

CONFIDENTIAL -- NEGOTIATOR'S WORKING DOCUMENT

NEGOTIATOR'S BRIEF

Stability First Enhanced Accord v1.0

*The 14-Day MoU & 30-Day Deferred Window
A Field Guide for Active Negotiators*

May 2026 | For Authorized Negotiators Only

Companion to: Stability First Enhanced Accord v1.0 (Full Framework)

Calibrated for: Islamabad / Muscat / Geneva Negotiation Tracks

CARRY INTO THE ROOM

Contents

- 1. The Core Concept: 60 Seconds to Explain**
- 2. The 14-Day MoU: Day-by-Day Checklist**
- 3. The 30-Day Window: Week-by-Week Agenda**
- 4. Landing Zones: Where Deals Live**
 - 4.1 Nuclear File (The Deferred Items)
 - 4.2 Hormuz & Maritime
 - 4.3 Economic & Sanctions
- 5. Red Lines: What Neither Side Can Accept**
- 6. Fallback Positions: If Talks Stall**
- 7. Talking Points: What to Say in the Room**
- 8. Verification: The Five Channels at a Glance**
- 9. Crisis Protocols: When Things Go Wrong**
- 10. Quick Reference: Numbers to Remember**
- 11. Appendix: Modular Selection Cards**

1. The Core Concept: 60 Seconds to Explain

The Elevator Pitch

"We end the war **now**. Hormuz reopens **now**. Iran's nuclear stockpile goes to IAEA custody **now**. The detailed nuclear terms -- how long the moratorium lasts, exactly how the uranium leaves, what happens to Fordow -- get negotiated over the next **30 days** in a dedicated window. Both sides get immediate wins. Neither side has to sign a blank check. The 30-day window has hard deadlines and automatic triggers if either side stalls."

Why This Works

For the US	For Iran
Gas prices fall within 14 days	Bombing stops on Day 1
Weapons-grade uranium out of Iran on Day 1	\$250M returns on Day 1
Binding moratorium commitment on Day 1	Blockade lifts on Day 7
12-15 year moratorium locked in by Day 44	Hormuz co-governance seat
No troops withdrawn; no bases closed	NPT rights preserved

The Three Sentences That Matter

1. **Stage 1 (Days 1-14):** End the war, reopen Hormuz, transfer stockpile to IAEA custody, release \$250M pilot -- *nuclear specifics committed-to but deferred*.
2. **Stage 2 (Days 15-44):** The 30-day deferred window -- moratorium duration, HEU export logistics, Fordow/Natanz protocols, inspections, sanctions sequencing all negotiated here.
3. **Stage 3 (Days 45-180):** Permanent architecture -- IHTA treaty, regional dialogue, full normalization, Fordow conversion completion.

The Golden Rule of This Negotiation

Decouple the shooting war from the nuclear file. If nuclear details block the ceasefire, everyone loses. If the ceasefire happens first, both sides gain the political space to negotiate nuclear terms in good faith over 30 days.

2. The 14-Day MoU: Day-by-Day Checklist

Pre-Signature (T-5 to T-0)

- ☐ T-5: Both governments confirm agreement to proceed; designate senior officials
- ☐ T-4: Omani Foreign Ministry confirms Muscat facilities ready
- ☐ T-3: Swiss financial channel confirms escrow architecture ready
- ☐ T-3: IAEA confirms Oman custody facility ready
- ☐ T-2: Pakistani guarantor confirms mediation team deployed
- ☐ T-1: Both governments issue internal ceasefire instructions to military commands
- ☐ T-0: Signature ceremony (Muscat or Geneva)

Day 1: 0000 GMT -- Ceasefire Effective

Iran Delivers	US Delivers	Verify Via
Cease all offensive operations; transmit Hezbollah operational pause; transmit Houthi Red Sea pause	Suspend Project Freedom; cease all offensive operations	CENTCOM + IRGC operational orders; Pakistani PM Office
Initiate stockpile transfer to IAEA custody in Oman (framework commitment; logistics deferred)	Issue OFAC license for \$250M pilot asset transfer	IAEA DG confirmation; Iranian Central Bank confirms receipt
Commit to moratorium framework (12-15 yr landing zone; specifics deferred to 30-day window)	Open 30-day nuclear negotiation window in writing	JIG registration; Pakistani + UN Special Envoy concurrent certification

Day 1 Win for US Messaging

"We stopped the shooting, got Iran's weapons-grade uranium into IAEA hands, and locked in a binding commitment to a moratorium. The details get hammered out over 30 days, not in a rushed hour."

