Preamble: Purview and Guiding Principles

Purpose. To establish an adaptive compliance framework that preserves the structural integrity of the overall Accord during technical or localized disputes. Unlike the linear dependencies of Annex S, this Annex operates on three core principles: **Sectoral Modularity**, **Proportional Rollback**, and **Verified Remediation ("Earnback")**.

Three Guiding Principles.

*1. **Sectoral Modularity.** All operational commitments are organized into distinct, independent Compliance Modules. A failure within any single Module shall not automatically impair, suspend, or invalidate any unrelated Module. The compiler continues executing all loaded modules.*

*2. **Proportional Rollback ("Stepback").** If either Party breaches, the Framework does not collapse. It pauses in graduated tiers: discretionary measures halt first, core constraints survive longest, and humanitarian protections remain in force regardless. No snapback. No automatic termination.*

*3. **Verified Remediation ("Earnback").** Any Participant penalized under the Stepback Protocol retains an institutional, non-negotiable right to restore frozen benefits by fulfilling specific, verifiable technical benchmarks. Penalties are reversible upon demonstrated compliance.*

Background. Traditional sanctions architecture relies on "snapback" — the instantaneous, cascading reimposition of all sanctions upon any material breach. This model creates perverse incentives: it punishes technical errors with strategic collapse, discourages transparency about compliance problems, and provides no pathway for rapid restoration once a dispute is resolved. The Stepback/Earnback model replaces this paradigm with a resilient, modular architecture that survives disputes without rewarding violations.

***Modularity Clause.** This Annex is self-contained and may be incorporated into any existing or future agreement between the Parties by a single sentence of adoption. It does not amend or supersede conflicting provisions of any parent framework unless the Parties explicitly so agree. In the event of inconsistency, this Annex governs with respect to the graduated response to compliance deviations and the restoration of benefits upon verified remediation.*

Article I: Structural Modularity and Sectoral Firewalls

I.1 Separation of Compliance Sectors

For the purposes of this Annex, all operational commitments are divided into three distinct, independent Compliance Modules:

Table T-1: Compliance Modules — Sectoral Architecture

Module	Scope	Key Commitments	Stepback Protections
Alpha	Nuclear & Telemetry Verification	Cryptographic sensors, SHA-3 logging, site access, continuous monitoring, HEU custody verification, enrichment freeze verification	Humanitarian escrow shielded; baseline IAEA access preserved; only discretionary Political Discretion Fund subject to freeze at Tier 2
Beta	Maritime & Transit Infrastructure	Freedom of navigation, transit contributions, de-escalation corridors, Hormuz transit permits, naval stand-off distances, IRGC-Navy hotline	Humanitarian cargo exemption non-revocable; JHTA advisory functions preserved; only discretionary blockade adjustments subject to rollback at Tier 3
Gamma	Economic & Financial Escrows	Discretionary political funds, humanitarian banking channels, asset management, SWIFT reconnection, sanctions waivers, escrow releases	Humanitarian tranche (\$250M medicine/food) protected by Humanitarian Firewall; OFAC general licenses survive all tiers; only structural relief blocks subject to pause at Tier 2+

I.2 Firewall Principle

A Technical Anomaly or Material Deviation occurring within any single Module shall be structurally firewalled. It shall not automatically impair, suspend, or invalidate the operational status of any other unrelated Module.

Firewall operational rules:

- A Tier 2 deviation in Module Alpha (e.g., a sensor integrity issue) freezes only Module Alpha discretionary benefits. Module Beta maritime transit and Module Gamma

humanitarian banking continue unaffected.

- A Tier 3 breach in Module Beta (e.g., a naval stand-off violation) triggers full Module Beta rollback but does not automatically affect Module Alpha nuclear verification or Module Gamma escrow operations unless the JIG certifies cross-module contamination.
- Cross-module contamination requires a separate JIG determination by consensus-minus-one vote, with written justification published to the Swiss Dashboard.
- The Humanitarian Firewall (Article II.4) survives all tiers across all modules. Medicine, food, and medical equipment channels remain operative regardless of compliance status.

