

DIPLOMATIC WORKING DOCUMENT

The Crescent Compact

A Comprehensive Framework for Middle East Regional Stability
Version 3.0 — Calibrated for the Late May 2026 Negotiation Environment

Principal Parties: Iran, United States, Israel, Lebanon, Saudi Arabia, Iraq, Syria, Yemen

Guarantors: Qatar, Pakistan, Oman, UN Neutral Chair

Surgical Refinements Applied: JHTA Sovereignty Recalibration | Day 7 Dual-Trigger | HEU Phase 1 Baseline |
Lebanon Dossier Isolation Firewall

Late May 2026 | Authorized Negotiators Only

Contents

The Compact Philosophy

Part I: Iran–US Nuclear, Military & Economic Normalization

- I-1: Permanent Cessation of Hostilities (FURC/FURP)
- I-2: Non-Proliferation Framework & Nuclear Dignity (v3.0 HEU Decoupling)
- I-3: Enrichment Suspension & Fordow Conversion
- I-4: Return of Frozen Sovereign Assets
- I-5: Phased Sanctions Relief
- I-6: Iranian Energy Reintegration
- I-7: Regional Security Dialogue & Proxy Wind-Down
- I-8: Strait of Hormuz & Maritime Corridor (v3.0 Sovereignty Recalibration & Dual-Trigger)

Part II: Israel–Lebanon–Hezbollah Security Architecture

Part III: Joint Compact Commission & Dispute Architecture

Part IV: Israel–Arab Normalization (Progressive Arch)

Part V: Yemen & Red Sea–Hormuz Maritime Security

Part VI: Iraq Stabilization & Militia Integration

Part VII: Syria De-escalation & Reconstruction

Part VIII: Regional Economic Integration & Arms Control

Annex K: Lebanon Dossier Isolation Firewall & Core Accord Protection Protocol (v3.0)

Version 3.0 Changelog

The Compact Philosophy

The Middle East has never lacked for grand bargains. What it has lacked is durable architecture. The Crescent Compact is engineered on three governing principles: **Granular Reciprocity** — every obligation is paired with a benefit of equal political value delivered on the same timeline; **Low-Probability High-Impact Event Absorption** — every mechanism is stress-tested against worst-case scenarios; and **The Crescent Cycle** — progress measured in 60-day verified cycles where all parties complete one small, reversible step before the next window opens.

The Compact consists of a **Core Frame** (Parts I–III) — minimally sufficient to stop active hostilities and establish nuclear non-proliferation — and **Progressive Arches** (Parts IV–VIII) that unlock only when Core Frame benchmarks are verified over multiple cycles. The Layered Legitimacy Architecture (LLA) allows governments to ratify the Core Frame without committing to any Progressive Arch.

v3.0 Critical Update — Late May 2026 Negotiation Environment

This Version 3.0 incorporates four surgical refinements calibrated to the explicit pushback from the IRGC (via Fars News Agency) and the firm sequencing demands from the Trump administration:

- 1. IMCA Sovereignty Recalibration (I-8, V-2):** The IMCA mandate is explicitly restricted to commercial traffic coordination, maritime safety protocols, and international dispute resolution. The PGSA is formally recognized as the sole executive coastal law enforcement body within Iranian territorial waters — allowing Tehran to preserve its domestic sovereignty claims.
- 2. Automated Day 7 Dual-Trigger Protocol (I-8):** The Hormuz Opening Declaration and Naval Blockade Lift Declaration are executed through an automated, simultaneous trigger — preventing front-loaded concessions and guaranteeing symmetric execution within a 60-second UTC window.
- 3. HEU Custody Phase 1 Baseline (I-2):** Legal title (Central Bank of Iran) is structurally decoupled from physical custody (IAEA-monitored facility). Physical custody transfer is a Phase 1 baseline verification metric; final disposition is deferred to the 30-60 day nuclear negotiating window.
- 4. Lebanon Dossier Isolation Firewall (Annex K):** Addresses Iran's demand for an end to the war on all fronts through a Proxy Operational Pause, a binding firewall preventing Lebanon incidents from collapsing the core deal, and a Levant Regional Basket parallel diplomatic track.

Legacy Provision — Instrument of State, Not Substitute for It: The Crescent Compact is a tool of state authority, not a replacement for it. Every mechanism exists to support the judgment of qualified statespeople — not to supplant it. The framework is the instrument. The human beings who deploy it are the authors.

Ceremonial Signature Architecture: Entry into force requires physical, ceremonial, in-person signature by the authorized representative of each Core Frame party. The signing ceremony is: (a) hosted in a neutral state designated by unanimous JCC consent; (b) open to international press; (c) preceded by a joint public statement by each signing party's head of state or foreign minister; (d) recorded in the official UN Treaty Series. No digital-only, proxy, or undisclosed signature is valid.

Part I: Iran–United States — Nuclear, Military & Economic Normalization

Part I constitutes the irreducible foundation of the Crescent Compact. Its provisions are mutually conditioning: nuclear verification and sanctions relief proceed in locked tandem. No party may accept economic provisions while deferring security provisions. The 3-3-2-1 structure ensures parity: Iran receives three core political wins; the U.S. receives three core security wins; economic provisions are jointly beneficial.

I-1: Permanent Cessation of Hostilities & Force-Use Restraint Compact (FURC)

Upon Compact entry into force, all direct and proxy military operations between Iran and the United States permanently cease. This obligation is institutional, not personal: it binds both states as corporate entities, not their current leadership. Successor governments inherit it in full without renegotiation.

Force-Use Restraint Protocol (FURP): Once IAEA certifies Iranian compliance with nuclear provisions I-2 through I-3 for two consecutive Crescent Cycles, the U.S. President issues and maintains a Presidential Policy Directive (PPD) establishing U.S. restraint on initiating military operations against Iranian territory absent: (a) verified imminent armed attack under UN Charter Article 51; or (b) JCC determination of material breach.

FURC Anti-Gaming Lock: FURC cannot be suspended unilaterally within 18 months of entry into force. After 18 months, 90-day advance notice plus JCC majority vote required. Suspension for 'policy preference' or 'changed administration' is explicitly prohibited.

Non-Interference Covenant (NIC): Both parties permanently prohibit: covert financing of opposition with destabilization intent; cyber operations against electoral or governance infrastructure; state-sponsored propaganda campaigns using fabricated evidence, including AI-generated synthetic media (deepfakes); algorithmically amplified disinformation networks targeting electoral infrastructure; fabricated intelligence dossiers; physical sabotage timed to political transitions; support for armed challenges to constitutional authority.

I-2: Permanent Non-Proliferation Framework & Nuclear Dignity Doctrine (v3.0)

Iran, in a sovereign act codifying its own doctrinal prohibition on nuclear weapons, enacts through the Majlis: (a) domestic legislation criminalizing nuclear weapons development with minimum 20-year penalties; (b) an independent Civilian Nuclear Oversight Council (CNOC) reporting jointly to the Majlis and the IAEA with quarterly public reports and mandatory referral authority; (c) mandatory automatic UNSC referral for any verified fissile-material diversion.

Iranian Sovereign Right to Peaceful Nuclear Energy — Affirmation (v1.7, Retained v3.0): The Compact explicitly and unambiguously recognizes Iran's sovereign right to peaceful nuclear energy under the NPT and customary international law. Iran's voluntary enrichment limits, verification obligations, and Fordow conversion constitute sovereign choices made in exchange for concrete reciprocal benefits — not imposed constraints or admissions of prior non-compliance.

