Stability First Enhanced Accord

*Version 5.9 — A Sovereignty-Preserving Regional Stability Framework for US-Iran De-escalation,
Strait of Hormuz Governance, and Nuclear Stabilization*

*v5.9 Surgical Refinements: JHTA Sovereignty Recalibration | Day 7 Dual-Trigger | HEU Phase 1
Baseline | Lebanon Dossier Isolation Firewall*

Calibrated for the Late May 2026 Negotiation Environment

Incorporating the Regional Security Charter, GCC Consultative Chamber, Israel Parallel Reassurance Mechanism,
Red Sea Security Annex, Iraq Stabilization Module, Syria Deconfliction Track, Proxy Governance Regional Baskets,
Shadow Escalation Attribution Cell, Cyber Conflict Provisions, Infrastructure Protection Rules, and Framework
Survival Core Doctrine

Late May 2026

Version 5.9 Changelog

Preamble: The Late May 2026 Moment

"The single most important achievement is the agreement that Iran will never ever have nuclear material that will create a bomb." — Omani Foreign Minister Badr Albusaidi, May 2026

As of late May 2026, the United States and the Islamic Republic of Iran stand at the closest point to a durable agreement since hostilities began on February 28, 2026. After nearly twelve weeks of military confrontation under Operation Epic Fury, both sides have returned to the negotiating table. A temporary ceasefire has been in place since April 8, 2026. Pakistan, led by Prime Minister Shehbaz Sharif, has mediated multiple rounds of talks in Islamabad.

v5.9 Critical Update — Late May 2026 Negotiation Environment

This Version 5.9 incorporates four surgical refinements calibrated to the explicit pushback from the IRGC (via Fars News Agency) and the firm sequencing demands from the Trump administration:

- 1. JHTA Sovereignty Recalibration (Section 11):** The Joint Transit Authority mandate is explicitly restricted to commercial traffic coordination, maritime safety protocols, and international dispute resolution. The PGSA is formally recognized as the sole executive coastal law enforcement body within Iranian territorial waters.
- 2. Automated Day 7 Dual-Trigger Protocol (Section 5):** The Hormuz Opening Declaration and Naval Blockade Lift Declaration are executed through an automated, simultaneous trigger on the Swiss Dashboard — preventing front-loaded concessions and guaranteeing symmetric execution within a 60-second UTC window.
- 3. HEU Custody Phase 1 Baseline (Section 12):** Legal title (Central Bank of Iran) is structurally decoupled from physical custody (IAEA-monitored facility). Physical custody transfer is a Phase 1 baseline verification metric; final disposition is deferred to the 30-60 day nuclear negotiating window.
- 4. Lebanon Dossier Isolation Firewall (Annex L):** Addresses Iran's demand for an end to the war on all fronts, including Lebanon, through a Proxy Operational Pause, a binding firewall preventing Lebanon incidents from collapsing the core deal, and a Levant Regional Basket parallel diplomatic track.

Current Hard Constraints (Late May 2026): Khamenei directive that uranium must not leave Iranian soil. US naval blockade since April 13. Hormuz transit down 40%; insurance up 300%. Israeli opposition to any Iranian enrichment. President Trump: "a few days" or "one shot." Secretary Rubio: Iran must physically surrender HEU up front. IRGC/Fars News Agency: rejecting any framework eroding Iranian Hormuz sovereignty. Iranian Foreign Ministry: the Strait's management remains "the monopoly and discretion of the Islamic Republic." Tehran views the current text as a "framework agreement" to end the war, with nuclear details deferred to a secondary 30-to-60 day window.

What Makes v5.9 Different: 147 total enhancements across 8 versions (v5.0: 10, v5.1: 42, v5.2: 10, v5.3: 17, v5.4: 20, v5.5: 6, v5.6: 3, v5.7: 4, v5.8: 7, **v5.9: 4 surgical structural refinements**). The v5.9 changes are not additive features — they are structural recalibrations designed to prevent the framework from collapsing at the signature table over four specific pushback points.

v5.8 Additions Retained: Regional Security Charter Annex (Section 54); GCC Consultative Chamber (Section 55); Israel Parallel Reassurance Mechanism / Tel Aviv Channel (Section 56); Red Sea Security Annex (Section 57); Iraq Stabilization Module (Section 58); Syria Deconfliction Track (Section 59); China Economic Coordination Lane (Section 60); India Commercial Stakeholder Observer (Section 61); Phased Missile Restraint Architecture (Section 62); Proxy Governance Regional Baskets (Section 63); Shadow Escalation Attribution Cell (Section 64); Cyber Conflict Provisions (Section 65); Infrastructure Protection Rules (Section 66); Election & Leadership Transition Continuity (Section 67); U.S. Congressional & Majles Survivability

(Section 68); Snap-Forward Rewards & Constructive Ambiguity (Section 69); Civilian Disaster-Response Framework (Section 70); Energy Market Stabilization (Section 71); Insurance-Risk Consortium (Section 72); Media & Disinformation Containment (Section 73); Framework Survival Core Doctrine (Section 74).

Executive Decision Brief

For Senior Officials — Read This Before the Full Document

The Core Exchange

Iran Delivers	US Delivers
60% Freeze: Immediate freeze of all enrichment at or above 60%. Verified by IAEA within 72 hours.	\$250M Pilot: Immediate humanitarian tranche via Swiss escrow. Non-reversible.
Hormuz Reopening: IRGC-Navy withdraws small craft from transit corridor. Synchronized with US blockade lift on Day 7 via automated dual-trigger.	Blockade Lift: US naval blockade lifted, synchronized with Hormuz reopening on Day 7 within 60-second UTC window.
Stockpile Transfer: Weapons-grade uranium to IAEA custody as Phase 1 baseline. Legal title retained by CBI. Final disposition deferred to 30-60 day nuclear window.	Sanctions Relief: Staged asset return through non-US channels.
1-Year Renewable Cap: Moratorium on enrichment above 3.67%, renewable annually for up to 12 years.	No Precedent Clause: Explicit language — this Accord creates no legal or political precedent.

v5.9 Surgical Refinements at a Glance

Refinement	Problem Solved	Location
JHTA Sovereignty Recalibration	IRGC/Fars rejection of any framework eroding sovereignty	Iranian Hormuz Section 11.3-A through 11.3-D
Automated Day 7 Dual-Trigger	Trump/Rubio demand: no front-loaded concessions; both sides move simultaneously	Section 5.3 (binding)
HEU Phase 1 Baseline Decoupling	Khamenei red line (uranium stays Iranian) vs. Rubio demand (physical verification now)	Section 12.1 (binding)
Lebanon Dossier Isolation Firewall	Baghaei demand: "end the war on all fronts including Lebanon" vs. US/Israel separation preference	Annex L (binding)

Three Deal Options: Minimal (Crisis Containment, ~\$850M, 90 days), Medium (Stability First, ~\$85B, 1-year renewable), Maximal (Comprehensive, \$100B+, 2-year initial). Default: Minimal activates by default; automatic graduation to Medium upon verified Micro-Pilot completion.

Section 1: Core Principles of the Waltz Architecture

1.1 Synchronized Reciprocal Motion

Neither side moves alone. Every Iranian commitment is matched by a corresponding US commitment on the same day. Waltz Pairing: Enrichment Freeze and Blockade Lift. Iranian Face-Saving: "NPT rights preserved; enrichment continues at 3.67%; sovereign annual review." US Face-Saving: "60% weapons-grade enrichment halted; IAEA inside Natanz and Fordow within 72 hours."

1.2 Modular Architecture with Partial Continuity Rule

Stabilization pause in one module does not suspend unrelated modules. Maritime disputes cannot terminate humanitarian channels. Cyber incidents cannot terminate medical isotope cooperation. Nuclear verification gaps do not affect Hormuz transit. **Lebanon incidents cannot collapse the core US-Iran nuclear and maritime agreement** (Annex L, Dossier Isolation Firewall). Tier 1 (Inviolable): Ceasefire hotline, humanitarian access, emergency diplomatic channel — never pause. Tier 2 (Protected): IAEA basic monitoring, Hormuz non-military transit, asset tranches 1-2 — continue during most stabilization pauses. Tier 3 (Conditional): SWIFT reconnection, bonus tranches, successor framework talks — may enter hold.

1.3 Sovereignty Preservation

This framework does not supersede any constitution. It does not create supranational authority. NPT rights are preserved. US treaty commitments to Gulf partners are preserved. The PGSA is explicitly recognized as the sole executive coastal law enforcement body within Iranian territorial waters (Section 11.3-B).

1.4 Framework Survival Core

Under all circumstances: (1) Ceasefire Hotline remains active; neither party may disable without 30 days notice to UN Secretary-General. (2) Humanitarian Access: zero-fee, no-inspection-delay corridor continues regardless of any dispute. (3) Emergency Diplomatic Channel stays open. The Survival Core is a standalone UN humanitarian arrangement that continues for 180 days even if both parties formally withdraw.

1.5 No Precedent Clause

"This Accord establishes no legal or political precedent for future negotiations. Each provision is sui generis, tailored to May 2026. No inference may be drawn from any provision regarding positions on any matter not expressly addressed herein."

1.6 Face-Saving Metrics

For each Waltz pairing, both sides receive quantifiable "wins" visible to domestic audiences. See Section 17 for complete table. v5.9 addition: Lebanon talking points for all four audiences (Section 17.3 and Annex L.4).

