take visible steps to restrain the violator. See Section 19 for full Rogue Actor procedures.

Section 5: Stage One — The 14-Day Opening

Stage One is the implementation of the 14-point MoU. It runs for 14 days from signature and produces seven irreversible operational deliverables.

Waltz Pairing: Day 1 Deliverables

- Iran:** Initiate transfer of 60%-enriched uranium stockpile to IAEA custody in Oman; cease all offensive operations; transmit Hezbollah operational pause; transmit Houthi Red Sea pause; commit to moratorium framework
- US:** Suspend Operation Epic Fury offensive operations; issue OFAC general license for \$250M pilot asset transfer; confirm Sovereign Energy Partnership framing; open 30-day nuclear negotiation window
- Verify:** IAEA Director-General confirmation; mass spectrometry; continuous CCTV; Pakistani PM Office + UN Special Envoy + Omani channel + Swiss financial channel concurrent certification

5.1 Day 7: Synchronized Dual Blockade Lift

Step	UTC Time	Iranian Action	US Action	Verification
1	T-60 min	IRGC Commander transmits stand-by signal to JMA MCC	5th Fleet Commander transmits stand-by signal to JMA MCC	JMA MCC logs both signals; Pakistani guarantor notified
2	T-15 min	IRGC small craft begin orderly withdrawal to 5nm stand-off; AIS positions broadcast	US Navy blockade vessels begin orderly withdrawal to 5nm from Iranian 12nm baseline; AIS broadcast	Lloyd's observer and UN OCHA vessel confirm movements
3	T-2 min	IRGC Commander issues go-confirmation to JMA MCC	5th Fleet Commander issues go-confirmation to JMA MCC	JMA Chair confirms both confirmations received
4	T=0000	Iranian government issues Hormuz opening declaration; IRGC-Navy transmits stand-down orders	US government issues naval blockade lift declaration; 5th Fleet transmits stand-down orders	SIMULTANEOUS within 60-second window; Pakistani guarantor logs
5	T+15 min	First JMA-AUTHORIZED vessel commences CTC transit	US Navy issues Notice to Mariners confirming Hormuz open	Lloyd's List, AIS Global, UN OCHA confirm first transit

Section 6: The 30-Day Deferred Window

6.1 The Staggered Enrichment Cap

Modification 3: Staggered 1-Year Renewable Cap

The immediate demand for a 12-year enrichment cap at 3.67% is a non-starter for Tehran. This is replaced with a staggered approach: a 1-year cap, renewable annually for up to 12 years, tied directly to rolling sanctions relief.

Phase	Duration	Enrichment Standard	Condition for Advancement
Year 1 Cap	Days 30-365	Zero enrichment above 3.67%. All higher-enrichment centrifuges under IAEA seal.	Clean IAEA certification at Year 1 review; no material breach
Year 2-3 Cap	Years 2-3	3.67% enrichment for civilian fuel-cycle purposes at Natanz only	Fuel supply guarantee deposited in escrow; Section 123 Agreement framework operative
Years 4-12	Years 4-12	3.67% enrichment under full IAEA safeguards	Five-year renewal confirmed; all compliance indicators at green
Year 13+	Year 13 onward	Civilian enrichment under IAEA Additional Protocol	Full compliance history; regional security dialogue active

6.2 Seven-Day Extension Clause

NEW in v5.1: Triad-Consensus Extension for Good-Faith Delays

The 30-day deferred window may be extended by up to 7 days through Triad consensus, triggered by verified good-faith delays. This prevents collapse from minor setbacks.

Extension Triggers:

- IAEA access logistics delays (inspector visa processing, equipment customs clearance)
- Technical verification equipment installation (camera systems, data transmission links)
- Banking channel activation delays (correspondent account setup, compliance verification)
- Transportation delays for HEU export convoy (weather, route security, third-country transit permits)
- Legislative procedural delays (Majlis committee review, Congressional notification period)

Extension Procedure:

1. Either party submits written extension request to Triad with specific cause and supporting documentation
2. Triad technical panel reviews within 48 hours
3. If Triad confirms good-faith delay, 7-day extension granted automatically
4. Maximum one extension per Stage 2 cycle; second extension requires JIG consensus
5. Extension does not delay humanitarian, ceasefire, or Hormuz transit tracks

Extension Does NOT Apply To: Material breaches; enrichment above agreed limits; obstruction of IAEA access; attacks on verification personnel; or deliberate delays for political leverage.

Section 7: Stage Three & Successor Framework Roadmap

7.1 Stage Three: Permanent Architecture (Days 45-180)

Stage Three converts the provisional arrangements into permanent architecture and opens the broader regional dialogue.

Member	Status	Role
Islamic Republic of Iran	Permanent voting member	Senior permanent seat; chair authority in alternating years
United States	Permanent voting member	Permanent seat; co-chair authority in alternating years
Sultanate of Oman	Permanent voting member	Tiebreaker authority; host nation
State of Qatar	Permanent voting member	Financial oversight authority; escrow co-guarantor
GCC Rotating Chair	Observer (speaking rights, no vote)	Annual rotation; regional advisory
European Union	Observer (speaking rights, no vote)	Chairs Environmental and Safety Subcommittee
PRC	Observer (speaking rights, no vote)	Technical observer; largest Gulf-oil importer
UN Secretary-General Appointee	Neutral chair	Non-voting; tie-breaking on procedural matters

7.2 Successor Framework Roadmap: Named Modules

NEW in v5.1: Day 180 Handoff with Named Modules

By Day 180, the following successor framework modules are formally opened for negotiation. Each is named and scoped to show the Stability First Accord as Phase 1 of a comprehensive regional stability architecture:

Module Name	Scope	Timeline	Prerequisites
Crescent v2.0: Ballistics/Missiles	Compact Ballistic missile range limitations; launch notification protocols; missile defense coordination; space launch vehicle governance	Months 7-18	Day 180 compliance review passed; both parties confirm; Triad certifies
Crescent v2.1: Governance	Compact Proxy Formal proxy relationship protocols; militia integration into state security structures; disarmament timelines for non-state armed groups	Months 7-24	6 months sustained proxy pause; regional security dialogue active
Gulf Dialogue v1.0	Security Multilateral regional security architecture; GCC-Iran formal communication channels; confidence-building measures; incident prevention protocols	Months 6-12	JHTA operational; first chair rotation completed
Regional Partnership v1.0	Economic Trade normalization; investment protection; energy transit agreements; infrastructure development fund	Months 9-18	SWIFT full reconnection; oil export normalization sustained
Nuclear Cooperation Framework v2.0	Cooperation Bushehr expansion; regional nuclear fuel bank; waste management cooperation; nuclear safety coordination	Months 12-24	Year 1 cap clean certification; Additional Protocol ratified
Environmental & Maritime Safety v1.0	& Hormuz environmental protection; oil spill response coordination; marine conservation; climate adaptation	Months 6-15	JHTA Environmental Subcommittee operational

Day 180 Deliverables:

- Permanent JHTA charter ratified and in force
- 85% of frozen assets returned (cumulative)
- Successor framework negotiations opened (all six modules)
- Section 123 Agreement (civilian fuel supply guarantee) negotiation framework established

- Regional Security Dialogue active with agenda agreed
- Fordow conversion to IMIRC underway (Phase B minimum)

Section 8: Minimum Viable Accord Emergency Fallback

NEW in v5.1: Emergency Stripped-Down Four-Element Pathway

If negotiators reject the full v5.1 architecture as too ambitious, the Minimum Viable Accord (MVA) provides an emergency fallback covering only the four most critical stabilization elements. The MVA is designed to be negotiated and activated within 72 hours.

The Four MVA Elements

Element	Iranian Commitment	US Commitment	Verification	Timeline
1. Ceasefire	Cessation of all offensive operations against US forces and allies; stand-down order to all Iranian military and proxy forces	Cessation of Operation Epic Fury; no offensive operations against Iranian territory; stand-down order to 5th Fleet and air assets	Pakistani guarantor confirmation; satellite observation; UN ceasefire monitoring	Immediate upon MVA signature
2. Hormuz Reopening	IRGC-Navy withdraws small craft from commercial transit corridor; Hormuz open for all commercial shipping	US naval blockade lifted; freedom of navigation operations suspended	JMA observation; Lloyd's List; UN OCHA; Omani naval observers	Within 7 days of ceasefire
3. Humanitarian Channel	Zero-fee, no-inspection-delay transit for food, medicine, medical equipment, UN supplies	OFAC general license for humanitarian transactions; sanctions exemption for humanitarian goods	UN OCHA; WFP; ICRC; Lloyd's humanitarian vessel registry	Immediate upon MVA signature
4. Enrichment Freeze	Freeze all enrichment at or above 60%; IAEA invited to verify within 72 hours	\$250M humanitarian tranche via Swiss escrow (same as Micro-Pilot)	IAEA confirmation within 72 hours; mass spectrometry	Within 72 hours of MVA signature

MVA Activation Protocol

- 1. Proposal:** Either party proposes MVA mode by encrypted written notice to the Triad
- 2. Triad Convening:** Triad convenes within 48 hours in Muscat (or by secure video if travel impractical)
- 3. Confirmation:** Both parties confirm MVA acceptance through Triad-facilitated exchange of letters

- 4. **Activation:** MVA activates 72 hours after confirmation; ceasefire begins at activation
- 5. **Verification Deploys:** IAEA advance team deploys within 48 hours; Pakistani guarantor confirms ceasefire

MVA to Full Accord Graduation

The MVA automatically graduates to the full v5.1 Accord when:

- 1. Both parties confirm MVA objectives are being met (certification to Triad)
- 2. 14 consecutive days of verified compliance (Pakistani guarantor + IAEA reports)
- 3. Neither party objects within the 7-day review window after 14-day mark
- 4. Triad certifies graduation conditions satisfied

Upon graduation, all v5.1 provisions become operative retroactive to the MVA activation date, with timelines adjusted accordingly.

MVA Framing for Domestic Audiences

Audience	Framing
Iranian domestic	"Emergency humanitarian stabilization measure to end the war and lift the blockade. Not a comprehensive agreement. Full sovereignty preserved."
US domestic	"Emergency de-escalation to protect American lives and reopen Hormuz. Not a comprehensive deal. Full military readiness maintained."
International	"Emergency stabilization measure under UN auspices. Humanitarian imperative. Reversible if either party withdraws."
Israeli	"Emergency freeze on weapons-grade enrichment; IAEA inside Fordow within 72 hours; no formal diplomatic recognition."

Section 9: Non-US Economic Channels & SWIFT Reconnection Pathway

Modification 6: Decouple U.S. Politics from Sanctions Relief

Initial economic benefits are routed entirely through non-US mechanisms that do not require explicit Congressional approval. The President's existing executive authority over foreign asset freezes and OFAC licensing is sufficient for the initial tranches.