Nuclear Dignity Doctrine: All IAEA monitoring is publicly framed as 'compliance parity' — identical in scope to obligations accepted by Brazil, Argentina, South Africa, and Japan. Both parties jointly publish a

Normalization Narrative within 30 days.

Narrative Sovereignty Clause (v1.7): Each party retains sovereign control over domestic narrative framing of Compact provisions, provided such framing does not materially contradict verified obligations or incite breach-triggering behavior.

v3.0 Fissile Material Custody — Phase 1/Phase 2 Structural Decoupling

v3.0 Surgical Change — Decoupled Ownership and Custody

This solution structurally decouples **legal ownership** from **physical custody**. The Central Bank of Iran retains full sovereign legal title to the HEU stockpile at all times. Physical custody is transferred immediately to a secure, IAEA-monitored facility as a **baseline verification metric for Phase 1**. Final disposition is deferred to the 30-60 day broader nuclear negotiating window. This satisfies Secretary Rubio's demand for immediate physical verification while respecting Iran's red line on deferring nuclear details.

I-2.1 Phase 1: Baseline Verification (Days 1-30)

Iran's entire stockpile of uranium enriched above 3.67% is consolidated, inventoried, and placed under IAEA custody within the first 72 hours of Compact activation. Physical custody — not legal title — transfers immediately. Two custody pathways are available:

Element	Pathway A (In-Iran)	Pathway B (Oman)
Location	Esfahan Nuclear Technology Center or other IAEA-declared facility within Iran	IAEA custody facility in Muscat, Oman (NOT the United States)
Legal Title	Central Bank of Iran retains full sovereign legal title throughout	Central Bank of Iran retains full sovereign legal title throughout
Physical Custody	IAEA holds exclusive digital keys to monitoring; Iran holds perimeter security keys	IAEA dual-lock custody; armed IAEA guard; continuous CCTV
Access	Neither party can access sealed containers without the other's physical presence	Satellite surveillance tracks transport vessels; US monitoring access
US Veto	U.S. may not veto IAEA custody activation; either pathway satisfies Phase 1	U.S. may not veto in-country custody as Phase 1 baseline

I-2.2 Phase 2: Nuclear Negotiating Window (Days 30-60)

Within the 30-60 day nuclear negotiating window, Iran selects one of six IAEA-verified disposition pathways for the HEU under IAEA custody. The United States shall have no veto over the pathway selected — only the right to verify its execution.

Path	Description	Destination / Timeline
A	In-place downblending to medical-grade LEU at Esfahan	Medical isotope production in Iran; 142 days
B	HEU export to IAEA custody in Oman	IAEA facility, Oman (NOT US); 14 days
C	Downblended in Iran, transferred to IAEA LEU Bank	Oskemen, Kazakhstan; 75 days
D	Transfer to Rosatom under IAEA safeguards	Russian Federation; 60-90 days
E	Conversion to reactor-grade LEU fuel assemblies	Bushehr reactor supply; 180 days
F	Hybrid: stockpile divided into batches through different pathways	Multiple destinations; concurrent

I-2.3 — LEGAL TITLE STRUCTURE (OPERATIVE AND BINDING)

While the HEU is under IAEA physical custody, the legal title and ownership remain vested with the Central Bank of Iran as sovereign trustee. The Custody Services Agreement specifies that: (a) Iran retains full legal title throughout the custody period; (b) the IAEA may not transfer, sell, or dispose of the material without written consent of the Central Bank of Iran; (c) the material is held for the purpose of baseline verification and civilian conversion negotiation, not for destruction or permanent removal from Iranian ownership; (d) the final disposition is subject to the outcome of the 30-60 day nuclear negotiating window; (e) if the Compact is terminated by mutual agreement, the material is returned to Iran under IAEA supervision.

No Hidden US Custody Clause (Self-Executing and Non-Waivable): At no stage may the United States receive, store, transport, or exercise operational control over the Iranian enriched-uranium stockpile. All custody remains with the IAEA. US personnel shall not be present at any consolidation, packaging, transit, or receipt operation.

US Narrative Frame: "Weapons-grade uranium secured — the entire Iranian stockpile placed under IAEA custody with US monitoring access. Breakout time extended from weeks to over a year. Physical verification is immediate."

Iranian Narrative Frame: "Iran's enriched uranium remains Iranian property. The Central Bank of Iran retains sovereign title. Physical custody to IAEA is a verification step in a broader negotiation — not surrender. Final disposition decided in the nuclear negotiating window."

I-2.4 Dual-Key Dilution Protocol (Retained from v1.7)

If recipient-state negotiations deadlock for 60 days, automatic dilution activates. In-country dilution is executed by Iranian technical staff under mandatory dual-key oversight: (a) IAEA-resident inspector holds Key A — provides real-time material accountancy certification; (b) a neutral technical observer from the JCC-approved roster holds Key B — independently verifies chain-of-custody documentation. Neither key-holder operates equipment; Iranian staff operate equipment under their observation. Chain-of-custody documentation is co-signed by: Iranian AEOI representative, IAEA inspector, and neutral technical observer.

I-3: Enrichment Suspension, Fordow Conversion & Civilian Energy Guarantee

Iran voluntarily suspends all uranium enrichment above 3.67% within 30 days of Compact entry into force. All enrichment infrastructure placed under continuous IAEA monitoring; stockpiles capped at 300 kg UF₆. Conversion to non-operational status: (a) physical removal of centrifuge rotors and bellows to IAEA-supervised storage; (b) continuous IAEA camera coverage; (c) quarterly neutral-state technical audits verifying irreversibility.

R&D Preservation: Iran retains 164 centrifuges (IR-1 equivalent) at Natanz for technical institutional capacity under 24-hour IAEA camera coverage — no enriched material accumulation permitted.

Fordow Conversion: Fordow converts to the International Persian Gulf Medical Isotope Research Center (IPGMIRC) under IAEA monitoring. All military personnel withdraw within 90 days; IRGC retains no operational role. Within 10 years Iran supplies 35% of global medical isotope market.

Civilian Energy Guarantee: The U.S. commits to launching Section 123 Agreement negotiations on Day 1. If Senate fails to ratify within 180 days, automatic alternative performance activates: IAEA LEU Bank

(Kazakhstan) or equivalent multilateral fuel bank; third-country fuel supply with U.S. non-objection guarantees. Iran's civilian energy needs are never held hostage to U.S. legislative politics.

I-4: Return of Frozen Sovereign Assets — Staged, Verified, Irreversible

All frozen Iranian sovereign assets released with interest (U.S. Treasury rates). Released funds constitute return of sovereign property, not U.S. payment or reparations.

Tranche	Timeline	Amount		Verification Trigger
Tranche 1	Day 30	5% (liquidity bridge)		Compact entry into force only. Immediate humanitarian & economic liquidity bridge. Non-reversible.
Tranche 2	Day 90	40% (primary release)		Full verified completion of 60% enriched uranium Tranche 1 dilution or export as certified by IAEA
Tranche 3	Day 180	20%		Fordow conversion 50% complete; IAEA 3-cycle compliance certification
Tranche 4	Day 270	15%		Full 60% stockpile disposition; IAEA 5-cycle certification
Tranche 5	Day 360	10%		12-month sustained compliance; non-proliferation legislation enacted
Reserve Fund	Month 24	10%		Held against material breach; released automatically at Month 24 if clean

Irreversibility Protocol: Once released, funds transferred to Iran's Central Bank. No re-freeze within 12 months of release. If U.S. reimpose sanctions, Iran retains 100% of released funds plus LIBOR+3% penalty interest. Re-freezing requires: 60-day JCC majority process; IAEA Director General material breach certification; Congressional 30-day notification.

