

Proxy-Led Stabilization Accord

Version 1.7 — Political Hardening Draft

A Peace-by-Proxy Framework for US-Iran De-escalation,
Hormuz Governance, Nuclear Stabilization,
and Regional Security Through Deniable Proxy Coalitions

*With Domestic Political Protection Layer &
Enhanced Verification Architecture*

“This Framework does not expire. It continues unless affirmatively voted down.”

“Inaction = peace.”

Calibrated for: The May 2026 Negotiation Environment

As of: May 22, 2026

Status: Negotiation Draft — Ad Referendum

Incorporating: 62 accepted changes, 6 modified changes, 8 passed
from Round 1 (Changes #1–#30) and Round 2 (Changes #31–#76)

Table of Contents

Executive Summary

Preamble: The May 2026 Moment

Section 1: Core Architecture

Section 2: Core Principles

Section 2A: Minimum Viable Configuration

Section 3: Proxy Coordination Architecture

Section 4: Maritime De-escalation

Section 5: Nuclear Safeguards

Section 6: Regional Ceasefires

Section 7: Economic Reconnection

Section 8: Core Exchange

Section 9: Staged Implementation

Section 10: The Core Triad

Section 11: Three-Tier Breach System

Section 12: Framework Survival Core

Section 13: Rollback Architecture

Section 14: Spoiler Management

Section 15: Political Shock Absorber

Section 16: MVA Fallback

Section 17: Parallel Public Framework

Section 18: Joint Coordination Secretariat

Section 19: Face-Saving Metrics

Section 20: Communications & Crisis Protocols

Section 21: Instruments of Acceptance

Appendix A: Quick Reference Card

Appendix B: Change Log Round 1 (#1–#30)

Appendix C: Change Log Round 2 (#31–#76)

Executive Summary — Read This First

Four pages. The rest are technical annexes.

The Problem

Direct negotiations have failed. Neither side can move first without appearing to capitulate.

The Proxy Solution

The US and Iran never sign a direct treaty. Two proxy coalitions do the work: **MSCG** (Maritime Security Coordination Group) — US-aligned; **RSCC** (Regional Stability Coordination Cell) — Iran-aligned. These are administrative labels for existing institutions: US CENTCOM, Iranian naval command, Omani maritime authorities, and Swiss financial channels.

The De-Risking Principle

Proxy violations are treated as graduated incidents under a tiered response system, not automatic state-to-state war.

The Backbone (MVC): Four Elements That CANNOT Collapse

Even if everything else fails, these survive for a minimum of 180 days: (1) **Ceasefire** — 72-hour auto-renewing (renews at Hour 71 UTC); (2) **Humanitarian corridor** — Zero-fee Hormuz transit; (3) **60% enrichment freeze** — IAEA-verified within 72 hours; (4) **\$250M humanitarian tranche** — Swiss escrow, non-reversible upon signature.

What Each Side Gets

Iran	United States
“We preserved sovereignty. We secured relief through proxies. We never surrendered to the US directly. HEU remains under IAEA dual-lock custody in Oman — not US territory.”	“We removed HEU from Iran. We capped enrichment. We kept all military options. We never signed a deal with Iran. We led through the MSCG and set the terms. Sanctions remain officially in full force.”

Key v1.7 protections: 62 accepted changes, 6 modified. Changes span: Governance (#1–#5), Financial Hardening (#6–#10, #41–#48), Nuclear Safeguards (#11–#15, #49–#56), Maritime/Proxy (#16–#20, #57–#64), Legislative/Narrative (#21–#25, #65–#72), Domestic Framing (#31–#40), Contingency (#73–#76).

Preamble: The May 2026 Moment

“We were getting ready to do a very major attack tomorrow, and I’ve put it off for a little while, hopefully maybe forever.” — President Donald J. Trump, May 18, 2026

Current Standoff: The Impasse of May 19, 2026

As of May 22, 2026, the United States and the Islamic Republic of Iran stand at the closest point to renewed large-scale military confrontation since hostilities began in late February 2026.

The current impasse is defined by five irreconcilable direct demands:

Party	Demand	Why the Other Side Cannot Accept
US	Iran delivers 400kg enriched uranium (all forms above 20% U-235) to the United States	Iran cannot surrender sovereign nuclear material directly to its adversary; this would constitute capitulation, not diplomacy
US	Iran maintains only one operational nuclear facility	Iran views multiple facilities as sovereign right and insurance against single-point attack; dismantling equals disarmament
US	Link nuclear negotiations to cessation of all hostilities	Iran cannot accept that proxy forces in Lebanon, Gaza, and Yemen become bargaining chips in nuclear talks
Iran	Full war reparations for damages	US Congress and electorate will not authorize payments to a state designated as hostile; implies US admission of fault
Iran	Release of 100% of frozen assets	Trump has explicitly refused to release at least 25%; releasing all assets removes leverage and invites Congressional revolt
Iran	Sovereign control of Strait of Hormuz	US maintains Hormuz is international waterway; ceding control would legitimize Iranian chokehold on global energy

Why Proxy-Led Architecture Now

The PLSA inverts the traditional diplomatic model. Proxies become deniable instruments of peace, allowing both Washington and Tehran to execute high-stakes diplomatic maneuvers without taking direct domestic political heat.

For Washington: Secure Iranian nuclear material, open Hormuz, and stabilize the region without signing a “weak deal” directly with Tehran, without transferring reparations, and without releasing all frozen assets. **For Tehran:** Secure sanctions relief, maintain Hormuz influence, preserve sovereign nuclear rights, and obtain reconstruction resources without surrendering enriched uranium directly to the United States.

Section 1: Core Architecture — The Double Insulated Buffer

In the PLSA framework, the United States and the Islamic Republic of Iran never sign a direct bilateral treaty. They act as **Principal Guarantors** behind two coordination mechanisms:

Layer	Western Side	Iranian Side	Interface
Principal Guarantor	United States	Islamic Republic of Iran	No direct contact
Proxy Coalition	MSCG	RSCC	Bilateral proxy-to-proxy agreements
Neutral Facilitating States	Oman, Switzerland, IAEA (Core Triad) — Oversight, escrow, verification, mediation		

1.1 The Maritime Security Coordination Group (MSCG)

The MSCG comprises the United Kingdom, specialized GCC task forces, Switzerland, and Oman. It is an administrative label for: US CENTCOM + allied naval commands + Omani maritime authority.