9.1 Tiered Asset Release with Performance Accelerants

NEW in v5.1: Bonus Tranches for Over-Performance

The standard tranche architecture is enhanced with performance-based accelerants that incentivize speed and over-compliance:

Tranche	Timing	Standard Amount		Accelerant Bonus	Bonus Trigger
Pilot (Stage 1)	Day 1	\$250M		None	N/A (baseline)
Tranche 1 (Stage 2)	Day 30	25%	minus pilot	+\$50M	HEU export completed 7+ days early
Tranche 2 (Stage 2 close)	Day 44	25%		+\$75M	Moratorium ratified with Additional Protocol commitment
Tranche 3 (Stage 3)	Day 120	20%		+\$100M	Fordow Phase C completed 30+ days early
Tranche 4 (Stage 3 close)	Day 180	15%		+\$100M	Successor framework negotiations opened on schedule
Reserve	Day 365	10%		+\$150M	Full Year 1 clean certification + Additional Protocol ratified
Maximum Bonus Pool	\$475M	All bonus tranches require Triad consensus and JIG certification			

Accelerant Rationale: Bonus tranches create positive incentives for over-performance rather than relying solely on the threat of snapback for under-performance. This "carrot + carrot" approach complements the existing "stick" architecture of the diluted PRDD. Iranian negotiators can present bonus tranches as "performance rewards for accelerated compliance." US negotiators can present them as "cost-effective investments in faster stabilization."

Bonus Funding Source: Bonus tranches are funded from a dedicated performance pool established by the Qatari Emergency Liquidity Facility. Qatar commits \$500M to the performance pool at MVA/Stage 1 signature. Unused pool funds are released to Iran's general reconstruction account on Day 365.

9.2 SWIFT Reconnection Pathway

NEW in v5.1: Phased SWIFT Reintegration with Qatari Bridging

The SWIFT reconnection pathway is detailed in four phases, with Qatari bridging to reduce Iranian economic pain during the transition:

Phase	Timing	SWIFT Access Level	Qatari Bridge	Trigger
Phase 0: Pre-SWIFT	Days 1-30	No SWIFT access. All transactions via Qatari riyal bridge and Swiss corridor.	Full bridging: all Iranian international transactions processed through Qatari Financial Centre in Doha; Euro and riyal clearing only	MVA or Stage 1 signature
Phase 1: Tier B/C	Days 30-60	Restricted SWIFT access: BIC codes for 5 Iranian banks (CBI + 4 designated commercial banks); MT 103/202 only; no MT 700 (LC) or MT 760 (guarantee)	Partial bridging: SWIFT handles 40% of transactions; Qatari bridge handles 60%; transition support fee of \$2M/month from EU	Stage 2 opening; IAEA confirms moratorium framework declared
Phase 2: Tier A	Days 60-120	Expanded SWIFT access: all Iranian banks with clean compliance record; MT 700/760 permitted; messaging only (no settlement)	Minimal bridging: SWIFT handles 80%; Qatari bridge handles 20% as backup; settlement via Swiss corridor	50% assets returned; Fordow Phase A complete; continuous IAEA monitoring active
Phase 3: Full Reintegration	Day 120+	Full SWIFT membership: all message types; Iranian banks eligible for correspondent relationships; full settlement integration	Bridge dissolved; Qatari facility transitions to permanent emergency backup (reduced to \$1B capacity)	Tranche 3 released; 180-day compliance review passed; Congressional notification period complete

SWIFT Governance Safeguard: SWIFT reconnection is governed by a bilateral agreement between the Iranian Central Bank and SWIFT HQ (Belgium), with EU endorsement. The US does not control SWIFT messaging (controlled by EU-based cooperative). However, US Treasury can pressure SWIFT through its influence on EU financial policy. To mitigate: the EU formally endorses the SWIFT reconnection pathway through a Council Decision, making US unilateral pressure politically costly.

Section 10: Maritime Architecture & Hormuz Governance

10.1 Governance Pathways

Option	Description	Timeline
G-1: JMA Provisional Council	Provisional Joint Maritime Authority with US and Iran as permanent voting members, rotating GCC chair, EU/PRC as observers	7 days
G-2: Triad-Supervised Council	JMA Council with Omani-Qatari-Swiss triad holding supervisory authority	14 days
G-3: Dual-Track Governance	Separate political decision-making from technical operations	21 days
G-4: IMO-Mandated Observer Mission	UN International Maritime Organization observer mission	30 days

10.2 Operational Command-Chain Diagrams

NEW in v5.1: Maritime Command Structure & Escalation Hierarchy

The maritime command structure specifies exactly who contacts whom, who has override authority, and what happens when commanders disagree.

Level	Iranian Chain	US Chain	Neutral Oversight	Communication
Tactical (Operational)	IRGC-Navy Duty Officer → IRGC-Navy Watch Commander	5th Fleet Duty Officer → 5th Fleet Watch Commander	Omani Naval Monitor (Khasab MCC)	Tier 1 Hotline: 5-minute response
Tactical (Senior)	IRGC-Navy Watch Commander → IRGC Senior Commander	5th Fleet Watch Commander → NAVCENT Deputy Commander	JMA Maritime Coordination Cell Chair	Tier 2 Hotline: 15-minute response
Operational (Strategic)	IRGC Senior Commander → IRGC Deputy Chief of Staff	NAVCENT Deputy Commander → NAVCENT Commander	JMA Council Chair (Omani Foreign Ministry)	Secure video + diplomatic backchannel
Political	IRGC Deputy Chief → SNSC Secretary → Iranian FM	NAVCENT Commander → CNO → US Secretary of State	Pakistani Guarantor + US Triad	Tier 3 Hotline: 30-minute response
Executive	SNSC Secretary → Supreme Leader / President	Secretary of State → National Security Advisor → President	UN Secretary-General	Direct executive link via Pakistani PM relay

Override Authority: At the Tactical level, the Omani Naval Monitor has authority to issue binding "hold fire" directives to both sides for up to 30 minutes pending escalation. At the Operational level, the JMA Council Chair can order a 4-hour "stabilization hold" on any military action. At the Political level, the Pakistani Guarantor can convene an emergency JIG session with 2-hour notice.

Commander Disagreement Protocol: If Iranian and US naval commanders at the same level disagree on the interpretation of an incident, the neutral oversight authority at that level makes a binding procedural determination within the response time window. If the neutral authority cannot determine within the window, the "cooling off" rule applies: no escalatory action for 24 hours pending escalation to the next level.

10.3 Security Pathways

Option	Description			Required
S-1: Synchronized Blockade Lift	Day-7	Dual	Both blockades lift at identical UTC timestamp within 60-second window	Required
S-2: Omani-Hosted Confliction Hotline	24/7	De-	Tri-lingual (English, Farsi, Arabic) hotline with 5-minute Tier-1 response mandate	Required
S-3: Unmanned Picket Line			Autonomous sensor network providing real-time transit corridor monitoring	Recommended
S-4: Naval Encounter Conduct	Code of		INCSEA-adapted rules of engagement preventing accidental escalation	Required
S-5: Symmetric Architecture	Stand-Off		Reciprocal 5nm stand-off distance from commercial transit corridor	Required

Section 11: Nuclear Stabilization Architecture

The nuclear architecture is the framework's most sensitive component. Six independently selectable pathways are provided for the verified neutralization of Iran's 60% HEU stockpile.

Pathway		Description	Timeline
A:	In-Place Downblending	Entire stockpile converted to medical-grade LEU (19.75%) through in-place downblending at Esfahan	142 days
B:	HEU Export to Oman	Entire stockpile transported under IAEA chain-of-custody to IAEA-controlled storage in Oman	14 days
C:	Kazakhstan LEU Bank	Stockpile downblended in Iran, then transferred to IAEA LEU Bank in Oskemen	75 days
D:	Russian Federation Custody	Transfer to Rosatom-operated storage under IAEA safeguards	60-90 days
E:	Bushehr Fuel Conversion	HEU downblended to reactor-grade LEU and fabricated into fuel assemblies	180 days
F:	Hybrid Modular	Stockpile divided into batches, each processed through different pathways	Concurrent

Section 12: Fordow Joint Venture & Funding Model

Modification 8: Reframe Fordow as International Scientific Achievement

International oversight of Fordow is rebranded as an international scientific joint venture led by neutral nations. The facility becomes the International Medical Isotope Research Center (IMIRC).

NEW in v5.1: Neutral-State Seed Funding Model

The Fordow IMIRC conversion is funded through a neutral-state seed funding model that positions the project as a prestige international scientific initiative:

Funding Source	Contribution	Form	Timeline
Switzerland (Seed Funder)	\$25M seed capital	Direct grant to IMIRC JV account; no repayment	Month 1 (upon Stage 2 opening)
Oman (Host Contribution)	\$15M	Infrastructure support: road access, utilities, telecommunications	Months 1-6
Qatar (Bridge Facility)	\$20M	Convertible loan at LIBOR + 0.5%; converts to equity if milestones met	Months 1-12
WHO/IAEA	\$30M	Technical assistance grant; equipment; training programs	Months 3-24
EU (Horizon Program)	\$25M	Research partnership grant; joint publications; scientist exchanges	Months 6-36
GCC Scientific Fund	\$15M	Regional research collaboration; isotope supply agreement	Months 6-36
Iran (In-Kind)	\$40M equivalent	Facility infrastructure; workforce; scientific expertise; land and buildings	Throughout
Private Sector (Pharma)	\$20M	Commercial offtake agreements; joint ventures with Iranian pharmaceutical companies	Months 12-48

Total Funding Pool: $190M + 40M$ Iranian in-kind = **\$230M over 48 months**

Prestige Positioning: The IMIRC is formally designated a **WHO Center of Excellence for Medical Isotope Production**. This status provides international legitimacy and protects the project from political disruption. Annual IMIRC Scientific Summits are held at the facility, rotating leadership between Iranian and international scientists.

Section 13: Rebranding & Crisis Communications

Modification 9: Rename and Rebrand the Framework

Remove terms like "deal," "rollback," or "concessions." Washington sells this as a "regional stability mechanism." Tehran sells it as a "sovereignty-protecting de-escalation tool." Neither narrative contradicts the other.

13.1 Public Communications Crisis Procedures

NEW in v5.1: Crisis Communications Protocol for Leaks, Contradictions, and Misinformation

Narrative management requires dedicated protocols for communications crises that can derail the underlying diplomatic process:

Crisis Type	Trigger	Response Protocol	Response Time
Unauthorized Leak	Confidential Accord text or negotiating positions published by media	JIG Media Working Group convenes within 4 hours; both parties issue coordinated "we do not comment on draft documents" statement; leaker investigation by respective internal security	4 hours
Contradictory Statement	Official from either party makes public statement contradicting Accord provisions	24-hour clarification window; JIG Media Working Group drafts corrective statement; senior official from same government issues clarification without attribution to JIG	24 hours
Media Provocation	Hostile media outlet publishes inflammatory story about Accord	No direct response to hostile outlet; instead, positive messaging through friendly outlets; JIG monitors narrative impact; corrective briefing for key journalists	48 hours
Viral Misinformation	False claims about Accord spread rapidly on social media	JIG Rapid Response Cell activates; pre-approved fact sheets distributed to embassies; key influencers briefed; social media monitoring enhanced; official corrections posted on government accounts	6 hours
Politically Inflammatory Speech	Senior politician delivers speech attacking Accord or opponent's negotiating position	No official response from negotiating team; backchannel message through Triad requesting clarification; domestic political allies provide counter-narrative; 72-hour cooling period before formal response	72 hours
Third-Party Narrative Attack	Spoiler state or non-state actor launches disinformation campaign against Accord	Triad Attribution Investigation (Section 20); coordinated pushback through diplomatic channels; UN statement if attribution confirmed; no unilateral public accusations without evidence	72 hours

Communications Blackout Protocol: During active military incidents or verification crises, both parties observe a 24-hour communications blackout. No public statements about the incident. All communications routed through the JIG Media Working Group. This prevents inflammatory rhetoric from escalating a manageable incident into a diplomatic crisis.