1.7 Political Shock Absorber

If national elections, assassination of senior leadership, cabinet collapse, mass protests, or leadership transitions occur, framework implementation automatically enters a Review Pause rather than terminating. Tier 1-2 modules continue; Tier 3 enters hold; 30 days to confirm continuation; max 90 days extendable by mutual agreement. Review Pause does NOT constitute material breach.

1.8 Cooling-Off Default

If disagreement occurs and attribution is unclear, all escalation freezes automatically for 24-72 hours. Negotiations continue. Verification teams investigate. No party may take escalatory action. Self-Defense Exception: active armed attack may be defended, but retaliatory strikes against territory are prohibited pending attribution.

Section 2: Framework Overview

Stage	Duration	Primary Goal	Closing Trigger
Stage 0: Micro-Pilot	Days -30 to -1	Build trust through limited, reversible exchanges	Both sides certify pilot objectives met
Stage 1: Opening	Days 1-14	End the war; transfer stockpile; reopen Hormuz	Blockades lifted; 200+ transits; IAEA custody verified
Stage 2: Deferred Window	Days 15-44 (+7 ext.)	Negotiate nuclear specifics; staggered cap; facility protocols	Moratorium ratified; HEU export confirmed; 50% assets returned
Stage 3: Permanent	Days 45-180	Joint Transit Authority; regional dialogue; normalization	Authority charter ratified; 85% assets returned; successor opened

Section 3: Micro-Pilot Module

Duration: 30 days (extendable to 45 by mutual consent; +7 by Triad for verified delays). Legal Status: Politically binding exchange of letters; not a treaty. Iranian Commitment: Freeze all enrichment at or above 60% at Natanz and Fordow. US Commitment: Release \$250M humanitarian tranche via Swiss escrow. Verification: IAEA confirms 60% freeze within 72 hours. Scope: Humanitarian goods only. Reversibility: Either side may terminate with 7 days written notice; no penalty. Transition: Upon successful completion, automatically transitions to Stage 1.

Section 4: Blind De-escalation & Cyber Protocol

4.1 Parallel Pause Mechanics

Domain	Iranian Pause	US Pause	Observable Effect
--------	---------------	----------	-------------------

Nuclear	No new centrifuge installation; no additional 60% enrichment	No new sanctions; no enforcement on humanitarian exemptions	IAEA reports "no observed expansion"
Maritime	IRGC-Navy reduces interdiction frequency	5th Fleet reduces close-proximity patrols	Insurance premiums stabilize
Financial	No cyber ops vs Gulf financial infrastructure	No interdiction of Iranian oil to China/India	CBI notes improved banking access
Regional	Proxy forces reduce attacks on US positions	No retaliatory strikes on proxy positions	CENTCOM reports "reduced threat"

4.2 Cyber Operations Stabilization

Category	Protected Infrastructure	Restraint	Violation Response
Category (Critical)	I Nuclear monitoring systems; banking settlement; maritime navigation	Strict non-aggression	Tier 2 breach; emergency session within 24h
Category (Important)	II Humanitarian logistics; medical supply chains; pipeline control	No offensive operations; defensive monitoring permitted	Tier 3 response; 72-hour review
Category (Commercial)	III General commercial infrastructure; telecoms; civilian aviation	No persistent disruption	Tier 1 diplomatic resolution

4.3 Proxy Force Stand-Down

Explicit mutual commitments on Hezbollah, Houthis, Iraqi militias, and Syrian proxies. Non-acknowledgment: neither party must publicly admit control. Rogue Commander Protocol requires condemnation within 24 hours and Triad cooperation. **v5.9:** Hezbollah operational pause detailed in Annex L.1.

Section 5: Stage One — The 14-Day Opening (v5.9)

Stage One produces seven irreversible operational deliverables. All timelines use target windows.

5.1 Day 1 Waltz Pairing

Iran: Transfer 60% stockpile to IAEA custody; cease offensive operations; proxy operational pause (including Hezbollah — see Annex L.1). **US:** Suspend Epic Fury; issue OFAC general license (\$250M); open 30-day nuclear window. **Verify:** IAEA DG confirmation; mass spectrometry; Pakistani convening state + Omani maritime + Swiss financial + UN procedural concurrent certification.

5.2 Day 1: v5.9 HEU Custody — Phase 1 Baseline Clarification

v5.9 Surgical Change — Decoupled Ownership and Custody

Day 1 stockpile transfer is a **Phase 1 baseline verification metric only**. The Central Bank of Iran retains full sovereign legal title to the HEU at all times. The IAEA holds physical custody only. Final disposition is deferred to the 30-60 day nuclear negotiating window (Stage 2). This satisfies Secretary Rubio's demand for immediate physical verification while respecting the Supreme Leader's red line on deferring nuclear details.

Day 1 Custody Activation: Iran's entire stockpile of uranium enriched above 3.67% is consolidated, inventoried, and placed under IAEA custody within 72 hours. Two pathways: **Pathway A (In-Iran):** Dual-lock at Esfahan or other IAEA-declared facility. IAEA holds digital keys; Iran holds perimeter keys. **Pathway B (Oman):** Physical custody transferred to IAEA facility in Muscat (NOT the United States). US may not veto either pathway as Phase 1 baseline.

5.3 Day 7: Synchronized Dual-Blockade Lift (v5.9 Automated Dual-Trigger)

v5.9 Surgical Change — Automated Simultaneous Trigger

The Hormuz Opening Declaration and Naval Blockade Lift Declaration are executed through an **automated, simultaneous trigger on the Swiss Dashboard**. This prevents front-loaded concessions, eliminates human timing errors, and ensures that neither side can claim the other moved first. The architecture is technically identical to a dual-key nuclear launch system — both keys must turn simultaneously, or nothing happens.

5.3.1 Day 7 Minute-by-Minute Choreography (UTC Timeline)

UTC Time	Iranian Action	US Action	Verification
T-24h (Day 6, 01:00)	Both parties confirm readiness through liaison offices. Logged on Dashboard. Cannot be withdrawn without 72-hour technical consultation.		
T-60 min	IRGC Commander transmits stand-by to Maritime Operations Cell	5th Fleet Commander transmits stand-by to Maritime Operations Cell	Omani facilitating state logs both signals
T-15 min	IRGC craft withdraw to 5nm; AIS broadcast	US Navy withdraws to 5nm from 12nm baseline; AIS broadcast	Lloyd's List observer confirms movements
T-1 min	Dashboard enters "Armed Standby." Both HSMs must transmit "ready" token within 5-minute window. If either token missing, trigger aborts; 48-hour technical consultation opens.		

T=0	Hormuz Opening Declaration issued; IRGC stand-down orders transmitted	Naval Blockade Lift Declaration issued; 5th Fleet stand-down orders transmitted	SIMULTANEOUS within 60-second UTC window
T+15 min	First authorized vessel commences transit	US issues Notice to Mariners: Hormuz open	Lloyd's List, AIS Global confirm
T+1h	Concurrent Airspace Stand-Down Protocol activates: Zone Alpha (Strait Corridor), Zone Beta (Coastal Buffer), Zone Gamma (Deep Airspace) — all within same 60-second window		
T+6h	IRGC issues first 6-hour compliance report	5th Fleet issues first 6-hour compliance report	Maritime Council issues first public Daily Transit Report
T+24h	24-Hour Bright-Line Period ends; standard ROE replaces heightened monitoring		

ARTICLE 5.3.2 — AUTOMATED SIMULTANEOUS TRIGGER PROTOCOL (OPERATIVE AND BINDING)

(1) T-minus-24 hours: Both parties confirm readiness through respective liaison offices. Confirmation logged on Dashboard and cannot be withdrawn without triggering 72-hour technical consultation.

(2) T-minus-1 hour: Dashboard enters "Armed Standby" mode. Both parties' HSMs must transmit "ready" authentication token within same 5-minute window. If either token not received, trigger aborts automatically and 48-hour technical consultation opens.

(3) T-zero: Dashboard executes both declarations simultaneously within 60-second UTC window. Neither declaration is active without the other. Dashboard logs exact timestamp (millisecond precision) and publishes synchronization certificate.

(4) Concurrent Airspace Stand-Down: Three-zone buffer activation choreographed through Dashboard within same 60-second window.

(5) Auto-Void Failure Mode: If either declaration fails to execute within 60-second window, both declarations are void. Neither party considered to have opened Strait or lifted blockade. Framework Survival Core remains intact. 48-hour technical grace period opens to diagnose and remediate before either party may invoke stepback.

5.3.3 Twelve-Nautical-Mile Blockade Verification (v5.4, Retained v5.9)

The synchronized Day 7 blockade lift explicitly includes withdrawal of all US naval vessels beyond the 12-nautical-mile territorial sea limit of Iran. Verified through: automatic AIS broadcast visible to Lloyd's List and Maritime Council; daily satellite confirmation via Secretariat satellite data feed; Omani naval observer confirmation from Khasab monitoring station. US vessels may not re-enter within 12nm without 24-hour advance notification to Maritime Operations Cell (emergency search-and-rescue exempted).

Section 6: Stage Two — The 30-Day Deferred Window

6.1 Staggered 1-Year Renewable Enrichment Cap

Phase	Duration	Standard	Advancement Condition
Year 1 Cap	Days 30-365	Zero enrichment above 3.67%. Higher-enrichment centrifuges under IAEA seal.	Clean IAEA certification at Year 1 review
Years 2-3	Days 1095	366- 3.67% enrichment for civilian fuel at Natanz only	Fuel supply guarantee deposited in escrow
Years 4-12	Days 4380	1096- 3.67% enrichment under full IAEA safeguards	Five-year renewal confirmed; all indicators green

6.2 Seven-Day Triad Extension

The 30-day window may be extended by up to 7 days through Triad consensus for verified good-faith delays (IAEA logistics, banking channel activation, transport weather, legislative procedural delays). Maximum one extension per Stage 2 cycle.

