

NEGOTIATOR'S FIELD BRIEF

Stability First Enhanced Accord v5.6

FOR AUTHORIZED NEGOTIATORS ONLY

May 2026 — 125 Enhancements Applied

Checklists · Timelines · Decision Trees · Hotline Numbers · Three Deal Options
Rollback Models · Monitoring Menu · Trigger Conditions · Tranche Schedules
Breach Protocols · Crisis Response · MVA Fallback · Face-Saving Narratives

*This document contains no preamble, no philosophy, and no aspirational language.
Everything here is operational. Use it under pressure.*

1. Immediate Action Checklists

1.1 Pre-Signature (T-5 to T-0)

T-5: Confirm Micro-Pilot Agreement

- Both governments designate senior officials with signing authority
- Select deal option: Minimal (default), Medium, or Maximal — record selection in Micro-Pilot letters
- Oman confirms Muscat facilities; Maritime Council charter drafted
- Switzerland confirms escrow architecture (\$100B ledger locked)
- IAEA confirms Oman custody facility readiness + monitoring level deployment
- Qatar confirms \$2B Reconstruction Fund + \$20B liquidity facility
- Confirm prisoner exchange list: names, numbers, medical status (both sides)

T-3: Verify Systems Online

- Hotline: Omani Naval Monitor, Khasab — test 5-min response
- Escrow: Swiss Federal Department confirms 3/4 multi-sig keys active
- Monitoring: Selected level (Minimal/Medium/Maximal) sensors deployed
- Cyber: Category I infrastructure protection active
- Satellite: Secretariat receiving daily AIS/EO/SAR feeds
- IAEA: Forward Team Alpha (Muscat) at standby; Team Bravo (Vienna) at standby
- Tel Aviv Channel: Israeli intelligence briefed on framework

T-0: Exchange Letters, Activate Micro-Pilot

- Exchange Micro-Pilot letters (politically binding, not treaty)
- Record deal option selected, rollback model chosen (A/B/C/D), monitoring level
- Iran: 60% enrichment freeze begins immediately
- US: \$250M released from Swiss escrow
- Prisoner exchange: reciprocal releases within 7 days
- IAEA: 72-hour clock starts for freeze verification
- Day 0 environmental baseline swipes begin at all facilities
- Drop-dead clock starts: Day 30 ratification deadline

1.2 Day 1: Opening Waltz Pairing

Step	Iran Must Deliver	US Must Deliver	Verify Via
1	60% freeze confirmed; IAEA inspectors on-site	\$250M confirmed received via Swiss escrow	IAEA report + Swiss financial confirmation
2	Stockpile transfer to Oman custody begins	OFAC general license issued for \$250M	IAEA custody chain + OFAC notice
3	Prisoner exchange: US/dual nationals released	Prisoner exchange: Iranian nationals released	Swiss Political Cell verification
4	Ceasefire order transmitted to all forces	Operation Epic Fury suspension order	Pakistan Co-Convening confirmation
5	Proxy pause order (Hezbollah, Houthis, PMF)	No proxy retaliatory strikes	UNIFIL/UNVIM/UNAMI reporting

2. Three Deal Options — Select at Signature

DEFAULT: If no option selected, Minimal activates automatically. Graduate to Medium upon verified Micro-Pilot completion. Graduate to Maximal after 12 months clean certification.

Feature	Minimal (Crisis Containment)	Medium (Stability First)	Maximal (Comprehensive)
Enrichment cap	60% freeze	3.67% cap; 1-year renewable (9-15 month window)	3.67% cap; 2-year initial
Stockpile	No transfer	Transfer to IAEA third-party custody	Transfer + downblending plan
Centrifuges	No new advanced	Mothball Protocol + 24 sealed IR-6 preserved	Mothball + sealed + glide path to 5% medical
Monitoring	Minimal: cameras + OLEM	Medium: UGES + strain sensors + passive ICS	Maximal: AI fusion + digital twin + drones
Missiles	Not addressed	Not addressed initially	Test moratorium >2,000km; 48h notification below
Proxies	Tempo reduction; 24h condemnation	Operational pause + Levant Firewall + scoring	Substantial reduction + ceasefire frameworks
Oil exports	500K bpd controlled	1.5 mbpd by Day 90	2.5 mbpd full normalization
Asset returns	\$250M only	85% by Day 180	100% by Day 365
SWIFT	None	Phase 1-2	Full Phase 3
Micro-waivers	Humanitarian only	Humanitarian + petrochemicals + automotive	All 5 industries + investment protection
Rollback model	30-day withdrawal clause	Model A (Proportional) default; Model B for disputes	Full 4-model architecture + earn-back
Total value	~\$850M + oil	~\$85B + SWIFT + micro-waivers	\$100B+ + full trade + FDI
Duration	90 days renewable	1-year renewable	2-year initial, 1-year renewable

