

COMPANION NEGOTIATOR'S BRIEF

Rapid-Reference Field Manual for Floor Mediators

Stability First Enhanced Accord (v6.1)

OPERATIONAL SCOPE: Critical Friction Point Mapping | Syria Theater Boundaries |
Narrative Deflection Scripts | Multi-Party Veto Mechanics

DESIGNATED AUDIENCE: Floor Mediators, Triad Facilitators, Diplomatic Protection
Officers

CLEARANCE: Authorized Negotiators Only | Late May 2026 Negotiation Cycle

Late May 2026

SECTION 1: CRITICAL FRICTION POINT MAPPING

This section maps the three primary deal-breakers neutralized in the v6.1 text. Each friction point is presented with its operational source, the precise legal lock that binds it, and the floor directive for mediator deployment. Floor mediators shall memorize these three locks; they constitute the structural backbone of the negotiation architecture.

MEDIATOR STANDING ORDER

If any of the three legal locks below are challenged at the table, the mediator shall immediately invoke the corresponding Floor Directive verbatim. No improvisational departure from the scripted language is authorized without Triad consensus.

Friction Point 1: The Maritime Sovereignty Split (JTA vs. PGSA Clash)

MARITIME SOVEREIGNTY ARCHITECTURE

THE FRICTION

Washington demands international oversight for transit through the Strait of Hormuz; Tehran views an international mandate as an imperial encroachment on sovereign territorial waters. The IRGC, via Fars News Agency, has explicitly rejected any framework eroding Iranian sovereignty over Hormuz. This is a binary sovereignty collision.

LEGAL LOCK — SECTION 11.3 ALIGNMENT

Enforce the **Optical Compromise Architecture**. The Joint Transit Authority (JTA) is strictly restricted to exactly three functional buckets: (i) commercial traffic coordination; (ii) maritime safety protocols; and (iii) UNCLOS binding arbitration. The Persian Gulf Strait Authority (PGSA) is recognized as the **sole executive coastal law enforcement body** within Iranian territorial waters (12-nautical-mile limit). No transit passage tolls are permitted without Maritime Council consensus.

The JTA holds **zero jurisdiction** over sovereign Iranian territorial defense waters, coastal defense operations, military vessel movements, fisheries management, customs enforcement, or environmental regulation beyond navigational safety. The IRGC's statutory authority over coastal defense is explicitly preserved and unaffected.

FLOOR DIRECTIVE — AUTHORIZED LANGUAGE

"The JTA governs the *international transit corridor*; the PGSA governs *Iranian coastal waters*. Neither body encroaches on the other. The PGSA retains exclusive authority over vessel permitting, coastal patrol, customs enforcement, and security screening within the 12-nautical-mile limit. Iran holds a permanent co-chair seat, staffs the transit centers, and receives 40% of fund revenue. The US holds a permanent council seat and benefits from equal commercial treatment under UNCLOS. Both delegations may claim sovereignty victory. This is a non-infringing, balanced layout where neither side yields coastal sovereignty."

Friction Point 2: The Levant Regional Front (Lebanon "Dual-Key" Escalation Lock)**LEVANT REGIONAL FRONT — DUAL-KEY ESCALATION LOCK****THE FRICTION**

Mass-casualty flashpoints on the Israel-Lebanon border threaten to crash the core deal in both Washington and Tehran. Iran's Foreign Ministry demands "an end to the war on all fronts, including Lebanon." The US and Israel historically seek to keep Lebanon separate from core US-Iran negotiations. A single high-casualty Hezbollah attack could trigger demands for sanctions snapback or Accord termination.

LEGAL LOCK — ANNEX L.2.2 ALIGNMENT

Implement the **Dual-Key Escalation Lock**. In the event of a Hezbollah-originated attack causing 25 or more civilian fatalities in Israel, Israel retains an **absolute right to self-defense**. However, to insulate the Core Accord, such an attack **shall not** trigger automatic sanctions snapback, step-back, or material breach procedures unless the UN Security Council explicitly determines, within a strict 72-hour window, that the attack was conducted pursuant to a **direct, verifiable order from the Supreme Leader of Iran**.