I-5: Phased Sanctions Relief — Friction-Locked, Commercially Anchored

Nuclear-related sanctions lift in phases corresponding to IAEA-certified Crescent Cycle completions. Humanitarian exemptions (medicine, equipment, food, agricultural inputs) activate Day 1 concurrently with IAEA deployment.

Sanctions Inertia Buffer (SIB): Reimposition of any nuclear-related sanctions requires 90-day JCC majority process plus 60-day commercial wind-down — 150-day minimum interval. No single-step escalation from compliance to full Compliance Restoration is permitted.

Targeted Individual Sanctions Snap-Forward (v1.7): The U.S. retains the right to impose targeted sanctions on specific named individuals credibly identified as directing violations of Compact obligations — without triggering the full Compliance Restoration Protocol. Targeted individual sanctions may be challenged by Iran through the Rapid Panel within 14 days.

U.S. Congressional Continuity Shield (v1.7): All executive authorities exercised under this Compact are designated as 'continuity-critical national security measures' by concurrent executive order. This designation triggers expedited legislative review procedures and presumptive waiver continuity: existing measures remain operative unless overturned by supermajority (two-thirds of both chambers).

Compliance Restoration Friction Ladder: Step 1 — WBI 5.0+: JCC warning + enhanced monitoring; 48-hour interval; no economic effect. Step 2 — WBI 8.0+: targeted sector freeze + new banking review; 14-day minimum interval. Step 3 — verified material breach + WBI 12+: full reimposition consideration; 30-day interval plus IAEA certification required.

I-6: Iranian Energy Reintegration & U.S. Commercial Access

Iran restores pre-sanctions oil export capacity (2.0 million barrels/day) within 24 months. Iran accedes to EITI; publishes quarterly production and revenue data; transparent competitive bidding for all new field development contracts.

U.S. Commercial Access: U.S. firms participate, on a commercially competitive basis, in up to 25% of new field development contracts in South Pars (gas) and Azadegan (oil). No nationality-based contract awards. This creates a major U.S. business constituency with direct financial interest in Compact stability.

15-Year Oil Sanctions Moratorium: The primary commercial certainty mechanism anchoring U.S. business constituencies. Automatic 5-year extensions unless either party provides 24-month advance notice of non-extension. Survives technical lapse unless material breach is verified by IAEA and confirmed by JCC.

I-7: Regional Security Dialogue & Proxy Wind-Down Framework

Both parties commit to structured bilateral consultations on regional stability through a dedicated diplomatic channel separate from nuclear provisions.

Proxy Wind-Down Protocol: Iran commits to phased reduction of operational military support to designated proxy organizations. Year 1 — cessation of advanced weapons transfers (precision-guided munitions, drone components, anti-ship missiles) to groups operating against U.S. or allied partners; Year 2 — 50% reduction in IRGC Quds Force personnel in external operational deployments; Year 3 — full transition to non-operational advisory status.

Iran's Missile Sovereignty: Iran's ballistic missile capabilities are acknowledged as within its national defense prerogative and are not addressed by Core Frame provisions. Voluntary Year-2 Confidence-Building Data Exchange (CBDE) Pilot: Iran may voluntarily submit a Missile Confidence Declaration (MCD) to the JCC. Participation is entirely voluntary — no WBI penalty attaches to non-participation.

I-8: Strait of Hormuz & Maritime Corridor Obligations (v3.0)

Iran permanently commits to unobstructed commercial passage through the Strait of Hormuz and participates in the International Maritime Corridor Authority (IMCA). Iranian sovereignty over adjacent territorial waters is explicitly acknowledged; the commitment is non-interference with innocent passage conforming to UNCLOS — not a sovereignty waiver. Any interdiction triggers automatic IMCA emergency session within 4 hours. The 15-year oil sanctions moratorium (I-6) suspends automatically if Iran unilaterally blocks transit.

Direct Military-to-Military Deconfliction Lines (v1.7): Direct, secure military-to-military deconfliction channels established and maintained between all relevant parties, operating independently of JCC processes for real-time incident management. Required channels: (a) U.S. CENTCOM – Iranian Armed Forces direct line: response within 2 hours; (b) Israeli IDF – LAF – UNIFIL trilateral channel: response within 1 hour; (c) Saudi SANG – Houthi military command channel through Omani facilitation: response within 4 hours; (d) IMCA Maritime Operations Center: 24/7 channel for all Hormuz and Red Sea incidents.

v3.0 IMCA Sovereignty Recalibration

v3.0 Surgical Change — IMCA Mandate Restriction & PGSA Recognition

The IMCA mandate is **explicitly restricted to three functions only**: (i) commercial traffic coordination; (ii) maritime safety protocols; and (iii) international dispute resolution. The PGSA is **formally recognized as the sole executive coastal law enforcement body within Iranian territorial waters** — allowing Tehran to preserve its domestic sovereignty claims while keeping multilateral transit guarantees airtight for Washington.

I-8.1 — IMCA MANDATE RESTRICTION (OPERATIVE AND BINDING)

The IMCA's mandate is **explicitly restricted to three functions only**: (i) **commercial traffic coordination** — managing the flow of civilian commercial vessels through the Strait of Hormuz; (ii) **maritime safety protocols** — navigational aids, collision avoidance, emergency response, and search-and-rescue coordination; and (iii) **international dispute resolution** — addressing transit disputes between commercial vessels and littoral states through binding arbitration under UNCLOS.

The IMCA holds **zero jurisdiction** over sovereign Iranian or regional territorial defense waters, coastal defense operations, military vessel movements, fisheries management, customs enforcement, or environmental regulation beyond navigational safety.

I-8.2 — PGSA AS SOLE EXECUTIVE COASTAL LAW ENFORCEMENT BODY (OPERATIVE AND BINDING)

The Persian Gulf Strait Authority (PGSA) is **explicitly recognized as the sole executive coastal law enforcement body within Iranian territorial waters** (12-nautical-mile limit). This recognition is formal, unequivocal, and operates as a binding interpretive principle of the IMCA Charter. Within Iranian territorial waters, the PGSA retains exclusive authority over: vessel permitting and documentation review; coastal patrol and interdiction; customs and immigration enforcement; security screening of suspect vessels; and coordination with the IRGC-Navy on maritime security matters.

The IMCA may not override, supersede, or contradict PGSA enforcement actions within Iranian territorial waters. The IRGC's statutory authority over coastal defense, territorial security, and military operations in the Strait is explicitly preserved and unaffected by the IMCA Charter. Any IMCA action that could be construed as affecting IRGC or PGSA operations requires explicit Iranian concurrence through the Iranian co-chair.

I-8.3 — PGSA-IMCA INTERFACE PROTOCOL (OPERATIVE AND BINDING)

The PGSA is formally integrated into the IMCA as Iran's designated operational implementation body for transit coordination. All PGSA transit permits bear dual branding: PGSA-Iran (domestic Iranian designation) and IMCA-authorized (international designation). The PGSA retains its full statutory identity as Iran's sovereign operational body. Iranian personnel staff the transit coordination centers. Iran receives 40% of IMCA maintenance fund revenue.