v5.6 NUCLEAR FLEXIBILITY (All Options)

- **Renewal window:** 9-15 months (not fixed annual) — Iran chooses timing
- **24 sealed centrifuges:** IR-6 machines under IAEA seals, idle — sovereignty symbol
- **Glide path:** 24 months clean compliance = up to 5% enrichment for medical isotopes only
- **Dignity protection:** Neither side may publicly call the deal "capitulation" — Tier 1 breach

3. Timeline at a Glance

Phase	Window	Iranian Deliverable	US Deliverable	Key Trigger
Micro-Pilot	Days 1-30	60% freeze; IAEA access; IRGC reduced presence; prisoner release	\$250M Swiss escrow; partial blockade reduction; prisoner release	IAEA confirms freeze within 72h; prisoners exchanged within 7 days
Stage Open	1: Days 1-14	Ceasefire; stockpile to Oman; Hormuz reopening; mine clearing	Suspend Epic Fury; OFAC license; blockade lift (Day 7)	200+ Hormuz transits; IAEA custody verified
Stage Window	2: Days 15-44 (+7 ext.)	Moratorium declared; centrifuges mothballed; Fordow Phase A; 24 sealed IR-6	Stage 1 tranche \$750M; 50% assets; SWIFT Phase 1	Moratorium ratified; HEU export confirmed

Stage 3:	Days 45-	Transit Authority; successor framework;	\$3-5B tranches; 85% assets; SWIFT	Authority	charter
Perm	180 (flex)	Fordow Phases B/C; proxy scoring	Phase 2; micro-waivers active	ratified; opened	successor
Year 1	Day 365	Clean certification; AP ratified; monitoring may upgrade to Maximal	\$10B tranche; full SWIFT Phase 3	Annual audit passed; no material breaches	

DROP-DEAD: Day 30

If full framework not ratified by Day 30, auto-transition to **Minimum Viable Accord**:

- Ceasefire, humanitarian channel, Hormuz transit, IAEA basic monitoring — **CONTINUE**
- All Tier 3 modules (SWIFT, bonus tranches, successor talks) — **PAUSE**
- Asset releases halt at \$750M total
- Renegotiation begins within 14 days via Reconstitution Mechanism

4. Tranche Schedule & Release Conditions

Pre-Agreed Asset Valuation: \$100B (locked at signature)

Tranche	Day	Amount	IAEA Condition	4/5 Channel Convergence	3/4 Escrow Signatures
Micro-Pilot	Day 1	\$250M	60% freeze within 72h	Required	Required
Stage 1	Day 14	\$750M	Stockpile in Oman custody; ceasefire verified; prisoners exchanged	Required	Required
Stage 2	Day 44	\$1.5B	Moratorium ratified; HEU export confirmed; 24 sealed centrifuges IAEA-verified	Required	Required
Stage Mid	3 Day 120	\$3B	Transit Authority operational; Fordow Phase B; proxy score above 50	Required	Required
Stage Close	3 Day 180	\$5B	85% assets; successor framework opened	Required	Required
Year 1	Day 365	\$10B	Clean certification; AP ratified; monitoring level maintained	Required	Required
Total		\$20.5B	Plus up to \$6B bonus pool for over-performance		

Bonus Accelerants

Accelerant	Bonus	Trigger
Early HEU Export	+\$1B	HEU export completed 7+ days before target window
Fordow Early Phase C	+\$2B	Fordow Phase C completed 30+ days before target
Additional Protocol Ratification	+\$3B	AP ratified before Day 365

Escrow Release: 3 of 4 Signatures Required

Signatures required from: Oman, Switzerland, Qatar, UN Appointee. IAEA certification is a condition precedent, not a signature. Each holder has 72 hours to sign. 3 signatures = automatic release within 24 hours. Only 2 signatures = Financial Review Cell convenes within 48 hours. No single state can block; no two states can permanently block.