Section 7: Stage Three & Successor Framework

v5.2: Start with Three Core Successor Tracks, Open Others Later. Immediate (Day 180): Maritime Security Dialogue; Economic Partnership; Humanitarian Cooperation. Deferred (Day 365): Ballistics/Missiles; Proxy Governance Dialogue; Nuclear Cooperation (contingent on Additional Protocol ratification).

Section 8: Minimum Viable Accord Emergency Fallback

If the full architecture is rejected, the MVA provides a stripped-down emergency pathway covering: ceasefire, Hormuz reopening, humanitarian channel, and enrichment freeze. Activation: either party proposes MVA by written notice; facilitating state convenes within 48 hours; both parties confirm through exchange of letters; MVA activates 72 hours after confirmation. v5.4 Thirty-Day Drop-Dead: If full framework not ratified by Day 30, auto-transition to MVA state. Tier 1 and Tier 2 modules continue; Tier 3 enters pause.

Section 9: The Distributed Facilitating State Matrix

9.1 The Six-Domain Matrix

Facilitating State	Domain		Core Function
Oman	Maritime Deconfliction		Hotline management; naval encounter facilitation; Hormuz transit oversight; procedural mediation
Switzerland	Financial Verification		Escrow administration; asset transfer verification; sanctions relief monitoring; audit coordination
Qatar	Escrow and Liquidity		Emergency liquidity facility; bridging finance; humanitarian corridor support; reconstruction coordination
IAEA	Nuclear Verification		Enrichment monitoring; stockpile custody verification; facility inspection; technical assessment
UN Appointee	Procedural Mediation		Governance facilitation; dispute resolution; deadlock breaking; procedural rulings
Pakistan	Emergency Convening	Diplomatic	High-level crisis summits; leadership-level backchannel relay; emergency communication; war-risk scenarios

9.2 Mandatory Escalation Pause Recommendation (v5.2)

When a facilitating state determines escalation is imminent, it issues a Mandatory Escalation Pause Recommendation, automatically activating a 30-minute review window. Neither party may take escalatory action. Both must designate senior officials for consultation. If either party supports the pause, the escalation freeze continues.

9.3 Pakistan Co-Convening Authority (v5.4)

Pakistan shares convening authority with Oman for: emergency diplomatic summits; executive-level backchannel relay; Reconstitution Conference convening. Pakistan does not assume financial, maritime, nuclear, or procedural mediation functions.

9.4 Escrow Multi-Signature Requirement (v5.3)

All tranche releases from Swiss escrow require digital signatures from 3 of 4 designated facilitating states (Oman, Switzerland, Qatar, UN Appointee). IAEA certification is required as condition precedent. No single facilitating state may unilaterally block a tranche release.

Section 10: Economic Channels & SWIFT Reconnection

10.1 Front-Loaded Asset Release with Reconstruction Fund (v5.4)

Stage	Timing	Amount	Trigger
Micro-Pilot	Day 1	\$250M	Signature / MVA activation
Stage 1 Completion	Day 14	\$750M	Ceasefire verified; stockpile transferred; Hormuz reopened
Stage 2 Completion	Day 44	\$1.5B	Moratorium ratified; HEU export confirmed; 50% assets
Stage 3 Midpoint	Day 120	\$3B	Transit Authority operational; Fordow Phase B; continuous monitoring
Stage 3 Completion	Day 180	\$5B	85% assets returned; successor framework opened
Year 1 Certification	Day 365	\$10B	Full Year 1 clean certification + Additional Protocol ratified

International Gulf Reconstruction Fund: 10% of each asset release tranche (capped at \$5B total). Seeded from released funds + Qatari bridge financing (\$2B at Day 1) + international donors. Administered by Swiss Financial Cell. Explicitly NOT "war reparations" — it is a Regional Stability Reconstruction Credit Facility.

10.2 SWIFT Reconnection with IAEA Milestone Linkage (v5.3)

SWIFT reconnection tiers are tied directly to specific IAEA verification reports, not to political events or bilateral negotiations. Phase 0 (Pre-SWIFT, Days 1-30): IAEA confirms 60% freeze within 72 hours. Phase 1 (Restricted, Days 30-60): 5 Iranian banks; MT 103/202 only; IAEA confirms moratorium framework declared. Phase 2 (Expanded, Days 60-120): All clean-record banks; MT 700/760 permitted; IAEA confirms continuous monitoring, no diversion. Phase 3 (Full, Day 120+): Full membership; all message types; IAEA confirms Year 1 clean certification. SWIFT Remediation Fuse: If IAEA identifies Tier 2 concern, SWIFT phase holds for 14 days as remediation window. Resolved: phase advances. Unresolved: SWIFT rolls back exactly one tier.

Section 11: Maritime Architecture & Hormuz Governance (v5.9)

11.1 Governance Options

Option	Description	Timeline
Provisional Council	Provisional Joint Maritime Council with US and Iran as voting members, rotating GCC chair, EU/PRC observers	7-14 days
Council-Supervised Dual-Track	Council with Omani-Qatari-Swiss supervisory oversight; political decision-making separate from technical operations	14-21 days
Observer Mission	UN maritime observer mission	21-30 days

11.2 Simplified Command Architecture (v5.2)

Level	Iranian Chain	US Chain	Neutral Oversight	Response Time
Field	IRGC-Navy Duty Officer	5th Fleet Duty Officer	Omani Naval Monitor (Khasab)	5-minute hotline
Strategic	IRGC Deputy Chief / SNSC Secretary / Foreign Minister	NAVCENT Commander / CNO / Secretary of State	Omani Foreign Ministry; UN Appointee; Facilitating State Council	30-minute secure video
Executive	SNSC Secretary / Supreme Leader / National Security Advisor	Secretary of State / President / NSA	Pakistan (emergency convening); UN Secretary-General	6-hour consultation

11.3 v5.9 JTA Sovereignty Recalibration

v5.9 Surgical Change — JTA Mandate Restriction & PGSA Recognition

The Joint Transit Authority's mandate is **explicitly restricted to three functions only**: (i) commercial traffic coordination; (ii) maritime safety protocols; and (iii) international dispute resolution. The PGSA is **formally recognized as the sole executive coastal law enforcement body within Iranian territorial waters** — addressing IRGC/Fars News Agency pushback while keeping multilateral transit guarantees airtight for Washington.

ARTICLE 11.3-A — JTA MANDATE RESTRICTION (OPERATIVE AND BINDING)

The Joint Transit Authority's mandate is **explicitly restricted to three functions only**: (i) **commercial traffic coordination** — managing the flow of civilian commercial vessels through the Strait of Hormuz; (ii) **maritime safety protocols** — navigational aids, collision avoidance, emergency response, and search-and-rescue coordination; and (iii) **international dispute resolution** — addressing transit disputes between commercial vessels and littoral states through binding arbitration under UNCLOS.

The JTA holds **zero jurisdiction** over sovereign Iranian or regional territorial defense waters, coastal defense operations, military vessel movements, fisheries management, customs enforcement, or environmental regulation beyond navigational safety.

ARTICLE 11.3-B — PGSA AS SOLE EXECUTIVE COASTAL LAW ENFORCEMENT BODY (OPERATIVE AND BINDING)

The Persian Gulf Strait Authority (PGSA) is **explicitly recognized as the sole executive coastal law enforcement body within Iranian territorial waters** (12-nautical-mile limit). This recognition is formal, unequivocal, and operates as a binding interpretive principle of the JTA Charter. Within Iranian territorial waters, the PGSA retains exclusive authority over: vessel permitting and documentation review; coastal patrol and interdiction; customs and immigration enforcement; security screening of suspect vessels; and coordination with the IRGC-Navy on maritime security matters.

The JTA may not override, supersede, or contradict PGSA enforcement actions within Iranian territorial waters. The IRGC's statutory authority over coastal defense, territorial security, and military operations in the Strait is explicitly preserved and unaffected by the JTA Charter. Any JTA action that could be construed as affecting IRGC or PGSA operations requires explicit Iranian concurrence through the Iranian co-chair.

ARTICLE 11.3-C — PGSA-JTA INTERFACE PROTOCOL (OPERATIVE AND BINDING)

The PGSA is formally integrated into the JTA as Iran's designated operational implementation body for transit coordination. All PGSA transit permits bear dual branding: PGSA-Iran (domestic Iranian designation) and JTA-authorized (international designation). The PGSA retains its full statutory identity as Iran's sovereign operational body. Iranian personnel staff the transit coordination centers. Iran receives 40% of JTA maintenance fund revenue.

11.4 Optical Compromise Architecture (v5.9)

This structure allows President Trump to state that "the Strait is open to international commerce under multilateral governance" while allowing Iranian officials to state that "the PGSA remains the sole authority for Hormuz transit within our territorial waters, and the JTA's role is limited to commercial coordination." Both statements are factually accurate under the Charter. The JTA governs the international transit corridor; the PGSA governs Iranian coastal waters. Neither body's authority encroaches on the other.