Member	Domain	Proxy Function
United Kingdom	Maritime Security / Diplomatic Hosting	Hosts asymmetric security forums; provides naval escort; politically shields US from direct engagement with RSCC actors
GCC Task Force	Maritime Patrol / Economic Bridge	Regional naval patrol replacing direct US presence; regional banking corridors for sanctions-compliant trade
Switzerland	Financial Escrow / Verification	Administers all escrow accounts; verifies asset transfers; neutral financial oversight
Sultanate of Oman	Maritime Deconfliction / Political Relay	Hormuz transit oversight; hosts proxy negotiations; 24/7 hotline management

1.2 The Regional Stability Coordination Cell (RSCC)

The RSCC is an administrative label for: Iranian naval command + IRGC liaison + Omani relay channel. Function: Broadcasts Iranian stand-down orders, verifies proxy receipt.

Member	Domain	Proxy Function
Ansar Allah (Houthis)	Red Sea / Gulf of Aden Maritime	Moratorium on commercial vessel targeting; collects environmental transit tariff via Omani Maritime Trust
Kata'ib Hezbollah & Iraqi PMF	Border Security / Drone Buffers	Border-security stabilization; drone-free buffer zones; proxy policing of commercial lines
Government of Iraq	Security Forum Hosting	Hosts asymmetric security forum in Baghdad; legitimacy umbrella for RSCC-MSCG engagement
Omani Trust	Revenue Collection / Escrow	Collects synchronized transit tariffs; routes funds to third-party logistical escrow

1.3 Graduated Proxy Incident Response

Article 1.3 — Graduated Proxy Incident Response

Tier	Incident Type	Response	State-to-State Impact
1	Minor violation: single drone overflight, warning shot, zero fatalities and under \$50,000 property damage #20	RSCC/MSCG coordination within 24 hours; no economic penalty	None — operational friction
2	Significant violation: vessel interdiction, mine-laying attempt	48-hour attribution by JFM Board; affected module pauses	Tier 1 state review; no military response
2B	Unattributed kinetic activity with high probability of proxy link #17	7-day Tactical Freeze on discretionary tranches only ; investigation continues; humanitarian channels unconditional	All MVC elements continue; only Tranches 5–7 on temporary hold
3	Major attack: US/GCC vessel damaged or crew killed, confirmed Iranian-supplied weapons	Emergency consultation within 6 hours; Tier 3 penalties; Reconstitution Conference within 30 days	Potential state-level escalation

1.4 Direct Principal Override (Emergency Channel)

Article 1.4 — *Direct Principal Override*

(a) Normal Operations: All communications flow through proxy coalitions and the Core Triad. **(b) Emergency Override Threshold:** Either Principal may invoke DPO if: 10+ military fatalities; confirmed state-to-state strike; nuclear facility attacked; existential threat certified. **(c) Procedure:** Proxy channels NOT suspended; Principal-to-Principal hotline becomes primary; Core Triad convenes within 6 hours; 72-hour cooling-off period activates. **(d) Deniability Preservation:** DPO invocation does NOT constitute admission of proxy channel failure. **(e) Reversion:** Operations revert to proxy-led channels within 30 days unless both Principals agree otherwise.

1.5 Advisor Transparency Requirement

Article 1.5 — *Advisor Transparency Requirement* #67 MODIFIED

(a) Any White House advisor, NSC staff member, or State Department official involved in Framework implementation must disclose whether they have provided advice or analysis to Israel, Saudi Arabia, or the UAE regarding Framework terms. Such disclosure is transparency, not a conflict of interest. **(b)** The US retains sole authority over personnel assignments. Iran may raise concerns, but personnel decisions are exclusively a US sovereign matter. **(c)** This provision prevents covert sabotage by ensuring advisory communications to foreign powers are known and documented.

Section 2: Core Principles

2.1 Synchronized Reciprocal Motion

Principle: Neither side moves alone. Every Iranian commitment is matched by a corresponding US commitment, activated simultaneously, verified by neutral observers.

Section 2.1A — *Narrative Asymmetry Allowance (US Framing)* #31

The United States may characterize this Framework as: “**America First—The Proxy Principle.** The US led the design, set the security parameters, conditioned every Iranian step on verified US security interests, and maintains full sanctions architecture as leverage. Iran follows through proxy coalitions because direct confrontation with the United States failed. This is not a retreat—it is a restructured victory achieved without ground troops, without treaty constraints on the US executive, and without surrender of leverage.” #31

The United States may also characterize this Framework as: “America First, So We Go First — through proxies. The United States led by establishing the MSCG, setting the terms of maritime security, and conditioning relief on verified Iranian proxy stand-down.”

Section 2.1B — *Narrative Asymmetry Allowance (Iranian Framing)*

The Islamic Republic may characterize this Accord as: “Resistance diplomacy triumphed. The United States was forced to work through proxies because direct confrontation failed. Iran never surrendered sovereign rights, never signed a direct deal with the United States, and secured relief while preserving all strategic assets.”

Article 2.1C — *No Goalpost Moving*

Neither party may unilaterally redefine compliance criteria, verification standards, or certification thresholds after they have been certified by the Joint Implementation Group.

Article 2.1D — *No Precedent Clause*

This Accord establishes no legal or political precedent for unrelated disputes globally. It is *sui generis*, tailored exclusively to the May 2026 operational environment.

2.2 Sovereignty Preservation

Article 2.2 — *Sovereignty Preservation*

This Accord does not supersede any constitution. It does not create supranational authority. NPT rights are preserved. US treaty commitments to Gulf partners are preserved. Iranian sovereign title to all nuclear material remains intact regardless of custodial location.

2.3 Modular Architecture with Partial Continuity Rule

Article 2.3 — *Partial Continuity Rule*

Stabilization pause in one module does not suspend unrelated modules. The Partial Continuity Rule applies automatically. When one module enters pause, all other modules continue at current operational levels for a minimum of 90 days.

Tier	Modules	Behavior During Pause
Inviolable	Ceasefire hotline; humanitarian access; emergency diplomatic channel	Never pause under any circumstances
Protected	IAEA basic monitoring; Hormuz non-military transit; asset tranches 1–3	Continue during most stabilization pauses
Conditional	SWIFT reconnection; bonus tranches; successor framework talks; Fordow advanced phases	May enter hold during disputes

2.4 Exclusion of Designated Adversary States

Article 2.4 — *Exclusion of Designated Adversary States from Framework Benefits*

#36 MODIFIED

(a) China and Russia are explicitly excluded from IHTC membership, Secretariat observer status, escrow oversight, and all facilitation roles. **(b)** Neither Iran nor any proxy coalition may use Framework-enabled trade flows to advance prohibited transactions with China or Russia (as defined by current OFAC SDN List and BIS Entity List). **(c)** The Swiss Financial Cell shall monitor all escrow dispersals and report suspicious patterns suggesting re-export to Chinese or Russian intermediaries. Any detected transfer triggers automatic 30-day hold pending investigation. **(d)** The IAEA shall monitor enrichment facilities for technical assistance from non-Framework state sources and report any anomalies to the Coordination Secretariat for review.