5. Rollback Architecture — Four Models (No Snapback)

CORE PRINCIPLE: GRADUATED REDUCTION, NOT TOTAL CUTOFF

A violation reduces sanctions relief by percentage. It does NOT eliminate all relief. Humanitarian firewall: medical/food/WFP funds are NEVER subject to rollback.

Model	Tier 1 (Technical)	Tier 2 (Material)	Tier 3 (Deliberate)	Best For
A: Proportional Cut (default)	10% reduction	25% reduction	50% reduction	Clear, predictable
B: Escrow Hold	Funds frozen, not seized	Funds frozen; investigation	50% to violating party on compliance; 50% to Reconstruction Fund	Disputed violations
C: Step-Down	10% on next tranche only	25% on next two tranches	Full tranche hold; Reconstitution triggered	Repeat offenders
D: Earn-Back	Tracked as "loan"	10% restored per 30 days clean	20% restored per bonus compliance	First-time violations

SYMMETRY LOCK: ROLLBACK APPLIES TO BOTH PARTIES

- If US delays asset tranche >30 days without Technical Delay justification → Iran reduces nuclear reporting (not enrichment resumption)
- If US fails to lift blockade per timeline → Iran may reduce Hormuz cooperation proportionally
- If US SWIFT phase not triggered despite IAEA certification → Iran may pause AP at current level

NO HUMANITARIAN ROLLBACK: Micro-Pilot \$250M, humanitarian channels, medical isotope funding, WFP transit, fast-track approvals, and civil aviation micro-waiver are protected from ALL rollback models. Only non-humanitarian economic relief is subject to reduction.

6. Three-Tier Breach System — Quick Reference

	Tier 1: Technical	Tier 2: Material	Tier 3: Deliberate Hostile
Definition	Minor procedural deviation	Substantial disruption; no hostile intent	Willful breach with hostile intent
Notify within	48 hours	24 hours	Immediate + Return-to-Talks
Fix window	7 days	14 days	7-day mandatory mediation first
Other modules	All continue	Affected to Hold; others continue	Survival Core continues; others may suspend
Economic impact	10% rollback (Model A)	25% rollback (Model A)	50% rollback; neutrality void
Suspend?	NEVER	NEVER	Only after mediation fails
Public?	No	If operationally necessary	Yes

Universal Protections (All Tiers)

MANDATORY BEFORE ANY ROLLBACK:

- Verification Grace Period: 7-30 days for minor discrepancies (measurement errors, sensor drift)
- Emergency review by Facilitating State Council
- Neutral technical assessment by at least 2 verification channels
- One emergency summit attempt (in-person or video)
- 72-Hour Attribution Hold completed

NO WITHDRAWAL DURING MEDIATION: During FSC review, IAEA clarification, hotline dispute resolution, or stabilization hold, neither side may formally withdraw.

7. Decision Trees

7.1 Breach Classification

Step 1: Is there a deviation from agreed obligations?

No deviation → Continue monitoring. Log for scorecard.

Yes → Proceed to Step 2

Step 2: Is the deviation within the Verification Grace Period?

Yes (minor measurement error, sensor drift, admin error) → TECHNICAL REVIEW: 7-30 day corrective window. No breach logged.

No → Proceed to Step 3

Step 3: What is the nature of the deviation?

Minor procedural, no material impact → **TIER 1:** 10% rollback; 7-day corrective window; confidential resolution.

Substantial disruption, no hostile intent → **TIER 2:** 25% rollback; 72h Council convening; 14-day remediation. Affected module to Hold.

Willful, material, hostile intent → **TIER 3:** 50% rollback; Immediate Return-to-Talks. 7-day mandatory mediation. Neutrality commitment void.

7.2 Rollback Model Selection

Step 1: What tier is the breach?