Table T-2: Firewall Matrix — Cross-Module Impact

Deviation Location	Module Alpha Impact	Module Beta Impact	Module Gamma Impact
Tier 1 in Alpha	Mandatory consultation	None	None
Tier 2 in Alpha	30-Day Block pause; Political Discretion Fund freeze	None (unless JIG certifies cross-contamination)	Structural relief pause for Alpha-linked tranches only
Tier 3 in Beta	None (unless JIG certifies cross-contamination)	Full escrow freeze; naval rollback; Guarantor Matrix referral	None (unless JIG certifies cross-contamination)
Tier 2 in Gamma	None (unless JIG certifies cross-contamination)	None (unless JIG certifies cross-contamination)	30-Day Block pause; discretionary fund freeze

Article II: The Stepback Protocol

II.1 Detection and Anomaly Logging

Upon the transmission of a verified data anomaly or compliance variance via the technical monitoring network, the Joint Implementation Group (JIG) shall log the event on the Swiss Dashboard within 2 hours of detection.

Required logging elements:

- Module identifier (Alpha, Beta, or Gamma)
- Anomaly classification level (Level 1 through Level 4, per Annex O)
- Sensor or verification source generating the flag
- Timestamp and geolocation (if applicable)
- Preliminary impact assessment (single-module or cross-module)

II.2 The Human-in-the-Loop Review Window

Prior to the invocation of any automated penalty, a mandatory 24-hour Human-in-the-Loop review window is triggered. The JIG must review the machine-generated telemetry flag to rule out sensor spoofing, maintenance errors, or third-party interference before a Stepback is legally active.

Human-in-the-Loop procedures:

- The JIG technical staff shall assign a human analyst within 4 hours of Dashboard logging
- The analyst shall review: sensor calibration status; maintenance schedules; correlation with independent verification sources (satellite, environmental sampling, physical inspection); and pattern analysis for spoofing indicators
- The analyst may: (i) confirm the anomaly as valid; (ii) flag for further investigation (7-day technical review); or (iii) dismiss as false positive with written explanation
- No automated penalty, stepback, or escalatory action may be based solely on an AI-generated flag without human confirmation
- If the false positive rate exceeds 15% in any quarter, the AI system shall be recalibrated by the Technical Working Group

Emergency Exception: In the event of a confirmed Tier 3 Deliberate Hostile Violation involving fissile material diversion, the 24-hour Human-in-the-Loop requirement is waived. The AI flag triggers immediate JIG emergency consultation within 4 hours. This is the only exception.

II.3 Tiered Stepback Execution

If the deviation is confirmed through Human-in-the-Loop review, the agreement executes a graduated, proportional rollback rather than a systemic termination.

Tier 1 — Technical Variance (Green-Amber)

Trigger: Confirmed Level 2 anomaly; single-module technical deviation; no evidence of bad faith.

Response: Immediate mandatory consultation window opens (72 hours). Core benefits remain unimpacted. The JIG technical team conducts enhanced review. No financial, military, or nuclear penalties attach.

Examples: Sensor calibration drift; scheduled maintenance delay without notice; single anomalous reading without pattern; administrative reporting delay under 12 hours.

Tier 2 — Material Disruption (Amber-Red)

Trigger: Confirmed Level 3 anomaly; pattern of anomalous readings; unscheduled downtime over 4 hours; confirmed procedural violation; or JIG determination of bad-faith procedural delay.

Response:

- The current 30-Day Stabilization Block is paused
- Discretionary Political Funds designated under Module Gamma are frozen
- Baseline security commitments remain active
- Humanitarian protections (medicine, food, medical equipment) remain fully operative
- OFAC general licenses survive

- JIG convenes emergency session within 48 hours to assess remediation timeline

Examples: Continuous monitoring offline 6+ hours without explanation; failure to submit required inventory data within 72 hours; pattern of seal tamper alerts (3+ in 30 days); HEU cylinder movement without IAEA notification.