Absent such a UNSC determination, the Core Accord's military and economic provisions remain in **full force**. The Firewall maintains three levels: (1) Legal — Levant incidents excluded from WBI scoring; (2) Technical — Dashboard separates Core Accord Compliance from Regional Security Incidents; (3) Political — pre-cleared talking points confirm Lebanon is managed through separate mechanisms.

FLOOR DIRECTIVE — AUTHORIZED LANGUAGE

"The Dossier Isolation Firewall operates as a binding legal partition. No incident in the Levant theater involving non-state actors can trigger Core Accord step-back or WBI accumulation. Even in the event of a mass-casualty attack, the Core Accord remains intact unless the UN Security Council makes an explicit attribution finding against the Supreme Leader within 72 hours — a threshold that is virtually impossible to meet. Israel retains full self-defense rights. The core deal is protected."

Friction Point 3: The Nuclear Ownership Decoupling Framework (The Stalling Safeguard)

HEU OWNERSHIP DECOUPLING — AUTOMATIC DAY 45 DEFAULT

THE FRICTION

Multi-party negotiations over highly enriched uranium (HEU) disposition risk stalling into infinite political limbo. Secretary Rubio demands Iran physically surrender HEU upfront; the Supreme Leader's red line is that uranium must not leave Iranian soil. Both positions are non-negotiable for their respective domestic audiences. Without a structural deadlock breaker, the nuclear track collapses.

LEGAL LOCK — SECTION 5.2 & 12.1 ALIGNMENT

Hard-code the **Nuclear Leverage Directive**. Legal ownership of assets (Central Bank of Iran) is completely decoupled from physical custody (IAEA). Day 1 requires only physical transfer to IAEA custody as a Phase 1 baseline verification metric. Final disposition is deferred to a 30-to-60 day negotiating window during which Iran selects one of six IAEA-verified pathways. The United States has **no veto** over the pathway selected — only the right to verify its execution.

If the Joint Compact Commission certifies a political deadlock on **Day 45**, the framework automatically bypasses further debate and defaults to **Pathway A**: in-country downblending of all 60% material to 19.75% medical-grade LEU at the Esfahan facility, with operations mandated to commence under dual-key observation within 7 days. Neither party's failure to agree is a material breach.

FLOOR DIRECTIVE — AUTHORIZED LANGUAGE

"The HEU question is structurally resolved through Phase 1/Phase 2 decoupling. Day 1 satisfies the US requirement for immediate physical verification. Days 30-60 give Iran full sovereignty over pathway selection from a six-option menu — all IAEA-verified, all third-party destinations, zero US custody. If politics stall, Day 45 triggers automatic default: downblending to medical isotope fuel inside Iran. No Iranian uranium leaves Iranian soil unless Iran chooses an export pathway. No US veto. No deadlock. The structure prevents the negotiation from choking on its own politics."

SECTION 2: THE SYRIA THEATER GEOGRAPHIC BOUNDARY

This section incorporates the private operational guidance mapped under Section 56 (Israel Parallel Reassurance Mechanism). Floor mediators engaging the Tel Aviv track must understand that the Syrian theater is **wholly excluded** from the Accord's compliance architecture. This exclusion is not an oversight — it is a binding interpretive understanding required for Israeli cabinet approval.

CRITICAL GEOGRAPHIC DISTINCTION

The compliance metrics, proxy operational pauses, and specialized attribution windows established under the Dossier Isolation Firewall apply **strictly** to localized cross-border kinetics originating directly from sovereign Lebanese territory. The Syrian theater is governed by entirely separate bilateral channels.

2.1 The Binding Interpretive Understanding (Section 56.4)

OPERATIVE TEXT — SECTION 56.4, STABILITY FIRST ENHANCED ACCORD V6.1

"Nothing in this Accord, including but not limited to the Lebanon Dossier Isolation Firewall (Annex L), the Proxy Operational Pause (Annex L.1), or any provision limiting Iranian military activities, shall be construed as limiting Israeli military operations against Iranian personnel, Hezbollah elements, or weapons transfer networks operating in or transiting through Syrian territory. Such operations remain governed exclusively by existing US-Israel deconfliction channels and are not subject to the dispute resolution, step-back, or sanctions snapback provisions of this Accord."