Section 2A: Minimum Viable Configuration (Backbone)

Section 2A — *Minimum Viable Configuration (Backbone)*

The MVC is not a fallback. It is the backbone. Four elements survive total suspension:

#	Element	Specification
1	72-Hour Auto-Renewing Ceasefire	Omani-facilitated hotline. Renews at Hour 71 UTC via automated Ping/Ack. Neither party may disable without 30 days' notice. #29
2	Humanitarian Corridor	Zero-fee Hormuz transit for medicine, food, medical equipment. Legally non-divertible.
3	60% Enrichment Freeze	IAEA-verified within 72 hours. All downstream benefits contingent on this confirmation.
4	\$250M Humanitarian Tranche	Swiss escrow to UN OCHA upon signature. Non-reversible.

Even if all proxy modules collapse, the MVC continues for a minimum of 180 days.

Section 3: The Proxy Coordination Architecture

3.1 Not New Coalitions — Existing Institutions

MSCG: US CENTCOM + allied naval commands + Omani maritime authority. **RSCC:** Iranian naval command + IRGC liaison + Omani relay channel.

3.2 Proxy “Commitments” Are Principal Commitments (via Relay)

When the Accord says “Houthis commit to a maritime pause,” the mechanism is: (1) Iran transmits written orders through Omani-relay channels; (2) Iran provides the Secretariat with proof of transmission; (3) The Houthis are not signatories — Iran is responsible for transmitting orders.

3.3 No Proxy Autonomy

Proxy coalitions have no independent authority to declare breach, suspend benefits, modify timelines, or communicate directly with the other Principal’s proxy coalition.

3.4 Proxy Universe Freeze

Article 3.4 — *Proxy Universe Freeze*

(a) Proxy universe limited to groups in Annex P (Classified) at signature. **(b)** No new designations without unanimous Core Triad consent + 30 days’ notice. **(c)** Either party may unilaterally remove a group. **(d) Rogue Group Protocol:** If a group not in Annex P attacks, it is NOT attributable unless the JFM Board finds clear evidence of command, control, or material support within **72 hours**. The JFM Board has exactly 72 hours to issue a preliminary “Attribution/Non-Attribution” ruling. Default: non-attributable, criminal referral. ^{#16} **(e)** Annex P reviewed every 24 months.

3.5 Pass-Through Immunity for Proxy Messengers

Article 3.5 — *Pass-Through Immunity for Proxy Messengers* ^{#5}

Any physical or digital diplomatic courier moving between the Secretariat and proxy forces is granted temporary, transit-only legal immunity by facilitating states. This immunity applies exclusively to transit activities and communications relay, does not extend to unrelated criminal conduct, and remains in force even during localized flare-ups, Tier 1 breaches, or temporary module suspensions.

Section 4: Maritime De-escalation — The Hormuz Framework

4.1 Civilian Transit Guarantee

Article 4.1 — *Strait of Hormuz Civilian Transit Guarantee* #57

(a) All civilian commercial vessels — regardless of flag state, ownership nationality, or cargo origin — are guaranteed safe, unimpeded transit through the Strait of Hormuz and Persian Gulf sea lanes. **(b)** This guarantee applies to vessels of all nations, including those of the United States, its allies, and neutral third parties. **(c)** Transit fees, if any, shall be assessed uniformly without discrimination based on flag or ownership. **(d)** Any interference with civilian transit constitutes a breach of this Accord subject to the Three-Tier Breach System.

4.2 Military Transit Exclusion

Article 4.2 — *No Restraint on Iranian Military Naval Operations* #63

(a) Nothing in this Accord restricts Iranian naval forces from conducting military operations in the Persian Gulf, Strait of Hormuz, or Gulf of Oman, including exercises, patrols, port visits, or intelligence collection. **(b)** Iranian military vessels retain full freedom of navigation in international waters. **(c)** The Civilian Transit Guarantee does not extend to military vessels, which remain subject to standard international law and applicable UNCLOS provisions. **(d)** Both Principals shall issue clear rules of engagement to their naval forces to minimize accidental engagement during proximate operations.

4.3 Strait of Hormuz Monitoring

Article 4.3 — *Strait of Hormuz Civilian Transit Monitoring* #64

(a) A Joint Maritime Monitoring Cell (JMMC) comprising Omani, Swiss, and IAEA-registered neutral observers shall monitor civilian transit flows. **(b)** The JMMC publishes weekly transit statistics: vessel count, flag distribution, incident reports. **(c)** Any deviation from normal transit patterns exceeding 20% triggers automatic JMMC investigation and Core Triad notification. **(d)** All monitoring data is public and posted to the Secretariat website within 48 hours of compilation.

4.4 Houthi Red Sea Maritime Pause

Article 4.4 — *Houthi Red Sea Maritime Pause* #61

(a) Iran shall transmit orders through Omani relay channels for an immediate cessation of all Houthi attacks on commercial vessels in the Red Sea, Gulf of Aden, and Bab el-Mandeb. **(b)** The pause includes: missile strikes, drone attacks, boarding operations, and navigational interference. **(c)** Verification: Omani naval observers confirm 72-hour absence of attacks triggers first escrow

tranche. **(d)** Sustained 90-day pause triggers bonus tranche. **(e)** A single attack resets the 72-hour clock; three attacks within 30 days constitutes Tier 2 breach. **(f)** This pause applies exclusively to commercial vessels; military vessels of belligerent states are not covered.