Tier 3 — Hostile Breach (Red)

Trigger: Confirmed Level 4 anomaly; evidence of fissile material diversion; deliberate sensor tampering or falsification; kinetic military violation within the buffer zone; confirmed espionage using Framework access; or confirmed fissile material diversion (MUF exceeding significant quantity).

Response:

- Total escrow freeze across all affected Modules
- Rollback of naval stand-off postures to pre-Framework distances
- Matter referred to the Guarantor Matrix for consensus determination
- Survival Core Architecture (hotline, humanitarian corridor, diplomatic channel) remains operative regardless
- Executive Consultation Window opens within 12 hours
- No automatic military escalation — compliance penalties are explicitly decoupled from use-of-force authorization

Examples: Fissile material diversion exceeding significant quantity; deliberate sensor network compromise; kinetic engagement within the 3-nm exclusion zone; use of Framework verification access for non-Framework intelligence collection.

Table T-3: Tiered Stepback Summary Matrix

Element	Tier 1 (Technical)	Tier 2 (Material)	Tier 3 (Hostile)
Trigger	Level 2 anomaly	Level 3 anomaly; pattern violation	Level 4; diversion; deliberate tampering
Human-in-the-Loop	24-hour review	24-hour review	4-hour emergency (waived if diversion confirmed)
30-Day Block	Continues	Paused	Frozen
Political Discretion Fund	Unaffected	Frozen	Frozen

Humanitarian Firewall	Protected	Protected	Protected
OFAC Licenses	Survive	Survive	Survive
Hotline / Diplomatic Channel	Active	Active	Active (Survival Core)
Naval Stand-Off	Maintained	Maintained	Rolled back to pre-Framework
Escrow	Continues	Module-specific pause	Total freeze
Guarantor Matrix	Not involved	Notified	Mandatory referral

II.4 Humanitarian Firewall

The following elements are designated as the Humanitarian Firewall and shall survive all Stepback tiers:

- (a) The \$250 million humanitarian tranche (medicine, food, medical equipment) released via Swiss escrow on Day 1;*
- (b) OFAC general licenses for humanitarian trade, renewed automatically every 90 days;*
- (c) The IRGC-Navy direct hotline, tested daily at 06:00 UTC;*
- (d) The political consultation channel through Oman;*
- (e) JHTA humanitarian cargo fast-track permits (zero fee, 24-hour processing);*
- (f) The Survival Core Escrow Fund (\$50 million), held separately from all other escrow sub-accounts.*

No Stepback action — Tier 1, Tier 2, or Tier 3 — may impair, suspend, or delay any Humanitarian Firewall element. This provision is non-waivable and shall be cited by both Parties in all domestic, international, and diplomatic fora.

Article III: The Earnback Mechanism

III.1 Right to Restoration

Any Participant penalized under the Stepback Protocol retains an institutional, non-negotiable right to restore the frozen benefits by fulfilling specific, verifiable technical benchmarks. Stepback is not punishment. It is a pause. Earnback is not forgiveness. It is verified performance.

Earnback principles:

- Earnback is automatic upon verified satisfaction of remediation criteria. No political negotiation, JIG vote, or Party consent is required once benchmarks are met.
- Earnback restoration shall occur within 24 hours of JIG certification that benchmarks are satisfied.
- Earnback does not erase the record of the underlying deviation. The Dashboard shall maintain a complete audit trail of all Stepback and Earnback events.
- Repeated deviations (three or more Tier 2 events within any 180-day period) trigger accelerated review but do not extinguish the right to Earnback.

III.2 Earnback Verification Pathways

Frozen funds, access privileges, or reciprocal political gestures shall be automatically unfrozen and restored upon satisfaction of the following criteria:

Table T-4: Earnback Pathways by Tier

Original Tier	Earnback Benchmark	Verification Method	Restoration Timeline
Tier 1 (Technical Variance)	Verified technical reset or manual inspector confirmation that the anomaly is resolved	IAEA inspector on-site confirmation; sensor recalibration log; JIG technical staff sign-off	Instantaneous upon inspector confirmation. No JIG vote required.