Section 14: Goldilocks Crisis Protocol

Modification 10: Pre-Position for a "Goldilocks" Crisis

The framework is most likely to be adopted during a crisis that scares both sides but doesn't collapse diplomacy. The Goldilocks Protocol keeps the modular 14-day implementation directives and Micro-Pilot module ready to deploy instantly.

14.1 Crisis Triggers and Response

Crisis Type		Deployable Module	Timeline
Maritime Insurance Spike		Micro-Pilot + Day-7 Synchronized Blockade Lift	48 hours
Near-Miss Encounter	Military	Blind De-escalation Protocol + S-2 Hotline Full Activation	24 hours
Leadership Transition		Micro-Pilot (presents as "new initiative")	7 days
Regional Spoiler Attack		JMA Emergency Protocol + Triad Attribution Investigation	Immediate
Energy Market Collapse		Full Stage 1 (14-Day Opening) pre-authorized for emergency deployment	72 hours

Section 15: Five-Channel Verification & Diluted PRDD

15.1 The Five Verification Channels

Channel	Active	Coverage	Reporting
Pakistani Mediator	Throughout	Bilateral diplomatic channel; ceasefire compliance; major commitment certification	Pakistani Prime Minister's Office
Omani Technical	Throughout	Maritime operations; JMA observation; hotline; mine clearance	Omani Foreign Ministry
Swiss Financial	Throughout	Asset transfer verification; sanctions relief; escrow management	Swiss Federal Department of Foreign Affairs
IAEA	From Day 1	Nuclear verification: stockpile custody, enrichment moratorium, Fordow conversion	IAEA Director General
National Technical Means	Throughout	Satellite imagery, signals intelligence; used as backstop and discrepancy detector	US, partner intelligence services

15.2 Diluted PRDD "Kill Switch"

Modification 4: Dilute the PRDD Snap Line from 72 Hours to 30 Days

The original 72-hour Petroleum Revenue Direct Deposit Snap Line is extended to 30 days with mandatory third-party mediation.

Parameter	Original (v1.0-2.5)	Diluted (v5.1)
Freeze trigger window	72 hours	30 days
Trigger authority	Automatic upon IAEA non-compliance notice	IAEA notice + Triad dispute resolution
Dispute resolution	None (automatic)	Mandatory 14-day Triad mediation before freeze
False positive protection	2-hour verification loop	30-day window + Triad technical review
Humanitarian firewall	No freeze affects humanitarian funds	Expanded: no freeze affects humanitarian, medical isotope, or JHTA operational funds

Restoration	Only IAEA DG can certify	IAEA DG + Triad consensus required
-------------	--------------------------	------------------------------------

Section 17: What Each Side Wins & Face-Saving Metrics

This section provides the diplomatic framing that enables each government to defend the Accord to its domestic audience, with quantifiable metrics for every claim.

16.1 What the United States Wins

Win	Specific Deliverable	Face-Saving Metric	Day Verified
Strait of Hormuz reopened	200+ commercial vessel transits per 14-day period	"Gas-pump prices begin falling within 7 days; 20% of global oil supply restored"	Day 14
Operation Epic Fury succeeded	Offensive operations transition to JMA convoy support	"President can credibly claim operation achieved its objective"	Day 7
Weapons-grade stockpile secured	Entire 60%-enriched stockpile in IAEA third-country custody	"Every kilogram of weapons-grade uranium verified by mass spectrometry"	Day 1
1-year renewable enrichment cap	Performance-based annual renewal ensuring sustained compliance	"Ratchet effect: politically easier to maintain than to reverse"	Day 44
Fordow permanently converted	Fortified Fordow facility producing medical isotopes	"Most fortified enrichment plant now produces cancer medicine"	Day 60
No basing concessions	All US Gulf bases remain; all treaty obligations preserved	"Not a single base closed; not a single troop withdrawn"	Day 1
Congressional oversight preserved	Each tranche from Tranche 3 forward subject to 30-day review	"Congress has a vote on every major tranche"	Throughout
Israeli security backstop	Weapons-grade stockpile secured; moratorium in force	"Tel Aviv Channel provides real-time IAEA data to Israeli intelligence"	Day 1
No precedent created	Explicit No Precedent Clause in every document	"This is a one-time arrangement; no template for future deals"	Day 1

16.2 What Iran Wins

Win	Specific Deliverable	Face-Saving Metric	Day Verified
War ends permanently	Permanent bilateral ceasefire	"American offensive operations ceased; no more bombs on Iranian soil"	Day 1
US naval blockade lifted	Synchronized with Hormuz reopening on Day 7	"Iranian commercial ports fully operational; trade resumes"	Day 7
Return of sovereign assets	\$250M Day 1; 50% by Day 44; 85% by Day 180	"Irreversible return of sovereign property held hostage for decades"	Staged
NPT rights preserved	Enrichment continues at 3.67% under sovereign annual review	"We review the arrangement annually; no enduring obligation imposed"	Throughout
Permanent JHTA governance seat	Permanent voting seat with chair authority in alternating years	"Permanent Iranian co-equality replacing decades of American unilateralism"	Day 90
Fordow as scientific achievement	World-class medical isotope center led by Iranian scientists	"Iranian scientists lead cancer medicine production for the Middle East"	Day 60
No precedent created	Explicit No Precedent Clause protects Iranian flexibility	"This Accord creates no template; future arrangements require fresh negotiation"	Day 1
Bonus tranches for performance	Up to \$475M in bonus payments for accelerated compliance	"Iran rewarded for speed and excellence, not just minimum compliance"	Throughout

Section 18: Safeguards, Force Majeure & No Precedent

Key Safeguard 1: Failure Without War

Framework failure does not restore war conditions. If the Accord collapses, the bilateral ceasefire remains in force unless explicitly renounced. The 150-day inertia buffer means no instant sanctions snapback.

Key Safeguard 2: Stabilization Holds

When a specific Accord measure becomes domestically untenable, that measure can be placed on Stabilization Hold for up to 90 days. During the Hold, all other obligations remain in force.

Key Safeguard 3: Emergency Ambiguity Authority

The Triad chair possesses Emergency Ambiguity Authority — the capacity to introduce controlled procedural ambiguity that prevents immediate escalation when clarification would inflame domestic public opinion.

Key Safeguard 4: Costed Withdrawal

Any party may withdraw through a six-month notification window, orderly asset disposition, infrastructure handover, and personnel repatriation. Nuclear constraints survive withdrawal as residual obligations.

Key Safeguard 5: Force Majeure Provision

NEW in v5.1: Force Majeure with Triad Arbitration

Article FM-1: Definition of Force Majeure. Force majeure events are defined as: (a) natural disasters (earthquake, flood, hurricane, pandemic) affecting either Party's territory; (b) third-party military attack on either Party not attributable to the other Party; (c) terrorist attack of catastrophic scale (>50 fatalities); (d) critical infrastructure failure due to causes beyond either Party's control; (e) cyber attack by a third party on essential verification or financial systems.

Article FM-2: Temporary Pause Without Breach. Upon occurrence of a force majeure event, the affected Party may declare a Temporary Pause for a period not exceeding 90 days. During a Temporary Pause: (a) the affected Party's obligations under this Accord are suspended; (b) the other Party's obligations continue unless the force majeure event affects them equally; (c) the humanitarian module continues regardless; (d) IAEA monitoring continues if inspector safety is assured.

Article FM-3: Triad Arbitration Procedure. Within 7 days of a Temporary Pause declaration, the Triad convenes an emergency arbitration panel consisting of one representative from each Triad member plus one independent technical expert selected by mutual agreement (or, if no agreement, by the UN Secretary-General). The panel determines: (a) whether the event qualifies as force majeure; (b) the appropriate duration of the Temporary Pause; (c) conditions for resumption; (d) whether any obligations must be adjusted to account for the disruption. The panel's determination is binding.

Article FM-4: No Penalty. A properly declared and Triad-certified Temporary Pause does not constitute a material breach, does not trigger the PRDD, and does not affect the calculation of compliance timelines. Days during a certified Temporary Pause are excluded from all compliance timeframes.

Key Safeguard 6: No Precedent Binding

Article 1.11 (No Precedent Clause) is incorporated by reference into every operational document, implementation mechanism, and public statement. No action taken under this Accord shall be cited in any future negotiation as establishing a standard, baseline, or expectation.

Key Safeguard 7: Israeli Quiet Acquiescence Mechanism

NEW in v5.1: Tel Aviv Channel for Pre-Briefings

To secure Israeli non-objection to the Accord, a confidential "Tel Aviv Channel" provides real-time intelligence sharing and advance briefings:

Element	Description	Frequency
IAEA Data-Sharing	Real-time access to IAEA monitoring data on Iranian enrichment activities; camera feeds; environmental sampling results	Continuous (24/7)
Pre-Briefing Protocol	Israeli intelligence briefed 48 hours before any public announcement of Iranian compliance milestones	Per milestone
Pickaxe Mountain Transparency	Full IAEA survey data shared; continuous seismic monitoring; any detected construction activity reported within 6 hours	Weekly reports
Fordow Conversion Verification	Real-time video feed of conversion activities; mass spectrometry of output material; access for Israeli technical observer upon request	Continuous
Consultation on HEU Export	Israel consulted on destination country for HEU export; Israeli observer may accompany transport convoy	Per export batch
Crisis Alert	Immediate notification if any Accord provision is violated or suspected violation detected	Within 2 hours

Status: The Tel Aviv Channel operates as a bilateral US-Israel arrangement parallel to the Accord. Israel is not a party to the Accord and has no veto over its provisions. However, the Channel ensures that Israeli concerns are addressed through transparency rather than through military action.

Face-Saving for Israel: Israeli officials can state: "We have full transparency into every aspect of the Iranian nuclear program. Any deviation from the agreed limits will be detected immediately. Our security is enhanced, not compromised, by this arrangement."

Section 19: Spoiler & Rogue Actor Management

NEW in v5.1: Comprehensive Spoiler Management Framework

The Accord references crisis scenarios repeatedly, but no previous version contained a fully developed framework for managing spoilers and rogue actors. This section fills that gap.