4.5 Iraqi Militia Stand-Down

Article 4.5 — *Iraqi Shia Militia Stand-Down* #59

(a) Iran shall transmit orders for all Iraqi Shia militia groups within the proxy universe to: cease attacks on US diplomatic and military facilities in Iraq; suspend drone and rocket operations; withdraw from positions within 2km of US installations. **(b)** Verification: Joint Iraq Monitoring Team (Iraqi government + Omani observers + Swiss logisticians). **(c)** 30-day verified stand-down triggers first tranche. **(d)** Attacks on US personnel during stand-down: Tier 2 if attributable, non-attributable if 72-hour JFM Board review cannot confirm command linkage. #16

4.6 Hezbollah Southern Lebanon Restraint

Article 4.6 — *Hezbollah Southern Lebanon Restraint* #60

(a) Iran shall transmit orders for Hezbollah to: maintain positions north of the Litani River; refrain from cross-border strikes into Israel; suspend precision missile deployments south of the Awali River. **(b)** Verification: UNIFIL mandate enhancement with Swiss-funded supplementary monitoring. **(c)** 60-day verified restraint triggers tranche release. **(d)** Hezbollah retains defensive capabilities; this provision does not require disarmament. **(e)** Any rocket fire into Israel constitutes Tier 3 breach unless the JFM Board certifies non-attribution within 72 hours.

4.7 Shia Militia Iraq Protocol

Article 4.7 — *Formal Integration of Iraqi Shia Militia Commitments* #62

(a) The Accord formally recognizes that Iraqi Shia militia groups operate under varying degrees of Iranian influence and accepts a graduated verification approach. **(b)** Tier 1 groups (direct command linkage): full stand-down required. **(c)** Tier 2 groups (material support, advisory): best-effort restraint, Iran provides monthly compliance reports. **(d)** Tier 3 groups (ideological affinity only): no Iranian obligation; attacks by these groups are non-attributable by default. **(e)** The JFM Board reviews tier assignments quarterly based on intelligence assessments.

4.8 Hormuz Security Architecture

Article 4.8 — *Maritime Security Coordination Architecture*

Layer	Function	Participants
Layer 1: Patrol	Visible naval presence, SAR, interdiction of smugglers	Oman, Qatar, Kuwait coast guards
Layer 2: Surveillance	Radar, AIS monitoring, satellite coverage	MSCG shared C4I cell
Layer 3: Diplomatic	Incident de-escalation, hotline management	Omani Maritime Authority + Swiss relay

Layer 4: Economic

Trade flow monitoring, sanctions enforcement

Swiss Financial Cell + IHTC

No Layer 1 patrol vessel may approach within 500 meters of another state's flagged vessel without prior coordination.

Section 5: Nuclear Safeguards — The Verification Architecture

5.1 Sixty Percent Enrichment Cap — Permanent

Article 5.1 — *Permanent Enrichment Cap at 60%* #49

(a) Iran shall maintain uranium enrichment at or below 60% U-235 at all facilities, permanently. (b) This cap is not subject to sunset, renewal negotiation, or reversion. (c) IAEA continuous monitoring verifies compliance in real-time. (d) Any enrichment exceeding 60% at any facility constitutes immediate Tier 3 breach, triggering full stabilization pause and emergency Core Triad consultation within 6 hours. (e) This provision survives Accord termination and becomes a standalone international commitment.

5.2 No JCPOA Revival

Article 5.2 — *Explicit Non-Revival of JCPOA* #50

(a) This Framework supersedes and replaces the Joint Comprehensive Plan of Action (2015) in its entirety. (b) The JCPOA is not revived, reinstated, or referenced as a binding instrument. (c) All JCPOA timelines, sunset clauses, and lifting commitments are void. (d) The US maintains that it withdrew from JCPOA in 2018 and that withdrawal stands. (e) Iran maintains that JCPOA was abandoned by the US. Both positions are acknowledged; neither position creates obligation under this Accord.

5.3 No Additional Protocol

Article 5.3 — *No Additional Protocol Requirement* #51

(a) Iran is not required to implement the IAEA Additional Protocol or its Code 3.1 modified safeguards obligations. (b) Verification is limited to: declared facility monitoring; 60% enrichment cap confirmation; centrifuge inventory tracking; and material accountancy. (c) The IAEA shall not request or pursue access beyond these four pillars. (d) The IAEA Director General certifies compliance quarterly based solely on these four pillars.

5.4 Scheduled IAEA Inspections

Article 5.4 — *Scheduled IAEA Inspections Only* #52

(a) All IAEA inspections occur on a published 90-day schedule. (b) Iran shall receive 30 days' advance notice of each inspection. (c) No surprise, challenge, or short-notice inspections are permitted. (d) The schedule is published to the Coordination Secretariat and available to both Principals. (e) Inspections occur only at declared facilities during business hours (0800-1800 local time). (f) The IAEA may request ad-hoc inspections only with unanimous Core Triad approval.

5.5 No Military Site Access

Article 5.5 — *Exclusion of Military Sites from IAEA Access* #53

(a) IAEA inspectors shall not enter, overfly, or remotely monitor any site designated by Iran as a military installation, regardless of whether nuclear activity is suspected. **(b)** Sites under IRGC command are presumptively military sites. **(c)** The IAEA may request access to a military site only if: enrichment above 60% is detected at a declared facility; and the Core Triad unanimously approves the request; and Iran consents. **(d)** Absent all three conditions, no military site access occurs. **(e)** No IAEA inspector of US, UK, French, Canadian, Australian, or Israeli nationality shall participate in inspections at any Iranian nuclear facility. #37

5.6 Centrifuge Stockpile Limit

Article 5.6 — *Centrifuge Stockpile Limitation* #54

(a) Iran shall maintain no more than 1,060 IR-1 centrifuges and 506 IR-2m centrifuges in operating configuration at Natanz and Fordow combined. **(b)** Excess centrifuges shall be placed under IAEA seal and stored at a location mutually agreed with the IAEA. **(c)** Iran may retain all excess centrifuges as property; they are not destroyed. **(d)** No new centrifuge types may be introduced without 180 days' notice and Core Triad approval. **(e)** Research and development on advanced centrifuges may continue at pilot scale (≤ 20 machines) at Natanz PFEP.

5.7 Fordow Converted to Research

Article 5.7 — *Fordow Facility Converted to Research and Stable Isotope Production* #55

(a) The Fordow Fuel Enrichment Plant (FFEP) shall transition from uranium enrichment to stable isotope production and research. **(b)** No uranium enrichment above 3.67% shall occur at Fordow. **(c)** Two IR-1 cascades (total 348 machines) may remain at Fordow for stable isotope production only. **(d)** All other Fordow centrifuges shall be removed or placed under seal within 180 days of Framework signature. **(e)** IAEA monitors Fordow via declared inspections per Article 5.4. **(f)** Iran retains ownership and operation of the Fordow facility; no foreign personnel are stationed there.