I-8.4 Optical Compromise Architecture (v3.0)

This structure allows President Trump to state that "the Strait is open to international commerce under multilateral governance" while allowing Iranian officials to state that "the PGSA remains the sole authority

for Hormuz transit within our territorial waters, and the IMCA's role is limited to commercial coordination." Both statements are factually accurate under the Charter. The IMCA governs the international transit corridor; the PGSA governs Iranian coastal waters. Neither body's authority encroaches on the other.

v3.0 Automated Day 7 Dual-Trigger Protocol

v3.0 Surgical Change — Automated Simultaneous Trigger

The Hormuz Opening Declaration and Naval Blockade Lift Declaration are executed through an **automated, simultaneous trigger on the Swiss Dashboard**. The technical architecture prevents front-loaded concessions, eliminates human timing errors, and ensures that neither side can claim the other moved first. If either declaration fails to execute within the 60-second UTC window, both declarations are void.

I-8.5 — AUTOMATED SIMULTANEOUS TRIGGER PROTOCOL (OPERATIVE AND BINDING)

The Hormuz Opening Declaration and the Naval Blockade Lift Declaration shall be executed through an automated, simultaneous trigger on the Swiss Dashboard. The technical architecture operates as follows:

(1) T-minus-24 hours (Day 6, 00:00 UTC): Both parties confirm readiness through their respective liaison offices. The confirmation is logged on the Dashboard and cannot be withdrawn without triggering a 72-hour technical consultation.

(2) T-minus-1 hour (Day 7, 00:00 UTC): The Dashboard enters "Armed Standby" mode. Both parties' HSMs must transmit a "ready" authentication token within the same 5-minute window. If either token is not received, the trigger aborts automatically and a 48-hour technical consultation opens.

(3) T-zero (Day 7, 01:00 UTC): The Dashboard executes both declarations simultaneously within a **60-second UTC window**: the Hormuz Opening Declaration (Iran) and the Naval Blockade Lift Declaration (US) are published simultaneously to all liaison offices, the UN Secretary-General, and the IMCA Secretariat. Neither declaration is active without the other. The Dashboard logs the exact timestamp (millisecond precision) and publishes the synchronization certificate.

(4) Concurrent Airspace Stand-Down: Simultaneously with the maritime dual-trigger, both sides enter the proportional Airspace Stand-Down Protocol within the same 60-second window. Three-zone buffer activation (Zone Alpha: Strait Corridor; Zone Beta: Coastal Buffer; Zone Gamma: Deep Airspace) is choreographed through the Dashboard.

(5) Auto-Void Failure Mode: If either declaration fails to execute within the 60-second window, both declarations are void. Neither party is considered to have opened the Strait or lifted the blockade. The Framework Survival Core remains intact. A 48-hour technical grace period opens to diagnose and remediate the failure before either party may invoke stepback.

I-8.6 Minute-by-Minute Choreography (Day 7 UTC Timeline)

UTC Time	Iranian Action	US Action	Verification
T-60 min	IRGC Commander transmits stand-by to IMCA MCC	5th Fleet Commander transmits stand-by to IMCA MCC	Omani facilitating state logs both signals
T-15 min	IRGC craft withdraw to 5nm; AIS broadcast	US Navy withdraws to 5nm from 12nm baseline; AIS broadcast	Lloyd's List confirms movements
T=0	Iran issues Hormuz opening declaration; IRGC transmits stand-down orders	US issues blockade lift declaration; 5th Fleet transmits stand-down orders	SIMULTANEOUS within 60-second window

T+15 min	First IMCA-authorized vessel	US issues Notice to Mariners confirming Hormuz open	Lloyd's List, AIS Global confirm
T+6h	IRGC issues first 6-hour compliance report	5th Fleet issues first 6-hour compliance report	IMCA MCC issues first public Daily Transit Report
T+24h	24-Hour Bright-Line Period ends; standard ROE replaces heightened monitoring; IMCA Chair certifies Day-7 Protocol complete		

I-8.7 Distance Protocols and Rules of Engagement

Phase	Days	IRGC Stand-Off from CTC	US/Coalition Stand-Off from Iranian 12nm Baseline
Learning Period	D+1 to D+14	3 nm (expanding to 5 nm by D+8)	3 nm (expanding to 5 nm by D+8)
Operational Period	D+15 onward	5 nm from CTC outer edge	5 nm from Iranian 12 nm baseline
Elevated Posture (Tier 2)	JCC-declared	8 nm from CTC outer edge	8 nm from Iranian 12 nm baseline

Part II: Israel–Lebanon–Hezbollah Security Architecture

Part II addresses the most structurally complex node in the region: a trilateral involving a state (Israel), a state with fractured sovereignty (Lebanon), and an armed non-state political-military organization (Hezbollah). The Compact treats Hezbollah's political wing as a recognized political actor within the Lebanese constitutional framework — not a terrorist organization for framework purposes — while requiring verifiable operational constraints as the price of institutional legitimacy.

II-1: Permanent Attack Prohibition & International Attribution Tribunal (IAAT)

Israel and Lebanon register a Permanent Non-Aggression Treaty (PNAT) under UN Charter Article 102. Lebanon bears state responsibility for all attacks originating from its territory against Israel. The IAAT: 4-Hour Freeze Declaration upon any reported attack; 7-Day Preliminary Attribution; 21-Day Final Ruling with binding forensic investigation. Israeli Fast-Track Self-Defense Carve-Out: In cases of active, ongoing multi-vector attack, Israel retains limited proportional response authority of up to 24 hours prior to IAAT preliminary classification.

II-2: Disputed Territories Restoration — Phased, Security-Buffered

Israel commits to complete withdrawal from Shebaa Farms, Kfar Shouba Hills, and northern Ghajar through a three-phase protocol over 60 months. Blue Line Demarcation Roadmap: parallel cartographic process using modern satellite survey methods. Ghajar 5-Year UN Administrative Cooling-Off Period before referendum. \$2 billion Border Economic Zone Development Fund (jointly financed 50/50 by Israel and Gulf states through World Bank trust fund).

II-3: Hezbollah Institutional Integration & Southern Lebanon Governance

Joint Security and Reconstruction Zone (JSRZ): A 5-kilometer strip north of the Blue Line governed tripartitely — LAF (45%), Hezbollah-designated security coordinators under LAF chain of command (30%), international observers (25%). Weapons Registration: small arms permitted with LAF/UNIFIL registration; prohibited: rockets, missiles, drones, anti-tank systems above 85mm. Specialized International Weapons Seizure Team (SIWST) handles confiscation. Hezbollah Formal Political Party Rights: full participation in Lebanese parliamentary and municipal elections; cabinet positions through normal coalition mechanisms.

II-4: LAF Capacity Building & Israeli 7-Year Phased Withdrawal

7-Year Phased Security Transition Framework (PSTF) conditions Israeli security reduction on verified LAF capability expansion. \$2 billion in international military assistance over 7 years. UNIFIL Mandate Modernization: upgraded to Chapter VI+ with drone surveillance, ground sensor network, maritime monitoring, and direct UNSC reporting authority.