19.1 Spoiler Categories and Response Protocols

Spoiler Type	Example Actors	Likely Tactics	Response Protocol
Proxy Attackers	Unrestrained Hezbollah cells; Houthi splinter factions; Iraqi PMF hardliners; Syrian militias	Rocket attacks on US facilities; maritime harassment; IED attacks on convoys; kidnapping of officials	Immediate condemnation by sponsoring party within 24h; Triad attribution investigation (Section 20); rogue commander protocol activation; regional firewall
False-Flag Operators	Intelligence services of third states; criminal organizations; terrorist groups seeking to provoke war	Staged attack attributed to other party; forged communications; planted evidence	Triad forensic investigation; burden-of-proof threshold (Section 20); no military response until attribution confirmed; provisional restraint mandate
Rogue Commanders	IRGC officer rejecting civilian authority; US field commander exceeding ROE; JMA officer acting unilaterally	Unauthorized strikes; unilateral blockade enforcement; false incident reports	Immediate recall by parent chain of command; JMA investigation; commander's government issues public disavowal; temporary suspension from operations
Terrorist Maritime Attackers	Al-Qaeda maritime cell; ISIS naval unit; criminal piracy networks	Suicide boat attack on commercial vessel; mine placement in transit corridor; hijacking of tanker	JMA Emergency Protocol activates; Triad attribution investigation; all parties cooperate on response; no party exploits attack for political advantage
Cyber Spoilers	Third-state intelligence services; criminal ransomware groups; hacktivist collectives	Attack on IAEA monitoring systems; disruption of banking settlement; spoofing of maritime navigation	Cyber Operations Stabilization Module (Section 21); 6-hour notification window; Triad technical review; no military retaliation without confirmed state attribution

Political Saboteurs	Opposition politicians; media outlets; ideological activists	Leaks of confidential negotiating positions; inflammatory rhetoric; organized protests	Crisis Communications Protocol (Section 28); no official response to hostile media; corrective messaging through friendly outlets; narrative monitoring
----------------------------	--	--	---

19.2 Regional Firewall Protocol

When a third-party regional escalation threatens the framework, the Regional Firewall activates:

- 1. **Detection:** Any party or Triad member identifies threat to framework stability from external source
- 2. **Notification:** All parties and Triad notified within 2 hours
- 3. **Consultation:** Emergency JIG session convened within 12 hours (virtual if necessary)
- 4. **Coordinated Response:** Joint statement by all parties condemning escalation and affirming commitment to Accord
- 5. **Containment:** Specific measures to isolate framework from external conflict (humanitarian track continues regardless)
- 6. **Review:** 72-hour assessment of whether escalation requires framework adjustments

Section 20: Attribution Uncertainty Protocols

NEW in v5.1: Disputed Attribution Framework

Real crises often involve disputed attribution. This section establishes protocols for managing uncertainty without triggering premature escalation.

20.1 Provisional Response Rules

Certainty Level	Definition	Permitted Response	Prohibited Response
Level 5: Confirmed	Multiple independent sources confirm attribution; physical evidence; intercepted communications	Full diplomatic response; PRDD activation; UNSC referral; proportional military response if self-defense	Disproportionate military response; attacks on civilian infrastructure
Level 4: Highly Probable	Strong evidence from 2+ independent sources; no credible alternative explanation	Diplomatic protest; sanctions designation; JIG formal review; Triad arbitration initiated	Military response; PRDD activation
Level 3: Probable	Single strong source or multiple weak sources; plausible but not certain	Backchannel demarche; JIG informal review; enhanced monitoring; 14-day forensic review window	Public accusations; sanctions; military response
Level 2: Possible	Circumstantial evidence; could be true but alternative explanations exist	Intelligence sharing with Triad; enhanced vigilance; no public statements	Any diplomatic or military response
Level 1: Unknown	No reliable information; conflicting reports; no basis for attribution	Fact-finding only; provisional restraint; 72-hour forensic review window	Any response beyond fact-finding

20.2 Forensic Review Windows

Incident Type	Initial Review	Extended Forensic	Final Determination
Maritime attack	24 hours (JMA initial assessment)	14 days (Triad maritime panel)	21 days (Triad consensus or majority)
Nuclear facility incident	6 hours (IAEA emergency response)	7 days (IAEA + independent experts)	14 days (IAEA DG + Triad)

Cyber attack	6 hours (JIG cyber cell)	14 days (Triad cyber panel + independent experts)	30 days (Triad consensus)
Proxy attack	24 hours (UN mission reporting)	14 days (Triad + host government)	21 days (Triad + host government consensus)
Military incident	2 hours (hotline notification)	7 days (JIG military review panel)	14 days (JIG + Triad)

20.3 Temporary Restraint Mandate

During any attribution review period, both parties are bound by the Temporary Restraint Mandate:

- No military retaliation against the other party pending attribution determination
- No public accusations of responsibility until Level 4 (Highly Probable) reached
- No PRDD activation until Level 5 (Confirmed) reached and Triad consensus obtained
- Humanitarian and ceasefire tracks continue regardless of attribution review
- Self-defense rights preserved if active armed attack is in progress against personnel

20.4 Burden of Proof Thresholds

Action	Required Certainty Level	Approver
Public accusation	Level 4 (Highly Probable)	JIG consensus
Diplomatic protest	Level 4 (Highly Probable)	JIG majority
Sanctions designation	Level 5 (Confirmed)	Triad consensus
PRDD activation	Level 5 (Confirmed) + material breach	IAEA DG + Triad consensus
Military response	Level 5 (Confirmed) + self-defense necessity	UNSC (or self-defense if imminent threat)
Framework suspension	Level 5 (Confirmed) + pattern of violations	JIG consensus + Triad concurrence

Section 21: Cyber Operations Stabilization

NEW in v5.1: Comprehensive Cyber Stabilization Module

Cyber conflict is one of the most likely escalation vectors. This module provides a dedicated framework for cyber de-escalation.

21.1 Protected Infrastructure Categories

(See Section 4.2 for full Category I/II/III table)

21.2 Cyber Incident Notification and Response

Severity	Definition	Notification Time	Response
Critical	Attack on Category I infrastructure causing operational disruption	1 hour	Cyber hotline activation; Triad emergency session; all parties coordinate response; analogue backup systems activate
Serious	Attack on Category II infrastructure; significant reconnaissance of Category I	6 hours	JIG cyber cell review; enhanced monitoring; 72-hour remediation window
Moderate	Attack on Category III; minor reconnaissance of Category II	24 hours	JIG notification; technical review; no diplomatic response required
Low	Probing; scanning; no operational impact	Weekly summary	Routine monitoring; logged for pattern analysis

21.3 Cyber De-escalation Principles

- 1. No Escalation by Cyber:** Neither party may use a cyber incident as justification for kinetic escalation unless the attack causes loss of life or critical infrastructure destruction
- 2. Attribution Before Retaliation:** No cyber retaliation without Level 4 attribution certainty (Section 20)
- 3. Protected Channels:** JIG communications, Triad hotlines, and IAEA data links are inviolable. Attack on these channels constitutes Critical severity regardless of operational impact
- 4. Shared Threat Intelligence:** Both parties share cyber threat intelligence regarding third-party actors targeting Accord infrastructure
- 5. No Prepositioning:** Neither party may preposition cyber weapons in the other's critical infrastructure as "insurance"

Section 22: Crisis Management & Degraded Compliance

22.1 The 24-Hour Cooling-Off Rule

When an incident occurs, no escalatory action by either party may be taken within the first 24 hours. Self-defense rights are preserved where an active armed attack is in progress.

22.2 Five Independent De-escalation Pathways

Pathway	Trigger	Duration	Authority
Crisis Lock	10+ fatalities; verified direct military clash; critical infrastructure attack	14 days; extendable to 42	JIG majority; Pakistan facilitates
Third-Party Spoiler Attribution	Third-party attack or spoiler activity	30-day investigation	JIG-convened panel; neutral technical expert chair
Military Deconfliction	Any military incident in or near JHTA corridor	Permanent 24/7 hotline	Oman-hosted; 2-hour mandatory response
Regional Firewall	Third-party regional escalation threatening framework	Immediate emergency session	JIG; Pakistan facilitates
Direct Executive Link	Imminent crisis requiring head-of-state communication	6-hour consultation	Pakistan Prime Minister as initial relay

Section 23: Degraded Compliance Operating Mode

NEW in v5.1: Intermediate State Between Full Compliance and Dispute

The framework assumes either full compliance or formal dispute. This section adds an intermediate "degraded compliance" state where partial implementation continues, humanitarian channels remain active, monitoring persists, but some tracks temporarily freeze.

23.1 Degraded Compliance Triggers

Trigger	Effect on Full Compliance	Degraded Mode Continues	Degraded Mode Freezes
Domestic political crisis in either capital (elections, cabinet reshuffle, leadership transition)	Some obligations politically untenable	Ceasefire; humanitarian; IAEA monitoring; Hormuz transit; diplomatic channels	New asset releases; new nuclear concessions; sanctions relief expansion; successor framework talks
Regional escalation not directly involving parties	Risk of guilt-by-association	Ceasefire; humanitarian; IAEA monitoring; diplomatic channels	Hormuz military coordination; proxy stand-down enforcement; regional dialogue
Technical verification failure (non-material)	Some verification data unavailable	All tracks; analogue backup monitoring; enhanced physical inspection	Digital-dependent processes; automated compliance certification
Financial channel disruption	Asset transfer delays	Ceasefire; humanitarian; IAEA monitoring; Hormuz transit	Further asset releases; bonus tranches; SWIFT reconnection
Cyber attack on verification systems	Data integrity questioned	Ceasefire; humanitarian; physical IAEA inspection; diplomatic channels	Digital verification; automated compliance; remote monitoring

23.2 Degraded Compliance Activation Procedure

1. Affected party notifies JIG of intent to enter Degraded Compliance Mode with specific justification
2. Triad reviews within 48 hours; confirms degraded mode is appropriate (not a material breach)
3. JIG issues Degraded Compliance Certificate specifying which tracks continue and which freeze
4. All frozen tracks placed on 90-day hold (extendable by Triad to 180 days)

5. Humanitarian track continues at full capacity regardless

6. Monthly JIG review of whether conditions permit return to Full Compliance

23.3 Graduated Return to Full Compliance

Stage		Condition	Tracks Restored
Stage Return	1	Political crisis resolved; JIG confirms stability	Diplomatic channels; Hormuz transit (non-military); IAEA standard monitoring
Stage Return	2	30 days stable partial compliance; Triad confirms	Asset releases (standard tranches); proxy stand-down; SWIFT Phase 1
Stage Return	3	60 days stable compliance; all prior obligations met	Full sanctions relief; bonus tranches; SWIFT Phase 2; successor framework talks
Full Restoration		90 days stable compliance; 180-day review passed	All tracks fully operational; all bonus tranches available

Section 24: Enforcement Asymmetry & Risk Mitigation

NEW in v5.1: Addressing the Asymmetry Concern

The Concern: Some reviewers may argue that Iran's commitments are concrete and immediate (enrichment freeze, stockpile transfer, facility conversion), while US sanctions relief depends on political processes outside executive control (Congressional review, legislative change, regulatory implementation). This asymmetry creates a risk that Iran delivers while the US stalls.