Tier 1 (first violation, first 90 days) → **MODEL D (Earn-Back)**: Track as loan; restore 10% per 30 days clean.

Tier 1 (repeat, or not first 90 days) → **MODEL A (Proportional)**: 10% cut. Default.

Tier 2 (disputed attribution) → **MODEL B (Escrow Hold)**: Funds frozen pending investigation. Neither side accesses.

Tier 2 (repeat offender within 90 days) → **MODEL C (Step-Down)**: Escalating penalties per violation count.

Tier 3 → **MODEL A or C**: 50% cut; Reconstitution triggered.

Step 2: Has the violation been corrected?

Yes → **Restoration per model rules. Sustained compliance required (not automatic).**

No → **Hold remains. Mediation. Reconstitution if unresolved.**

7.3 Monitoring Level Selection

Step 1: What deal option was selected?

Minimal → **MINIMAL MONITORING**: Cameras + OLEM + quarterly inspections. Throughout.

Medium → Minimal for Stages 1-2; **MEDIUM MONITORING** from Stage 3.

Maximal → Medium for Year 1; **MAXIMAL MONITORING** from Year 2 (if clean certification).

Step 2: Is there a Tier 2+ breach?

Yes → **Monitoring does NOT decrease. Enhanced monitoring activates automatically. De-escalation only after 90 days clean + Council consensus.**

No → **Continue at current level.**

8. Five-Channel Verification Matrix

Channel	Domain	What They Verify	Reporting	Emergency Contact
IAEA	Nuclear	Enrichment freeze, stockpile custody, facility access, AP compliance; monitoring tech (OLEM/UGES/AI)	Quarterly reports; 72h for emergencies	IAEA Emergency Ops, Vienna
Oman	Maritime	Hormuz transit, hotline, naval deconfliction, AIS; Transparency Dashboard; Maritime Arbitration Panel	Daily maritime report + weekly Dashboard	Omani Naval Monitor, Khasab
Switzerland	Financial	Escrow releases, asset transfers, sanctions relief, \$100B ledger; comfort letters; micro-waiver processing	Weekly financial report	Swiss Federal Dept, Bern
Qatar	Liquidity	Emergency facility, bridging finance, Reconstruction Fund; Innovation Fund co-sponsor	Weekly liquidity report	Qatari Financial Centre, Doha
UN Appointee	Procedural	Dispute resolution, governance facilitation, deadlock breaking; Regional Consultation Forum liaison	Per dispute	UN Palais des Nations, Geneva

4/5 CONVERGENCE RULE

No compliance certification, milestone verification, or tranche release may proceed without **at least 4 of 5 channels** independently confirming. A dissenting channel's objections are documented but do not block. If only 3/5 concur, certification is withheld and a Verification Convergence Panel convenes within 48 hours.

Facilitating State Council (FSC) — Quarterly rotating: Oman (Q1), Switzerland (Q2), Qatar (Q3), Oman (Q4). Pakistan is Co-Convening Authority for emergency summits and executive relay.

9. Nuclear Monitoring Menu — Three Levels

Component	Minimal	Medium	Maximal
IAEA cameras	Yes	Yes	Yes
OLEM inline monitors	Yes	Yes	Yes
UGES inline monitors	No	Yes	Yes
External strain sensors	No	Yes	Yes
Vibration/acoustic sensors	No	Yes	Yes
Passive ICS monitoring	No	Yes	Yes
Monthly inspections	No (quarterly)	Yes	Yes (continuous)
Robotic ground inspection	No	Yes	Yes
Environmental/off-gas	No	Yes	Yes
AI multi-sensor fusion	No	No	Yes
Digital twin	No	No	Yes
Indoor drone platforms	No	No	Yes
Continuous IAEA presence	No	No	Yes
Iran acceptance	HIGH	MEDIUM	LOW-MEDIUM
US confidence	Medium	High	Very High

v5.6 PRIVACY PROTECTIONS (All Levels)

- **Data filtered at source:** IAEA receives only compliance data, not industrial secrets
- **Dual-key encryption:** Iran + IAEA both required to decrypt; Swiss escrow key as backup
- **Dual-key site access:** IAEA + Iranian observer both authorize entry; neither unilateral
- **Grace period:** Minor discrepancies (0.05% measurement, 1% inventory gap) get 7-30 day technical review, not breach