5.8 Breakout Timeline Extension

Article 5.8 — *Minimum One-Year Breakout Timeline* #56

(a) The combined effect of Articles 5.1, 5.6, and 5.7 shall ensure that Iran's breakout timeline — the time required to produce sufficient weapons-grade uranium for one nuclear device — is not less than 12 months from the moment of a decision to break out. **(b)** The IAEA shall verify breakout timeline estimates quarterly using agreed technical parameters. **(c)** If the IAEA certifies the breakout timeline has fallen below 10 months, automatic consultation triggers within 48 hours. **(d)** If the breakout timeline falls below 6 months, this constitutes Tier 3 breach.

5.9 Iranian Monitoring at Declared Facilities

Article 5.9 — *Iranian-Approved Inspector Nationality Requirements* #37

(a) All IAEA inspectors assigned to Iranian nuclear facilities must be pre-approved by Iran based on nationality. **(b)** Inspectors from adversarial states (US, UK, France, Canada, Australia, Israel) are excluded. **(c)** Inspectors from neutral or friendly states (Brazil, Argentina, South Africa, Malaysia, Indonesia, Thailand, Austria, Finland, Ireland, Sweden, Switzerland) are presumptively approved. **(d)** Iran shall provide a list of approved nationalities within 30 days of signature. **(e)** The IAEA shall assign inspectors exclusively from approved nationalities.

5.10 Technology Transfer Prohibition

Article 5.10 — *Prohibition on Nuclear Technology Transfer* #40

(a) Iran shall not transfer enrichment technology, centrifuge designs, or nuclear fuel cycle expertise to any state or non-state actor. **(b)** This prohibition is permanent and survives Accord termination. **(c)** Violation constitutes Tier 3 breach. **(d)** The IAEA shall monitor for technology transfer indicators and report annually to the Core Triad.

Section 6: Regional Ceasefires — The Proxy Stand-Down

6.1 Gaza Ceasefire

Article 6.1 — *Gaza Ceasefire*

Iran shall transmit orders for Palestinian Islamic Jihad and affiliated groups to observe a complete ceasefire with Israel. Verification: Egyptian intelligence + Omani relay. 72-hour confirmed ceasefire triggers first tranche.

6.2 Lebanon Border

Article 6.2 — *Lebanon Border Stabilization*

Hezbollah shall maintain positions north of the Litani River. No cross-border rocket fire. UNIFIL mandate enhanced with Swiss-funded supplementary monitoring. 60-day verified restraint triggers tranche release.

6.3 Iraq

Article 6.3 — *Iraq Stabilization*

All Shia militia groups per Article 4.5 shall stand down. Iraqi government assumes sovereign security responsibility. Joint Iraq Monitoring Team verifies. US force posture in Iraq reduced to advisory only within 180 days of verified stand-down.

6.4 Yemen

Article 6.4 — *Yemen Maritime and Land Pause*

Houthi maritime pause per Article 4.4, plus land-based missile freeze. Houthi-Saudi talks facilitated by Oman proceed in parallel. No Houthi attacks on Saudi energy infrastructure.

6.5 Ceasefire Verification Chain

Conflict Zone	Iranian Order	Verifier	Trigger
Gaza	PIJ ceasefire	Egypt + Oman	72h no-fire
Lebanon	Hezbollah north of Litani	UNIFIL + Swiss	60-day restraint
Iraq	Militia stand-down	Iraqi Gov + JIMT	30-day verified
Yemen (maritime)	Houthi Red Sea pause	Oman naval	72h no-attack
Yemen (land)	Houthi KSA freeze	UN monitors	30-day verified
Syria	IRGC/affiliate restraint	Russian + Omani	30-day verified

6.6 "No New Fronts" Commitment

Article 6.6 — *No New Fronts Commitment*

Iran shall not activate new proxy conflict fronts during Framework operation. Any attack by an Iran-linked group in a theater not listed in Article 6.5 constitutes Tier 2 breach unless non-attributed per Article 3.4(d).

Section 7: Economic Reconnection — The Graduated Reopening

7.1 Oil Revenue Escrow Cap

Article 7.1 — *Oil Revenue Escrow with Hard Cap* #41

(a) Iranian oil export revenues shall flow into a Swiss-governed escrow account. (b) A hard cap of \$3.5 billion per quarter applies to escrow deposits. (c) Revenues exceeding the cap shall be held in a separate account and released only with unanimous Core Triad approval. (d) The cap is not subject to automatic escalation. (e) Any request to raise the cap requires a new Principals' agreement and 60-day Congressional review per Article 15.2. (f) The Swiss Financial Cell shall publish monthly escrow balance reports.

7.2 SWIFT Reconnection with Kill Switch

Article 7.2 — *SWIFT Reconnection with US Kill Switch* #42

(a) Iranian banks designated in Annex B shall be reconnected to the SWIFT network. (b) The US retains a unilateral “kill switch” — the Secretary of the Treasury may order immediate disconnection of any Iranian bank from SWIFT with 48 hours' notice to the Core Triad, without requiring Accord breach findings. (c) Kill switch activation does not constitute Accord breach or stabilization pause. (d) The kill switch may be used for: evidence of sanctions evasion; diversion to prohibited end-users; or national security determination by the President. (e) Kill switch activation is reviewable by the Core Triad but not reversible by it. (f) SWIFT reconnection occurs only after 60% enrichment freeze verification.

7.3 No Full Diplomatic Relations

Article 7.3 — *No Establishment of Full Diplomatic Relations* #43

(a) This Framework does not establish, recognize, or imply full diplomatic relations between the United States and the Islamic Republic of Iran. (b) No exchange of ambassadors shall occur. (c) No permanent diplomatic missions shall be established in either capital. (d) All communications flow through proxy channels, the Core Triad, or the Coordination Secretariat. (e) This provision is permanent and not subject to sunset or renewal negotiation.

7.4 No Embassy Reopening

Article 7.4 — *No Reopening of Embassies or Interest Sections* #44

(a) Neither the US nor Iran shall reopen an embassy, interest section, or any permanent diplomatic facility in the other's territory under this Framework. (b) The Swiss protecting power arrangement for US interests in Iran continues unchanged. (c) The Pakistani protecting power

arrangement for Iranian interests in the US continues unchanged. **(d)** No upgrade, expansion, or modification of existing protecting power arrangements shall occur without 180 days' notice and Core Triad approval. **(e)** This provision is permanent.

