I. Core Architecture: How the System Thinks

The Compact operates on three fundamental assumptions. Every mechanism in the document flows from these.

The Three Principles That Drive Everything

Principle	What It Means	Operational Effect
Synchronized Reciprocal Motion	Neither Party moves alone. Every commitment has a matched counterpart.	No unilateral action. Everything pairs.
Differential Processing	Disputes route to the appropriate speed band.	Small problems do not collapse the core. Large problems do not overwhelm fast channels.
Forward Drift Protection	Verified structural gains are permanent.	You lose pace, not ground. Setbacks slow the cycle but do not reverse the archive.

The Five Layers

Layer	Function	Reference
Core	Fundamental architecture	Articles I-V
Operations	Implementation mechanisms	Articles VI-IX
Stabilization	Crisis response	Articles X-XI
Foundation Annexes	Operational baselines	Annexes A-J
Stabilization Annexes	Regional crisis architecture	Annexes K-O

II. The Reciprocity Ledger: The Math of Political Lift

What It Is

The Reciprocity Ledger is a formal accounting system that tracks the balance of implemented commitments between Parties. It operates on a rolling 90-day window. Think of it as a political credit score with diplomatic consequences.

How It Works

Element	Function
Credits	One Party implements a commitment: credit added
Debits	One Party defers or suspends a commitment: debit added
Balance	Credits minus debits over the rolling 90-day window
Tolerance	Plus or minus 15% deviation allowed before formal response
Publication	Ledger summaries published every 30 days

The Formula

```
Balance = (Total Credits - Total Debits) / Total Commitments Due
Example: 10 commitments due, 8 completed (credits), 2 deferred (debits)
Balance = (8 - 2) / 10 = 0.6 or 60%
Tolerance threshold: 85% is passing
```

TIP:Core commitments carry more weight than routine commitments. Weighting applies in all calculations.

Ledger State Transitions

Balance	Status	Consequence
85-100%	Positive	Full flexibility. Good-faith buffer available.
70-84%	Neutral	Standard operations. Monitoring increases.
55-69%	Warning	Enhanced reporting. Consultation triggered.
Below 55%	Deficit	Step-Back protocol activates.

How Weighting Works

Commitment Type	Weight
Red Band (significant)	3x
Amber Band (coordinated)	2x
Green Band (routine)	1x

What This Means in Practice

Scenario	Ledger Effect	Action
Iran completes nuclear seal verification	+3 credits (Red Band)	US sanctions relief unlocks
US delays asset release	-2 debits (Amber Band)	Iran pauses corresponding commitments
Both Parties complete 30 days stable operations	+1 credit each (Green Band)	No action needed

III. Verification Mechanics: How We Know What Happened

The Verification Stack

Layer	What It Does	Who Does It
Telemetry	Sensor readings, financial records, physical lock confirmations	IAEA, neutral verification teams
Triangulation	Any 2 of 5 independent sources confirm an incident	Joint Coordination Center
Human-in-the-Loop	Review Panel interprets anomalies and issues binding determinations	5-member panel
Swiss Dashboard	Single authoritative interface displaying all data in real time	Switzerland

Verification Sources (Triangulation Standard)

An incident counts as verified when any two of the following independently confirm it:

Source	Description
Neutral Guarantor on-site observation	Oman or designee physically present
Satellite imagery	Commercial or neutral source
Credible local witnesses	At least 3 independent sources
Communications intercept	Corroboration available
Either Party's admission	Formal acknowledgement

IAEA Role

Function	Authority	Reference
----------	-----------	-----------

Primary technical verification	All nuclear-related commitments	Article V, Section 5.3
Continuous monitoring	All declared facilities	IAEA safeguards protocols
Binding findings	Unless overruled by JCC consensus within 14 days	IAEA Director General
Inspector safety	Emergency evacuation if needed	Article VII, Section 7.4

Verification Workflow

Step 1: Incident Detection

- > Step 2: Telemetry Capture (sensor data, financial records, physical logs)
- > Step 3: Triangulation Check (any 2 of 5 sources confirm?)
- > Step 4: Dashboard Posting (both Parties see simultaneously)
- > Step 5: Compliance Determination (IAEA for nuclear, JCC for non-nuclear)
- > Step 6: Action (if verified non-compliance)