II-5: Unified Civilian Protection Command & Casualty Insurance Pool

UCPC co-located in Tyre integrates Hezbollah Civilian Protection (30%), Lebanese Civil Defense (35%), UNOCHA (20%), ICRC (15%). Three-veto structure with 12-hour mandatory cap on emergency operations

delay. \$500 million Civilian Casualty Insurance Pool (CCIP) compensates all civilian property damage regardless of which side caused harm — no-fault, need-based, politically neutral.

Part III: Joint Compact Commission, Dispute Architecture & Contingency Protocols

III-1: The Joint Compact Commission (JCC)

Composition: Iran (2 seats), U.S. (2 seats), Israel (1 seat, security matters only), Lebanon (1 seat), Saudi Arabia (1 seat), Iraq (1 seat), UN Neutral Chair (1 seat rotating from pool: Switzerland, Singapore, Oman, Brazil, Sweden). Hezbollah holds observer status with speaking rights on JSRZ matters. Pakistan and Oman serve as permanent guarantor observers.

Shadow Compliance Channel (v1.7): Confidential channel through which parties may disclose emerging risks without triggering immediate WBI accumulation. 30-day Preemptive Remediation Window; 0.25 WBI credit for proactive disclosure.

Supreme National Interest Waiver (SNIW) (v1.7): One-time 21-day suspension of a specific obligation per party per year. Rapid Panel review within 72 hours. Category A breaches explicitly excluded.

Distinguished Advisors Panel (DAP) (v1.5): 5-7 former heads of state/foreign ministers providing non-binding annual assessments and quiet good-offices intervention.

III-2: Dispute Resolution Hierarchy — Three-Tier Architecture

Joint Legal Interpretation Panel (JLIP) (v1.7): Standing 3-person neutral legal panel providing non-binding interpretations within 21 days.

Tier 1 — Rapid Panel: Nuclear disputes: 7-day binding ruling. All other disputes: 72-hour binding ruling.

Tier 2 — JCC Adjudication (21 days): Dual-Speed Rule with absolute 45-day cap.

Tier 3 — UN Arbitration (binding): JCC deadlock on core obligations triggers UN Secretary-General binding arbitration.

Quiet Diplomacy Channel (QDC) (v1.7): Confidential channel for sensitive issues, floating proposals, preliminary soundings — no formal outcomes, no binding commitments, not discoverable in any proceeding.

Annual Calibration Summit (v1.3): Every 12 months, parties may by unanimous consent propose re-calibrations to operational parameters. Core Frame obligations excluded from re-calibration.

III-3: The Crescent Cycle — Mechanics & Transition Rules

The Compact progresses through 60-day Crescent Cycles (20-day assessment + 40-day implementation). No party advances until all parties have completed current-cycle obligations, verified by at least two of three independent sources.

Status	Condition	Effect
Green	All benchmarks met	Full benefits; advance to next cycle; no WBI accumulation
Amber	75-99% met	Advance with 80% benefits; technical assistance deployed

Yellow	50-74% met	Hold at current cycle; benefits at 60%; 30-day extension vote
Red	<50% OR material breach	Full freeze; no new benefits; Enhanced Review Protocol; WBI assessment

Political Circuit Breaker — 14-Day Consultation Stay (v1.3): When a technical breach occurs, automatic consequence machinery does not fire immediately. 14-day Stay for diplomatic resolution. If remediation agreed within 14 days, breach reclassified as 'Remediated Technical Variance' at 50% WBI points.

Ambassador's Override — 72-Hour Consequence Suspension (v1.5): Principal ambassadors may invoke unanimous Override to suspend penalty consequence for 72 hours. Breach entry always logged immediately — Override cannot delete factual record.

III-4: Weighted Breach Index (WBI) & Compliance Scoring

Breach Type	WBI Points	Trigger
Nuclear breach (enrichment above 3.67%)	4 points	IAEA Director General certification
Fissile material diversion	8 points	Automatic Enhanced Review; no WBI ladder required
Cross-border attack (IAAT attributed)	3 points	Full IAAT investigation process
Proxy military weapons transfer	2 points	SWIFT + satellite verified
Maritime chokepoint incident	1 point	IMCA Council within 4 hours
Verification obstruction	2 points	Per incident
WBI 5.0 threshold	Enhanced Review Protocol activated	
WBI 8.0 threshold	Compliance Restoration consideration; Rapid Panel convenes	
WBI 12.0+ threshold	Full compliance restoration available; treaty suspension vote	

Goodwill Credit (v1.3): Each party receives 1.0 WBI Goodwill Credit per 12-month period to forgive a minor violation. **Self-Disclosure Credit:** -0.5 point credit per disclosure, capped at -1.0 per cycle. **Annual Goodwill Credit:** Each party receives 1.0 credit per year to formally forgive a minor violation.

III-5: Contingency Protocol Register — Eight Pre-Committed Protocols

Protocol	Trigger	Response
B-1: Cyber Attack	Major cyberattack on critical infrastructure	CAP Panel convenes within 24 hours; 10-day investigation; default non-attribution
B-2: Leadership Succession	Assassination, incapacitation, institutional collapse	30-day Framework Preservation Hold; JCC neutral chair administers
B-3: Third-Party Disruption	Third-party attack designed to force bilateral retaliation	72-hour attribution panel; 10-day investigation; default non-attribution; zero penalties
B-4: Compact-Adverse Actor	Domestic hawkish factions sabotaging Compact	Investigation + discipline; WBI penalties apply to the state
B-5: Loophole Prevention	Gaming, misinterpretation, exploitation	Living Loophole Register patches within one Crescent Cycle
B-6: Financial System Disruption	SWIFT disruption, banking collapse	Backup channels activate within 24 hours; 30-day commercial wind-down grace
B-7: Mass Casualty / WMD	Suspected chemical, biological, or nuclear event	JCC Emergency Session within 4 hours; 14-day Crisis Lock
B-8: Narrative Alignment	Media collapse, systematic misrepresentation	Coordinated statements within 48 hours; Dispute Gag Rule

Part IV: Israel–Arab Normalization & Extended Abraham Accords (Progressive Arch)

Activation Condition: Two consecutive green Crescent Cycles in Core Frame Parts I–III. Constructive Ambiguity Doctrine: parties 'commit to a good-faith effort' toward defined outcomes, 'subject to technical feasibility and domestic political conditions.'

IV-1: Saudi Arabia–Israel Normalization Protocol

Four-step sequenced protocol: Israeli 18-month settlement freeze → Saudi trade liaison offices; Palestinian prisoner release + PA tax revenue → full diplomatic recognition; 'credible pathway' language at UNSC → Abraham Accords membership; Israel–Palestine permanent status negotiations → full normalization. Saudi Civilian Nuclear Program under U.S. 123 Agreement with 'gold standard' provisions.

IV-2: Palestinian Horizon Architecture

Gaza Reconstruction Authority (GRA) replacing Hamas administrative role with \$50 billion 10-year reconstruction fund. West Bank Settlement Freeze: all expansion in Area C outside established blocs freezes for 18 months.

IV-3: Iran–Israel Managed Non-Belligerence Protocol (MNBPP)

No diplomatic normalization. Instead: Swiss back-channel; absolute prohibition on cyberattacks against civilian infrastructure; no nuclear targeting under any scenario; 48-hour advance notification of military exercises within 200km; shared de-escalation hotline through JCC.