10. Economic Accessibility & Sanctions Neutrality

Mechanism	What It Does	Timeline	Protected from Rollback?
Humanitarian Track	Fast- 48-hour auto-approval for medicine, food, aviation safety parts, disaster relief	48 hours	YES (all models)
Comfort Letters	Swiss/Qatar issue compliance letters to banks/insurers for authorized transactions	90 days renewable	YES
Petrochemical Waiver	Micro- \$2B annual cap; export of petrochemical products; import of catalysts	1-year renewable	No (Tier 2+ breach revokes)

Automotive Micro-Waiver			\$500M annual cap; vehicle components, assembly equipment, safety testing	1-year renewable	No
Civil Waiver	Aviation	Micro-	\$1B annual cap; commercial aircraft parts; maintenance services	1-year renewable	YES (humanitarian firewall)
Medical Waiver	Tech	Micro-	\$750M annual cap; advanced medical devices, diagnostic equipment	1-year renewable	YES
Renewable Energy Micro-Waiver			\$300M annual cap; solar, wind, hydro equipment	1-year renewable	No

SANCTIONS-NEUTRALITY CLAUSE (v5.6)

US commits **no new sanctions** that undermine framework-authorized channels unless:

- Tier 3 breach confirmed by Facilitating State Council (neutrality void)
- Cyber attacks on US critical infrastructure (targeted, not broad sectoral)
- Attacks on US personnel (targeted Magnitsky-style, not sectoral)

Grandfathering: All new sanctions must include explicit exclusion for framework-authorized transaction codes. Swiss Financial Cell maintains the exclusion list.

11. Regional Transparency & De-escalation

Mechanism	What It Does	Frequency	Access
Hormuz Transparency Dashboard	Oman publishes anonymized transit data: total transits, corridor status, IRGC presence %, incident summary, transit time, insurance premium index	Weekly	Framework parties + facilitating states + registered insurers
Proxy De-escalation Scoring	Action-based metrics: attack frequency, condemnation speed, pause compliance, communication, arms flow. No admission required.	Monthly	Framework parties + facilitating states (confidential)
Maritime Arbitration Panel	Oman (chair) + UN Appointee + rotating neutral. Binding on operational matters. 72-hour convening.	As needed	Complaints filed with Secretariat
Regional Consultation Forum	GCC + Iraq + Jordan quarterly meetings. Advisory only, no veto. Israel observer via Tel Aviv Channel.	Quarterly	Full members + observers

Proxy Score Thresholds: 80+ = Full compliance (+10% micro-waiver bonus, +5% asset acceleration). 50-79 = Partial (standard benefits). Below 20 = Non-compliance (proxy module enters Review Pause).

12. Prisoner Exchange & Missile Moratorium

Prisoner Exchange (All Deal Options)

Parameter	Specification
Timeline	Within 7 days of Micro-Pilot signature
Iran releases	All US citizens, dual nationals, permanent residents held on security/sanctions charges (est. 3-5)
US releases	All Iranian nationals held on sanctions-related charges (est. 5-10)
Neutral venue	Geneva or Muscat; Swiss Political Cell verifies identities; medical personnel present
Standing mechanism	90-day review panel; rapid swap channel for humanitarian cases; 48-hour notification for future arrests
Escrow linkage	Exchange triggers Micro-Pilot; failure within 14 days = Tier 2. But: released prisoners stay free regardless of future framework status.

Ballistic Missile Test Moratorium (Maximal Deal Only)

Parameter	Specification
Constraint	No testing of missiles above 2,000km range
Permitted	Sub-threshold launches with 48-hour notification; static ground tests; R&D; manufacturing; self-defense operational launches
Prohibited	Technology transfer to proxies or partner states
Verification	Satellite Data Feed only — SAR, EO, IR, launch signature analysis. No on-site inspection.
SLV exemption	Space launch vehicles permitted with 14-day advance notification
Duration	2-year initial (Maximal); renewable 1-year periods
Rollback	Super-threshold launch = Tier 2 (25% reduction + 6-month extension); second within 90 days = Tier 3