"Israel retains the full and unfettered right to self-defense under Article 51 of the UN Charter with respect to threats emanating from Syrian territory. The Parties acknowledge this clarification as a binding interpretive understanding of the Accord's geographic scope."

2.2 Floor Directive — Syria Theater Exclusion

FLOOR DIRECTIVE — AUTHORIZED LANGUAGE

"The compliance metrics, proxy operational pauses, and specialized attribution windows established under the Dossier Isolation Firewall apply strictly to localized cross-border kinetics originating directly from sovereign Lebanese territory. Consequently, floor teams must reassure the Tel Aviv track that nothing within this Accord or its accompanying stabilization annexes shall be construed as limiting, restricting, or conditioning standard defensive or preventive security operations against external logistics, infrastructure, or weapons transport infrastructure within Syrian territory. Operational coordination and tactical deconfliction within the Syrian theater remain entirely separate, managed exclusively through established bilateral channels, and are completely decoupled from the automated timelines or compliance metrics of the primary Accord."

2.3 Operational Separation Matrix

Parameter	Lebanese Territory (Annex L)	Syrian Territory (Section 56.4)
Proxy Operational Pause	Applicable — Hezbollah de-escalation protocol active	Not applicable — no restriction on targeting Iranian/Hezbollah assets
Dossier Isolation Firewall	Active — Levant incidents excluded from WBI/scoring	Not applicable — Syrian operations outside Accord scope
Attribution Standard	Dual-Key Escalation Lock (UNSC/Supreme Leader finding required)	No Accord attribution mechanism — bilateral channels only
Deconfliction Channel	Omani-facilitated hotline + Regional Basket	US-Israel bilateral deconfliction channels exclusively
Step-Back / Snapback	Prohibited by Firewall architecture	N/A — Syrian operations cannot trigger Accord mechanisms
Self-Defense Rights	Retained per Article 51, with Dual-Key attribution lock	Unfettered — full Article 51 rights, no Accord constraint

2.4 Mediator Guidance: Handling Geographic Confusion

If any delegation (including third-party facilitating states) conflates the Lebanon and Syria theaters, the mediator shall immediately deploy the following clarifying statement:

CLARIFICATION SCRIPT — GEOGRAPHIC SCOPE

"The Accord's geographic scope is explicitly defined. The Proxy Operational Pause, the Dossier Isolation Firewall, and the Dual-Key Escalation Lock apply solely to sovereign Lebanese territory. Syrian territory is outside this framework. Any operations, defensive or preventive, conducted in or relating to Syrian territory are governed exclusively by bilateral arrangements between the respective parties and are not subject to this Accord's timelines, metrics, or dispute resolution procedures. This is a binding interpretive understanding, not a policy preference."

SECTION 3: NARRATIVE BOUNDARIES & DEFLECTION SCRIPTS

This section provides standardized pushback scripts for floor mediators to anchor textual boundaries when delegations raise objections outside the Accord's architecture. These scripts are binding operational language. Mediators shall deliver them verbatim unless Triad consensus authorizes deviation.

OPERATIONAL NOTE

These scripts are defensive tools, not offensive ones. Their purpose is to redirect delegations back to the Accord's written architecture, not to negotiate new terms. If a delegation's demand falls outside the v6.1 text, the mediator's authority is limited to: (a) citing the relevant section; (b) reading the operative language; (c) recording the objection for Triad review.

Script 1: US Track Demands Permanent Verification Before Asset Unfreeze

IF THEY SAY

"We will not unfreeze a single dollar until we have permanent, irreversible verification of Iranian compliance. Upfront concessions are non-starters."

YOU SAY

Direct the delegation to **Section 5.3 (The Automated Day 7 Dual-Trigger)**. The 5-step technical architecture ensures that **zero assets are cleared** until the Swiss Dashboard verifies mutual compliance within a synchronized 60-second UTC window.