Pause Verification (during Wartime)

Aspect	Normal Mode	Wartime Mode
Standard	5-source standard	3-source standard (compressed)
Timelines	14-day timelines	7-day timelines
Certification	IAEA certification required	JCC certification sufficient

IV. Compliance Engine: Step-Back, Earn-Back, and Exit

The Step-Back Sequence

When either Party identifies a concern regarding compliance, the following sequence activates:

Step 1: Consultation

- > Step 2: Human-in-the-Loop Review (convenes within 72 hours)
- > Step 3: Proportional Step-Back (suspension of affected reciprocity unit)
- > Step 4: Correction Window (14 days to correct)
- > Step 5: Earn-Back (automatic reactivation upon correction)

Graduated Response Scale

Level	Description	Response	Correction Window
Level 1	Technical Delay (up to 72 hours)	No step-back. Documents delay.	N/A
Level 2	Partial Non-Performance	Suspend corresponding reciprocity unit	14 days
Level 3	Systemic Breach	Suspend all units in affected annex	14 days
Level 4	Fundamental Violation	Terminate Compact unless remediated	48 hours

Cumulative Step-Back Protocol

Threshold: 3 or more Level 1 or Level 2 Step-Backs within any 30-day period constitutes a Cumulative Step-Back event.

Review determines one of three outcomes:

- (a) Genuine, separate incidents: no collective action
- (b) Coordinated pattern of pressure: treated as single Level 3 Step-Back
- (c) Capacity constraints: Good Faith Exception applies

The Earn-Back Sequence

Phase 1: Acknowledgment (14 days minimum)

> Phase 2: Visible Corrective Action (14 days minimum)

> Phase 3: Independent Verification of Restored Compliance (14 days minimum)

> Phase 4: Automatic Reactivation

Clean Break Exit Ramp

Element	Detail
Notice	14 days' written notice to Neutral Guarantor
Breach	Does not constitute a breach
Penalty	No penalty
Post-withdrawal protections (180 days)	Strait stays open; released funds stay released; delivered relief stays delivered; both Parties refrain from military escalation

V. Financial Architecture: How Money Moves

Sanctions Relief Tiers

Day	Relief Tranche	Paired Milestone	Reversibility
Day 1	Humanitarian asset release (\$250M) + transit normalization	IAEA baseline access	Humanitarian non-reversible; transit reversible
Day 14	Banking-channel licensing + sectoral general licenses	Material above 5% sealed under IAEA monitoring	Reversible by license withdrawal
Day 45	Broader designation relief + expanded financial access	Sustained verified compliance	Reversible by re-designation
Day 60	Comprehensive sanctions relief + permanent nuclear framework dialogue	75% of 60% HEU disposition complete	Reversible by Tier 3 Step-Back only
Day 90	Permanent resolution working group + JCPOA successor framework	100% of 60% HEU disposition complete	Permanent after 24 months sustained compliance

Frozen Asset Release Schedule

Tranche	Amount	Trigger	Timing
Initial	\$2B	Verified Day 14 sealing of material above 5%	Phase Two
A	\$10B	IAEA-certified execution of disposition pathway	On verified milestone
B-1	\$3B	IAEA seals on all HEU/LEU in Iran	Phase Three, early
B-2	\$3B	60% HEU downblended or transferred	Phase Three, within 12 months
B-3	\$3B	Fordow conversion (or agreed alternative)	Phase Three, within 24 months
B-4	\$3B	12 months sustained compliance	Phase Three, after 12 months
Total	\$24B		

Financial Latency Buffer

Element	Detail
Authorization Date	Date authorizing body formally authorizes release or waiver
Settlement Date	Date funds are actually available
Compliance Date	Settlement Date, not Authorization Date
Buffer	5-business-day standard
Effect	If authorized by Compliance Date, considered "met" even if settlement within buffer

Escrow Architecture

Stage	Function	Control
Inbound hold	Tranche enters escrow against its milestone	Swiss guarantor custody
Confirmation release	Dashboard milestone confirmation releases the tranche	Joint visibility
Suspension hold	Non-compliance returns the tranche to hold	Step-Back proportionality
Earn-back release	Verified correction re-releases the tranche	Dashboard re-confirmation