7.5 Aircraft Purchase Prohibition

Article 7.5 — *Prohibition on Civilian Aircraft Sales* #45

(a) No sale, lease, or transfer of Boeing, Airbus, or any US/EU-manufactured civilian aircraft to Iran shall occur under this Framework. **(b)** No aircraft parts, maintenance services, or technical support for US/EU-manufactured aircraft shall be provided. **(c)** Existing OFAC license requirements for aircraft transactions remain in full force. **(d)** Iran may acquire aircraft from non-Western manufacturers subject to standard OFAC licensing. **(e)** This prohibition is permanent and survives Accord termination.

7.6 Frozen Asset Sequencing

Article 7.6 — *Frozen Asset Release Sequencing* #46

(a) Iranian assets frozen in third-country accounts shall be released in three tranches tied to verified milestones. **(b)** Tranche 1 (30%): released upon 60% enrichment freeze IAEA certification. **(c)** Tranche 2 (40%): released upon 90-day verified ceasefire in all six conflict zones (Article 6.5). **(d)** Tranche 3 (30%): released upon completion of Year 1 review with no Tier 3 breaches. **(e)** All releases flow through Swiss escrow; no direct bank-to-bank transfers to Iranian institutions. **(f)** Assets in US jurisdiction are excluded from this sequencing; their status is governed by US domestic law and court proceedings.

7.7 European Bank Subsidiary Mechanism

Article 7.7 — *European Bank Subsidiary Channel* #47

(a) A subsidiary of a major European bank (Swiss, Austrian, or Irish-domiciled) shall establish a dedicated Iran trade processing unit. **(b)** The subsidiary operates under Core Triad oversight with quarterly compliance audits. **(c)** All transactions are pre-cleared through the Swiss Financial Cell. **(d)** The subsidiary handles: pharmaceutical payments; food and agricultural trade; medical equipment; and other humanitarian-category transactions. **(e)** The subsidiary shall not process: military-related transactions; transactions with SDN-listed entities; or transactions exceeding \$10M without individual review. **(f)** The European parent bank receives no US sanctions liability for subsidiary operations conducted in compliance with this Article.

7.8 US Oil Purchase Option

Article 7.8 — *US Strategic Petroleum Reserve Purchase Option* #48

(a) The United States may, at its sole discretion, purchase Iranian crude oil for the Strategic Petroleum Reserve (SPR) at market prices. **(b)** Such purchases are exempt from sanctions enforcement and do not require OFAC licensing. **(c)** Purchase volumes shall not exceed 500,000 barrels per month. **(d)** Revenue from SPR purchases flows through the standard escrow mechanism per Article 7.1. **(e)** The US may exercise this option, decline it, or suspend it at any time without justification. **(f)** Iranian oil purchased for the SPR may not be re-exported or traded commercially.

7.9 Tranche Architecture Summary

Tranche	Amount	Release Condition	Binding Authority
T1: Humanitarian	\$250M	Signature	Immediate, non-reversible
T2: Enrichment Freeze	\$500M	IAEA 60% freeze certified	IAEA DG certification
T3: Ceasefire Verified	\$750M	30-day ceasefire all zones	JIG Chair certification
T4: SWIFT	\$400M	SWIFT reconnected	Swiss Financial Cell
T5: 90-Day Review	\$600M	No Tier 2+ in 90 days	JIG Chair
T6: 6-Month Review	\$800M	First JPEC report positive	JPEC consensus
T7: Year-End Review	\$1.2B	Full Year 1 certification	Core Triad unanimous

Total: \$4.5B maximum annual economic incentive pathway.

Section 8: The Core Exchange — What Each Side Gets

Category	US Commitment	Iranian Commitment
Security	No direct military action; proxy-only channels; DPO threshold high	60% enrichment cap permanent; no weaponization; proxy stand-downs
Economic	Graduated sanctions relief via escrow; SWIFT reconnection; no new designations	Oil revenue transparency; no circumvention; escrow compliance
Regional	Gulf partner coordination; no provocative exercises; Hormuz civilian guarantee	Proxy ceasefires; no new fronts; Houthi Red Sea pause
Nuclear	No pursuit of Additional Protocol; no military site access; inspector nationality respect	IAEA monitoring at declared facilities; centrifuge limits; Fordow conversion
Political	No regime change policy; Acknowledgment; no “surrender” framing required of Iran	No “victory” framing that claims US defeat; balanced narrative

8.1 What Iran Gets

- \$4.5B annual economic incentive pathway via Swiss escrow
- 60% enrichment preserved (NPT-compliant)
- No Additional Protocol, no military site access
- SWIFT reconnection with kill switch
- Oil revenue access via capped escrow
- No regime change policy from US
- Humanitarian corridor guaranteed
- Sovereign title to all nuclear material preserved
- No Western inspectors at Fordow or any facility

8.2 What the US Gets

- Permanent 60% enrichment cap
- 12-month minimum breakout timeline
- Proxy stand-downs in all theaters
- Real-time IAEA monitoring at declared facilities
- Houthi Red Sea maritime pause
- No new proxy conflict fronts
- Oil revenue transparency and escrow oversight
- China/Russia exclusion from Framework benefits
- SWIFT kill switch authority
- No full diplomatic relations required
- No embassy reopening
- No aircraft sales

8.3 Asymmetric Gains Acknowledged

The US gains strategic stability and Iranian nuclear constraint without military action. Iran gains economic relief and sovereignty preservation without political submission. Both gains are real. Neither side is required to characterize the other's gains as legitimate in domestic communications.

Section 9: Staged Implementation — The Three-Month Cadence

9.1 Year One Implementation Calendar

Phase	Timeline	Iranian Actions	US Actions	Verification
Phase 1: Signature	Month 0	Signature; MVC activates	T1 humanitarian release	Immediate
Phase 2: Freeze	Month 0-1	60% enrichment freeze; IAEA confirms	T2 release; SWIFT prep	IAEA 72h confirmation
Phase 3: Ceasefire	Month 1-2	Proxy stand-downs; orders transmitted	T3 release; SWIFT connect	JIMT 30-day verify
Phase 4: Stabilization	Month 3	First JPEC report	T5 release; 90-day review	JPEC consensus
Phase 5: Consolidation	Month 6	6-month review; Fordow progress	T6 release	JPEC + IAEA
Phase 6: Annual Review	Month 12	Full compliance report	T7 release; Year 2 talks	Core Triad unanimous

9.2 Critical Path Dependencies

Article 9.2 — *No US Action Without Prior Verified Iranian Action*

US commitments activate only after Iranian commitments are verified. Sequence: Iranian action → neutral verification → US response. Never simultaneous. Never US-first. The US releases tranches only after the IAEA, JIMT, or JPEC certifies Iranian compliance.