US Narrative: "No more unilateral Iranian tolling. The Strait is governed as an open international waterway under UNCLOS. All commercial vessels receive equal treatment. The US holds a permanent seat on the governing council." **Iranian Narrative:** "The PGSA remains Iran's statutory authority for Hormuz transit. We hold a permanent co-chair seat. Our personnel staff the transit centers. We receive 40% of fund revenue. The IRGC's coastal defense authority is explicitly untouched."

11.5 Distance Protocols and Rules of Engagement

Phase	Days	IRGC Stand-Off from CTC	US/Coalition Stand-Off from Iranian 12nm Baseline
Learning Period	D+1 to D+14	3 nm (expanding to 5 nm by D+8)	3 nm (expanding to 5 nm by D+8)
Operational Period	D+15 onward	5 nm from CTC outer edge	5 nm from Iranian 12 nm baseline
Elevated Posture (Tier 2)	JCC-declared	8 nm from CTC outer edge	8 nm from Iranian 12 nm baseline

11.6 Hormuz Environmental Transit Fee (v5.4)

Vessel Type	Fee	Collection Method
Oil tankers (>50,000 DWT)	\$0.10 per barrel of cargo	Automated via AIS + cargo declaration
Container vessels	\$500 per transit	Pre-paid through Maritime Council online portal
General cargo / bulk carriers	\$250 per transit	Pre-paid through Maritime Council online portal
WFP / humanitarian vessels	\$0 (exempt)	Automated exemption via UN registration
Military / naval vessels	\$0 (exempt)	Flag state declaration

Revenue Distribution: 40% Iranian Maritime Environmental Protection Fund; 30% Omani transit infrastructure; 20% International Maritime Safety Fund; 10% Secretariat operational costs. Rate Ceiling: may not be increased without Maritime Council consensus (including US voting rights).

11(b) IAEA Forward Deployment Teams (v5.3)

Two permanent IAEA Forward Deployment Teams stationed outside Iran: Team Alpha (Muscat, Oman — 6 inspectors + 2 analysts + 2 logistics + 2 security; 12-hour deployment to any Iranian facility) and Team Bravo (Vienna, Austria — same composition; 18-hour deployment). Rapid Deployment Triggers: Secretariat request; IAEA DG emergency authorization; 4/5 Facilitating State Council request; automatic activation upon enrichment anomaly detection. Equipment: portable mass spectrometers, environmental sampling kits, radiation detectors, tamper-evident seals, secure communications gear, satellite uplink terminals.

11(b) Satellite Data Feed Mandate (v5.3)

The Secretariat receives automated daily satellite data feeds covering: all declared Iranian nuclear facilities; the Strait of Hormuz transit corridor; Hormuz stand-off zones. Data includes AIS (maritime vessels), SAR (all-weather monitoring), and EO (high-resolution imagery). Satellite data is archived and made available to both parties and all facilitating states upon request. Classified as Tier 1 (Inviolable) — continues to flow regardless of framework status.

Section 12: Nuclear Stabilization (v5.9)

Six independently selectable pathways for verified neutralization of Iran's 60% HEU stockpile. **v5.9**

Clarification: Physical custody transfer to IAEA is a Phase 1 baseline verification metric (Day 1-14). Final disposition selection from the six-pathway menu occurs in the 30-60 day nuclear negotiating window (Stage 2). The United States shall have no veto over the pathway selected — only the right to verify its execution.

v5.9 Surgical Change — Phase 1/Phase 2 Structural Decoupling

Day 1-14 requires only the physical transfer of HEU to IAEA custody and verification of quantity and enrichment level. This satisfies the US requirement for immediate physical verification. Days 30-60 address the final disposition of the HEU through a dedicated nuclear negotiating track. Iran's red line — that nuclear details are deferred to a secondary negotiating window — is fully respected.

12.1 The Six Pathways

Pathway	Description	Destination	Timeline
A: In-Place Downblending	Stockpile converted to medical-grade LEU (19.75%) at Esfahan	Medical isotope production in Iran	142 days
B: HEU Export to Oman	Stockpile transported under IAEA custody to Oman storage	IAEA facility, Oman (NOT US territory)	14 days
C: Kazakhstan LEU Bank	Downblended in Iran, transferred to IAEA LEU Bank in Oskemen	IAEA LEU Bank, Kazakhstan	75 days
D: Russian Federation Custody	Transfer to Rosatom storage under IAEA safeguards	Rosatom facility, Russian Federation	60-90 days
E: Bushehr Fuel Conversion	Downblended to reactor-grade LEU, fabricated into fuel assemblies	Bushehr reactor fuel supply	180 days
F: Hybrid Modular	Stockpile divided into batches, each through different pathways	Multiple third-party destinations	Concurrent

12.2 v5.9 Legal Title Structure (Operative and Binding)

ARTICLE 12.2 — DECOUPLED OWNERSHIP AND CUSTODY

While the HEU is under IAEA physical custody, the **legal title and ownership remain vested with the Central Bank of Iran** as sovereign trustee. The Custody Services Agreement specifies that: (a) Iran retains full legal title throughout the custody period; (b) the IAEA may not transfer, sell, or dispose of the material without written consent of the Central Bank of Iran; (c) the material is held for the purpose of baseline verification and civilian conversion negotiation, not for destruction or permanent removal from Iranian ownership; (d) the final disposition is subject to the outcome of the 30-60 day nuclear negotiating window; (e) if the Accord is terminated by mutual agreement, the material is returned to Iran under IAEA supervision.

No Hidden US Custody Clause (Self-Executing and Non-Waivable): At no stage may the United States receive, store, transport, or exercise operational control over the Iranian enriched-uranium stockpile. All custody remains with the IAEA. US personnel shall not be present at any consolidation, packaging, transit, or receipt operation.

12.3 Third-Party Destination Guarantee (v5.4, Retained v5.9)

Under no circumstances may Iran's enriched uranium stockpile be transferred to United States territory, custody, or control. All six pathways specify third-party destinations: Oman, Kazakhstan, Russia, or in-place conversion within Iran. This is a binding, non-negotiable feature. The US does not object to any of the six pathways as long as the final destination is a third country with IAEA safeguards. Iran selects the pathway(s). The IAEA verifies the transfer chain of custody.

12.4 The Mothball Protocol: Centrifuge Rotor Removal (v5.4)

All centrifuge rotors and bellows at facilities producing enrichment above 3.67% are removed, sealed in IAEA-tamper-evident containers with unique serial numbers, and stored in a UN-monitored facility within Iran. Dual-key custody: one key held by Iran, one by IAEA. Reactivation requires: annual review confirming non-renewal of enrichment cap; Facilitating State Council consensus; 90-day notice period. Reactivation without these conditions constitutes Tier 3 breach.

12.5 Additional Protocol Acceleration (v5.4)

Implementation of the IAEA Additional Protocol accelerated from Year 1 to Day 90. Days 1-30: Iran submits AP declaration. Days 31-60: IAEA begins complementary access inspections. Days 61-90: Full AP implementation including short-notice inspections (24-hour notice). Contingent on: Stage 1 closing successfully; IAEA confirming 60% freeze sustained; HEU export plan confirmed.

Section 13: Fordow Joint Venture & Funding

The Fordow facility converts to the International Medical Isotope Research Center. Total funding: \$175M + \$40M Iranian in-kind = \$215M over 48 months. Sources: Switzerland \$25M (seed), Oman \$15M, Qatar \$20M, WHO/IAEA \$30M, EU \$25M, Iran \$40M in-kind (facility, workforce), Private Sector \$20M. Designated WHO Center of Excellence.

Section 14: Rebranding & Crisis Communications

Remove terms like "deal," "rollback," or "concessions." Washington: "regional stability mechanism." Tehran: "sovereignty-protecting de-escalation tool." Neither narrative contradicts the other. Unauthorized Leak: 4-hour "we do not comment on draft documents" response. Contradictory Statement: 24-hour senior official clarification. Viral Misinformation: 6-hour pre-approved fact sheets. Inflammatory Speech: 72-hour backchannel through Council; cooling period.

Section 15: Goldilocks Crisis Protocol

The framework is most likely adopted during a crisis that scares both sides but doesn't collapse diplomacy. Deployable modules: Insurance spike (Micro-Pilot + Day-7 synchronized blockade lift, 48 hours). Near-miss encounter (Blind De-escalation + Hotline full activation, 24 hours). Leadership transition (Micro-Pilot as "new initiative," 7-14 days). Energy market collapse (Full Stage 1 pre-authorized for emergency deployment, 72 hours).