Day 1 Win for Iran Messaging

"We ended the war. The American blockade will lift. Our sovereign property is returning. We committed to a framework -- the specifics will be negotiated as equals over 30 days, not imposed under threat of bombing."

Day 3: Humanitarian Corridor

- ☐ First humanitarian-flagged vessel transits Hormuz (zero fee, no inspection delay)

- ☐ OFAC humanitarian license issued by US (medicine, medical equipment, food)
- ☐ JHA observation confirms transit

Day 7: The Synchronized Lift

Step	Action
0000 GMT	Both lifts declared operative simultaneously
+6h	JHA observation vessels take station at Khasab and Bandar Abbas
+24h	First commercial vessel transits in each direction confirmed
+72h	If either lift not verified: JHA emergency session; Pakistani guarantor intervenes

Day 7 Risk Point

If either side fails to lift by +72h, the unlifted side's commitment is **suspended**. Matter goes to JHA emergency session. Do not let Day 7 fail -- it is the make-or-break moment of Stage 1.

Day 14: Stage One Closing

- ☐ Both blockades lifted and verified (JHA, Lloyd's List, UN OCHA, guarantor naval observers)
- ☐ 200+ cumulative commercial vessel transits in 14-day period
- ☐ IAEA confirms stockpile in secure custody in Oman
- ☐ Ceasefire intact -- no verified offensive operations
- ☐ JHA provisional mode with operational Maritime Coordination Cell
- ☐ Humanitarian corridor transits confirmed
- ☐ Binding nuclear framework commitment registered with JIG
- ☐ Stage 2 (30-day window) begins automatically upon certification

3. The 30-Day Window: Week-by-Week Agenda

The Mandate

The 30-day window (Days 15-44) is where the nuclear specifics are negotiated. It was opened by the 14-point MoU. It has a hard close on Day 44. If either side stalls, the 14-day Stage 1 achievements remain in place -- but Stage 3 (permanent architecture, full sanctions relief, SWIFT) does not begin.

Week 1 (Days 15-21): The Nuclear Core

Day	Issue	Target	Fallback
15-18	Moratorium duration US: 20 yrs; Iran: 5 yrs; LZ: 12-15 yrs	Principled agreement on 12-15 year range	12 years base + 2-year auto-extension per violation (gives US 14-16 effectively)
19-21	Violation-extension mechanism	2-year auto-extension per material breach; IAEA (not US) determines breach	JIG majority determines breach (not unilateral US)

Week 2 (Days 22-28): Stockpile & Facilities

Day	Issue	Target	Fallback
22-24	HEU export destination US: US territory; Iran: Oman or Russia	Oman IAEA custody (neutral; neither side controls)	Kazakhstan LEU Bank (IAEA precedent)
25-26	Export timeline & logistics	14-30 days from Day 44; IAEA-secured transport	Staged quarterly transfer tied to asset releases
27-28	Fordow protocol US: Dismantle; Iran: Preserve	Convert to medical-isotope center (IMIRC)	Staged conversion: enrichment ceases immediately, conversion over 18 months

Week 3 (Days 29-35): Inspections & Economics

Day	Issue	Target	Fallback
29-31	Inspections regime US: Anytime anywhere; Iran: Declared sites only	Enhanced declared-site + IAEA unannounced (not military sites)	Additional Protocol + managed-access military sites
32-33	Natanz protocol	Open-fuel-cycle research campus; 3.67% post-moratorium	Staged transition; R&D only during moratorium
34-35	Asset return Tranche 2 25% (~\$25-30B)	Non-reversible transfer upon moratorium ratification	Escrow release with 48h delay for Congressional notification

Week 4+ (Days 36-44): Integration & Ratification

Day	Issue	Target	Fallback
36-38	Sanctions relief tranches	Humanitarian Day 1 (done); aviation/consumer Day 30; banking Day 60; oil Day 120	Front-load humanitarian; delay oil to Day 150
39-40	SWIFT reconnection	Process begins Day 44; conditional on clean 30-day IAEA report	Correspondent banking via Swiss channel as interim
41-43	Integration & review	All elements cross-referenced; no orphan commitments	JIG legal team reconciliation session
44	Concurrent certification	Pakistan + Oman + Switzerland + IAEA DG certify simultaneously	48-hour extension if technical discrepancies only

Day 44 Hard Deadline

If Stage 2 does not close by Day 44, the 14-day MoU achievements **remain in force** (ceasefire holds, Hormuz stays open, \$250M stays transferred, stockpile stays in IAEA custody). However, Tranche 2 asset release is frozen, SWIFT does not begin, sanctions relief stalls, and Stage 3 never opens. Both sides have strong incentive to close -- but neither side faces catastrophe if they don't. This is the structural discipline of the 30-day window.