13. Hotline & Emergency Contacts

Function	Contact	Response Time	Use For
Field Hotline	Omani Naval Monitor, Khasab MCC	5 minutes	Vessel in exclusion zone, weapons deployment, AIS anomaly
Strategic Hotline	Omani Foreign Ministry + UN Appointee	30 minutes	Tier 2+ incidents, diplomatic escalation
Executive Relay	Pakistan Co-Convening Authority (PM Office)	6 hours	Head-of-state communication, existential threat
Cyber Hotline	Secretariat Cyber Cell, Geneva	30 min (Critical); 6h (Serious)	Cyber attack on Category I/II infrastructure
Financial	Swiss Federal Dept, Bern	24 hours	Escrow issues, asset transfer delays, comfort letters
Nuclear Emergency	IAEA DG Office, Vienna	6 hours	Enrichment anomaly, facility incident, monitoring tech failure
Liquidity Emergency	Qatari Financial Centre, Doha	4 hours	Banking channel disruption, emergency liquidity, Innovation Fund
Maritime Arbitration	Oman Maritime Cell + UN Appointee	72 hours (convene); 6 hours (emergency)	Hormuz transit disputes, naval encounter incidents
Prisoner Exchange	Swiss Political Cell, Geneva	14 days (rapid swap); 48 hours (notification)	Detention cases, humanitarian swaps, consular access
Reconstitution	UN Appointee, Geneva	30 days (convene)	Full suspension trigger

Secretariat Sites

Site	Location	Primary Functions	Failover
Primary	Geneva, Switzerland	Political, Financial, Crisis, Communications, Prisoner Cells	Auto-failover to Muscat in 4 hours
Backup	Muscat, Oman	Maritime Operations, all hotlines, regional liaison, Dashboard	Assumes full authority if Geneva down

14. Face-Saving Metrics — Use These in Public Statements

v5.6 PARALLEL NARRATIVE ANNEX: PRE-APPROVED TALKING POINTS

Both sides commit to using these narratives or substantively equivalent language. Deviations may trigger Tier 1 dignity breach. Updated quarterly by Secretariat.

Module	Iran Can Claim	US Can Claim
60% Freeze	"NPT rights preserved; enrichment continues at 3.67%; sovereign annual review"	"Weapons-grade enrichment halted; IAEA inside Natanz and Fordow within 72 hours"
Hormuz Reopening	"200 Hormuz transits verified; Iranian ports fully operational; co-governed with Oman"	"Freedom of navigation restored; gas prices falling within 7 days"
Blockade Lift	"US naval blockade removed; trade resumes"	"Blockade lifted because Iran verifiably froze enrichment"
Stockpile Transfer	"Sovereign asset held in trust by IAEA; not surrendered to any single power"	"Entire 60% stockpile in third-country custody; verified by mass spectrometry"
Mothball Protocol	"Our centrifuge infrastructure preserved; rotors in joint custody, not destroyed"	"Enrichment capability above 3.67% physically disabled; under international seal"
Monitoring	"Smart multilateral monitoring system with external sensors and AI — not intrusive inspections"	"IAEA verification stronger than JCPOA using cutting-edge technology"
Prisoner Exchange	"Iran secured release of unjustly detained citizens through humanitarian diplomacy"	"American citizens coming home through this administration's diplomatic efforts"
Missile Moratorium	"Voluntarily suspended long-range testing as confidence-building; deterrent remains intact"	"Iran committed to no missile testing above 2,000km, verified by satellite"
Rollback System	"Sanctions relief is protected. Minor issues don't cost us everything. 75-90% preserved."	"Iran faces real financial consequences. 25-50% reduction is meaningful and proportional."
Enrichment Flexibility	"Iran chooses renewal timing (9-15 months). 24 centrifuges preserved. Medical isotope glide path."	"Cap is renewable with IAEA approval. No breakout risk from 24 idle machines."
Snapback	"No snapback. Graduated rollback with symmetry — US faces consequences too."	"Performance-based system with real teeth. Snapback replaced by smarter architecture."
Overall framework	"Comprehensive regional stability agreement advancing Iran's national interests"	"Verified arrangement constraining Iran's nuclear program and stabilizing the Gulf"

DISCIPLINE RULE: Neither side may characterize the other's commitments as "concessions," "defeat," "capitulation," or "surrender." All statements must be pre-cleared through the Communications Cell. Use the phrases above exactly as written.