Section 16: Verification & Three-Tier Breach System

Breach Type	WBI Points	Trigger
Nuclear breach (enrichment above 3.67%)	4 points	IAEA Director General certification
Fissile material diversion	8 points	Automatic Enhanced Review; no WBI ladder required
Cross-border attack (attributed)	3 points	Full attribution investigation process
Proxy military weapons transfer	2 points	SWIFT + satellite verified
Maritime chokepoint incident	1 point	Maritime Council within 4 hours
Verification obstruction	2 points	Per incident
WBI 5.0 threshold	Enhanced Review Protocol activated	
WBI 8.0 threshold	Compliance Restoration consideration; Rapid Panel convenes	
WBI 12.0+ threshold	Full compliance restoration available; treaty suspension vote	

Section 17: Face-Saving Metrics & Domestic Wins (v5.9 Updated)

Iranian Domestic Narrative	US Domestic Narrative
"We ended the war" — Permanent bilateral ceasefire	"Hormuz is open" — 200+ transits in 14 days
"Blockade lifted" — US naval blockade removed	"Weapons-grade uranium secured" — Entire stockpile in IAEA custody
"Assets returning" — \$250M immediate; 50% by Day 44; 85% by Day 180	"Enrichment capped and verified" — 1-year renewable cap; IAEA continuous monitoring
"Sovereignty preserved" — No precedent clause; NPT rights intact; annual review; PGSA recognized as sole coastal enforcement	"No bases lost" — All US Gulf bases remain
"We moved as equals" — Every US concession matched simultaneously	"Congressional oversight" — Tranches 3+ subject to 30-day Congressional review
v5.9: "War ended on all fronts" — Lebanon addressed through Regional Basket; Iran monitors as observer	v5.9: "Lebanon is a separate track" — Full Israeli participation; Dossier Isolation Firewall protects core deal

17.1 v5.9 Lebanon Talking Points

US: "The core US-Iran agreement addresses nuclear proliferation and freedom of navigation. Lebanon is a separate file managed through a dedicated regional basket with full Israeli participation. We are not trading Hormuz for Hezbollah. The Dossier Isolation Firewall ensures that what happens in Lebanon cannot affect the nuclear deal." **Iran:** "The framework ends the war on all fronts. Through the Levant Regional Basket, Iran ensures our allies in Lebanon are not abandoned." **Israel:** "Israel's security is not negotiable. The Levant Regional Basket is a separate diplomatic process in which Israel has full participation and veto authority." **Lebanon:** "Lebanon welcomes the Levant Regional Basket as a pathway to stability. We are not a proxy battlefield."

Section 18: Safeguards, Force Majeure & No Precedent

Force Majeure: earthquake, major cyberattack, health pandemic — automatic 14-day Review Pause; obligations suspended during pause; parties cooperate to restore verification capacity. No Precedent Clause: This Accord establishes no legal or political precedent for future negotiations. Each provision is sui generis, tailored to May 2026. No inference may be drawn from any provision regarding positions on any matter not expressly addressed herein.

Section 19: Spoiler & Rogue Actor Management

Third-Party Disruption Protocol (B-3): If a third-party attack is designed to force bilateral retaliation: 72-hour attribution panel; 10-day investigation; default non-attribution; zero penalties for either party. **Compact-Adverse Actor Protocol (B-4):** If domestic hawkish factions sabotage the Compact: investigation + discipline; WBI penalties apply to the state. **Loophole Prevention (B-5):** Living Loophole Register patches within one Crescent Cycle. **Mass Casualty / WMD (B-7):** JCC Emergency Session within 4 hours; 14-day Crisis Lock.

Section 20: Attribution Uncertainty

When an incident occurs and attribution is unclear: 72-hour forensic assessment; blame-free investigation; Cooling-Off Default activates automatically; no penalty for either party during investigation. Rogue Commander Exception: Commander declares independence; state has 24 hours to publicly renounce; renunciation prevents WBI.

Section 21: Cyber Operations Stabilization

Category I (Critical): Nuclear monitoring systems, banking settlement, maritime navigation — strict non-aggression; Tier 2 breach; emergency session within 24h. Category II (Important): Humanitarian logistics, medical supply chains, pipeline control — no offensive operations; Tier 3 response; 72-hour review. Category III (Commercial): General commercial infrastructure, telecoms, civilian aviation — no persistent disruption; Tier 1 diplomatic resolution. Incident Notification: Category I/II incidents must be reported to Coordination Secretariat within 6 hours. Failure to report is a technical delay, not a breach.

Section 22: Crisis Management

Direct US-Iran secure crisis line established through Coordination Secretariat. Omani officer serves as duty officer. Iran receives hotline number 24 hours before Day 1. Usage restricted to: imminent military incident; misunderstanding requiring clarification; verification anomaly requiring immediate discussion. Emergency Consultation: 15-minute response required. Escalation Inhibition: Neither side may escalate militarily while crisis line is active. Humanitarian Override: If humanitarian emergency confirmed by ICRC, both parties may suspend any provision for 72 hours to allow relief. Override requires: ICRC confirmation; Secretariat concurrence; notification within 2 hours; public transparency within 12 hours.

Section 33: Three-Tier Breach System (Detailed)

Tier 1 — Technical Dispute (De Minimis)

Telemetry signature: <0.5% above enrichment ceiling; ≤2 un-mothballed rotors; ≤48h reporting delay. Response: Engineering resolution within 14 days; no rollback; confidential handling; JIG technical assistance; quiet compliance corrections.

Tier 2 — Material Disruption

Telemetry signature: >0.5% above ceiling; >2 rotors; >72h IAEA obstruction. Response: 25% benefit reduction; 30-day remediation; earn-back via compliance; humanitarian tranches protected; SWIFT phase holds (14-day fuse active); full restore on IAEA clean certification within 14 days.

Tier 3 — Deliberate Hostile Violation

Telemetry signature: Nuclear weapons activity; fissile diversion; IAEA attack. Response: 50% reduction; 90-day remediation; full earn-back requires 90-day sustained compliance + IAEA clean certification + JIG majority confirmation.

Section 35: Reconstitution Mechanism

If the framework enters full suspension, all parties attend a Reconstitution Conference within 30 days, convened by Pakistan and the UN Appointee. Root causes reviewed. Modifications proposed. Conditions for graduated restoration defined. No party may unilaterally block reconstitution. The Framework Survival Core (ceasefire hotline, humanitarian access, emergency diplomatic channel) continues for 180 days during reconstitution efforts.

Section 36: Political Shock Absorber

Framework implementation enters automatic Review Pause (not termination) upon: national elections or referenda; assassination of senior leadership; cabinet collapse; mass protests; leadership transitions (Supreme Leader, President, Foreign Minister); significant military incident affecting domestic politics. During Review Pause: Tier 1-2 modules continue; Tier 3 enters hold; Secretariat issues Review Pause Certificate within 48 hours; 30 days to confirm continuation. Max 90 days, extendable by mutual agreement. Does NOT constitute material breach. Does NOT trigger the three-tier system.

Section 38: Rollback and Step-Down Architecture

Step-Down Tier 1: No benefit reduction. 14-day resolution. JIG technical assistance. Quiet compliance corrections confidential. **Step-Down Tier 2:** 25% reduction in non-humanitarian benefits. Humanitarian tranches protected. SWIFT phase holds (14-day fuse active). 30-day remediation. Full restore on IAEA clean certification within 14 days. **Step-Down Tier 3:** 50% reduction in non-humanitarian benefits. Tier 3 modules enter hold. 90-day remediation. Full earn-back requires: 90-day sustained compliance + IAEA clean certification + JIG majority confirmation.

Section 40: Minimal, Medium, and Maximal Deal Options

Option	Nuclear	Monitoring	Economic	Duration
Minimal (Crisis Containment)	60% freeze; no stockpile transfer	Minimal (cameras + OLEM)	~\$850M limited oil	+ 90 days, renewable
Medium (Stability First)	3.67% cap; stockpile to IAEA; Mothball Protocol	Medium (UGES + sensors + ICS)	~\$85B + SWIFT	1-year renewable
Maximal (Comprehensive)	3.67% cap; AI fusion; missile test moratorium	Maximal (AI + digital twin + drones)	\$100B+ trade	+ full 2-year initial

Default: Minimal activates by default; automatic graduation to Medium upon verified Micro-Pilot completion. **v5.9:** Medium option includes all four surgical refinements (JTA Sovereignty Recalibration, Day 7 Dual-Trigger, HEU Phase 1 Baseline, Lebanon Firewall). Minimal option includes Day 7 Dual-Trigger and HEU Phase 1 Baseline only (maritime and nuclear core). Maximal option includes all four plus missile CBDE, proxy governance dialogue, and Additional Protocol cooperation.

Section 54: Regional Security Charter Annex (v5.8)

After Stage 1 is verified and the Joint Transit Authority is operational (Day 120+), a Regional Security Charter is opened for signature by all parties. The Charter does not supersede bilateral security commitments or alliance obligations. It creates a Regional Security Council with rotating membership: permanent seats for Iran, United States, Saudi Arabia, Iraq, Oman; rotating seats for UAE, Kuwait, Qatar, Bahrain, Lebanon (one seat, rotating every 18 months). The Council addresses: maritime security beyond Hormuz; counter-terrorism intelligence sharing (sanitized); regional arms control confidence-building measures; cyber incident coordination; environmental security (oil spills, maritime pollution). Council decisions require 5 of 6 permanent members (Iran + US = de facto joint veto). Council decisions are politically binding, not legally binding. Charter activation: minimum 4 signatories including Iran and United States. Charter entry into force: 30 days after signature.

Section 55: GCC Consultative Chamber (v5.8)

A GCC Consultative Chamber is established as a permanent advisory body to the Joint Transit Authority. The Chamber has no voting authority but provides: quarterly threat assessments; economic impact analysis of maritime disruption; recommendations on transit corridor security; liaison with GCC joint military command. Chamber composition: one senior official from each GCC member state (Saudi Arabia, UAE, Kuwait, Qatar, Bahrain, Oman) plus one Iranian observer and one US observer. Chamber meetings are held in Riyadh (quarterly) with rotating chairmanship. Chamber reports are advisory — the JTA Council may accept, modify, or reject recommendations without explanation. The Chamber serves as a confidence-building mechanism between Iran and GCC states, not as a decision-making body.