VI. Maritime Operations: How the Strait Works

Strait of Hormuz Traffic Framework

Phase	Transit Posture	Center Function
Day 1	Strait open to unrestricted commercial transit	Real-time dashboard activates
Days 1-30	Phased recovery toward pre-conflict volumes	Traffic management + weekly reporting
Day 30+	Normalized commercial transit	Continuous monitoring + incident logging

Data Sources

Source	Function
Automatic Identification Data	Vessel position and identity in real time
Transit Logs	Center logs each transit event
Recovery Tracking	Return toward pre-conflict volumes during recovery period

Service-Fee Schedule

Transit Toll: Charges a vessel for the act of passage itself. EXCLUDED entirely.

Service Fee: Compensates an actual marine service rendered. PERMITTED with constraints:

Service	Description	Cap
Pilotage support	Boarding-pilot service through traffic-separation scheme	Per-vessel cap set jointly
Search-and-rescue coordination	Standby readiness for transit corridor	Per-vessel cap set jointly
Navigational guidance	Traffic management, lane-status, hydrographic guidance	Per-vessel cap set jointly

TIP:Rule: A single published schedule applies to every vessel regardless of flag, origin, or destination. Fee never conditions passage. Breach suspends only the Hormuz transit reciprocity unit.

Engagement Posture

Zone	Posture	Coordinating Authority
Commercial transit lanes	Unimpeded transit; non-interdiction	Joint Maritime Coordination Center
Defensive naval zones	Defensive positioning only	Respective national command under deconfliction
Convergence points	Pre-agreed separation procedure	Center-managed real-time coordination

VII. Lebanon Firewall: Containment Mechanics

Activation Triggers

The Firewall activates automatically upon occurrence of any of the following:

Category	Examples
Kinetic Cross-Border Activity	Projectile launch, artillery fire, airstrike, drone strike, ground force incursion
Proxy Operations	Military operations by Hezbollah resulting in casualties or infrastructure damage
Air and Cyber Operations	Airspace penetration, cyber attacks, electronic warfare operations
Ceasefire Violations	Sustained, attributed, offensive resumption

Three-Band Containment Structure

Band	Description	Commitments
Band Green (Stabilization)	Lebanon situation contained	All core commitments continue
Band Amber (Selective Separation)	Threat of regional escalation	Suspend within 200km of Lebanese border; nuclear, maritime, Crisis Anchors continue
Band Red (Full Firewall)	Active crisis	All commitments except Crisis Anchors suspend in affected zone

Incident Baseline and Escalation Budget

Normal Tolerance: Up to 3 minor incidents per calendar month do not trigger Band processing. Logged but do not affect Strain Gauge.

Minor Incident Definition:

- Cross-border fire with no confirmed casualties
- Incidents involving less than \$50,000 verified infrastructure damage
- Routine military posture movements
- Verbal threats without accompanying military action

ALERT: Escalation Trigger: Incidents exceeding 3 per month OR any single incident causing casualties or damage above minor threshold routes to Band One.

Strain Gauge (Incident-Based Scoring)

Incident	Points
Cross-border fire incident	+5
Casualty-causing incident	+15

Hezbollah drone or UAV launch	+20
Attack on personnel of either Party	+30
Coordinated multi-unit attack	+40

Weekly Decay: -10 points per week of verified calm (no incidents scoring 5 or more points).

Strain Level	Points	Response
Green	0-25	Normal operations
Amber	26-50	Monitoring intensifies; Early Warning Network elevates to Level 2
Orange	51-75	De-escalation channel auto-deploys
Red	75+	Firewall auto-activates; Synchronization Clock pauses

Political Time Compression Buffer

Upon detection of any incident causing casualties:

Step	Action	Timeline
1	Immediate Human-in-the-Loop Review via secure virtual channel	Within 2 hours
2	Preliminary Attribution Assessment (may use fewer than 3 sources if urgency certified)	Within 6 hours
3	Political Consultation Channel activated between senior diplomats	Immediately
4	72-hour Cooling-Off Window: both Parties refrain from offensive retaliation	Within 72 hours