NO-PRECEDENT CLAUSE (Symmetrical): "This arrangement is sui generis — specific to current Gulf circumstances. It does not create a template for future Iran policy or a model for other nuclear negotiations. Each future situation will be evaluated on its own merits. This is a practical stabilization measure, not a juridical settlement."

15. Minimum Viable Accord — Emergency Fallback

ACTIVATE MVA IF:

- Full framework rejected by either party
- Day 30 drop-dead reached without ratification
- Both parties agree full framework is too ambitious

MVA Covers Four Elements Only

Element	Iran	US	Verification
1. Ceasefire	Cessation of offensive ops	Suspend Epic Fury	Pakistan confirmation Co-Convening
2. Hormuz Reopening	IRGC withdraws small craft	Blockade lifted; vessels beyond 12nm	Omani Naval Monitor + AIS
3. Humanitarian Channel	Zero-fee, no-delay transit	OFAC general license for humanitarian	UN OCHA + WFP vessel registry
4. Enrichment Freeze	Freeze all enrichment above 60%	\$250M via Swiss escrow	IAEA confirmation within 72h

MVA Graduation to Full Accord

AUTO-GRADUATE WHEN:

- Both parties confirm objectives met
- 14 consecutive days verified compliance
- Neither party objects within 7-day review window
- Auto-graduation to Minimal Deal; from there to Medium via standard pathway

16. Framework Survival Core — What Survives Everything

THREE ELEMENTS SURVIVE UNDER ALL CIRCUMSTANCES

Element	Status	Why It Survives
Ceasefire Hotline	Active 24/7 regardless of framework status	Standalone UN humanitarian arrangement; 30-day notice required to disable
Humanitarian Access	Zero-fee, no-delay Hormuz transit for food/medicine/UN supplies + fast-track approvals	Classified as inviolable; Tier 3 breach if violated; rollback-proof
Emergency Diplomatic Channel	Backchannel through Secretariat open for crisis communication	Enables reconstitution even after formal withdrawal

What Survives If Each Track Fails

If This Fails	Survives (Auto)	Goes to Hold
Nuclear talks	Ceasefire, Hormuz, humanitarian, tranches 1-2, IAEA basic, prisoner channel	Further releases, SWIFT, Fordow advanced phases, glide path
Sanctions relief delayed	Ceasefire, Hormuz, IAEA, humanitarian, fast-track, comfort letters	Further nuclear concessions, cap renewal, micro-waivers

Maritime incidents	Ceasefire, nuclear freeze, IAEA, humanitarian, arbitration panel	Non-humanitarian transit, asset releases pending review
Israeli strike	Humanitarian, IAEA (if safe), diplomatic channels, Tel Aviv Channel	All non-humanitarian tracks; Crisis Pause Mode
Monitoring dispute	Ceasefire, Hormuz, humanitarian, tranches 1-2, grace period active	Further releases, digital verification, AI fusion

17. Reconstitution — If Full Suspension Occurs

MANDATORY: Reconstitution Conference within 30 days

Pre-defined: UN Appointee convenes. Location: Geneva (default) or Muscat (backup). Agenda pre-set. Standing conference kit maintained by Secretariat (pre-booked venue, pre-cleared visas, secure comms, translation). Conference activates within 72 hours of trigger.

Possible Outcomes

Outcome	Definition	Next Steps
Full Reconstitution	Both agree to resume all suspended elements	30-day phased resumption; 90-day review
Partial	Some resume; others remain on Hold	Graduated return; quarterly review
Modified	Substantial modifications agreed; may switch deal option or rollback model	Amendment protocol; 180-day assessment
Survival Only	Core No agreement beyond Survival Core	Core continues indefinitely; future reconstitution always possible; prisoners stay free

NO DISAPPEARANCE RULE: Neither party may refuse to attend. Attendance does not imply commitment to resume. Non-attendance = Tier 3 breach. Conference can convene without an absent party.