Section 56: Israel Parallel Reassurance Mechanism (v5.8)

Israel is not a party to this Accord but has legitimate security interests affected by its provisions. The Israel Parallel Reassurance Mechanism addresses these interests without requiring Israeli participation in the main framework. The Tel Aviv Channel: direct, secure communications between US negotiating team and Israeli national security leadership; daily updates during Stage 1; weekly briefings during Stages 2-3. Israeli Red Lines: any Iranian enrichment above 3.67%; Iranian ballistic missile deployment to Syria or Lebanon; Iranian naval bases on Mediterranean coast; Iranian transfer of advanced anti-ship missiles to proxies. Any of these red lines triggers automatic US consultation with Israel within 4 hours. Israeli Intolerance Threshold: If Israel determines that the Accord is enabling Iranian military buildup, Israel may request emergency consultation. The US has 24 hours to respond. Israeli Military Freedom of Action: This Accord does not constrain Israeli military operations against Iranian targets in Syria, Lebanon, or elsewhere. Israel retains full sovereign right to self-defense. Israeli intelligence on Iranian compliance may be submitted to the Coordination Secretariat and will be treated as credible but requiring independent verification.

Section 57: Red Sea Security Annex (v5.8)

The Red Sea Security Annex extends maritime security coordination from Hormuz to the Bab el-Mandeb Strait. It is activated by JTA Council decision after Day 180. Coverage: maritime transit corridors from Hormuz through Gulf of Aden to Bab el-Mandeb; port security at Jeddah, Aqaba, Eilat, Djibouti; coordination with existing multinational naval forces (CTF-150, CTF-151, EU NAVFOR). Iranian participation: Iran may deploy naval liaison officers to the JTA Maritime Coordination Center in Muscat; Iran may not deploy naval vessels to the Red Sea without 30-day advance notification to all parties; Iranian vessels in the Red Sea are subject to the same transit rules as all other vessels. Yemeni Houthis: The Red Sea Annex does not alter the status of Houthi forces; Houthi attacks on maritime traffic remain prohibited; any Houthi attack triggers the same response mechanisms as any other maritime security threat.

Section 58: Iraq Stabilization Module (v5.8)

Iraq is a critical transit state and a site of intense Iran-US proxy competition. The Iraq Stabilization Module addresses both dimensions. Iraqi Government Role: Iraq is a facilitating state with observer status in the JTA Council; Iraqi ports (Umm Qasr, Khor al-Zubair) are designated as alternative transit points if Hormuz is disrupted; Iraq receives 5% of JTA transit fee revenue for port infrastructure development. Proxy Militia Provisions: All Iran-aligned militias in Iraq must transition to political parties or integrate into Iraqi Security Forces within 18 months; weapons transfers from Iran to Iraqi militias are prohibited (verification through border monitoring + intelligence sharing); any militia attack on US forces triggers the standard attribution and response protocol. US Force Posture: US forces in Iraq transition from combat to advisory role within 90 days of Stage 1 completion; US force levels decline to 2,500 within 180 days; remaining US forces are housed at Ain al-Asad and Erbil only.

Section 59: Syria Deconfliction Track (v5.8)

The Syria Deconfliction Track prevents the US-Iran conflict from reigniting through Syrian proxy warfare. It is activated by JTA Council decision after Day 90. Deconfliction Protocols: Israeli strikes on Iranian targets in Syria are not addressed by this Accord — Israel retains full freedom of action; Iran commits to no new military bases in Syria beyond existing facilities; Iran commits to no transfer of advanced weapons systems (precision-guided missiles, air defense) to Syria; US and Russia maintain existing deconfliction mechanisms over Syrian airspace. Verification: satellite monitoring of known Iranian facilities in Syria; intelligence sharing through existing channels; monthly reports to JTA Council.

Section 60: China Economic Coordination Lane (v5.8)

China is the largest purchaser of Iranian oil and a significant investor in regional infrastructure. The China Economic Coordination Lane addresses China's interests without requiring Chinese participation in the political framework. Oil Purchases: Chinese purchases of Iranian oil are not subject to US sanctions after Stage 1 completion; Chinese banks may process Iranian oil payments through the Qatari riyal bridge facility; Chinese oil purchases are reported to the Coordination Secretariat monthly. Infrastructure Investment: Chinese Belt and Road investments in Iran are not restricted by this Accord; Chinese investments in port infrastructure (Chabahar, Jask) are subject to JTA maritime safety standards; Chinese investments in Iranian rail and energy are not subject to US sanctions after Stage 2 completion. Nuclear Cooperation: Chinese civil nuclear cooperation with Iran (Arak reactor) continues under existing IAEA safeguards; Chinese technology transfers must be reported to the IAEA.

Section 61: India Commercial Stakeholder Observer (v5.8)

India is a major energy importer and has significant commercial interests in Iran (Chabahar port, INSTEX alternative). India is designated as a Commercial Stakeholder Observer with the following rights: attendance at JTA Council meetings as a non-voting observer; receipt of all public JTA reports and transit data; participation in the Insurance-Risk Consortium as a premium-paying member; submission of commercial grievances to the JTA dispute resolution mechanism. India has no voting rights, no veto authority, and no role in nuclear verification or sanctions relief.

Section 62: Phased Missile Restraint Architecture (v5.8)

The Phased Missile Restraint Architecture addresses Iranian ballistic and cruise missile capabilities through a graduated approach that does not require immediate dismantlement. Phase 1 (Days 1-180): No new ballistic missile tests; no transfer of missiles to proxies; declaration of current missile inventory to JTA Council (confidential). Phase 2 (Days 180-365): Range cap of 2,000 km on new missiles; no development of missiles capable of carrying nuclear warheads; technical consultations on missile verification. Phase 3 (Year 2+): Regional Missile Transparency Registry — all missiles above 500 km range registered; notification 72 hours before test launches; annual exchange of missile data. This architecture is voluntary at each phase — Iran may pause at any phase without triggering WBI penalties. However, progression to each new phase unlocks corresponding economic benefits.

Section 63: Proxy Governance Regional Baskets (v5.8)

The Proxy Governance Regional Baskets provide structured, geographically focused mechanisms for managing Iran's relationships with non-state actors in Lebanon, Yemen, Syria, and Iraq. Lebanon Basket: Hezbollah political wing recognized as legitimate Lebanese political actor; military wing subject to operational constraints (see Annex L); economic reintegration of southern Lebanon. Yemen Basket: Houthi political wing recognized as legitimate Yemeni political actor; military operations subject to ceasefire; humanitarian access to all Yemeni territory. Syria Basket: Iranian military advisors limited to non-combat roles; no new Iranian military bases; cooperation on counter-terrorism against ISIS and AQAP. Iraq Basket: Militia integration into Iraqi Security Forces (Section 58); border security cooperation; intelligence sharing on ISIS. Each basket operates independently — progress in one basket is not conditional on progress in others.

Section 64: Shadow Escalation Attribution Cell (SEAC) (v5.8)

The SEAC is a confidential, technical body that investigates incidents where attribution is disputed. SEAC Composition: 5 technical experts (nuclear forensics, cyber forensics, maritime forensics, signals intelligence, chemical/biological forensics); appointed by the Facilitating State Council; serve 2-year terms; may not be citizens of Iran, the United States, or Israel. SEAC Mandate: investigate incidents where standard attribution is inconclusive; provide technically grounded assessments within 10 days; assessments are confidential — provided only to the JTA Council and the parties directly involved; SEAC does not make policy recommendations. SEAC Triggers: any party requests SEAC investigation; JTA Council determines standard attribution is insufficient; nuclear anomaly detected that cannot be explained by standard monitoring. SEAC Protections: SEAC members have diplomatic immunity; SEAC facilities are inviolable; SEAC communications are encrypted and classified.

Section 65: Cyber Conflict Provisions (v5.8)

Building on Section 21 (Cyber Operations Stabilization), the Cyber Conflict Provisions establish three categories of protected infrastructure and response protocols. Category I (Critical — Nuclear, Banking, Maritime): Strict non-aggression; offensive cyber operations prohibited; defensive monitoring permitted; any violation = Tier 2 breach. Category II (Important — Humanitarian, Medical, Pipeline): No offensive operations; defensive monitoring and disruption of incoming attacks permitted; violations = Tier 3 response. Category III (Commercial — General infrastructure, Telecoms, Aviation): No persistent disruption; short-term disruption for defensive purposes permitted; violations = Tier 1 diplomatic resolution. Cyber Escalation Ladder: Level 1 — reconnaissance and scanning (no response required); Level 2 — malware deployment on non-critical systems (diplomatic protest); Level 3 — disruption of critical systems (Tier 2 breach); Level 4 — destruction of critical systems or loss of life (Tier 3 breach + emergency session).

Section 66: Infrastructure Protection Rules (v5.8)

Five categories of civilian infrastructure are designated as protected under all circumstances: (1) Energy — power generation, transmission, distribution; oil and gas production and transport. (2) Water — desalination plants, water treatment facilities, distribution networks. (3) Healthcare — hospitals, clinics, pharmaceutical manufacturing, medical supply chains. (4) Telecommunications — internet infrastructure, mobile networks, undersea cables. (5) Financial — banking systems, payment networks, SWIFT infrastructure. Any attack on protected infrastructure triggers automatic Framework Survival Core activation. The attack is investigated by SEAC. Attribution determines WBI scoring. Unattributed attacks trigger Cooling-Off Default.

Section 67: Election & Leadership Transition Continuity (v5.8)

This Accord survives elections and leadership transitions in both countries. US Elections: If a new administration takes office, the Accord continues unless the new administration provides 90-day written notice of withdrawal. During the 90-day period, all Tier 1 and Tier 2 obligations continue. Iranian Leadership: If the Supreme Leader is succeeded, the Accord continues unless the new leadership provides 90-day written notice. The Political Shock Absorber (Section 36) provides additional protection during transitions.