Direct Acknowledgment: This concern is valid. The architecture below directly addresses it:

24.1 Asymmetry Mitigation Measures

Asymmetry	Mitigation	Guarantor
Iran's commitments are physical and irreversible	US commitments are staged and reversible through the first two tranches; Iran's physical commitments are matched by physical US commitments (blockade lift, asset transfer)	Triad verifies both sides deliver simultaneously
US sanctions relief requires Congressional action for large tranches	Tranches 1-2 (\$250M + ~25%) require only executive authority; non-US channels bypass Congress entirely for initial phases; 30-day Congressional review provides early warning if Congress objects	Swiss escrow holds funds; released only upon IAEA confirmation of Iranian compliance
Iran cannot "un-freeze" enrichment once physically transferred	US cannot "un-lift" blockade once lifted without visible consequences; both sides create irreversible facts on the ground	JMA verifies blockade status; IAEA verifies enrichment status
US can reimpose sanctions unilaterally	Diluted PRDD requires 30-day Triad process before any freeze; humanitarian firewall protects medical/food funds; reimposition triggers Iranian right to resume enrichment (symmetrical)	Triad holds veto over any freeze
Iran's parliament (Majlis) may reject the moratorium	30-day deferred window provides time for Majlis review; sovereignty-preserving language reduces rejection risk; Micro-Pilot builds political capital before binding commitments	Pakistani guarantor facilitates backchannel Majlis briefing

24.2 Symmetry Lock Mechanism

The fundamental design principle: **neither side is ever significantly ahead of the other in delivered value**. At every stage, the approximate value of delivered commitments is balanced:

- **Micro-Pilot:** Iran delivers 60% freeze (value: ~50M in foregone enrichment capacity); US delivers \$250M (value: \$250M). US delivers more financial value; Iran delivers more security value. Net: roughly balanced.
- **Stage 1:** Iran delivers stockpile transfer + ceasefire (value: irreversible security gain); US delivers blockade lift + \$250M (value: irreversible economic gain). Net: roughly balanced.
- **Stage 2:** Iran delivers moratorium + facility protocols (value: long-term security architecture); US delivers 25-50% asset return + sanctions relief (value: long-term economic architecture). Net: roughly balanced.
- **Stage 3:** Both sides deliver institutional commitments of comparable strategic value.

Section 25: Legally Binding vs Politically Binding Framework

NEW in v5.1: Explicit Binding Character of Every Provision

The distinction between legally binding and politically binding commitments matters enormously in actual negotiations. This section clarifies the binding character of every major element:

Element	Binding Character	Legal Form	Enforcement	Withdrawal
Ceasefire	Legally binding	Exchange of letters constituting international agreement; registered with UN	UN observer mission; Pakistani guarantor; JIG	6-month notice; orderly transition
Stockpile transfer to IAEA	Legally binding	IAEA custody agreement; legally binding transfer of title/custody	IAEA verification; mass spectrometry; physical security	Requires IAEA DG + Triad consensus
Enrichment moratorium (1-year cap)	Legally binding	Voluntary legal commitment to IAEA Board of Governors; binding under Iran's NPT safeguards agreement	IAEA continuous monitoring; environmental sampling; satellite observation	Automatic if US triggers snapback; 6-month notice otherwise
Hormuz reopening / blockade lift	Legally binding	Executive order (US); cabinet decree (Iran); JMA operational directive	JMA observation; Lloyd's List; UN OCHA; satellite AIS	6-month notice; humanitarian exemption survives
Asset return tranches	Legally binding	Swiss escrow agreement; contractually binding on escrow agent	Swiss banking regulator; Triad oversight; IAEA certification trigger	PRDD process required; humanitarian firewall
JHTA Charter	Legally binding	Multilateral treaty; ratified by all parties	International law; UN registration; ICJ jurisdiction (optional)	Treaty withdrawal procedures (12-month notice)
Micro-Pilot (Stage 0)	Politically binding	Exchange of letters; not registered with UN; not a treaty	Political credibility; Triad moral suasion; reputational cost	7 days notice; no penalty

Blind De-escalation	Politically binding	No written agreement; mutual understanding through backchannels	Observable behavior; Triad assessment; reputational cost	Either side can resume at any time
Rebranding / messaging	Politically binding	JIG Media Working Group guidelines; not legally enforceable	Political coordination; JIG monitoring; public accountability	24-hour embargo on contradictory messaging
Face-saving metrics	Politically binding	JIG Media Working Group approval; pre-cleared statements	Political coordination; domestic political accountability	Revocable by either party with 48-hour notice
Israeli Tel Aviv Channel	Politically binding	US-Israel bilateral memorandum; Iran not a party	US commitment to Israel; IAEA data-sharing agreement	US can suspend with 30-day notice to Israel
Successor framework roadmap	Non-binding	Aspirational; political commitment to negotiate	Political credibility; Triad facilitation	Either party can decline to open negotiations

Key Principle: All security-critical commitments (ceasefire, stockpile transfer, enrichment cap, Hormuz governance) are legally binding. All trust-building and political commitments (Micro-Pilot, Blind De-escalation, messaging) are politically binding. Economic commitments occupy an intermediate status: the escrow agreements are legally binding, but the political decision to fund them is politically binding.

Section 26: US Succession Continuity

NEW in v5.1: Explicit US Institutional Binding

Version 5.0 addressed Iranian succession resilience well but did not explicitly address US continuity. This section ensures the framework survives US elections, administration changes, Congressional turnover, and cabinet reshuffles:

26.1 US Institutional Commitments

US Institution	Binding Mechanism	Survives What Changes?
Office of the President	Executive agreement under Article II; bilateral exchange of letters; registered with UN	Presidential election; administration change; party turnover
Department of State	Secretary of State certification; Foreign Service implementing instructions; diplomatic note exchange	Cabinet reshuffle; Secretary change; regional bureau reorganization
Department of Treasury / OFAC	General licenses issued; regulatory guidance; banking instructions to correspondent banks	Treasury Secretary change; OFAC Director change; regulatory reform
Department of Defense	Standing Rules of Engagement amendment; operational orders; force posture instructions	SECDEF change; Combatant Commander rotation; service secretary change
Intelligence Community	Intelligence sharing agreements; National Intelligence Estimate findings; liaison protocols	DNI change; CIA Director change; NGA/NSA leadership change
Congress	Notification requirements (Tranche 3+); 30-day review windows; oversight hearings	Election cycles; majority/minority change; committee chair turnover

26.2 Continuity Safeguards

- 1. Escrow Protection:** Once funds are transferred to Swiss escrow, they are legally held by the escrow agent, not the US government. A new administration cannot claw back funds already legally released.
- 2. Treaty Lock-In:** The JHTA Charter is a multilateral treaty requiring 12-month withdrawal notice. A new administration cannot instantly withdraw.
- 3. Irreversible Facts:** Once the blockade is lifted and Hormuz is open, reimposing the blockade requires a visible, politically costly executive decision. A new administration inherits these facts.
- 4. Constituency Creation:** American companies, banks, and investors benefit from restored trade. These constituencies lobby for continuation regardless of

administration.

5. **International Reputation:** US withdrawal from a verified agreement damages American credibility on non-proliferation. This reputational cost deters casual withdrawal.

6. **Congressional Notification:** By the time Tranche 3 triggers Congressional review, two prior tranches have already been released, creating sunk costs of cooperation.

Section 27: Domestic Legislative Synchronization

NEW in v5.1: Legislative Timeline Matrix

Legislative Body	Notification Window	Review Period	Veto Authority	Required Action
US Congress	Tranche 3 (Day 120): 30-day notification; Tranche 4 (Day 180): 30-day review	30 calendar days	Joint Resolution of Disapproval (subject to Presidential veto)	Notification only for Tranches 1-2; active review for Tranches 3+
Iranian Majlis	30-day window before moratorium ratification; 14-day window for asset return approval	30 days (extendable to 45 by Speaker)	Refusal to ratify moratorium legislation	Moratorium ratification required; asset return notification required
GCC Council	Joint 14-day consultation before JHTA provisional charter; 30-day before permanent charter	14-30 days	Formal objection by 2+ GCC members triggers revised consultation	Consultation required; no veto but political weight
EU Council	14-day notification for INSTEX activation; 30-day for SWIFT endorsement	14-30 days	Blocking regulation prevents EU compliance with US extraterritorial sanctions	Political endorsement for SWIFT; regulatory action for INSTEX
UN Security Council	Report within 30 days of JHTA charter; quarterly reports thereafter	N/A	No veto authority over Accord implementation (not a UNSC resolution)	Reporting obligation only; no approval required
Swiss Parliament	Notification of escrow agreement; annual report on escrow operations	30 days	No veto over executive foreign policy	Notification and reporting only
Omani/Qatari Consultative Assemblies	Notification of Triad commitments; annual report on Triad activities	14 days	Advisory only	Notification and reporting only

Section 28: Public Communications Crisis Procedures

NEW in v5.1: Narrative Management Under Pressure

(See Section 13.1 for detailed crisis communications protocol including leak response, contradictory statement management, media provocation, viral misinformation, and inflammatory speech protocols.)

28.1 Messaging Discipline Rules (Reinforced)

1. All public characterizations must include acknowledgment that benefits are conditional on performance
2. 24-hour embargo on contradictory messaging from either side
3. Pre-approved sound-bites only; deviations require JIG Media Working Group notification within 4 hours
4. Messaging override permitted for domestic crises (natural disaster, terrorist attack) for up to 14 days
5. Neither side may characterize the other's commitments as "concessions" or "defeat"
6. No public reference to Israeli Tel Aviv Channel operations
7. No public discussion of bonus tranche amounts (to avoid perception of bribery)
8. All force majeure declarations reported as "operational adjustments" not compliance failures

Section 29: Independent Audit & Review Mechanism

NEW in v5.1: Periodic External Review Panel

To increase institutional credibility, a periodic independent audit mechanism reviews compliance, financial management, and operational effectiveness:

Review Type	Frequency	Panel Composition	Scope	Reporting
90-Day Technical Review	Every 90 days	3 neutral technical experts (nuclear, maritime, sanctions); appointed by Triad	Compliance verification; technical implementation; milestone achievement	Confidential to JIG; summary public report
180-Day Comprehensive Audit	Every 180 days	5-person panel: nuclear specialist, maritime sanctions expert, financial auditor, legal scholar; appointed by UN Secretary-General on Triad recommendation	Full framework assessment; financial audit; legal compliance; effectiveness evaluation	Public report to all parties; UN registration
Annual Independent Evaluation	Annually	7-person panel: former heads of government or international organizations; appointed by Nobel Institute (Oslo) on Triad recommendation	Strategic assessment; political sustainability; successor framework readiness	Public report; media briefing; parliamentary testimony in all capitals
Ad Hoc Crisis Review	As needed	2-3 experts appointed by Triad within 48 hours of crisis	Incident-specific; attribution; compliance impact; remediation	To JIG within 14 days; public summary

Panel Authority: Review panels have full access to: IAEA monitoring data (with IAEA DG approval), JMA operational records, Swiss escrow financial records, JIG meeting minutes, and personnel interviews. Panels do not have enforcement authority but their findings are considered binding interpretations for purposes of JIG decision-making.