Proxy Influence Presumption

Rule	Detail
Responsibility	Iran accepts responsibility for actions taken by Hezbollah in Lebanese territory
Non-Attribution	Requires Iran to provide verified evidence of opposition within 72 hours
Effect of Absence	Absence of evidence creates a presumption of influence
Rebuttal	Active opposition through public statements ordering compliance, observable redeployment, or evidence that Iran-directed support was conditioned on compliance

VIII. Wartime Protocol: Survival Mode

Activation Triggers

Condition	Trigger
(a) Active military operations in Lebanon	More than 3 verified incidents per week
(b) Technical drafters unable to establish fixed verification coordinates	Due to territorial flux
(c) Negotiation timeline compressed	Less than 60 days for major reciprocity unit
(d) Neutral Guarantor certifies "operating under uncertainty"	On more than one front
(e) Either Party formally requests Wartime mode	Cannot be blocked

Duration

Element	Detail
Default	90 days

duration	
Renewal	Once, for total of 180 days
Exit	30 consecutive days of zero major incidents; OR all Pilot Zone maps finalized; OR Phase Three activation; OR either Party files 14-day exit notice

21-Day Bridging Sequence

Days	Phase	Actions
1-7	Micro-Convergence (C-Type)	Each side: one visible, low-stakes action (e.g., prisoner mini-exchange, transit corridor verification)
8-14	Structural Micro-Step (S-Type)	Each side: one small structural commitment with hard verification (e.g., Pilot Zone boundary, uranium down-blend)
15-21	Sounding Exchange + Reset	Each side: positive surprise + concern + next-round proposal

Pilot Security Zones: Three-Phase Execution

Phase	Timeline	Israeli Action	Hezbollah Action	LAF Action	Verification
1A: Freeze	Days 1-7	Halt strikes on pilot zone	Halt fire from pilot zone	Deploy vetted units to zone edges	Neutral Guarantor + satellite
1B: Handover	Days 8-21	IDF withdraws to outer perimeter, maintains overwatch only	Operatives relocate north of Litani	LAF assumes operational control	JCC verification with GPS confirmation
1C: Validation	Days 22-30	Zero strikes into zone	Zero fire from zone	Dismantle tunnels or caches, run checkpoints	3-source incident verification + weekly JCC report

Ratchet Lock

Rule	Detail
Irreversible Territorial Lock	Each IDF withdrawal from a Pilot Zone enters Forward Drift Archive permanently
Re-occupation	Constitutes material breach
Remedy for Hezbollah violation	LAF enforcement + JCC mediation within 72 hours; Band Two escalation if mediation fails
IDF re-entry authorization	Only if LAF ceases to exist OR Red Signal indicates imminent attack on Israel proper

IX. Third-Party Integration: How Others Join

Core Principles

Principle	Meaning
Voluntary selection	Each State selects its own role
Non-hierarchy	No role carries superiority
Firewalled participation	Withdrawal from one role does not affect others
Open accession	No deadline for role selection

Tier I: Core Implementation and Security Partners

Role	Function	Commitment Level
I-A: Maritime Security Coalition Lead	Lead multinational defensive maritime initiative	High (operational command)
I-B: Implementation Coordinator	Oversee sequencing of verification and relief	High (24/7 coordination)
I-C: Verification and Monitoring Liaison	Provide ISR capabilities supplementing IAEA	High (continuous surveillance)
I-D: Sanctions-Sequencing Facilitator	Provide banking-channel expertise	Medium (banking expertise)

Tier II: Technical and Maritime Contributors

Role	Function	Commitment Level
II-A: Mine Countermeasures	Minehunting vessels, ROVs, mine detection	High (sustained deployment)
II-B: Maritime Domain Awareness	Vessel-tracking data, port-state information	Medium (data feed)
II-C: Monitoring Technology	Sensor tech, comms infrastructure	Medium (technology transfer)
II-D: Naval Presence	Frigates, destroyers, patrol vessels	Medium (vessel deployment)