9.3 Pause and Reversal Protocols

Any module may enter pause upon Tier 2 or 3 breach finding. All other modules continue per Partial Continuity Rule. Pause triggers: automatic Core Triad consultation within 48 hours; 14-day cooling-off; Reconstitution Conference within 30 days.

Section 10: The Core Triad — Oman, Switzerland, IAEA

10.1 Oman — The Political Relay

Oman chairs the Joint Facilitation and Monitoring Board (JFMB). All non-military communications flow through Muscat. Omani diplomatic immunity for all relay personnel. Omani costs covered by escrow administrative fund (0.5% of all tranches).

10.2 Switzerland — The Financial Custodian

Swiss Financial Cell manages escrow, SWIFT reconnection protocol, and trade verification. Swiss banking secrecy applies to individual data; aggregate data published quarterly. Swiss personnel enjoy diplomatic immunity for Framework-related activities.

10.3 IAEA — The Technical Verifier

IAEA monitors enrichment, centrifuge inventory, and declared facility access. Per Articles 5.3-5.5: no Additional Protocol, no military site access, scheduled inspections only, approved inspector nationalities only. IAEA Director General certifies compliance quarterly.

10.4 Triad Decision Rules

Decision Type	Vote Required	Abstention
Routine operational	Simple majority	Permitted; deferred to next meeting
Tranche release	All three present, no objection	Blocks decision
Tier classification	Consensus	Not permitted
Framework survival core activation	Unanimous	Not permitted
Amendment recommendation	Unanimous	Not permitted

Section 11: The Three-Tier Breach System

11.1 Tier 1 — Minor Infraction

Attribute	Specification
Trigger	Single drone overflight; warning shot; zero fatalities; under \$50,000 damage #20
Attribution	48-hour JFM Board review
Response	Diplomatic note; 14-day cooling-off; module pause only
Economic impact	None — discretionary tranches may be deferred
Escalation	Three Tier 1s within 90 days = Tier 2

11.2 Tier 2 — Significant Violation

Attribute	Specification
Trigger	Vessel interdiction; mine-laying; facility attack; proxy attacks during stand-down
Attribution	7-day JFM Board investigation #17
Response	Module pause; 14-day cooling-off; Reconstitution Conference within 30 days
Economic impact	Discretionary tranches (T5-T7) on hold; protected tranches (T1-T3) continue
Escalation	Two Tier 2s within 180 days = Tier 3

11.3 Tier 3 — Existential Breach

Attribute	Specification
Trigger	Confirmed state-to-state strike; nuclear facility attack; enrichment above 60%; mass-casualty proxy attack
Attribution	Emergency JFM Board within 6 hours; DPO channel activates
Response	Full stabilization pause; all tranches frozen; Core Triad emergency session; MVC survives
Economic impact	All tranches frozen; escrow on hold; SWIFT kill switch available
Recovery	Reconstitution Conference within 30 days; unanimous Core Triad vote to resume

11.4 Tactical Freeze on Discretionary Tranches

Article 11.4 — *Discretionary Tranche Tactical Freeze* #17

(a) During any Tier 2 investigation period, only discretionary tranches (T5-T7) enter temporary hold. (b) Protected tranches (T1-T4) and inviolable elements (MVC) continue unconditionally. (c) The 7-day JFM Board investigation does not constitute a breach finding; it is a precautionary measure. (d) If the JFM Board rules non-attribution within 7 days, discretionary tranches resume automatically. (e) Humanitarian access, ceasefire hotline, and basic IAEA monitoring continue regardless of investigation status.

Section 12: Framework Survival Core — The Lifeboat

12.1 Minimum Viable Configuration

Per Section 2A, four elements survive total Framework collapse:

1. **72-Hour Auto-Renewing Ceasefire:** Omani hotline, auto-renews at Hour 71 UTC via Ping/Ack. Neither party may disable without 30 days' notice. #29
2. **Humanitarian Corridor:** Zero-fee Hormuz transit for medicine, food, medical equipment. Legally non-divertible.
3. **60% Enrichment Freeze:** IAEA-verified within 72 hours. All downstream benefits contingent on this confirmation.
4. **\$250M Humanitarian Tranche:** Swiss escrow to UN OCHA upon signature. Non-reversible.

12.2 Survival Core Duration

Article 12.2 — *Survival Core Minimum Duration*

The MVC continues for a minimum of 180 days regardless of any other Framework element's status. Even if all proxy modules collapse, all tranches freeze, and all diplomatic channels break down, the MVC remains active. After 180 days, either Principal may provide 30 days' notice of MVC termination.

12.3 Reactivation Protocol

From MVC status, Framework reactivation requires: unanimous Core Triad recommendation; 14-day cooling-off period; formal written notification by both Principals; IAEA confirms 60% freeze still active.

Section 13: Rollback Architecture — Graduated, Not Snap

13.1 Rollback Is Graduated, Never Automatic

Article 13.1 — *Graduated Rollback Architecture*

Penalties for verified breach are graduated, calibrated, and reversible. No snapback. Each rollback step requires human decision by the Joint Political and Economic Committee (JPEC).

13.2 Rollback Ladder

Step	Condition	US Action	Iranian Consequence	Reversibility
1	Tier 1 breach	Diplomatic note; cooling-off	Module pause	Automatic after 14 days if no recurrence
2	Three Tier 1s in 90 days	Discretionary tranches deferred	Economic pressure	Reversible after 30 days compliance
3	Tier 2 breach	Protected tranches pause; SWIFT review	Significant economic impact	Reversible after JPEC recommendation
4	Two Tier 2s in 180 days	SWIFT kill switch activated; all tranches frozen	Full economic isolation	Reversible after unanimous Core Triad vote
5	Tier 3 breach	Full stabilization pause; MVC only	Existential crisis	Only via Reconstitution Conference

13.3 Reversal Requirements

Each rollback step is reversible upon: verified compliance restoration; JPEC positive recommendation; 30-day sustained compliance; Core Triad administrative clearance.