Section 30: Failure Without Collapse End-State Framework

NEW in v5.1: Modular Survival Architecture Pushed Further

One of the strongest ideas in this document is modular survivability. This section pushes it further by defining exactly what survives when each track fails:

If This Track Fails...	What Survives (Automatic)	What Survives (JIG Decision)	What Collapses	Floor Guarantee
Nuclear talks fail	Ceasefire; Hormuz transit; humanitarian channel; asset tranches 1-2; IAEA standard monitoring	SWIFT Phase 0-1; proxy pause; regional dialogue	Further asset releases; bonus tranches; enrichment cap renewal; continuous monitoring; Fordow Phase D	Ceasefire + humanitarian + IAEA basic monitoring
Sanctions relief stalls	Ceasefire; Hormuz transit; IAEA monitoring; humanitarian channel; enrichment freeze	Proxy pause; JHTA provisional; SWIFT Phase 0	Further nuclear concessions; moratorium renewal; Fordow conversion beyond Phase A	Ceasefire + humanitarian + Hormuz + basic nuclear freeze
Maritime incidents resume	Ceasefire; nuclear freeze; IAEA monitoring; humanitarian channel; asset tranches 1-2	Proxy pause; diplomatic channels; JMA emergency protocols	Non-humanitarian transit; military coordination; asset releases pending review	Ceasefire + humanitarian + nuclear monitoring
Verification fails (IAEA expelled)	Ceasefire; Hormuz transit; humanitarian channel; asset tranches 1-2; diplomatic channels	Proxy pause; JMA; analogue monitoring	Further asset releases; bonus tranches; continuous monitoring; PRDD	Ceasefire + humanitarian + diplomatic channels
Israeli military strike	Humanitarian channel; IAEA monitoring (if safe); Triad mediation; diplomatic channels	Proxy pause (if Hezbollah not involved); ceasefire (if not Israel)	All non-humanitarian tracks; Crisis Pause Mode activates (30-90 days)	Humanitarian channel + Triad mediation
Political crisis (coup, revolution)	Humanitarian channel; IAEA monitoring (if safe); Hormuz transit (if safe)	Determined by new government within 30 days	All tracks pending new government confirmation	Humanitarian channel

Cyber attack on all verification	Ceasefire; humanitarian; physical inspection; diplomatic channels	IAEA	Analogue monitoring systems; JMA non-digital operations		Digital verification; automated compliance; remote monitoring	Ceasefire humanitarian physical inspection	+	+
Triad collapses (member withdraws)	Ceasefire; transit; monitoring; humanitarian; tranches 1-2	Hormuz IAEA asset	JIG assumes functions; emergency reconstitution within 30 days	Triad	Further releases; new resolution	asset PRDD; dispute monitoring	Ceasefire humanitarian Hormuz + basic monitoring	+

30.1 The Absolute Floor

Under no circumstances can the following collapse, regardless of what else fails:

- 1. Humanitarian channel:** Food, medicine, and UN supplies continue transiting Hormuz with zero fees and no inspection delays
- 2. Bilateral ceasefire:** Neither party resumes offensive operations against the other unless explicitly renounced with 6-month notice
- 3. IAEA basic monitoring:** At minimum, standard safeguards inspections continue at declared sites under existing NPT obligations
- 4. Diplomatic channels:** JIG and Triad communication lines remain open for crisis management and potential framework restoration

This floor guarantee is binding on both parties regardless of withdrawal or material breach by either side. Even in total framework collapse, the floor survives.

Section 31: Economic Stabilization Metrics

NEW in v5.1: Measurable Benchmarks for Economic Success

Metric	Baseline (May 2026)	30-Day Target	90-Day Target	180-Day Target	365-Day Target	Verifier
War-risk insurance premium	2.5% of cargo value	1.5%	0.75%	0.25%	0.15%	Lloyd's List; reinsurance market data
Hormuz commercial transits (14-day period)	~60 vessels	200+	350+	400+	450+	JMA Daily Transit Report; Lloyd's List
Iranian oil exports (million barrels/day)	0.5 mbpd	1.0 mbpd	1.5 mbpd	2.0 mbpd	2.5 mbpd	OPEC; energy market data; JIG
SWIFT reconnection	Zero Iranian banks	0 (Qatari bridge)	5 banks (Tier B/C)	12 banks (Tier A)	20+ banks (full)	SWIFT Iranian Central Bank HQ;
Iranian inflation rate (annual)	45%	40%	30%	20%	15%	IMF; World Bank; Iranian Central Bank
Iranian rial/USD exchange rate	550,000 IRR/USD	450,000	350,000	250,000	200,000	Central Bank of Iran; forex market
Asset return (\$ billion cumulative)	\$0	\$1B	\$15B	\$50B	\$100B	Swiss escrow reports; JIG verification
JHTA transit toll revenue (\$ million)	\$0	\$5M	\$50M	\$150M	\$400M	JMA financial reports
Foreign direct investment (\$ million)	~\$0	\$50M	\$200M	\$500M	\$1.5B	UNCTAD; Iranian Investment Organization
Employment in Fordow IMIRC	~0 (conversion)	50 (planning)	200 (Phase B)	500 (Phase C)	800 (operational)	IAEA; IMIRC management reports

Reporting Cadence: All metrics reported monthly to JIG; quarterly public summary; 180-day comprehensive assessment; annual independent audit.

Section 32: Technical Delay Without Breach

NEW in v5.1: Formal Carveouts for Logistical Delays

The current architecture risks accidental breach declarations over logistics delays. This section adds formal carveouts:

Delay Type		Maximum Tolerable Delay	Notification Requirement	Verification	Effect on Timeline	
Weather (maritime, transport)		7 days	Notify JIG within 12 hours; Triad confirms	JMA weather logs; meteorological data	Excluded from compliance timeframe	
Communications outage		48 hours	Notify via alternate channel within 2 hours of restoration	Telecom provider confirmation; Triad verification	Excluded from compliance timeframe	
Customs/border processing		7 days	Notify JIG within 24 hours; supporting documentation	Customs authority confirmation	Excluded from compliance timeframe	
Inspection equipment delivery		14 days	Notify JIG within 48 hours; shipping documentation	Shipping carrier confirmation; customs records	Excluded from compliance timeframe	
Satellite downtime		24 hours	Notify JIG immediately; technical report	Satellite operator confirmation; backup satellite data	Excluded from compliance timeframe; backup monitoring activates	
Banking processing lag		5 business days	Notify JIG within 24 hours; bank confirmation	Swift/CHIPS logs; bank confirmation	Excluded from compliance timeframe	
Personnel delays	visa	10 days	Notify JIG within 48 hours; visa application documentation	Immigration authority confirmation	Excluded from compliance timeframe	
Equipment calibration		3 days	Notify JIG within 12 hours; calibration schedule	Technical service report	Excluded from compliance timeframe	

32.1 Technical Delay Procedure

1. Affected party notifies JIG as soon as delay is anticipated (not after it occurs, if possible)

2. JIG issues Technical Delay Certificate within 24 hours, excluding the delay period from compliance timeframes
3. Triad confirms the Technical Delay Certificate within 72 hours
4. During the delay, all unaffected obligations continue
5. Upon resolution, compliance timeline resumes from the point of interruption
6. Maximum 3 Technical Delays per stage per party; additional delays require Triad review

Section 33: Implementation Roadmap

33.1 Pre-Signature Phase (T-5 Days to T-0)

Day	Action	Responsible
T-5	Both governments confirm Micro-Pilot agreement; designate senior officials	Heads of Government
T-4	Omani Foreign Ministry confirms Muscat facilities ready; JMA provisional charter drafted	Oman
T-3	Swiss financial channel confirms escrow architecture; IAEA confirms Oman custody facility readiness	Switzerland / IAEA
T-2	Pakistani guarantor confirms mediation team; Qatari facility confirms liquidity readiness	Pakistan / Qatar
T-2	Tel Aviv Channel activated; Israeli intelligence briefed on Accord framework	US / Israel
T-1	Both governments issue internal instructions to military commands for ceasefire compliance	Military Commands
T-1	Cyber Operations Stabilization Module activates; protected infrastructure categories communicated	JIG Cyber Cell
T-0	Micro-Pilot letters exchanged; 60% freeze begins; first IAEA inspectors deploy	Foreign Ministers

33.2 Critical Success Factors

- Speed in Micro-Pilot:** The first 30 days must produce visible, reversible but credible deliverables.
- Israeli Coordination:** The single highest-risk scenario is a coordinated Israeli military strike. The Tel Aviv Channel provides advance briefings and real-time data sharing.
- Verification Credibility:** The five-channel verification system must be fully operational by Day 7.
- Triad Reliability:** The Oman-Qatar-Switzerland triad must demonstrate operational readiness from Day 1.
- Cyber Stabilization:** Category I infrastructure protection must be active from T-1.
- Successor Framework Readiness:** By Day 90, the Crescent Compact v2.0 negotiation framework must be ready to open.
- Acronym Reduction:** All negotiators receive a pocket glossary. In public statements, full terms used on first reference.

Appendices

Appendix A: Visual Sequencing Matrix — 180-Day Gantt Overview

Track / Phase			Days 1-14	Days 15-30	Days 31-44	Days 45-60	Days 61-90	Days 91-120	Days 121-150	Days 151-180
NUCLEAR TRACK										
60% Freeze			CONTINUOUS FROM MICRO-PILOT							
IAEA Standard Monitoring			ACTIVE							
IAEA Enhanced Access					ACTIVE					
IAEA Continuous Monitoring							ACTIVE			
Moratorium Ratification					TARGET					
HEU Export					EXECUTE					
Fordow (Cessation)	Phase A						ACTIVE			
Fordow (Purge)	Phase B								ACTIVE	
MARITIME TRACK										
Ceasefire			CONTINUOUS FROM DAY 1							
Blockade Lift			D7 TARGET		SUSTAINED					
JMA Provisional			ACTIVE							
JHTA Permanent							ACTIVE			
Humanitarian Channel			CONTINUOUS							

ECONOMIC TRACK				
Swiss Escrow (Pilot)	\$250M			
Tranche 1 (25%)		RELEASE		
Tranche 2 (25%)			RELEASE	
Tranche 3 (20%)				TARGET
Tranche 4 (15%)				TARGET
SWIFT Phase 0 (Qatari Bridge)	ACTIVE			
SWIFT Phase 1 (Tier B/C)		ACTIVE		
SWIFT Phase 2 (Tier A)			ACTIVE	
Bonus Tranches			AVAILABLE	
GOVERNANCE TRACK				
JIG Operations	CONTINUOUS			
Triad Mediation	AVAILABLE			
90-Day Technical Review		REVIEW 1		REVIEW 2
180-Day Comprehensive Audit			AUDIT 1	
Successor Framework Opening				OPEN

Appendix B: 30-Day Window Negotiation Agenda

Period	Priority Issues	Target Outcomes
Days 15-18	1-year cap terms; annual renewal mechanism; violation consequences	Principled agreement on staggered cap architecture
Days 19-22	HEU export logistics; destination; transport timeline	Confirmed export plan with IAEA
Days 23-26	Underground facility protocols; Fordow JV timeline; Natanz parameters; Pickaxe Mountain lock	Facility protocols agreed and documented
Days 27-30	Phased inspections regime; IAEA scaling timeline; standard-to-continuous transition triggers	Inspection framework ratified
Days 31-36 (+7 ext. available)	Sanctions relief sequencing; asset return tranches; SWIFT reconnection; non-US channels	Economic package agreed

Days 37-40	Triad operational procedures; dispute resolution protocols; Crisis Pause mechanics	Governance framework agreed
Days 41-44	Final ratification; concurrent certification; Stage 2 closing	All elements verified and operative

Appendix C: Glossary of Key Terms (Reduced Acronym Edition)

Acronym Reduction Note: In all public statements, press releases, and communications with non-specialist audiences, full terms are used on first reference with the shortened form in parentheses. Acronyms are used only in internal operational documents and after the full term has been established. The most frequently used terms are limited to: "the Transit Authority" (not "JHTA"), "the Maritime Authority" (not "JMA"), "the Coordination Cell" (not "MCC"), "the Joint Implementation Group" (not "JIG"), "the Escrow Mechanism" (not "PRDD"), "the Medical Isotope Center" (not "IMIRC"), and "the Successor Framework" (not "RCSA").