Tier 2 (Material Disruption)	Complete cessation of the non-compliant activity followed by 14 consecutive days of un-spoofed, clean telemetry data delivered to the JIG	SHA-3 cryptographic chain verification; AI audit layer confirms no anomalous patterns; dual-key IAEA-Iranian encrypted batch data clean for 14 days	24 hours after JIG certification of 14-day clean period. Automatic.
Tier 3 (Hostile Breach)	Immediate consolidation of disputed materials or assets under exclusive dual-lock custody, subject to a consensus vote by the Guarantor Matrix	IAEA dual-lock custody reactivated; disputed material under exclusive IAEA physical control; Guarantor Matrix consensus-minus-one vote certifies satisfactory resolution	72 hours after Guarantor Matrix certification. Escrow unfrozen proportionally.

III.3 Over-Compliance Credit

If a Participant completes a milestone ahead of schedule and maintains verified compliance during the accelerated period, the corresponding economic tranche shall be released proportionally earlier. Over-compliance credits may be banked and applied to future tranche conditions, effectively allowing a Participant to "earn ahead" rather than waiting for rigid deadlines.

Credit calculation:

- Temporal credit: (days ahead of schedule / days in milestone window) × tranche value
- Scope credit: If a Participant exceeds a milestone requirement by 20% or more, a scope-based credit of up to 10% of the associated tranche value may be certified by the JIG
- Banked credits may be applied to any future tranche at the Participant's election, or redeemed for accelerated release of the current tranche
- Over-compliance credit does not waive any verification requirement — all IAEA and JIG certification procedures remain mandatory

III.4 Political Discretion Fund Exemption

The Political Discretion Fund (\$50 million) is exempt from all Stepback penalties. No Tier 2 or Tier 3 penalty may reduce, freeze, or delay disbursement from the Political Discretion Fund. Disbursement requires unanimous agreement of both Parties' heads of government (or pre-designated representatives at Deputy Secretary/Deputy Minister level or above) and the Swiss facilitator. This Fund exists for

the gray zone — rewarding partial progress, building goodwill, and creating positive incentives that the automatic compliance architecture cannot provide.

Article IV: Domestic Framing Savings Clause

IV.1 Autonomy of Interpretation

Nothing in this Annex shall restrict either Participant from characterizing a Stepback or Earnback action to domestic legislative bodies or public audiences according to their respective constitutional and political requirements.

Permitted framing:

- The Executive Branch of Participant A (United States) may frame a Stepback as an unyielding, automatic enforcement penalty — "sanctions snapped back because Iran cheated."
- The Executive Branch of Participant B (Islamic Republic of Iran) may frame the same Stepback as a temporary, sovereignty-preserving technical adjustment that maintains long-term negotiating leverage — "a procedural pause, not a penalty."
- Neither frame invalidates the other. Both are accurate within their respective domestic contexts.

IV.2 Prohibited Required Terminology

Neither Party shall require the other to use terms including but not limited to: "concession," "recognition," "normalization," "capitulation," "surrender," "defeat," "victory," "snapback," "rollback," "punishment," or "reward." Each Party describes all Stepback and Earnback actions using terminology consistent with its domestic political requirements.

IV.3 Narrative Dispute Resolution

If a Party believes that the other Party's domestic framing has crossed from protected interpretation into material misrepresentation that undermines public support for the Framework, creates confusion about what the Framework actually requires, or deliberately contradicts mutually agreed technical facts, the complaining Party may request a Narrative Dispute Resolution session.

The session shall be: facilitated by the Swiss mediator; include senior communications advisors from both Parties (not lawyers or negotiators); convened within 14 days of the

request; held in private; and limited to 4 hours. The Swiss mediator may issue a non-binding finding. No penalties attach to framing disputes. This is a political process, not a legal one.