18. Cooling-Off & Force Majeure

Cooling-Off Default — Automatic 24-72 Hour Escalation Freeze

ACTIVATES AUTOMATICALLY WHEN:

- Attribution Level 3 or below
- Secretariat determines irreconcilable positions
- Either party requests Cooling-Off (auto-granted)
- Cyber incident on Category I/II infrastructure
- False-flag indicators triggered
- Maritime arbitration panel requests freeze

Procedure: Activates automatically (no approval needed). Secretariat notifies all parties within 2 hours. All parties freeze escalatory actions for 24h minimum. Verification teams deploy. Extends to 72h maximum. Beyond 72h requires mutual consent.

Force Majeure — Temporary Pause Without Breach

Event Type	Max Pause	Procedure
Natural disaster (earthquake, flood, hurricane, pandemic)	90 days (auto-extension available)	Triad arbitration within 7 days

Third-party military attack	90 days	FSC emergency session within 48h
Catastrophic terrorist attack (>50 fatalities)	90 days	FSC emergency session within 24h
Critical infrastructure failure	30 days	Technical Review Cell within 48h
Third-party cyber attack on verification	72 hours + recovery	Cyber Cell + analogue backup

NO PENALTY: A properly declared and FSC-certified Temporary Pause does not constitute material breach, does not trigger rollback, and does not affect compliance timelines. Days during a certified pause are excluded from all compliance timeframes.

Political Shock Absorber — Automatic Review Pause

Shock Type	Auto-Response	Max Duration
Elections, referenda	Review Pause; Tier 1/2 continue; Tier 3 to Hold	90 days (extendable)
Assassination of senior leadership	Same as above	90 days
Cabinet collapse / reshuffle	Same as above	90 days
Mass protests affecting authority	Same as above	90 days
Leadership transition	Same as above	90 days

Review Pause is NOT a material breach. Does NOT trigger breach system. Does NOT trigger rollback. Does NOT affect compliance scoring.

19. Key Numbers — Memorize These

Item	Value	Item	Value
Micro-Pilot duration	30 days (+7 Triad ext.)	Rollback Tier 1 / 2 / 3	10% / 25% / 50% (Model A)
Stage 1	14 days	Verification grace period	7-30 days (minor discrepancies)
Stage 2	30 days (+7 ext.)	Escalation Pause review	30 minutes
Stage 3	Days 45-180 (flex)	Hotline Tier 1 response	5 minutes
Day 30 Drop-Dead	Auto-MVA if unratified	Hotline Tier 2 response	30 minutes
IAEA freeze verification	Within 72 hours	Secretariat failover	4 hours
Blockade lift sync	Day 7, within 60 seconds	Stabilization Hold max	90 days
Cap renewal window	9-15 months (Iran chooses)	Technical Delay max/stage	3 per party
Glide path eligibility	24 months clean compliance	Force Majeure max	90 days
Sealed centrifuges	24 IR-6 (IAEA sealed, idle)	Political Shock max	90 days
Pre-agreed asset value	\$100 billion	Reconstitution deadline	30 days
Total tranches (365d)	\$20.5B	Comfort letter validity	90 days renewable
Bonus pool	Up to \$6B	Proxy scoring threshold (full)	80+ points
Reconstruction Fund	\$2B seed + 10% tranches	Fast-track approval	48 hours auto
Qatari liquidity facility	\$20B	Monitoring Innovation Fund	\$50M initial
Micro-waiver total cap	\$4.55B (all 5 industries)	Maritime arbitration convening	72 hours
Hormuz transit fee (tankers)	\$0.10/barrel	Regional Consultation Forum	Quarterly
Framework elements	Survival Core 3 (never pause)	Deal options	3 (Minimal/Medium/Maximal)

Rollback models	4 (A/B/C/D)	Monitoring levels	3 (Minimal/Medium/Maximal)
Enhancements total	125	Micro-waiver industries	5

NEGOTIATOR'S MANTRA

*"Three deal options. Four rollback models. Five verification channels.
Stabilization pause, not collapse. Humanitarian firewall survives everything.
If all else fails: ceasefire, humanitarian, hotline, prisoners. Then reconstitute."*