Full Term			Short Form		Definition			
Joint Hormuz Transit Authority			Transit Authority		Permanent multilateral body governing Strait of Hormuz transit			
Joint Maritime Authority			Maritime Authority		Provisional Hormuz governance body preceding the Transit Authority			
Maritime Coordination Cell			Coordination Cell		Operational nerve center for Hormuz transit management			
Joint Implementation Group			Joint Group		Central coordination body in Geneva for all Accord implementation			
Petroleum Deposit	Revenue	Direct	Revenue Deposit		Mechanism for Iranian oil revenue; diluted from 72h to 30-day freeze window			
International Research Center	Medical	Isotope	Medical Center	Isotope	Converted Fordow facility producing cancer diagnostic materials			
Regional Stability Architecture		Comprehensive	Successor Framework		Comprehensive long-term regional security framework			
Highly Enriched Uranium			HEU		Uranium enriched to 60% U-235 in Iran's current stockpile			
Micro-Pilot Module			Micro-Pilot		30-day trust-building pilot with 60% enrichment freeze			
Blind De-escalation Protocol			Quiet Pauses		Mutual, unacknowledged parallel pauses creating breathing room			

Staggered Cap		Annual Cap	1-year renewable enrichment cap, extending annually based on performance
Triad		Guarantor Triad	Neutral Guarantor Coalition: Oman (political), Qatar (financial), Switzerland (banking)
Waltz Philosophy		Synchronized Steps	Synchronized reciprocal motion: neither party moves alone
Minimum Accord	Viable	Emergency Accord	Stripped-down 4-element emergency pathway if full framework rejected
Goldilocks Crisis		Optimal Crisis	A crisis that scares both sides but doesn't collapse diplomacy

Appendix D: All Modifications & Enhancements at a Glance

#	Modification		Type	Section	Primary Benefit
1	30-Day Module	Micro-Pilot	v5.0	Section 3	Builds trust through limited, reversible exchanges before full commitment
2	Blind Protocol	De-escalation	v5.0	Section 4	Creates breathing room without political cost of formal concessions
3	Staggered Renewable Cap	1-Year	v5.0	Sections 6, 11	Replaces politically explosive 12-year demand with manageable annual decisions
4	Diluted Deposit Snap Line	Revenue	v5.0	Section 15	Extends 72h freeze to 30 days with Triad mediation; eliminates accidental disruption
5	Neutral Triad	Guarantor	v5.0	Section 9	Oman-Qatar-Switzerland coalition provides legitimacy neither side can provide alone
6	Non-US Channels	Economic	v5.0	Section 10	Routes initial benefits through mechanisms not requiring Congressional approval
7	Phased Verification	IAEA	v5.0	Sections 6, 11	Starts with standard safeguards, scales to continuous monitoring based on performance
8	Fordow Scientific Venture	Joint	v5.0	Section 13	Rebrands oversight as international achievement; preserves Iranian scientist employment
9	Dual-Track Rebranding		v5.0	Section 14	Washington: "regional stability mechanism"; Tehran: "sovereignty-protecting de-escalation tool"
10	Goldilocks Protocol	Crisis	v5.0	Section 15	Pre-positions 14-day directives for instant deployment during future crisis off-ramp
11	No Precedent Clause		v5.1	Section 1.11	Protects both sides from domestic accusations of creating a slippery slope
12	Face-Saving Metrics		v5.1	Sections 1.12, 16	Quantifiable wins for domestic audiences on every Waltz pairing

13	7-Day Triad Extension	v5.1	Section 6.2	Prevents collapse from verified good-faith delays (IAEA logistics, etc.)
14	Gantt Visual Sequencing Matrix	v5.1	Appendix A	Full-page 180-day chart for quick negotiator reference
15	Cyber Operations Stabilization	v5.1	Sections 4.2, 21	Protected infrastructure categories, mutual restraints, incident notification
16	Proxy Force Stand-Down	v5.1	Section 4.3	Explicit mutual commitments on Hezbollah, Houthis, Iraqi militias, Syrian proxies
17	Israeli Tel Aviv Channel	v5.1	Section 17.7	Pre-briefings on Fordow/Pickaxe Mountain; IAEA data-sharing for quiet acquiescence
18	Force Majeure Provision	v5.1	Section 17.5	Temporary pauses without breach; Triad arbitration within 7 days
19	Tiered Asset Release Accelerants	v5.1	Section 10.1	Up to \$475M in bonus tranches for over-performance
20	Fordow JV Funding Model	v5.1	Section 13	\$230M neutral-state seed funding; WHO Center of Excellence designation
21	SWIFT Reconnection Pathway	v5.1	Section 10.2	4-phase reintegration with Qatari bridging; EU Council Decision protection
22	Dual-Track Messaging Toolkit	v5.1	Appendix E	Sample press releases/statements for each capital, pre-vetted for framing
23	Successor Framework Roadmap	v5.1	Section 7.2	Named modules: Crescent Compact v2.0, Gulf Security Dialogue, etc.
24	Executive Decision Brief	v5.1	Front matter	2-3 page compressed summary for senior officials
25	Visual Timeline Flow Chart	v5.1	Front matter	One-page flow chart showing all five phases
26	Minimum Viable Accord Fallback	v5.1	Sections 2.3, 8	Emergency 4-element pathway if full architecture rejected
27	Spoiler & Rogue Actor Management	v5.1	Section 19	Comprehensive framework for proxy attacks, false flags, rogue commanders
28	Attribution Uncertainty Protocols	v5.1	Section 20	5-level certainty scale; forensic review windows; temporary restraint mandates
29	Technical Delay Without Breach	v5.1	Section 32	Formal carveouts for weather, communications, customs, satellite downtime
30	Negotiator Reference Quick	v5.1	Appendix J	Condensed tables for timelines, triggers, hotlines, tranches
31	Legally vs Politically Binding	v5.1	Section 25	Explicit binding character for every provision

32	US Succession Continuity		v5.1	Section 26	Explicit survival through elections, administration changes, Congressional turnover
33	Domestic Synchronization	Legislative	v5.1	Section 27	Matrix for Congress, Majlis, GCC, EU, UNSC notification windows
34	Red Team Annex	Objections	v5.1	Appendix G	Anticipated objections from Israel, GCC hawks, US Congress, IRGC, with responses
35	Economic Metrics	Stabilization	v5.1	Section 31	10 measurable benchmarks with 30/90/180/365-day targets
36	Public Crisis	Communications	v5.1	Sections 13.1, 28	Protocols for leaks, contradictions, viral misinformation, inflammatory speeches
37	Cyber Stabilization Module		v5.1	Sections 4.2, 21	Protected infrastructure, banking restraints, maritime nav protection
38	Degraded Mode	Compliance	v5.1	Section 23	Intermediate state between full compliance and dispute
39	Enforcement Mitigation	Asymmetry	v5.1	Section 24	Direct acknowledgment and mitigation of concrete vs political commitment gap
40	Operational Chain Diagrams	Command-	v5.1	Section 11.2	Maritime command structure: who contacts whom, override authority, disagreement protocol
41	Independent Mechanism	Audit	v5.1	Section 29	90-day technical, 180-day comprehensive, annual independent evaluations
42	Failure Without End-States	Collapse	v5.1	Section 30	Absolute floor guarantee: humanitarian + ceasefire + basic monitoring survives everything

Appendix E: Dual-Track Messaging Toolkit

NEW in v5.1: Pre-Vetted Sample Communications

All samples below are pre-cleared for sovereignty/stability framing. Negotiators should use these as templates, adapting for specific circumstances.

E.1: Joint Announcement of Micro-Pilot Launch

Joint Statement by the Governments of the United States and the Islamic Republic of Iran

"The United States and Iran have agreed to a limited, reversible humanitarian stabilization measure to reduce tensions and create space for comprehensive negotiations. This measure involves no binding long-term commitments and creates no precedent. Both sides have taken parallel steps to reduce military and nuclear tensions. These steps will be verified by the International Atomic Energy Agency and neutral third parties. If successful, this measure may lead to broader negotiations on regional stability."

Note: This statement is identical for both capitals. The sovereignty/stability framing is built in.

E.2: US Domestic Announcement (Stage 1 Completion)

Statement by the President of the United States

"Today I can report that Operation Epic Fury has achieved its objectives. Iran's weapons-grade uranium stockpile has been transferred to international custody and verified by the IAEA. The Strait of Hormuz is open, with over 200 commercial transits in the first two weeks. Gas prices are already beginning to fall. We have secured a performance-based enrichment cap with annual renewal tied to verified compliance. And we did it without losing a single American life or closing a single military base. This is a regional stability mechanism, not a comprehensive peace treaty. It creates no precedent. And Congress will have a vote on every major tranche from this point forward."

E.3: Iranian Domestic Announcement (Stage 1 Completion)

Statement by the President of the Islamic Republic of Iran

"The war is over. The American naval blockade of our ports has been lifted. Our frozen sovereign property is returning. The Strait of Hormuz is now governed by an international authority on which Iran holds a permanent seat with co-chair authority — replacing decades of American unilateralism. We have chosen to redirect our nuclear program toward guaranteed civilian energy leadership and cancer medicine production for the benefit of all humanity. Our NPT rights remain fully intact. The arrangement is subject to our sovereign annual review. And we negotiated every detail as equals, not under bombardment. This creates no enduring obligation beyond what is expressly agreed."

E.4: Crisis Response Template (Following Spoiler Attack)

Coordinated Response to [Incident]

"The United States and Iran condemn in the strongest terms the [attack/incident] in [location]. This attack threatens the fragile stability we have built together and endangers innocent civilians. We are cooperating fully with the Joint Implementation Group and neutral guarantors to determine responsibility. Neither party will allow spoilers to derail the progress we have made. The humanitarian channel remains open. The ceasefire remains in effect. And we remain committed to the full implementation of our stabilization framework."

Note: Identical statement issued by both capitals within 4 hours of incident.

Appendix F: Domestic Legislative Synchronization Matrix

Legislative Body	Notification Trigger	Window	Required Action		Escalation if Blocked		
US Congress	Tranche 3 (\$20B+); SWIFT full reconnection; JHTA permanent charter	30 days	Notification opportunity for Joint Resolution Disapproval	+ of	President veto attempt; public campaign by beneficiaries	override	Triad mediation by

Iranian Majlis	Moratorium ratification; asset return authorization; JHTA membership	30 days	Ratification vote required for moratorium; notification for other elements	Supreme Security emergency public campaign; National Council authority; Triad backchannel
GCC Joint Council	JHTA provisional and permanent charters	14-30 days	Consultation required; formal objection by 2+ members triggers revised consultation	Bilateral GCC state negotiations; US security guarantees; economic incentives
EU Council	SWIFT reconnection endorsement; INSTEX activation	14-30 days	Political endorsement; Blocking Regulation if US extraterritorial sanctions threatened	European Court of Justice; WTO dispute; bilateral EU-Iran negotiations
UN Security Council	JHTA charter registration; quarterly compliance reports	N/A (reporting)	Reporting obligation only; no approval required	N/A

Appendix G: Red Team Objections & Framework Responses

NEW in v5.1: Anticipated Objections with Framework Responses

G.1: Israeli Objections

Objection	Framework Response
"Any Iranian enrichment is unacceptable"	"The 3.67% cap is below weapons-grade and verified by IAEA continuous monitoring. The Tel Aviv Channel provides real-time data. Any deviation triggers immediate notification."
"Fordow is too deep to verify"	"IAEA has full access including continuous cameras and environmental sampling. Israeli technical observer may accompany inspections. Pickaxe Mountain seismic monitoring detects any tunneling."
"The Accord doesn't address missiles"	"The Crescent Compact v2.0: Ballistics/Missiles module opens at Day 180. This is Phase 1. Missiles are Phase 2."
"US is giving away too much for too little"	"The US gets IAEA inside Fordow, weapons-grade stockpile removed, Hormuz open, and performance-based renewal. Iranian 'wins' are largely symbolic (sovereignty language, annual review)."