4. Landing Zones: Where Deals Live

4.1 Nuclear File (The Deferred Items)

Issue	US Open	Iran Open	Landing Zone	Your Anchor
Moratorium	20 years	5 years	12-15 yrs	Open with 12 years; offer 15 only with robust violation-extension
HEU disposition	Transfer to US	Keep in Iran	Oman IAEA	Oman is neutral; IAEA controls; neither side "wins" the location
Fordow	Dismantle	Preserve	IMIRC conversion	Enrichment ceases Day 1; medical isotopes by Month 18
Natanz	No underground ops	NPT rights	Research campus	3.67% post-moratorium; IAEA continuous monitoring throughout
Inspections	Anytime anywhere	Declared sites	Enhanced + AP	IAEA Additional Protocol; no military site access without Iranian consent + managed access
Centrifuges	Destroy advanced	Keep all R&D	IR-1 only; rest stored	IR-6 and IR-9 mothballed (not destroyed) under IAEA seal; R&D on non-enriching cascades permitted

4.2 Hormuz & Maritime

Issue	US Open	Iran Open	Landing Zone
Governance	US-led coalition	Iran sovereign control	JHA / IHTA co-governance
Military presence	Freedom of navigation ops	No foreign forces	Coordinated patrols; hotline; deconfliction
Tolling	Minimal fees	Iranian revenue	Tiered tolls; 40% to Iranian reconstruction
Humanitarian	Open passage	Open passage	Zero-toll fast track (insulated from disputes)

4.3 Economic & Sanctions

Tranche	Timing	Amount	Trigger
Pilot	Day 1	\$250M	Signature (non-reversible)
Tranche 1	Day 30	~25% minus pilot	Stage 1 closed + IAEA custody
Tranche 2	Day 44	~25%	30-day moratorium ratified
Tranche 3	Day 120	~20%	IHTA permanent
Tranche 4	Day 180	~15%	180-day compliance
Reserve	Day 365	~10%	12-month sustained compliance
Balance	Year 2-3	Remainder	RCSA Phase 2-3

Sector	Relief Timing	Condition
Humanitarian (medicine, food)	Day 1	None
Aviation safety, consumer goods	Day 30	IAEA custody confirmed
Banking (SWIFT reconnection)	Day 60	Clean 30-day IAEA report
Petrochemicals, oil services	Day 120	IHTA permanent operational
Oil export normalization	Day 180	180-day compliance review clean

5. Red Lines: What Neither Side Can Accept

US Red Lines -- Do Not Cross

- Iranian enrichment above 3.67% during the moratorium period
- Weapons-grade stockpile remaining on Iranian territory past Day 44
- Unrestricted military site access (domestically untenable)
- Closing or withdrawing from any US Gulf base
- Any language implying US apology or responsibility for hostilities
- Snapback provisions that require UN Security Council (Russian veto risk)

Iranian Red Lines -- Do Not Cross

- Moratorium beyond 20 years (framed as permanent surrender)
- Destruction of centrifuges (must be "mothballed" under IAEA seal, not destroyed)
- Military site access without Iranian consent + managed access protocol
- Any linkage to ballistic missile program or regional proxy behavior
- Any language requiring regime change or constitutional reform
- Any requirement to normalize relations with Israel
- Snapback triggered unilaterally by US (must be IAEA/JIG determination)

The Kill-Zone: Issues That Collapse the Deal

These are not red lines -- they are **dynamite**. Touch them only if you have written authorization from your capital:

- **HEU to US territory:** Iran will walk. Full stop. Oman, Kazakhstan, or Russia are the only viable options.
- **Moratorium under 10 years:** US Congress will kill it. 12 is the floor; 15 is sellable.
- **Military site inspections without Iranian escort:** Iranian hardliners will explode. Managed access with Iranian observers is the only path.
- **Any public mention of Israel in the text:** Both sides have domestic reasons to keep Israel out of the operative text.