Part V: Yemen Conflict Resolution & Red Sea–Hormuz Maritime Security (Progressive Arch)

V-1: Houthi Participation Framework & Ceasefire

Yemen Stabilization Dialogue (YSD) hosted in Oman. Houthi political leadership not treated as designated terrorist organization for YSD participation (18-month suspension). Yemen Reconstruction Fund: up to \$30 billion as strict 1:1 matching fund with World Bank Verification Cell milestone certification. Yemen Transitional Power-Sharing Council (YTPC) with proportional seats. Elections at Month 48.

V-2: International Maritime Corridor Authority (IMCA) (v3.0)

Governance: Iran (permanent), Saudi Arabia (permanent), UAE (permanent), U.S. (permanent), Djibouti/Eritrea (rotating), Yemen transitional (rotating), EU (observer), China (observer). Tiered Tolling: Tier 1 (humanitarian): zero toll; Tier 2 (standard): \$0.12/ton; Tier 3 (energy/VLCC): \$0.22/ton; Tier 4 (premium security): \$0.50/ton. Estimated annual revenue: \$475 million. Freedom of Navigation Guarantee: Iran permanently commits to unobstructed commercial passage.

v3.0 IMCA Sovereignty Recalibration Applied (Cross-Reference I-8)

All provisions of I-8.1 (IMCA Mandate Restriction), I-8.2 (PGSA as Sole Coastal Enforcement), I-8.3 (PGSA-IMCA Interface), and I-8.4 (Optical Compromise Architecture) apply equally to the IMCA as constituted under Part V. The PGSA's exclusive authority within Iranian territorial waters is not diminished by IMCA's Progressive Arch activation.

V-3: Saudi Arabia–Iran Yemen De-Escalation

Direct bilateral Yemen consultations within 30 days: no new weapons transfers to any Yemeni faction; active YSD support; joint humanitarian aid corridors; intelligence sharing on ISIS/AQAP.

V-4: Saudi Arabia–Iran Bilateral Stabilization Annex (v1.7)

Direct Hotline (24/7, Omani facilitation); Hajj Coordination Protocol; Persian Gulf Maritime Deconfliction (24-hour advance notification); Bilateral Economic Normalization (diplomatic missions within 90 days).

Part VI: Iraq Stabilization, Militia Integration & Sovereignty Restoration (Progressive Arch)

VI-1: PMF Transition Framework

Iraq Sovereign Transition Fund (ISTF) of \$15 billion over 5 years. PMF Transition Options: full ISF integration; honorable discharge with \$25K-\$50K buyout; Ministry of Interior policing; agricultural land grant. 5-Year Re-Arming Clawback Provision. Iraq Sovereignty Guarantee: Baghdad holds exclusive authority over all PMF integration decisions.

VI-2: Regional Counterterrorism Intelligence Cell (RCIC)

Hosted in Baghdad under Iraqi authority. Sanitized intelligence sharing on ISIS and AQAP. Cryptographic No-Targeting-Data Wall: one-way hash architecture preventing shared threat data from being reverse-engineered to identify source assets.

VI-3: Sadrist Political Reintegration Module

Independent Electoral Integrity Commission (IEIC) with Sadrist-nominated one-third representation. Conditional Parliamentary Return: Sadrist Movement commits to non-disruption and engagement. Arab League Political Stability Mission (ALPASM) for ongoing monitoring.

Part VII: Syria De-escalation, Reconstruction & Golan Pathway (Progressive Arch)

VII-1: Syria Stabilization & Reconstruction Framework

Israeli cessation of strikes on Syrian military/civilian infrastructure absent verified Iranian re-entrenchment. Israeli forces withdraw from Syrian territory seized after November 2024 within 24 months. Syria Reconstruction Fund: \$50 billion over 10 years with World Bank Verification Cell anti-diversion audit. HTS context: treated as transitional state actors provided inclusive governance, civilian targeting renunciation, and RCIC cooperation. Syria Refugee Return Authority (SRRA): \$10 billion voluntary return program.

Part VIII: Regional Economic Integration, Arms Control & Counterterrorism (Progressive Arch)

VIII-1: Middle East Economic Integration Zone (MEIZ)

Gulf-to-Mediterranean Infrastructure Corridor: \$100 billion joint rail, energy, and digital infrastructure. Persian Gulf Regional Energy Transition Fund: \$50 billion for renewable energy, desalination, and grid interconnection. Private Sector Lock-In Protocol (PSLP): multinational contracts of 12+ months involving 3+ signatories receive treaty protection.

VIII-2: Regional Arms Transparency Protocol (RATP)

Annual declaration of major weapons systems; 14-day advance notification of military exercises; naval deconfliction protocol; air defense coordination; regional cyber non-aggression pact. Iranian Ballistic Missile Transparency: annual declarations of inventory, ranges, and general basing locations — not a cap or operational restriction.

VIII-3: Regional Counterterrorism Cooperation

Sanitized threat intelligence sharing through RCIC; FATF standards; Regional Cyber Incident Response Center (RCIRC) hosted in Oman. Participation voluntary and non-attributional.

VIII-4: Humanitarian & Refugee Framework

Regional Humanitarian Coordination Authority (RHCA) under UNOCHA auspices. Four concurrent crises: Syria (6.5M+ refugees), Palestine (UNRWA reform), Yemen (active crisis), Iraq (1.2M+ IDPs). **Core Guarantee: NON-SUSPENDABLE.** Any party obstructing humanitarian access = double-weight WBI + immediate UNSC notification.

Annex K: Lebanon Dossier Isolation Firewall & Core Accord Protection Protocol (v3.0)

Operational Context: Iran's Foreign Ministry, via spokesperson Esmail Baghaei, has explicitly stated that Tehran's fixed position is an **end to the war on all fronts, including Lebanon**. Tehran refuses to sign a standalone deal that stops bombing on Iranian soil while allowing the active conflict between Israel and Hezbollah in southern Lebanon to continue. The United States and Israel have historically sought to keep Lebanon separate from core US-Iran negotiations. This annex provides a structural compromise that prevents the entire deal from collapsing over the Lebanon front while respecting both sides' core requirements.

Relationship to Part II: The Crescent Compact's Part II already contains the most comprehensive Lebanon-Israel-Hezbollah architecture of any regional framework (JSRZ, IAAT, PSTF, UCPC, SIWST, and Hezbollah institutional integration). Annex K does not duplicate or replace Part II. It adds three critical instruments that Part II does not contain: (1) a **Dossier Isolation Firewall** that prevents Lebanon incidents from collapsing the core US-Iran nuclear and maritime deal; (2) a **Proxy Operational Pause** that gives Israel immediate security benefits from Day 1; and (3) a **Levant Regional Basket** that creates a parallel diplomatic track for long-term Israel-Lebanon stability.

K.1 Proxy Operational Pause: Hezbollah De-escalation Protocol

Purpose: To satisfy the US and Israeli requirement that pulling back US forces and opening Hormuz does not result in immediate escalation on Israel's northern border, Iran transmits immediate, formal instructions to Hezbollah leadership for an operational pause concurrent with the main Compact timeline. This pause is not disarmament, surrender, or political concession — it is a structured, time-limited operational de-escalation.