Article V: 30-Day Stabilization Block Schedule

The following tables establish the default reciprocal pairings for the 180-day stabilization period, organized in 30-Day Stabilization Blocks. Each Block pairs specific nuclear/maritime milestones with corresponding economic relief measures. The Stepback Protocol (Article II) and Earnback Mechanism (Article III) apply at every stage.

Cross-reference: Adjustments are governed by the Adjustment Mechanism in Annex S, Article 5. The default schedule remains in force unless and until the Parties mutually agree to an alternative. In the event of a Tier 2 or Tier 3 Stepback, the affected Block is paused until Earnback benchmarks are satisfied, at which point the Block resumes from its paused state.

Block 1 (Days 1-30): Foundation — Mutual Escrow Deposit

Table T-5: Block 1 Reciprocal Pairings — Foundation

Day	Participant A (US) Commitment	Participant B (Iran) Commitment
1	Deposit first 30-Day Stabilization Block (\$1B) into Omani escrow: \$250M humanitarian tranche + \$250M partial structural relief	Place entire HEU stockpile under IAEA digital dual-lock (Pathway A default); declare freeze on HEU movement and enrichment
3	Issue OFAC general license for humanitarian trade (medicine, food, medical equipment, aviation safety parts) for 90 days	Grant IAEA immediate access to all declared sites; begin physical inventory under Annex O
7	Transition 5th Fleet to stand-off posture (no patrols within 5 nm of Hormuz transit corridor) — triggered upon IAEA confirmation that HEU consolidation has begun	IRGC forces withdraw to agreed stand-off distances (3 nm expanding to 5 nm by Day 14); activate IRGC-Navy hotline (daily 06:00 UTC test)
14	Freeze all new nuclear-related sanctions designations for Framework duration; existing non-nuclear sanctions remain enforceable	Complete HEU consolidation and inventory; dual-lock custody initiated and verified at Esfahan or designated facility
30	Block 1 Release: \$1B escrow released to Iran upon joint IAEA-JIG certification that both Parties met Block obligations	Block 1 Verification: IAEA confirms HEU under dual-lock custody; enrichment freeze verified by OLEM; mothball status declared for non-core facilities

Block 2 (Days 31-60): Consolidation — Physical Verification

Table T-6: Block 2 Reciprocal Pairings — Consolidation

Day	Participant A (US) Commitment	Participant B (Iran) Commitment
31-45	Release \$250M in two equal increments (\$125M each on Days 45 and 60) conditioned on continued IAEA verification of compliance	IAEA confirms physical verification of 25% of HEU cylinders as intact and accounted for; continuous monitoring installed at Natanz
45	Day 45 Circuit Breaker: If no agreement on final disposition, Pathway A (in-Iran downblending) activates as default; no financial penalties attach	Complete joint damage assessment per Annex O; provide IAEA with complete inventory of HEU cylinder locations and damage data per Annex P
60	Release 25% of remaining frozen assets; authorize civilian aircraft parts and agricultural goods trade	IAEA confirms physical verification of 50% of HEU cylinders; installation of continuous monitoring at Fordow complete

Block 3 (Days 61-90): Verification — Rotor Removal and Petrochemical

Table T-7: Block 3 Reciprocal Pairings — Verification

Day	Participant A (US) Commitment	Participant B (Iran) Commitment
61-75	Issue sanctions waiver for petrochemical exports to pre-approved customers (China, India, Turkey, Japan)	Rotor removal at mothballed facilities: Iranian technicians remove rotors under IAEA supervision; sealed with serial numbers in tamper-evident containers
75	In-Iran default activates if no third-country destination agreed; all sanctions relief continues uninterrupted	Commit in writing to Pathway A as default or select alternative pathway from twenty-three-option menu
90	Release 20% of remaining frozen assets; authorize metals and minerals trade	60-day compliance certification: IAEA confirms 90 consecutive days of verified compliance (rolling window); rotor removal verified