Tier III: Humanitarian and Civilian Support Partners

Role	Function	Commitment Level
III-A: Humanitarian Corridor Partner	Facilitate passage of humanitarian goods	Medium (logistical support)
III-B: Medical-Isotope Supply Facilitator	Support production and delivery of medical isotopes	Low (specialized supply)
III-C: Civilian Nuclear Safety Supporter	Nuclear safety expertise, training	Low (technical assistance)
III-D: Essential Goods Access Partner	Ensure flow of food, medicine, ag commodities	Low (trade facilitation)
III-E: Economic Normalization Partner	Support economic reintegration	Low (long-term engagement)

Tier IV: Observers and Dialogue Partners

Role	Function	Commitment Level
IV-A: Transparency Observer	Independent assessments of implementation	None (observation only)
IV-B: Dialogue Partner	Formal communication channels	None (consultation only)
IV-C: Regional Stability Liaison	Facilitate communication among regional States	None (facilitation only)
IV-D: Information-Sharing Partner	Open-source intelligence, analysis	None (analysis only)
IV-E: Accountability Partner	Coordinate sovereign measures in response to violations	Low-Medium (trigger-based)
IV-F: Independent Fact-Finding Partner	Deploy neutral investigative teams	Low (discretionary)
IV-G: Missile Attack Verification Observer	Deploy technical verification teams	Low (discretionary)

Tier V: Future Accessions and Open Participation

Role	Function	Commitment Level
V-A: Prospective Participant	Intends to select active role	None (pre-participation)
V-B: General Observer	Monitor implementation	None (observation)
V-C: Consultation-Only Member	Provide input on specific topics	None (ad hoc input)
V-D: Future Accession Candidate	Formal pathway for future participation	None (pathway only)

Track Integration

Track	Roles	Coordinating Body
A: Maritime Security	I-A, I-C, II-A, II-B, II-D	Joint Maritime Coordination Center
B: Verification and Monitoring	I-C, II-C, IV-A, IV-D	Swiss-hosted dashboard + IAEA
C: Humanitarian and Civilian Flows	III-A, III-B, III-C, III-D	Neutral Guarantor Humanitarian Coordination Office
D: Economic Normalization	I-D, III-E, III-D	Swiss escrow + banking working group
E: Implementation Coordination	I-B, IV-B, IV-C	Implementation Secretariat
F: Political Legitimacy and Dialogue	IV-A, IV-B, IV-C, IV-D, all Tier V	Regional Security Dialogue

X. Annexes A-J: Operational Reference

When to Use Which Annex

Annex	Name	When to Use	Key Content
A	Implementation Timelines and Reciprocity Matrix	Tracking day-by-day commitments	Every commitment mapped to its day and paired with counterpart
B	Forward Drift Registry and Lock Points	Recording permanent structural gains	Registry format, lock point schedule, 3-test verification
C	Frozen Asset Release Schedule	Managing \$24B asset release	2-tranche structure, milestones, safeguards against re-freezing
D	Definitions and Interpretive Notes	Resolving interpretive disputes	Definitions for all key terms
E	Nuclear Reciprocity Matrix	Nuclear-specific reciprocity	Iranian nuclear steps vs. American reciprocal measures
F	Verification Sequencing and Telemetry Protocol	Managing verification workflow	Dashboard specs, baseline establishment, continuous monitoring activation
G	Public Messaging and Transparency Architecture	Managing public communications	Shared factual floor, messaging compatibility rule
H	Operational One-Page Tools	Quick reference	72-hour ceasefire module, veto card, step-back ladder, earn-back path, clean break, sounding format
I	Crisis Communication and Guarantor Messaging	Managing crisis communications	Crisis communication protocol, guarantor reporting, Israeli self-defense acknowledgment
J	Sounding Exchange Templates and Status Instruments	Managing the sounding protocol	Sounding template, stability coefficient reading sheet, reciprocity index calculation sheet

Quick Reference: Key Timelines

Item	Timeline
Ceasefire confirmation	Hour 71 of each 72-hour cycle
Ceasefire non-renewal notice	48 hours' written notice
IAEA baseline access	Within 48 hours of signature
Fuel swap completion	Day 7
IAEA seals on material above 5%	Day 14
Tier Two relief	Day 14
SWIFT reconnection	Day 30