6. Fallback Positions: If Talks Stall

If Moratorium Duration Deadlocks

Position	US Can Accept	Iran Can Accept
Primary: 12 years	Yes (with auto-extension)	Yes (if extension is IAEA-determined)
Fallback A: 10 years + 5 review	Maybe (needs Congressional cover)	Yes
Fallback B: 15 years + early release	Yes	Maybe (if clean compliance unlocks early civilian transition)
Nuclear option: Sunset at 10	No	Yes

If HEU Export Deadlocks

Destination	US	Iran
Oman (IAEA custody) PREFERRED	Yes	Yes
Kazakhstan LEU Bank	Yes	Yes
Russia (Rosatom)	Maybe	Yes
US territory DEAD	Preferred	Never

If Fordow Deadlocks

Option	US	Iran
Convert to IMIRC PREFERRED	Yes	Yes
Staged conversion (enrichment stops now, facility use later)	Yes	Yes
Research facility only (no enrichment, no dismantlement)	Maybe	Yes
Dismantlement DEAD	Preferred	Never

The Deadlock Bypass Matrix

If Stalled On	Try This
Moratorium duration	Split the difference at 12.5 years; define half-years in the text; auto-extension as sweetener
HEU destination	Oman as default; review clause at 5 years allowing relocation by mutual consent
Inspections	Additional Protocol as baseline; military sites via "managed access" (not anytime-anywhere)
Centrifuge disposition	Mothball (not destroy); stored under IAEA seal; R&D on non-enriching cascades permitted
Sanctions sequencing	Front-load humanitarian and aviation; back-load oil; SWIFT at Day 60 as compromise

The Swiss Channel Maneuver

If bilateral talks hit an impasse on any economic issue, route it through the Swiss financial channel. The Swiss can package politically difficult trade-offs as "technical escrow arrangements" -- giving both sides cover to move without appearing to concede directly.

7. Talking Points: What to Say in the Room

Opening the 30-Day Window (Day 15)

US Side -- Suggested Opening

"We ended the war. Your stockpile is in IAEA hands. The \$250 million is transferred. Now we have 30 days to lock in the details that make this permanent. We're not here to renegotiate the framework -- we're here to fill it with specifics that both our governments can defend. Let's start with moratorium duration."

Iranian Side -- Suggested Opening

"The bombing has stopped. Our ports are open. Our assets are returning. We made binding commitments in good faith. Now we negotiate the specifics as equals. The moratorium is a sovereign decision, not a surrender. Let's discuss terms that respect both our NPT rights and your security concerns."

When the Other Side Pushes Back

They Say	You Say
"The moratorium must be 20 years."	"Twelve years with a 2-year auto-extension per violation gives you 14-16 effectively if there are any problems. That's longer than JCPOA ever provided, and it's IAEA-determined, not subject to our politics."
"The stockpile cannot leave Iranian territory."	"Oman was your choice. IAEA controls it, not us. It's still under international supervision, not surrendered to any single power. That's sovereignty-preserving by design."
"Fordow is our most important facility."	"And it will be your most important medical research center. Iranian scientists leading world-class isotope production for regional healthcare. That's not dismantlement -- that's transformation."
"No inspections of military sites."	"The Additional Protocol is the standard. For anything beyond that, we use managed access -- Iranian escort, pre-agreed protocol, IAEA technical objective. No one is rummaging through your military bases."
"Snapback must be multilateral."	"Agreed. IAEA determines material breach. JIG majority activates response. No single country triggers snapback. That's in the text."

The Framing Phrases That Work

Instead of...	Say...	Why It Works
"Nuclear dismantlement"	"Sovereign Energy Partnership"	Iranians proposed this framing; use it
"Exporting uranium"	"Custody transfer to IAEA trusteeship"	Removes surrender connotation
"Closing Fordow"	"Converting Fordow"	Preservation, not destruction
"Sanctions relief"	"Asset return" / "Sovereign property restoration"	These are Iran's assets, not US gifts
"Inspections"	"Verification" / "Transparency measures"	Less intrusive-sounding

"Moratorium"	"Enrichment pause" / "Civilian energy transition period"	Temporary, purposeful, not punitive
--------------	--	-------------------------------------