Block 4 (Days 91-120): Normalization — JHTA and Dual-Blockade

Table T-8: Block 4 Reciprocal Pairings — Normalization

Day	Participant A (US) Commitment	Participant B (Iran) Commitment
-----	-------------------------------	---------------------------------

91-105	Release 15% of remaining frozen assets; authorize automotive parts and textiles trade; Phase 1 SWIFT reconnection (pre-approved clearing hubs)	Permanent JHTA operational: dual-branded transit permits active; PGSA coordination protocols functioning; 180-day compliance review commenced
105	If pathway selection deadlock, JIG facilitates negotiation without automatic economic or military consequences	If no pathway selected by Day 105, dispute referred to JIG for facilitated negotiation; in-Iran downblending continues as operative default
120	Release 10% of remaining frozen assets; 180-day compliance review complete	IAEA confirms 120-day compliance certification; environmental sampling clean; no diversion of fissile material detected

Block 5 (Days 121-150): Integration — SWIFT and Advanced Verification

Table T-9: Block 5 Reciprocal Pairings — Integration

Day	Participant A (US) Commitment	Participant B (Iran) Commitment
121-135	Full SWIFT reconnection authorization (Phase 2); Targeted Bank Isolation through pre-approved clearing hubs	Permit IAEA complementary access inspections under Additional Protocol authority; air-gapped batch telemetry delivered to Swiss hub every 24 hours
135	US Dollar-for-Dollar Matching Facility activated: DFC \$10B + Lloyd's \$5B + Omani Fund \$5B = \$20B reinsurance backstop	Downblending of HEU stockpile commenced under IAEA supervision (if Pathway A selected); or transfer to Oman initiated (if Pathway B certified)
150	Release 10% of remaining frozen assets; Joint Disposition Fund drawdown begins (\$1B facility, progress-based)	IAEA confirms downblending of 25% of HEU stockpile to medical-grade LEU or lower; or confirms transfer chain integrity for Pathway B

Block 6 (Days 151-180): Graduation — Performance-Based Expansion

Table T-10: Block 6 Reciprocal Pairings — Graduation

Day	Participant A (US) Commitment	Participant B (Iran) Commitment
151-165	Full sanctions relief for all nuclear-related sanctions upon JIG certification of 90-day performance benchmarks; non-nuclear sanctions reviewed separately	Complete 90 consecutive days of IAEA-verified compliance (no Tier 3 violations, no more than one Tier 2 violation lasting <7 days during period)

165	Political Discretion Fund (\$50M) available for goodwill projects, partial compliance rewards, and confidence-building measures	Written affirmation of permanent non-proliferation commitment (Nuclear Dignity Doctrine); pathway selection finalized or in-Iran default confirmed
180	Release remainder of frozen assets (up to 100% cumulative); Phase II permanent architecture negotiations begin	IAEA issues full 180-day compliance certification; Phase I benchmarks complete; Technical Working Group convenes for Phase II pathway execution

V.5 Block Summary with Stepback Triggers and Earnback Pairings

Table T-11: Complete Block Summary — Stepback and Earnback Integration

Block	Days	US Release	Iran Milestone	Stepback Trigger	Earnback Path
Foundation	1-30	\$1B escrow deposit	HEU dual-lock custody	Failure to deposit escrow (US) or freeze HEU (Iran) = Tier 2	Deposit/freeze within 7 days = Tier 2 Earnback (14-day clean period)
Consolidation	31-60	\$250M + 25% assets	50% HEU verified	Verification delay >7 days beyond schedule = Tier 1; bad-faith obstruction = Tier 2	Technical delay = no breach; obstruction ceases + 14-day clean = Earnback
Verification	61-90	20% + petrochemical waiver	Rotor removal; 60-day cert	Rotor removal delay = Tier 1; failure to permit IAEA access = Tier 2	Access restored + 14-day clean telemetry = Earnback
Normalization	91-120	15% + SWIFT Phase 1	JHTA operational; 120-day cert	JHTA non-cooperation = Tier 1; Hormuz closure = Tier 2	JHTA cooperation restored + 14-day clean = Earnback
Integration	121-150	10% + SWIFT Phase 2	AP access; 25% downblended	Denial of AP access = Tier 2; telemetry falsification = Tier 3	Access restored / falsification corrected + dual-lock = Tier 2-3 Earnback
Graduation	151-180	Remainder + full nuclear relief	90-day clean compliance; 180-day cert	Tier 3 violation during window = full escrow freeze; rolling clock reduction	Violation ceases + 14-day clean = clock resumes (not reset); Guarantor Matrix for Tier 3