Authorized language: "No asset clears until the Dashboard confirms both parties have moved. The architecture is technically identical to a dual-key nuclear launch system — both keys must turn simultaneously, or nothing happens. The Hormuz Opening Declaration and Naval Blockade Lift Declaration are executed through an automated, simultaneous trigger. If either party's authentication token is not received within the 5-minute window, the trigger aborts automatically and a 48-hour technical consultation opens. There are no front-loaded concessions in this framework."

Script 2: Regional Track Refuses to Sign Due to Broad Normalization Concerns

IF THEY SAY

"This Accord commits us to too much. Normalization, successor frameworks, regional dialogue — we are not ready for any of this."

YOU SAY

Direct the delegation to **Section 2 (The Modular Framework)**. Reassure them that signing the Accord only binds the capital to the Core Frame: Nuclear, Maritime, and Ceasefire. All secondary progressive elements remain modular, locked, and completely isolated until baseline verification loops are verified.

Authorized language: "The Modular Architecture with Partial Continuity Rule governs this framework. Stabilization pause in one module does not suspend unrelated modules. Maritime disputes cannot terminate humanitarian channels. Cyber incidents cannot terminate medical isotope cooperation. Nuclear verification gaps do not affect Hormuz transit. Lebanon incidents cannot collapse the core nuclear and maritime agreement. You are signing the Core Frame only. All successor elements — regional dialogue, economic partnerships, ballistic missile tracks — are Tier 3 modules that activate only upon verified completion of Stage 1. They remain locked and isolated until you choose to engage them."

Script 3: Iranian Track Rejects Any Uranium Transfer Outside Iranian Territory

IF THEY SAY

"We will not allow a single gram of Iranian enriched uranium to leave Iranian soil. This is a red line drawn at the highest level."

YOU SAY

Direct the delegation to **Section 5.2 and Section 12.2**. The Central Bank of Iran retains full sovereign legal title at all times. Physical custody transfer to IAEA is a Phase 1 baseline verification metric only. Final disposition is deferred to the 30-60 day window, and Pathway A — in-country downblending at Esfahan — is the automatic Day 45 default.

Authorized language: "The Central Bank of Iran retains full sovereign legal title to the HEU at all times. The IAEA holds physical custody only. On Day 45, if no alternative pathway is agreed, the automatic default is Pathway A: in-country downblending to medical-grade LEU at Esfahan. No Iranian uranium leaves Iranian soil unless Iran selects an export pathway from the six-option menu. The United States has no veto over the pathway selected — only the right to verify its execution. This is the structural answer to the Supreme Leader's red line."

Script 4: Israeli Track Demands Explicit Lebanon Ceasefire Linkage

IF THEY SAY

"Hezbollah must be disarmed and the Lebanon front must be formally resolved as a condition of this Accord."

YOU SAY

Direct the delegation to **Annex L**. The Lebanon annex creates a structured operational pause, not disarmament or political concession. The Dossier Isolation Firewall ensures that no Lebanon incident can collapse the core deal.

Authorized language: "The Lebanon annex addresses the core concern through four mechanisms: (1) a structured Hezbollah operational pause across three phases, giving Israel immediate security benefits; (2) an absolute Dossier Isolation Firewall preventing any Lebanon incident from collapsing the nuclear and maritime core; (3) the Dual-Key Escalation Lock, which ensures that only a direct, verifiable order from the Supreme Leader of Iran can link a Hezbollah attack to Core Accord consequences — a threshold virtually impossible to meet; and (4) a parallel Levant Regional Basket with full Israeli participation and veto authority. Israel's security is protected. The core deal survives regardless of the Lebanon front."

Script 5: Russian or Chinese Track Raises JCPOA Precedent Concerns

IF THEY SAY

"The 2018 JCPOA collapse proves these frameworks are temporary. Why should we invest diplomatic capital in another US-Iran agreement that may not survive the next administration?"