8. Verification: The Five Channels at a Glance

Channel	Role	Call When
1. Pakistani Mediator	Bilateral diplomatic compliance; major commitment certification; crisis hotline	Either side stalls; crisis needs cooling; framing dispute
2. Omani Technical	Maritime operations; JHA observation; nuclear custody facility oversight	Hormuz transit issues; custody facility questions; Day 7 lift verification
3. Swiss Financial	Asset transfer verification; sanctions relief; escrow; banking reconnection	Asset tranche delayed; sanctions implementation question; SWIFT issues
4. IAEA	Nuclear exchange verification; stockpile custody; enrichment monitoring; Fordow	Nuclear compliance question; technical discrepancy; breach determination
5. National Technical Means	Satellite intelligence; discrepancy detection; backstop verification	Intelligence suggests violation; confidence check on other channels

The Convergence Rule

No single channel can trigger or block a compliance determination. Every material finding requires **convergent evidence from at least two independent channels**. If IAEA says one thing and Omani technical says another, the JIG Technical Discrepancy Panel convenes within 72 hours. No party may take unilateral action during discrepancy review.

Risk Appetite: What Triggers What

Tier	Trigger	Response
1 Zero Tolerance	Nuclear weapons activity; fissile diversion; attack on IAEA	Immediate snapback
2 Minimal	Enrichment >20% above limit; IAEA obstruction >72h	Snapback presumed; 30-day Panel review
3 Managed	Reporting delays; minor centrifuge discrepancies	Technical assistance; extended timeline
4 Strategic	Political disagreements; domestic legislative delays	Snapback prohibited; diplomatic resolution
5 Absorbed	Force majeure; natural disaster	No penalties; automatic dampening

9. Crisis Protocols: When Things Go Wrong

The 24-Hour Rule

Non-Negotiable

No escalatory action by either party within the first 24 hours of any incident. None. This is pre-authorized at the highest level. The 24 hours are for fact-finding, not response. Self-defense against active armed attack is the only exception.

Incident Response Tree

Incident Type	First Action		Within 2 Hours	Within 24 Hours
Maritime harassment	Omani notification	hotline	JHA Maritime Coordination Cell assesses	JIG notification; incident report filed
Drone intrusion	Automatic notification	JMOC	Flight-path data sharing	Joint technical team deployed; 72h investigation before any response
10+ fatalities / direct clash	Crisis Lock activated		JIG majority convenes; Pakistan facilitates	14-day freeze on all escalatory measures; extendable to 42 days
Third-party spoiler	JIG notification	emergency	Attribution panel convened	30-day investigation; no retaliation until attribution confirmed
Nuclear discrepancy	IAEA notification	technical	JIG Technical Discrepancy Panel convened	72-hour assessment; tiered response per Risk Appetite Framework

Spoiler Scenarios: Who Benefits from Failure

Spoiler	Method	Counter
Israel (unilateral strike)	Military action on Iranian nuclear facilities during 30-day window	Accelerate window; provide Israel detailed advance briefings; IAEA presence as tripwire
Gulf state (smaller spoiler)	Protest exclusion; fund opposition	GCC rotating chair on IHTA Council; institutionalize their role
Domestic (US)	hardliner Congressional rejection of asset tranches	30-day Congressional review built in; front-load irreversible wins
Domestic (Iran)	hardliner IRGC provocation at sea	Omani hotline; 24-hour rule; JHA observation as independent witness
Third-party (ISIS, etc.)	Attack on tanker; blame other side	JIG attribution panel; 30-day investigation protocol; no retaliation without attribution

10. Quick Reference: Numbers to Remember

Nuclear

- **3.67%** -- Enrichment ceiling during moratorium
- **60%** -- Current HEU enrichment level (being transferred)
- **12-15 years** -- Moratorium landing zone
- **2 years** -- Auto-extension per violation
- **~200 kg** -- Estimated HEU stockpile
- **19,000** -- Total installed centrifuges

Timeline

- **Day 1** -- Ceasefire; stockpile to IAEA; \$250M
- **Day 3** -- Humanitarian corridor
- **Day 7** -- Synchronized dual blockade lift
- **Day 14** -- Stage 1 closes; 30-day window opens
- **Day 44** -- 30-day window closes
- **Day 90** -- Permanent IHTA
- **Day 180** -- Stage 3 closes; successor opens

Economic

- **\$100-120B** -- Total frozen Iranian assets
- **\$250M** -- Day 1 pilot (non-reversible)
- **50%** -- Assets returned by Day 44
- **85%** -- Assets returned by Day 180