Section 68: U.S. Congressional & Majles Survivability (v5.8)

US Congressional Provisions: Tranches 1-2 (\$1B) require no Congressional action — funded through existing executive authorities. Tranches 3+ require 30-day Congressional notification. If Congress passes a resolution of disapproval, the President may veto. If Congress overrides, the US may suspend Tranche 3+ obligations while maintaining Tier 1 and Tier 2 commitments. Iranian Majles Provisions: The Micro-Pilot and Stage 1 require no Majles ratification — implemented through executive authority of the President and Supreme National Security Council. Stage 2 and beyond require Majles notification within 30 days. The Majles may review but cannot unilaterally terminate obligations already implemented.

Section 69: Snap-Forward Rewards & Constructive Ambiguity (v5.8)

Snap-Forward Rewards: If Iran exceeds baseline compliance (e.g., accelerates HEU disposition, expands IAEA access, reduces proxy activity), the US may accelerate sanctions relief beyond the scheduled timeline. Snap-forward rewards are discretionary — the US is not obligated to provide them, but their availability creates positive incentives for Iranian over-compliance. Constructive Ambiguity: Certain provisions are intentionally ambiguous to allow both sides to claim victory. The PGSA-JTA relationship (Section 11.3) is the primary example — the US can claim multilateral governance while Iran claims sovereign coastal enforcement. Neither side may challenge the other's interpretation as long as both interpretations are consistent with the operational text.

Section 70: Civilian Disaster-Response Framework (v5.8)

The Civilian Disaster-Response Framework establishes protocols for joint response to natural disasters, industrial accidents, or environmental emergencies. Joint Response Team: pre-designated team of 50 experts (medical, engineering, nuclear safety, environmental) from all parties; deployable within 24 hours; funded by a \$50M standby fund administered by the UN. Activation: any party may request joint response; Secretariat convenes within 4 hours; deployment within 24 hours. Scope: nuclear accidents (radiation

release); oil spills; earthquakes; pandemics. This framework operates under the Framework Survival Core — it continues regardless of any dispute or suspension.

Section 71: Energy Market Stabilization (v5.8)

The Energy Market Stabilization mechanism prevents oil price spikes that could destabilize the global economy and derail the Accord. Price Band: If Brent crude exceeds \$100/barrel for more than 5 consecutive trading days, all parties commit to coordinated supply increases. If Brent crude falls below \$50/barrel for more than 10 consecutive trading days, all parties commit to coordinated production restraint. Strategic Petroleum Reserve Coordination: US, China, India, Japan, and EU commit to coordinated SPR releases if prices spike above \$120/barrel. Iranian Production: Iran commits to gradual production increases (500K bpd per quarter) rather than sudden floods that could crash prices. Market Transparency: All parties commit to monthly publication of production, export, and inventory data through the JTA Energy Market Monitor.

Section 72: Insurance-Risk Consortium (v5.8)

The Insurance-Risk Consortium provides affordable maritime insurance for vessels transiting the Strait of Hormuz. Structure: Lloyd's of London (lead underwriter) + regional insurers (Oman, Qatar, UAE) + international reinsurers (Swiss Re, Munich Re). Coverage: hull and machinery; cargo; war risks; environmental liability. Premiums: standardized risk-based pricing; no nationality-based discrimination; premiums decrease as JTA operational experience accumulates. Claims: independent arbitration under London Maritime Arbitrators Association rules; 90-day resolution target. Iranian Participation: Iranian vessels are eligible for coverage on the same terms as all other vessels; Iranian ports are eligible for coverage; Iranian-flagged vessels receive JTA-AUTHORIZED designation for insurance purposes.

Section 73: Media & Disinformation Containment (v5.8)

The Media & Disinformation Containment mechanism prevents hostile media narratives from derailing the Accord. Three-Tier Media Response: Tier 1 (Minor Inaccuracy) — 6-hour pre-approved fact sheet; Tier 2 (Significant Misrepresentation) — 24-hour senior official clarification; Tier 3 (Systematic Disinformation Campaign) — 48-hour coordinated response from all parties + Facilitating State Council statement. Disinformation Monitoring: the Secretariat maintains a 24/7 media monitoring unit tracking narratives in Farsi, English, Arabic, Hebrew, and Chinese. Counter-Narrative Protocol: pre-drafted statements for 50 common scenarios; translated into all relevant languages; approved by all parties before release. Social Media: parties commit to not amplifying hostile narratives; parties may request takedown of demonstrably false content from platform companies.

Section 74: Framework Survival Core Doctrine (v5.8)

The Framework Survival Core Doctrine is the foundational principle that ensures the Accord's essential functions continue regardless of disputes, crises, or suspensions. Three Invulnerable Elements: (1) **Ceasefire Hotline** — 24/7 secure communications through the Coordination Secretariat; neither party may disable without 30 days notice to the UN Secretary-General; operates even if all other provisions are

suspended. (2) **Humanitarian Access** — zero-fee, no-inspection-delay corridor for humanitarian goods; invulnerable to any dispute; operates under standalone UN humanitarian mandate. (3) **Emergency Diplomatic Channel** — direct communications between senior officials; invulnerable to any dispute; operates under standalone UN mandate. Survival Core Duration: The Survival Core continues for 180 days after any formal withdrawal by either party. During this 180-day period, the parties are expected to negotiate either a restoration of the full framework or an orderly transition. Survival Core Expansion: By mutual agreement, the parties may designate additional provisions as part of the Survival Core. Any expansion requires unanimous consent of the JTA Council.

Annex L: Lebanon Dossier Isolation Firewall & Levant Front Stabilization Protocol (v5.9)

Operational Context: Iran's Foreign Ministry, via spokesperson Esmail Baghaei, has explicitly stated that Tehran's fixed position is an **end to the war on all fronts, including Lebanon**. Tehran refuses to sign a standalone deal that stops bombing on Iranian soil while allowing the active conflict between Israel and Hezbollah in southern Lebanon to continue. The United States and Israel have historically sought to keep Lebanon separate from core US-Iran negotiations. This annex provides a structural compromise that prevents the entire deal from collapsing over the Lebanon front while respecting both sides' core requirements.

L.1 Proxy Operational Pause: Hezbollah De-escalation Protocol

Purpose: To satisfy the US and Israeli requirement that pulling back US forces and opening Hormuz does not result in immediate escalation on Israel's northern border, Iran transmits immediate, formal instructions to Hezbollah leadership for an operational pause concurrent with the main Accord timeline. This pause is not disarmament, surrender, or political concession — it is a structured, time-limited operational de-escalation.

Phase	Hezbollah Operational Parameters	Verification	US/Israel Reciprocal
Phase 1: Days 1-30	Cessation of cross-border rocket and drone attacks into northern Israel. Suspension of offensive military operations against IDF positions. Defensive positions in southern Lebanon maintained but not reinforced. No new weapons transfers from Iran to Hezbollah via Syria or maritime routes.	UNIFIL patrol confirmation; Israeli military intelligence (via Tel Aviv Channel); Lebanese Armed Forces liaison reports; satellite surveillance	Israel suspends offensive air strikes against Hezbollah positions in southern Lebanon for 30 days. IDF maintains defensive posture only. No ground incursions.
Phase 2: Days 31-90	Continued cessation of offensive operations. Hezbollah forces remain in defensive positions. No infiltration attempts across the Blue Line. Weapons transfers from Iran remain suspended.	Monthly UNIFIL verification report; ICRC monitoring; SEAC pattern analysis of supply routes	Israel extends air strike moratorium to 90 days contingent on verified Hezbollah restraint. Gradual relaxation of naval interdiction.
Phase 3: Days 91-180	Exploration of structured de-escalation through Levant Regional Basket (Section L.3). Hezbollah may engage in political and humanitarian activities. Military posture remains defensive.	Regional Basket monitoring cell; UN Special Coordinator quarterly assessment	Israeli restrictions reviewed at Day 180 milestone. If 180 consecutive days verified, Israel considers further confidence-building measures.

L.1.1 Non-Compliance Consequences

If any channel reports significant Hezbollah offensive action: (1) 24-hour verification window — all four channels confirm; (2) if confirmed, Iran has 72 hours to transmit renewed de-escalation instructions through the Oman back-channel; (3) if Iran de-escalates within 72 hours, pause resumes with enhanced monitoring; (4) if Iran does not de-escalate, Israel may resume defensive air strikes **limited to specific positions involved** — not blanket escalation; (5) **under no circumstances** does a Hezbollah incident trigger WBI accumulation against Core Accord (see Dossier Isolation Firewall, Section L.2).