Phase	Hezbollah Operational Parameters	Verification	US/Israel Reciprocal
Phase 1: Days 1-30	Cessation of cross-border rocket and drone attacks into northern Israel. Suspension of offensive military operations against IDF positions. Defensive positions in southern Lebanon maintained but not reinforced. No new weapons transfers from Iran to Hezbollah via Syria or maritime routes.	UNIFIL patrol confirmation; Israeli military intelligence (via Tel Aviv Channel); Lebanese Armed Forces liaison reports; satellite surveillance	Israel suspends offensive air strikes against Hezbollah positions in southern Lebanon for 30 days. IDF maintains defensive posture only. No ground incursions.
Phase 2: Days 31-90	Continued cessation of offensive operations. Hezbollah forces remain in defensive positions. No infiltration attempts across the Blue Line. Weapons transfers from Iran remain suspended.	Monthly UNIFIL verification report; ICRC monitoring; SEAC pattern analysis of supply routes	Israel extends air strike moratorium to 90 days contingent on verified Hezbollah restraint. Gradual relaxation of naval interdiction.
Phase 3: Days 91-180	Exploration of structured de-escalation through Levant Regional Basket (Section K.3). Hezbollah may engage in political and humanitarian activities. Military posture remains defensive.	Regional Basket monitoring cell; UN Special Coordinator quarterly assessment	Israeli restrictions reviewed at Day 180 milestone. If 180 consecutive days verified, Israel considers further confidence-building measures.

K.1.1 Verification Architecture

The Hezbollah operational pause is verified through four independent channels: (1) **UNIFIL ground patrols** — daily patrols along the Blue Line with incident logging published to the IMCA Dashboard; (2) **Israeli intelligence assessment** — weekly classified brief with sanitized summary published to Dashboard; (3) **Lebanese Armed Forces liaison** — daily reporting from LAF command in Tyre and Nabatieh to the Oman Liaison Office; (4) **SEAC pattern analysis** — automated detection of supply route activity, weapons convoy movement, and communications patterns. All four channels must show green before the pause is considered verified.

K.1.2 Non-Compliance Consequences

If any channel reports significant Hezbollah offensive action: (1) 24-hour verification window — all four channels confirm; (2) if confirmed, Iran has 72 hours to transmit renewed de-escalation instructions through the Oman back-channel; (3) if Iran de-escalates within 72 hours, pause resumes with enhanced monitoring; (4) if Iran does not de-escalate, Israel may resume defensive air strikes **limited to specific positions involved** — not blanket escalation; (5) **under no circumstances** does a Hezbollah incident trigger WBI accumulation or stepback against Core Frame Part I (see Dossier Isolation Firewall, Section K.2).

K.2 Dossier Isolation Firewall: Lebanon Non-Linkage Clause

Operative Principle: The Dossier Isolation Firewall is a binding structural provision that **explicitly prohibits** either party from using incidents, friction, or localized military activity in southern Lebanon as justification for WBI accumulation, sanctions restoration, suspension, or collapse of Core Frame Part I (Iran–US Nuclear, Military & Economic Normalization). The Lebanon file and the US-Iran nuclear/maritime file are legally and operationally segregated. What happens in Lebanon stays in Lebanon — it cannot blow back onto Hormuz.

ARTICLE K.2 — DOSSIER ISOLATION FIREWALL (OPERATIVE AND BINDING)				
Trigger Category	Lebanon Impact		Core Frame Part I Impact	Rationale
Hezbollah rocket fire into Israel	Israeli defensive response;	Regional Basket activation	NONE — Core Frame unaffected	Localized border friction; Core Frame addresses nuclear and maritime
Israeli air strike on Hezbollah position	Regional escalation;	Basket de-UNIFIL coordination	NONE — Core Frame unaffected	Israel retains sovereign right to self-defense
IDF ground incursion into Lebanon	Major emergency session;	Regional Basket UNSC consultation	NONE — stepback prohibited by Firewall	Ground incursion is escalatory but does not violate US commitments
Iranian weapons transfer to Hezbollah	SEAC attribution;	Regional Basket censure	NONE — proxy activity outside Core Frame scope	Proxy activity governed by I-7 Proxy Wind-Down, not Core Frame WBI
Hezbollah attack on US personnel	Full SEAC investigation;	US retains right to self-defense	NONE — unless attack explicitly linked to Iranian government directive per SEAC attribution	Sole exception: explicit government directive triggers Category B review

K.2.1 Firewall Architecture

The Dossier Isolation Firewall operates at three levels: (1) **Legal level** — the Exchange of Letters explicitly lists "incidents in the Levant theater involving non-state actors" as excluded from material breach triggers under III-4 WBI scoring for Core Frame Part I; (2) **Technical level** — the IMCA Dashboard maintains separate tracks for "Core Frame Part I Compliance" and "Regional Security Incidents." Lebanon incidents are logged only on the Regional Security track. WBI algorithms reference only the Core Compliance track; (3) **Political level** — both capitals issue pre-cleared talking points confirming that the Lebanon file is managed through separate mechanisms. No US or Iranian official may publicly link Hormuz transit to Lebanon de-escalation without triggering Yellow/Red Card narrative penalties under III-4.

K.2.2 Escalation Ceiling

Even if the Levant situation deteriorates significantly (major Israeli ground operation, large-scale Hezbollah rocket campaign, civilian mass casualty event), the Firewall remains in force. Core Frame Part I can only be affected if: (a) the UN Security Council determines that a party has committed a grave breach of international humanitarian law **and** (b) the JCC unanimously determines that the breach is directly linked to a Core Frame Part I commitment violation. This dual threshold is designed to be virtually impossible to meet in practice.

K.3 Levant Regional Basket: Parallel Track for Israel-Lebanon De-escalation

Purpose: To satisfy Iran's requirement that the framework address the war on all fronts, including Lebanon, the Levant Regional Basket creates a **parallel diplomatic track** for Israel-Lebanon de-escalation that runs alongside the 60-day nuclear negotiating window. This is not a condition for signing Core Frame Part I — it is a complementary process that begins concurrently and operates on its own timeline.

Element	Mandate	Participants	Timeline
Basket Steering Committee	Overall direction of Levant de-escalation; dispute resolution; escalation management	Lebanon (chair), Israel, US, Iran (observer), UN Special Coordinator, Oman (facilitator)	Convenes within 14 days of Core Frame activation
Border Monitoring Cell	Blue Line incident verification; cross-border firing attribution; civilian protection	UNIFIL (lead), Lebanese Armed Forces, IDF liaison, ICRC observer	Operational from Day 1; reports weekly
Humanitarian Sub-Track	Civilian protection in southern Lebanon; IDP return; infrastructure repair; medical corridors	ICRC (lead), UN OCHA, WHO, Lebanese Ministry of Health, donor states	Activates immediately; pre-authorized \$75M fund
Political Sub-Track	Long-term Israel-Lebanon stability; UN Resolution 1701 implementation; maritime boundary demarcation	UN Special Coordinator (lead), Lebanon, Israel, US, France	Convenes at Day 60
Economic Sub-Track	Reconstruction financing for southern Lebanon; energy infrastructure; port rehabilitation	World Bank (lead), EU, Saudi Arabia, UAE, Iran (through proxy reconstruction fund)	Convenes at Day 90; contingent on 60 days of verified border quiet

K.3.1 Iranian Participation

Iran participates as an **observer state**, not a full member. Iranian interests are represented by Oman (primary) and the UN Special Coordinator (secondary). Iran may fund reconstruction through the proxy reconstruction fund without direct engagement with Israeli officials. Framed domestically in Iran as "monitoring the situation to protect our allies" rather than "negotiating with the Zionist entity."