Tier Three relief	Day 45
Phase Three launch	Day 60
Prisoner exchange (Stage One)	Within 72 hours
Prisoner exchange (Stage Two)	Upon Phase Three trigger
Human-in-the-Loop Review convenes	Within 72 hours
Human-in-the-Loop determination	Within 10 days
Correction window	14 days
Earn-Back phases	14 days minimum per phase
Clean Break Exit	14 days' notice
Financial Latency Buffer	5 business days
Proxy Influence Presumption rebuttal	72 hours
Preliminary Attribution Assessment	6 hours
Cooling-Off Window	72 hours
Wartime Protocol round	21 days
Safe Mode default duration	90 days

Quick Reference: Key Percentages and Thresholds

Item	Threshold
Reciprocity Ledger positive	85-100%
Reciprocity Ledger neutral	70-84%
Reciprocity Ledger warning	55-69%
Reciprocity Ledger deficit	Below 55%
Strain Gauge Green	0-25
Strain Gauge Amber	26-50
Strain Gauge Orange	51-75
Strain Gauge Red	75+
Cumulative Step-Back threshold	3+ Level 1/2 Step-Backs in 30 days
Compliance Score review trigger	Below 60 for 90 consecutive days
Compliance Score escalation trigger	Below 40 for 30 days

Glossary

Term	Definition
Authorization Date	Date authorizing body formally authorizes a financial release or waiver
Benefit Corridor	Framework-defined zone of reduced political and security cost
Breakout Timeline	Estimated time required to produce sufficient fissile material for a nuclear weapon
Cascade Barrier	Explicit prevention of automatic cross-track contamination
Coastal State Rights	Iran's rights and responsibilities under international maritime law regarding the Strait of Hormuz
Cold Data Reserve	Immutable, multi-copy, cryptographically secured log of all framework decisions
Compliance Date	Settlement Date, not Authorization Date
Core Protection Filter	Selective membrane between rotating bands and the still center of the Compact

Crisis Anchor Protocol	Prevents total document collapse during severe disruptions
Cumulative Step-Back	3+ Level 1 or Level 2 Step-Backs within 30 days treated as Level 3
De-Escalation Credit	Credit awarded for good-faith efforts to prevent escalation
Differential Processing	Disputes process through three concentric bands at different speeds
Earn-Back	Automatic restoration of suspended reciprocity units upon correction
Financial Latency Buffer	5-business-day buffer for financial obligations
Firewall	Operational separation between core Compact and standalone annexes
Forward Drift Archive	Permanent ledger of structural gains that no later setback reverses
Human-in-the-Loop	Dispute resolution process involving human judgment rather than automated penalties
Irreversible Territorial Lock	Forward Drift entry preventing re-occupation of a Pilot Zone
Neutral Guarantor	Sultanate of Oman and designated secondary guarantors
No-Precedent Clause	This Compact creates no legal or political precedent for any future negotiation
Pilot Security Zone	Geographically defined area where LAF exercises exclusive security control
Political Time Compression Buffer	Protocol to prevent domestic political timelines from outpacing verification
Proxy Influence Presumption	Iran presumed responsible for Hezbollah actions unless rebutted within 72 hours
Reciprocity Ledger	Formal accountancy of political lift generated and consumed
Service Fee	Capped, transparent, non-discriminatory charge for defined marine services
Settlement Date	Date funds are actually available or waiver is operationally effective
Step-Back	Proportional suspension of reciprocity units in response to confirmed breach
Strain Gauge	Incident-based scoring system quantifying tension on the Lebanon front
Swiss Dashboard	Single Swiss-hosted digital interface displaying all telemetry and compliance status
Synchronized Activation	Both commitments in a reciprocity unit begin implementation at the same moment
Synchronized Reciprocal Motion	Neither Party moves alone; every commitment pairs with a reciprocal commitment
Telemetry	Objective, mechanical data including sensor readings, financial records, and physical confirmations
Telemetry-First Verification	Commitments verified through objective telemetry data; human judgment supplements but does not override
Transit Toll	A charge for the act of passage itself; EXCLUDED entirely
Triangulated Verification	Any 2 of 5 independent sources confirm an incident
Wartime Compact	Temporary operational overlay modifying timelines, verification thresholds, and incident budgets

Hormuz Synchronization Compact v7.3

Technical Implementation Manual

For authorized technical personnel, legal advisors, and third-party participants

June 2026