G.2: GCC Hawk Objections

Objection	Framework Response
"Iran gets a permanent seat on Hormuz governance"	"So does the US. Oman has tiebreaker authority. Neither Iran nor the US can unilaterally control the Strait. This is better than the status quo where Iran could close Hormuz at will."
"Iranian assets should not be returned"	"These are Iran's sovereign funds, frozen unilaterally. Their return is conditional on verified performance. The escrow architecture ensures no release without IAEA certification."
"This rewards Iranian aggression"	"The Accord follows a military campaign that proved neither side can achieve maximalist objectives. The alternative is continued war with 40% Hormuz transit reduction and \$120/bbl oil."

G.3: US Congressional Objections

Objection	Framework Response
"This is another JCPOA that will collapse"	"The modular architecture prevents total collapse. The PRDD is diluted. The Triad provides neutral oversight. And Congress has a vote on Tranche 3+, which the JCPOA never provided."

"Iran will cheat like they did before"	"Continuous IAEA monitoring, five verification channels, and 30-day dispute resolution make cheating far harder than under JCPOA. Any violation is detected and addressed before it becomes a strategic threat."
"We shouldn't lift sanctions without full nuclear dismantlement"	"The 1-year cap is a step toward dismantlement. If Iran maintains the cap, it automatically renews. Over 12 years, the effect is the same as a 12-year demand, but politically sustainable."

G.4: IRGC Hardliner Objections

Objection	Framework Response
"This surrenders Iran's nuclear achievements"	"Enrichment continues at 3.67%. The 60% stockpile was always a negotiating chip, not an operational arsenal. NPT rights are preserved. And the Fordow conversion is a scientific achievement."
"The US will renege on sanctions relief"	"Initial tranches flow through Swiss escrow, not US-controlled channels. The Triad holds veto over any freeze. And the annual renewal means Iran can review the arrangement every year."
"This compromises Iran's missile program"	"Missiles are explicitly deferred to the successor framework. This Accord does not address missiles. The issue remains open for future negotiation."
"The No Precedent Clause is meaningless"	"The clause is legally binding and enforceable through the Triad. Any attempt to cite this Accord as precedent triggers Triad arbitration."

G.5: European Skeptic Objections

Objection	Framework Response
"The verification is too weak"	"Five independent channels, continuous monitoring by Day 60, and 30-day dispute resolution. This is stronger than JCPOA verification."
"Human rights are not addressed"	"Human rights are outside the scope of this Accord. The EU can pursue human rights through bilateral channels. This Accord focuses on nuclear and regional stabilization."
"Economic benefits may not materialize"	"The escrow architecture ensures funds are available before Iran delivers. Bonus tranches incentivize speed. And the Qatari bridge ensures continuity even if SWIFT delays."

G.6: Proliferation Expert Objections

Objection	Framework Response
-----------	--------------------

"1 year is too short; breakout time remains concerning"	"The annual renewal creates a ratchet effect. Each year of compliance makes non-renewal harder. The IAEA monitoring detects any breakout attempt. And the stockpile transfer removes the immediate threat."
"Fordow could be reconverted"	"Reconversion requires unanimous ISAB consent + IAEA certification + fuel supply assurance from 2+ NSG states. This is a higher bar than JCPOA."
"The 3.67% cap allows too many centrifuges"	"The cap limits enrichment level, not centrifuge number. But the Additional Protocol (Phase 4) provides full access to centrifuge manufacturing. The phased approach builds trust before demanding full access."

Appendix H: Economic Stabilization Metrics Dashboard

(For detailed targets and verifiers, see Section 31. This appendix provides a quick-reference summary.)

Indicator	Current	30d	90d	180d	365d
Insurance Premium	2.5%	1.5%	0.75%	0.25%	0.15%
Hormuz Transits/14d	~60	200+	350+	400+	450+
Oil Exports (mbpd)	0.5	1.0	1.5	2.0	2.5
SWIFT Banks	0	0	5	12	20+
Inflation (annual)	45%	40%	30%	20%	15%
Rial/USD	550k	450k	350k	250k	200k
Assets Returned (\$B)	0	1	15	50	100
JHTA Revenue (\$M)	0	5	50	150	400
FDI (\$M)	~0	50	200	500	1,500
Fordow Jobs	~0	50	200	500	800

Appendix I: Technical Delay Without Breach -- Quick Reference

Delay Type	Max Tolerance	Notify Within	Excluded from Timeline?
Weather	7 days	12 hours	Yes
Communications outage	48 hours	2 hours of restoration	Yes
Customs/border	7 days	24 hours	Yes
Equipment delivery	14 days	48 hours	Yes

Satellite downtime	24 hours	Immediate	Yes + backup activates
Banking processing	5 business days	24 hours	Yes
Visa delays	10 days	48 hours	Yes
Equipment calibration	3 days	12 hours	Yes

Maximum 3 Technical Delays per stage per party. Additional delays require Triad review.

Appendix J: Negotiator Quick Reference

NEW in v5.1: Condensed Operational Reference for Active Negotiators

J.1: Hotline Escalation Tiers

Tier	Response	Participants	Trigger
Tier 1 (Operational)	5 minutes	IRGC-Navy duty officer; 5th Fleet duty officer; Omani monitor	Vessel in exclusion zone; weapons deployment; AIS anomaly
Tier 2 (Senior Military)	15 minutes	IRGC Senior Commander; NAVCENT Commander; JMA MCC Chair	Tier-1 failure; weapons deployment above stand-off zone
Tier 3 (Ministerial)	30 minutes	Iranian FM/SNSC Secretary; US Secretary of State; Omani FM chairs	Tier-2 failure; active kinetic exchange; mine detonation
Cyber Hotline	30 minutes (Critical); 6 hours (Serious)	JIG Cyber Cell; both parties' cyber commands; Triad technical observer	Cyber attack on protected infrastructure
Direct Executive Link	6 hours	Heads of government via Pakistani PM relay	Imminent existential threat to framework

J.2: Tranche Trigger Conditions

Tranche	Amount	Trigger	Verifier
Pilot (Day 1)	\$250M	Signature / MVA activation	IAEA confirms 60% freeze within 72h
Tranche 1	~25% minus pilot	Stage 1 closed; IAEA custody verified	JIG + Triad certification
Tranche 2	~25%	Moratorium ratified; HEU export confirmed	JIG closing certification
Tranche 3	~20%	JHTA operational; 180-day review passed	JIG + Triad + Congressional window
Tranche 4	~15%	180-day compliance; nuclear exchange maintained	JIG + Triad
Reserve	~10%	12 months sustained compliance	JIG + Triad + IAEA DG

J.3: Verification Authorities

Channel	Authority	Emergency Contact
IAEA	Director General	IAEA Emergency Operations Centre, Vienna
Pakistani Guarantor	Prime Minister's Office	Islamabad; 24/7 duty officer
Omani Technical	Foreign Ministry	Muscat; Maritime Coordination Cell, Khasab
Swiss Financial	Federal Department of Foreign Affairs	Bern; JIG Secretariat, Geneva
National Technical Means	US DNI / Iranian SNSC	Classified channels

J.4: Rollback Mechanisms

Action	Authority Required	Timeline	Humanitarian Protected?
PRDD Freeze	IAEA DG + Triad consensus	30-day review	Yes
Asset Hold	Triad consensus	72-hour implementation	Yes
Stabilization Hold	JIG + affected party	48-hour implementation	Yes
Crisis Pause Mode	Either party	Immediate	Yes
Technical Delay	JIG certification	Immediate	Yes
Force Majeure Pause	Affected party + Triad confirmation	7-day Triad review	Yes
Withdrawal	6-month written notice	180-day orderly wind-down	Yes

J.5: Key Numbers Every Negotiator Must Know

Item	Value
Micro-Pilot duration	30 days (extendable to 45 by mutual consent; +7 by Triad)
Stage 1 duration	14 days
Stage 2 duration	30 days (+7 extension available)

Stage 3 duration	Days 45-180 (135 days)
PRDD freeze window	30 days (was 72 hours)
Cooling-off period	24 hours after any incident
Hotline Tier 1 response	5 minutes
Stabilization Hold max	90 days per stage (2 per stage max)
Crisis Pause Mode max	90 days (extendable by mutual agreement)
Technical Delay max per stage	3 per party (additional require Triad)
Force Majeure max	90 days (Triad arbitration within 7 days)
Bonus tranche pool	Up to \$475M
Total asset return (Day 180)	85% of frozen assets
SWIFT full reintegration	Day 120+ (Phase 3)
Successor framework opening	Day 180
Withdrawal notice period	6 months
IAEA freeze verification	Within 72 hours of Micro-Pilot start
Blockade lift synchronization	Within 60-second window on Day 7
Attribution Level required for military response	Level 5 (Confirmed) + self-defense

Document Certification

This document, the **Stability First Enhanced Accord v5.1**, reflects the diplomatic trajectory of May 2026 and incorporates **42 targeted enhancements** building on the solid foundation of v5.0. It addresses every major blocker that prevented agreement in the JCPOA, the Qatar talks, the Oman channel, and the April 2026 Islamabad round.

The Micro-Pilot builds trust. The Blind De-escalation creates space. The staggered cap protects sovereignty. The diluted Revenue Deposit prevents accidents. The Guarantor Triad provides legitimacy. The non-US channels bypass politics. The phased IAEA reduces intrusiveness. The Fordow JV reframes conversion. The rebranding enables domestic defense. The Goldilocks Protocol ensures readiness. The No Precedent Clause protects flexibility. The Face-Saving Metrics enable victory claims. The Force Majeure provision handles disruptions. The Tel Aviv Channel secures Israeli acquiescence. The Cyber Module addresses digital threats. The Spoiler Management framework handles rogue actors. The Attribution Uncertainty protocols prevent false escalation. The Degraded Compliance mode fills the gap between compliance and dispute. The Failure Without Collapse architecture guarantees the floor survives everything.

Every provision is paired. No party moves alone. The waltz continues as long as both partners step together.

"Nuclear Stabilized. Hormuz Open. Sovereignty Preserved. No One Moves Alone."

Stability First Enhanced Accord v5.1 | May 2026

Drawing from: SFEA v1.0 | 14-Day Directive v2.5 | Maritime Annex v1.2 | Nuclear Annex v1.2 | RCSA v3.6
42 Enhancements | 10 Core Principles | 5 Phases | Absolute Floor Guarantee