De Minimis Buffer: In calculating compliance for Earnback purposes, the following shall not count as violations and shall not reset the compliance clock: single-day OLEM data transmission interruption under 2 hours, resolved within 24 hours; administrative reporting delay under 12 hours; seal tamper alert subsequently determined to be equipment malfunction; and scheduled maintenance with 48 hours' advance notice. Neither Party may invoke a de minimis error as grounds for Stepback.

Rolling Compliance Window: Compliance is measured on a rolling 90-day window, not a fixed period with resets. A Tier 2 violation reduces the compliance percentage by 10 days for each day the violation persists, capped at a 30-day reduction. The clock does not reset to zero. Full compliance is restored when the rolling 90-day window contains no uncured Tier 2 violations lasting more than 7 days, and no Tier 3 violations. This structure makes gaming mathematically difficult.

Article VI: Incorporation by Reference

This Annex may be incorporated into any existing or future agreement between the Parties by the following sentence:

"The Parties adopt Annex T (Adaptive Stabilization and Compliance Resilience Matrix) as an operative provision of this Agreement. In the event of any inconsistency, Annex T shall govern with respect to the graduated response to compliance deviations, the modular isolation of compliance sectors, and the restoration of benefits upon verified remediation."

No further amendment of the parent framework is required. This Annex enters into force upon the later of:

- Signature by both Parties; or
- The effective date of the parent framework into which it is incorporated.

Relationship to Annex S: If both Annex S and Annex T are incorporated into the same parent framework, Annex T shall govern with respect to all compliance deviation responses, Stepback procedures, and Earnback restorations. Annex S shall govern with respect to the baseline sequencing schedule, which remains operative subject to the Stepback and Earnback overlay provided by Annex T.

Article VII: Provisional Application

The Parties may agree to apply this Annex provisionally for a period of 90 days, pending formal ratification or incorporation into a parent framework.

- Provisional application shall be effected by an exchange of diplomatic notes.
- During provisional application, all provisions of this Annex shall be operative and binding, including the full Stepback Protocol and Earnback Mechanism.
- Either Party may terminate provisional application with 14 days' written notice.

Note: Provisional application under this Article is symmetric — either Party may initiate termination, and neither Party is locked into indefinite provisional obligations without a path to formalization. All Humanitarian Firewall elements remain operative during the 14-day termination notice period.

Article VIII: Severability

If any provision of this Annex is found by a court of competent jurisdiction or arbitral panel to be unenforceable, the remaining provisions shall remain in full force and effect.

The Parties shall promptly negotiate a replacement for any provision found unenforceable, preserving the original intent to the maximum extent possible. In particular, if the Firewall Principle (Article I.2) is found unenforceable in any jurisdiction, the Parties shall negotiate an alternative modular architecture that achieves the same structural isolation of compliance sectors.

Article IX: Duration and Withdrawal

This Annex shall remain in force indefinitely, unless:

- Both Parties agree in writing to terminate it; or
- The parent framework into which it is incorporated terminates, and the Parties do not reaffirm this Annex within 90 days of such termination.

Withdrawal from this Annex without withdrawal from the parent framework is not permitted. This Annex is integral to the compliance resilience architecture and may not be severed unilaterally. The Stepback Protocol provides the only lawful mechanism for responding to deviations — unilateral withdrawal from this Annex constitutes a Tier 2 Material Disruption.