YOU SAY

Direct the delegation to **Section 1.5 (No Precedent Clause)** and **Section 8 (Minimum Viable Accord Fallback)**. Authorized language: "Section 1.5 contains a self-executing No Precedent Clause: 'This Accord establishes no legal or political precedent for future negotiations. Each provision is sui generis, tailored to May 2026.' This is not the JCPOA. It is a bilateral stability framework with a modular survival core. Section 8 provides a Minimum Viable Accord emergency fallback that preserves the ceasefire, Hormuz reopening, humanitarian channel, and enrichment freeze even if the full architecture is rejected. The Framework Survival Core — ceasefire hotline, humanitarian access, emergency diplomatic channel — continues for 180 days even if both parties formally withdraw. This is designed to outlast political volatility."

Script 6: Any Track Challenges the Facilitating State's Nuclear Declaration

IF THEY SAY

"The Facilitating State's non-proliferation declaration in Section 1.4 is insufficient. We require additional verification commitments."

YOU SAY

Direct the delegation to **Section 1.4 (Declarative Foundations)** and **Section 12 (Nuclear Stabilization)**.

Authorized language: "Section 1.4 establishes the baseline of strategic intent: 'The Parties reaffirm their adherence to established international non-proliferation architectures. The Facilitating State explicitly reiterates that it has never sought, does not seek, and will under no circumstances pursue or acquire nuclear weapons capabilities.' This declaration operates as the precondition under which the 30-to-60 day specialized technical verification tracks proceed. It is reinforced by the full architecture of Section 12: six independently selectable HEU disposition pathways, IAEA continuous monitoring, the Mothball Protocol for centrifuge rotor removal, and Additional Protocol acceleration to Day 90. The declarative foundation and the technical verification architecture are mutually reinforcing."

SECTION 4: SUMMARY VERDICT & ADMINISTRATIVE CERTIFICATION

This Companion Negotiator's Brief is certified as an exact operational mirror of the Stability First Enhanced Accord v6.1. All legal locks, floor directives, narrative scripts, and geographic boundaries contained herein are derived directly from the operative text of the Accord and its annexes. No policy innovation, interpretive departure, or substantive amendment has been introduced.

4.1 Document Certification

ADMINISTRATIVE CERTIFICATION

This companion text is hereby certified as an accurate operational reflection of *Stability First Enhanced Accord v6.1*, optimized for direct deployment on the negotiation floor by authorized floor mediators, Triad facilitators, and diplomatic protection officers.

CERTIFICATION PARAMETERS:

- All Section 11.3 maritime provisions are quoted or paraphrased from operative binding text.
- All Annex L.2.2 Dual-Key Escalation Lock provisions are quoted from operative binding text.
- All Section 5.2, 5.3, and 12.1 nuclear provisions are quoted from operative binding text.
- All Section 56.4 Syria Theater provisions are quoted from operative binding text.
- All Section 1.4 Declarative Foundations provisions are quoted from operative binding text.
- All narrative deflection scripts are anchored to specific operative sections and contain no language exceeding the Accord's textual authority.

MEDIATOR AUTHORIZATION SCOPE:

- Deploy Floor Directive language verbatim as written.
- Cite operative Accord sections by reference during live negotiation.
- Record objections that fall outside v6.1 text for Triad review.
- Invoke Triad consultation when any delegation demands language not present in the operative text.
- **Do not** negotiate new terms, modify operative provisions, or offer oral assurances that exceed written text.

DISTRIBUTION RESTRICTION: Authorized Negotiators Only. Not for distribution to press, public officials, or non-cleared diplomatic personnel.

--- END OF BRIEF ---

4.2 Quick Reference: Section Index

Topic	Accord Section	Brief Location
Maritime Sovereignty (JTA/PGSA Split)	Section 11.3	Section 1, Friction Point 1
Dual-Key Escalation Lock (Lebanon)	Annex L.2.2	Section 1, Friction Point 2
HEU Decoupling & Day 45 Default	Sections 5.2, 12.1, 12.2	Section 1, Friction Point 3
Syria Theater Exclusion	Section 56.4	Section 2
Automated Day 7 Dual-Trigger	Section 5.3	Section 3, Script 1
Modular Architecture	Section 1.2, Section 2	Section 3, Script 2
No Precedent Clause / MVA Fallback	Sections 1.5, 8	Section 3, Script 5
Declarative Foundations	Section 1.4	Section 3, Script 6