L.2 Dossier Isolation Firewall: Lebanon Non-Linkage Clause

ARTICLE L.2 — DOSSIER ISOLATION FIREWALL (OPERATIVE AND BINDING)				
Trigger Category	Lebanon Impact		Core Accord Impact	Rationale
Hezbollah rocket fire into Israel	Israeli defensive response; Regional Basket activation		NONE — Core Accord unaffected	Localized border friction; Core Accord addresses nuclear and maritime
Israeli air strike on Hezbollah position	Regional escalation; coordination	Basket de-UNIFIL	NONE — Core Accord unaffected	Israel retains sovereign right to self-defense
IDF ground incursion into Lebanon	Major Regional emergency session; consultation	Basket UNSC	NONE — stepback prohibited by Firewall	Ground incursion is escalatory but does not violate US commitments
Iranian weapons transfer to Hezbollah	SEAC attribution; Regional Basket censure		NONE — proxy activity outside Core Accord scope	Proxy activity governed by existing protocols, not Core Accord WBI
Hezbollah attack on US personnel	Full SEAC investigation; US retains right to self-defense		NONE — unless attack explicitly linked to Iranian government directive per SEAC attribution	Sole exception: explicit government directive triggers Category B review

L.2.1 Firewall Architecture

Three levels: (1) **Legal level** — Exchange of Letters explicitly lists "incidents in the Levant theater involving non-state actors" as excluded from material breach triggers under Section 33 WBI scoring; (2) **Technical level** — Dashboard maintains separate tracks for "Core Accord Compliance" and "Regional Security Incidents." Lebanon incidents logged only on Regional Security track. WBI algorithms reference only Core Compliance track; (3) **Political level** — both capitals issue pre-cleared talking points confirming Lebanon file is managed through separate mechanisms (Section 17.1).

L.2.2 Escalation Ceiling

Even if the Levant situation deteriorates significantly (major Israeli ground operation, large-scale Hezbollah rocket campaign, civilian mass casualty event), the Firewall remains in force. Core Accord can only be affected if: (a) UN Security Council determines grave breach of international humanitarian law **and** (b) JCC unanimously determines breach is directly linked to a Core Accord commitment violation. This dual threshold is virtually impossible to meet.

L.3 Levant Regional Basket: Parallel Track

Element	Mandate	Participants	Timeline
Basket Steering Committee	Overall direction of Levant de-escalation; dispute resolution; escalation management	Lebanon (chair), Israel, US, Iran (observer), UN Special Coordinator, Oman (facilitator)	Convenes within 14 days of Core Accord activation
Border Monitoring Cell	Blue Line incident verification; cross-border firing attribution; civilian protection	UNIFIL (lead), Lebanese Armed Forces, IDF liaison, ICRC observer	Operational from Day 1; reports weekly
Humanitarian Sub-Track	Civilian protection in southern Lebanon; IDP return; infrastructure repair; medical corridors	ICRC (lead), UN OCHA, WHO, Lebanese Ministry of Health, donor states	Activates immediately; pre-authorized \$75M fund

Political Sub-Track	Long-term Israel-Lebanon stability; UN Resolution 1701 implementation; maritime boundary demarcation	UN Special Coordinator (lead), Lebanon, Israel, US, France	Convenes at Day 60
Economic Sub-Track	Reconstruction financing for southern Lebanon; energy infrastructure; port rehabilitation	World Bank (lead), EU, Saudi Arabia, UAE, Iran (through proxy reconstruction fund)	Convenes at Day 90; contingent on 60 days of verified border quiet

L.3.1 Iranian and Israeli Participation

Iran: Observer state, not full member. Interests represented by Oman (primary) and UN Special Coordinator (secondary). Iran may fund reconstruction through proxy reconstruction fund without direct engagement with Israeli officials. Framed domestically as "monitoring the situation to protect our allies."
Israel: Full member of Steering Committee with full voting rights, veto authority over reconstruction funding diversion to Hezbollah military purposes, and right to suspend participation without affecting Core Accord.

L.3.2 Graduation Pathway

If the Levant Regional Basket achieves 180 consecutive days of verified border quiet, it may graduate to a standalone Israel-Lebanon Framework Agreement brokered by the UN. Core Accord does not depend on this graduation — the two frameworks operate on fully independent timelines.

L.4 Narrative Architecture for Lebanon

US TALKING POINTS "The core US-Iran agreement addresses nuclear proliferation and freedom of navigation — America's core national security interests. Lebanon is a separate file managed through a dedicated regional basket with full Israeli participation. We are not trading Hormuz for Hezbollah. The Dossier Isolation Firewall ensures that what happens in Lebanon cannot affect the nuclear deal."
IRANIAN TALKING POINTS "The framework ends the war on all fronts. Through the Levant Regional Basket, Iran ensures that our allies in Lebanon are not abandoned while the main agreement proceeds. The Dossier Isolation clause protects the core agreement from being undermined by localized incidents."
ISRAELI TALKING POINTS "Israel's security is not negotiable. The Levant Regional Basket is a separate diplomatic process in which Israel has full participation and veto authority. The core US-Iran agreement does not constrain Israel's right to self-defense. If Hezbollah attacks, Israel will respond — and the nuclear deal remains unaffected."

LEBANESE TALKING POINTS

"Lebanon welcomes the Levant Regional Basket as a pathway to stability for our southern border. We are not a proxy battlefield. The Basket's humanitarian sub-track addresses the urgent needs of our civilian population. Lebanon's sovereignty is respected through our chairmanship of the Steering Committee."

L.5 Summary: The Lebanon Bridge

The Lebanon annex bridges the fundamental disagreement between Iran (which demands an end to the war on all fronts) and the US/Israel (which want Lebanon kept separate). It does so by: (1) creating a structured Hezbollah operational pause that gives Israel immediate security benefits; (2) building an absolute firewall that prevents Lebanon incidents from collapsing the core deal; (3) establishing a parallel regional basket that addresses Lebanon on its own timeline with its own participants; and (4) providing each side with narrative frames that allow them to claim the outcome they need. Iran can say the war ends on all fronts. The US can say Lebanon is a separate track. Israel can say its security is protected. And the Dossier Isolation Firewall ensures that if any of these claims prove hollow, the Core Accord survives.

Version 5.9 Changelog

Version	Date	Changes
1.0	Early 2026	Initial Stability First Accord — Core Frame with Synchronized Reciprocal Motion
2.0	March 2026	14-Day Implementation Directive; Micro-Pilot; Three-Tier Breach System; Cooling-Off Default
3.0	March 2026	Phase II Maritime Annex; Phase II Nuclear Annex; JTA governance; Fordow Joint Venture
4.0	April 2026	RCSA v3.6 integration; Economic Channels; SWIFT Pathway; Reconstruction Credits
5.0	April 2026	Distributed Facilitating State Matrix; Partial Continuity Rule; Framework Survival Core
5.1	May 2026	42 enhancements: Political Shock Absorber; Reconstitution Mechanism; Goldilocks Protocol
5.2	May 2026	10 enhancements: "Facilitating State" terminology; Mandatory Escalation Pause; Flexible Timelines; Acronym Reduction
5.3	May 2026	17 enhancements: Secretariat Redundancy; IAEA Forward Deployment Teams; SWIFT-IAEA Milestone Linkage; Escrow Multi-Signature; Rotating Facilitation Lock-In
5.4	May 2026	20 enhancements: Front-Loaded Asset Release; International Gulf Reconstruction Fund; Pre-Agreed Asset Valuation (\$100B); Pakistan Co-Convening Authority; Hormuz Environmental Transit Fee; 12nm Blockade Verification; Mothball Protocol; Additional Protocol Acceleration; Thirty-Day Drop-Dead
5.5	May 2026	6 strategic integrations: Beijing Transition Annex; Zero-Breakout Objective; Nuclear Verification Upgrade; Energy Release Valve; Anti-Spoiler Protocol; Trilateral Narrative Translation
5.6	May 2026	3 language softening refinements
5.7	May 13, 2026	4 technical refinements: Integrated Framework; 145 total enhancements; all blockers addressed
5.8	May 2026	7 structural additions: Regional Security Charter Annex (Section 54); GCC Consultative Chamber (Section 55); Israel Parallel Reassurance Mechanism (Section 56); Red Sea Security Annex (Section 57); Iraq Stabilization Module (Section 58); Syria Deconfliction Track (Section 59); China Economic Coordination Lane (Section 60); India Commercial Stakeholder Observer (Section 61); Phased Missile Restraint Architecture (Section 62); Proxy Governance Regional Baskets (Section 63); Shadow Escalation Attribution Cell (Section 64); Cyber Conflict Provisions (Section 65); Infrastructure Protection Rules (Section 66); Election & Leadership Transition Continuity (Section 67); U.S. Congressional & Majles Survivability (Section 68); Snap-Forward Rewards & Constructive Ambiguity (Section 69); Civilian Disaster-Response Framework (Section 70); Energy Market Stabilization (Section 71); Insurance-Risk Consortium (Section 72); Media & Disinformation Containment (Section 73); Framework Survival Core Doctrine (Section 74)
5.9	Late May 2026	Four surgical structural refinements for Sunday 4:00 PM Eastern deadline: (1) JTA Sovereignty Recalibration (Section 11.3) — explicit mandate restriction to 3 functions, PGSA recognized as sole coastal enforcement within Iranian territorial waters, PGSA-JTA Interface Protocol, Optical Compromise Architecture; (2) Automated Day 7 Dual-Trigger (Section 5.3) — 5-step technical architecture preventing front-loaded concessions within 60-second UTC window; (3) HEU Phase 1 Baseline Decoupling (Section 12.2) — legal ownership (CBI) decoupled from physical custody (IAEA), disposition deferred to 30-60 day nuclear window; (4) Lebanon Dossier Isolation Firewall (Annex L) — Proxy Operational Pause across 3 phases, Dossier Isolation Firewall with 5 trigger categories, Levant Regional Basket with 5 elements, narrative architecture for 4 audiences. Updated preamble, executive brief, face-saving metrics, and deal options. 149 total enhancements.

The Stability First Enhanced Accord v5.9 — 149 total enhancements — all blockers addressed.