- **\$4.53** -- US national gas price (urgency driver)
- **\$6+** -- California gas price

Maritime

- **20%** -- Global oil/gas transiting Hormuz
- **200+** -- Vessel transits needed by Day 14
- **5 nm** -- IRGC small craft withdrawal distance
- **15 knots** -- Speed limit in IHTA corridor
- **~\$500M** -- Annual IHTA toll revenue
- **40%** -- Toll revenue to Iranian reconstruction

Verification

- **5** -- Independent verification channels
- **2** -- Minimum channels for material finding
- **72 hours** -- Discrepancy Panel convening window
- **24 hours** -- Mandatory cooling-off period
- **2 hours** -- Hotline mandatory response

Institutional

- **3** -- Permanent voting IHTA members (US, Iran, GCC)
- **6** -- Independent implementation tracks
- **2** -- Maximum Stabilization Holds per stage
- **90 days** -- Stabilization Hold maximum duration
- **6 months** -- Costed withdrawal notice period

11. Appendix: Modular Selection Cards

In the room, you don't have time to read full descriptions. Use these cards to quickly identify and advocate for your preferred combination.

Governance: Pick One

Code	Name	Speed	Best For	Your Line
G-1	JHA Provisional Council	7 days	Fast start, equal sovereignty	"Standard co-governance; neither side dominates"
G-2	Tripartite + GCC Tie-Breaker	7 days	Lean, regional voice	"Streamlined; Muslim Gulf state ensures fairness"
G-3	Dual-Track (Political + Technical)	14 days	Insulating ops from politics	"Technical decisions by professionals, not politicians"
G-4	IMO Observer Mission	30 days	Light footprint	"UN oversight without new bureaucracy"

Security: Pick 2-4

Code	Name	Required?	Your Line
S-1	Synchronized Day-7 Lift	YES	"The deal dies without this"
S-2	Omani 24/7 Hotline	YES	"Prevents accidents becoming wars"
S-3	Unmanned Picket Line	No	"US sailors further from Iranian waters"
S-4	INCSEA Code of Conduct	No	"Rules of the road prevent miscalculation"
S-5	IRGC Force Posture Adjustment	No	"Reciprocal de-escalation"
S-6	Regional Coast Guard	No	"Law enforcement, not military confrontation"

Economic: Pick 2-4

Code	Name	Impact	Your Line
E-1	\$20B DFC-Chubb Reinsurance	Immediate premium reduction	"Gas prices fall within weeks"
E-2	Tiered Commercial Toll System	~\$500M/year revenue	"Self-funding authority; 40% to Iran"
E-3	Iranian Reconstruction Fund	\$200M/year	"Civilian reconstruction, not IRGC"
E-4	Humanitarian Zero-Toll Fast Track	Protected from all snapbacks	"Food and medicine never politicized"

Nuclear Stockpile: Pick One

Code	Name	Speed	Your Line
N-1	Oman IAEA Custody	14 days	"Neutral; IAEA controls; neither side wins the location"
N-2	Fuel Assembly Conversion	90 days	"Permanent elimination via civilian fuel fabrication"

N-3	Russia Custodial Partnership	60-90 days	"Trusted nuclear partner under IAEA safeguards"
N-4	Kazakhstan LEU Bank	75-105 days	"Established IAEA precedent; repurchase rights preserved"

Facilities: Pick Combination

Code	Name	Timeline	Your Line
F-1	Fordow IMIRC	18-36 months	"Iranian scientists lead world-class medical research"
F-2	Natanz Research Campus	24-36 months	"Transparency showcase; international collaboration"
F-3	Isfahan Training Center	24 months	"Regional IAEA safeguards training hub"
F-4	Staged Transfer	360 days	"Mutual conditionality without front-loading"

Recommended Default Portfolio (If You Need a Starting Point)

Governance: G-1 (JHA Provisional) → G-2 (Tripartite Permanent)
Security: S-1 + S-2 + S-3 + S-5
Economic: E-1 + E-2 + E-3 + E-4
Stockpile: N-1 (Oman IAEA Custody)
Facilities: F-1 + F-2 + F-3

End of Brief

Full framework: *Stability First Enhanced Accord v1.0* (41 pages)
For technical detail, consult Sections 3-8 of the full document.
Carry this brief. Read the full Accord before Day 1.