K.3.2 Israeli Participation

Israel participates as a **full member** of the Steering Committee with: (1) full voting rights; (2) veto authority over any reconstruction funding that could be diverted to Hezbollah military purposes; (3) the right to suspend its participation without affecting Core Frame Part I; (4) the Tel Aviv Channel for bilateral US-Israel coordination.

K.3.3 Graduation Pathway

If the Levant Regional Basket achieves 180 consecutive days of verified border quiet, it may graduate to a standalone Israel-Lebanon Framework Agreement brokered by the UN. Core Frame Part I does not depend on this graduation — the two frameworks operate on fully independent timelines.

K.4 Narrative Architecture for Lebanon

US TALKING POINTS

"The core US-Iran agreement addresses nuclear proliferation and freedom of navigation — America's core national security interests. Lebanon is a separate file managed through a dedicated regional basket with full Israeli participation. We are not trading Hormuz for Hezbollah. The Dossier Isolation Firewall ensures that what happens in Lebanon cannot affect the nuclear deal."

IRANIAN TALKING POINTS

"The framework ends the war on all fronts. Through the Levant Regional Basket, Iran ensures that our allies in Lebanon are not abandoned while the main agreement proceeds. The Dossier Isolation clause protects the core agreement from being undermined by localized incidents. Iran's observer status allows us to monitor and protect Lebanese interests without direct engagement."

ISRAELI TALKING POINTS

"Israel's security is not negotiable. The Levant Regional Basket is a separate diplomatic process in which Israel has full participation and veto authority. The core US-Iran agreement does not constrain Israel's right to self-defense. If Hezbollah attacks, Israel will respond — and the nuclear deal remains unaffected."

LEBANESE TALKING POINTS

"Lebanon welcomes the Levant Regional Basket as a pathway to stability for our southern border. We are not a proxy battlefield. The Basket's humanitarian sub-track addresses the urgent needs of our civilian population. Lebanon's sovereignty is respected through our chairmanship of the Steering Committee."

K.5 Summary: The Lebanon Bridge

The Lebanon annex bridges the fundamental disagreement between Iran (which demands an end to the war on all fronts) and the US/Israel (which want Lebanon kept separate). It does so by: (1) creating a structured Hezbollah operational pause that gives Israel immediate security benefits; (2) building an

absolute firewall that prevents Lebanon incidents from collapsing the core deal; (3) establishing a parallel regional basket that addresses Lebanon on its own timeline with its own participants; and (4) providing each side with narrative frames that allow them to claim the outcome they need. Iran can say the war ends on all fronts. The US can say Lebanon is a separate track. Israel can say its security is protected. And the Dossier Isolation Firewall ensures that if any of these claims prove hollow, the Core Frame survives.

Version 3.0 Changelog

Version	Date	Changes
1.0	Early 2026	Initial Crescent Compact — Core Frame (Parts I-III), Progressive Arches (Parts IV-VIII), 8 Annexes
1.1	March 2026	FURC 18-month stability lock; Fissile Material Custody two-tranche architecture; Tiered Tolling; WBI system; eight Contingency Protocols
1.2	March 2026	SIWST Confiscation Protocol; CIVIR independent verification; Geographic Dispersion Limits; 5-Year Re-Arming Clawback; differentiated Rapid Panel timelines; Blue Line post-flight notification; Facility Perimeter Buffer Rule; Tier 4 Premium Security Transit
1.3	April 2026	Five Modular Verification Systems (CEMS, ASPAN, ZKPEV, APRM, CRYPTO); Political Circuit Breaker; Incentive Acceleration Mechanism; Annual Calibration Summit
1.4	April 2026	Missile CBDE Pilot; Consolidated Material Breach Definition (G.8); JCC Voting Authority Matrix (G.9)
1.5	April 2026	Goodwill Credit; Ambassador's Override; 48-Month Sunset of Automation; Ghajar 5-Year Cooling-Off; DAP; Diplomatic Innovation Fund (DIF); Strategic Narrative Protocol (Annex J)
1.6	April 2026	Hezbollah Formal Political Party Rights; PLC Recognition Module; HTS Al-Qaeda Veteran Registry; Referendum Neutrality Clause
1.7	April 2026	FURP Presidential Policy Directive architecture; CNOC Simplified Framework; Iranian Sovereign Right Affirmation; Narrative Sovereignty Clause; Targeted Individual Sanctions Snap-Forward; Congressional Continuity Shield; Cyber Non-Escalation Protocol; Direct Military-to-Military Deconfliction Lines; Blue Line Demarcation Roadmap; UNIFIL Mandate Modernization; Israeli Self-Defense Carve-Out; Modular Ratification Pathways; Supreme National Interest Waiver; Shadow Compliance Channel; Quiet Diplomacy Channel; Joint Legal Interpretation Panel; Partial Automation-to-Recommendation Conversion; Phased Complexity Activation; 90-Day Early-Cycle Stabilization Window; Saudi-Iran Bilateral Stabilization Annex; Iraq Sovereignty Guarantee; Interpretive Buffer Zones
3.0	Late May 2026	Four surgical refinements for Sunday 4:00 PM Eastern deadline: (1) IMCA Sovereignty Recalibration (I-8.1-I-8.4) — explicit mandate restriction to 3 functions, PGSA recognized as sole coastal enforcement within Iranian territorial waters, PGSA-IMCA Interface Protocol, Optical Compromise Architecture; (2) Automated Day 7 Dual-Trigger (I-8.5) — 5-step technical architecture preventing front-loaded concessions; (3) HEU Phase 1 Baseline (I-2.1-I-2.4) — legal ownership (CBI) decoupled from physical custody (IAEA), disposition deferred to 30-60 day nuclear window, six-pathway menu; (4) Lebanon Dossier Isolation Firewall (Annex K) — Proxy Operational Pause across 3 phases, Dossier Isolation Firewall with 5 trigger categories, Levant Regional Basket with 5 elements, narrative architecture for 4 audiences. Updated preamble, I-8, and V-2 with v3.0 callouts.

v3.0 Design Principles

These four surgical refinements were designed to meet four specific pushback points identified in the late May 2026 negotiation environment:

IRGC/Fars News Agency pushback: The sovereignty recalibration explicitly restricts IMCA to commercial coordination and recognizes PGSA as sole coastal enforcement — addressing the IRGC's concern that the multilateral maritime authority would erode Iranian sovereignty.

Trump/Rubio "HEU must leave Iranian soil": The Phase 1 baseline places HEU under IAEA physical custody immediately (satisfying the physical verification demand) while deferring final disposition to a negotiated window (preserving Iranian negotiating leverage on the nuclear file).

Trump "no front-loaded concessions": The automated Day 7 dual-trigger guarantees simultaneous execution within 60 seconds — neither side moves first, eliminating the sequencing trap that collapsed prior negotiations.

Baghaei "end the war on all fronts including Lebanon": The Lebanon annex provides Iran with a structural mechanism to address Lebanon without making the core deal conditional on Hezbollah compliance. The Dossier Isolation Firewall ensures that even if Lebanon deteriorates, the nuclear deal survives.

"The crescent does not illuminate all at once. It grows."

The Crescent Compact v3.0 | Late May 2026 | Authorized Negotiators Only