Section 14: Spoiler Management — Israel, Saudi Arabia, Internal Factions

14.1 Israeli Spoiler Contingency

Article 14.1 — *Israeli Military Action Contingency* #68

(a) If Israel conducts unilateral military strikes against Iranian nuclear facilities during Framework operation: the Framework does NOT automatically terminate; the MVC survives; Iran may suspend non-MVC modules for 30 days without breach finding; the Core Triad convenes within 48 hours; the US is not obligated to oppose Israeli action but shall inform Israel that strikes void US incentive commitments for the duration of hostilities. **(b)** If Israeli strikes occur after Iran has demonstrably complied with the 60% freeze for 90+ days: the US shall publicly characterize Israeli action as “inconsistent with the diplomatic pathway” and suspend intelligence sharing on Iranian nuclear targets for 90 days. **(c)** Iran retains the right to proportional response against Israeli military targets without Framework breach if: IAEA confirms 60% freeze was active at time of strike; and response is limited to military installations; and civilian targets are excluded.

14.2 Saudi/UAE Spoiler Contingency

Article 14.2 — *Saudi and UAE Opposition Contingency* #69

(a) If Saudi Arabia or the UAE withdraw from MSCG cooperation, impose unilateral sanctions, or take military action against Iranian targets: the Framework continues; the US shall mediate through bilateral GCC channels; Iranian compliance obligations are reduced proportionally to the spoiler’s impact; the Core Triad adjusts tranche release schedules to compensate Iran for spoiler-induced delays. **(b)** If a GCC state provides material support to anti-Iranian proxy groups during Framework operation: this constitutes grounds for Iranian module suspension without breach; the JFM Board investigates within 14 days. **(c)** The US shall not require Iranian compliance with modules directly affected by GCC spoiler action.

14.3 Internal US Faction Management

Congressional oversight per Article 15.2. JCPOA comparison shield per Article 14.4. Waiver authority per Article 14.5. No US executive action beyond existing statutory authority.

14.4 JCPOA Comparison Shield

Article 14.4 — *JCPOA Comparison Shield* #70

(a) This Framework is categorically distinct from JCPOA. Comparison tables shall be made available to all Congressional committees and the public. **(b)** Key distinctions: no direct US-Iran deal; no Additional Protocol; no military site access; no Boeing/Airbus sales; no embassy reopening; permanent 60% cap; China/Russia exclusion; SWIFT kill switch; proxy-led architecture;

no UN Security Council resolution. **(c)** Any Congressional resolution comparing this Framework to JCPOA shall be answered by the Administration with a point-by-point differentiation within 30 days. **(d)** The Framework shall be marketed domestically as “tougher than JCPOA in every dimension that matters.”

Dimension	JCPOA (2015)	PLSA v1.7 (2026)
Architecture	Direct bilateral	Proxy-led, insulated
Enrichment cap	3.67% (sunset to 2028)	60% (permanent)
Additional Protocol	Required	Explicitly excluded
Military site access	Managed access	Excluded
SWIFT	Full reconnection	Kill switch retained
Aircraft sales	Boeing/Airbus authorized	Prohibited
Diplomatic relations	Interest section planned	Explicitly excluded
China/Russia	No exclusion	Explicitly excluded
Inspector control	IAEA selects	Iran approves nationalities
Sunset	10-15 years	No sunset on core provisions

14.5 Waiver Authority Clarification

Article 14.5 — *Presidential Waiver Authority Preservation* #71

(a) This Framework operates entirely within existing Presidential waiver authority under IEEPA, INA, and applicable sanctions statutes. **(b)** No new legislation is required for implementation. **(c)** No Congressional approval is sought or implied. **(d)** The 60-day Congressional review period per Article 15.2 is informational, not approval-seeking. **(e)** The President may suspend or modify any Framework commitment at any time under inherent executive authority over foreign policy and sanctions implementation.

14.6 Internal Iranian Faction Management

IRGC coordination through existing channels. Hardliner messaging: “The US was forced to accept our terms because direct confrontation failed.” Reformist messaging: “We secured economic relief without sacrificing nuclear rights.” Both framings are permitted under Article 2.1B.

Section 15: Political Shock Absorber — The Domestic Protection Layer

15.1 No US Troops on Iranian Soil

Article 15.1 — *Prohibition on US Military Personnel in Iran* #35

(a) No US military personnel shall enter, overfly, or operate from Iranian territory, airspace, or territorial waters for any purpose related to this Framework. **(b)** This includes: inspectors, advisors, security personnel, technical consultants, and military liaisons. **(c)** IAEA inspectors assigned to Iran shall not include US nationals per Article 5.9. **(d)** Any accidental entry of US military personnel into Iranian territory shall be resolved through Omani diplomatic channels within 24 hours. **(e)** This prohibition is permanent.

15.2 Congressional Review — 60 Days

Article 15.2 — *Congressional Review Period* #65

(a) The President shall transmit the Framework text to Congress within 5 days of signature. **(b)** A 60-day Congressional review period commences upon transmission. **(c)** During the review period: T1 (humanitarian) releases proceed; T2 (enrichment freeze) proceeds upon IAEA certification; all other tranches are deferred until Day 61. **(d)** The review period is informational; Congressional silence constitutes no objection. **(e)** A joint resolution of disapproval may be enacted under standard legislative procedure; if enacted, the President determines whether to comply or exercise waiver authority. **(f)** The 60-day period is not a statutory requirement but a voluntary Presidential commitment.

15.3 Snapback Insulation

Article 15.3 — *UN Snapback Mechanism Insulation* #66

(a) This Framework is not a UN Security Council resolution and is not subject to UN snapback mechanisms. **(b)** No Framework provision may be terminated by UN Security Council action. **(c)** The Framework operates under bilateral executive authority, not Chapter VII. **(d)** If the UN Security Council adopts resolutions conflicting with this Framework, the Principals shall consult through the Core Triad but are not bound by such resolutions. **(e)** This insulation protects both parties from third-party manipulation via the UN system.

15.4 Sunset Clause

Article 15.4 — *Framework Sunset and Renewal* #72

(a) This Framework has an initial term of 4 years from the date of signature. **(b)** Core provisions (60% cap, no Additional Protocol, no military site access, China/Russia exclusion, no diplomatic

relations) do NOT sunset and survive Framework termination. **(c)** Renewable provisions (tranche architecture, SWIFT access, escrow caps) require affirmative renewal negotiation beginning 180 days before expiration. **(d)** If no renewal agreement is reached by expiration: the Framework terminates; the MVC survives for 180 days per Article 12.2; core provisions continue indefinitely; all renewable provisions lapse. **(e)** Either Principal may withdraw with 180 days' notice per Article 21.3.

15.5 War Powers Act Protection

Article 15.5 — *War Powers Act Compliance* #73

(a) This Framework does not authorize the introduction of US armed forces into hostilities. **(b)** No US military action is contemplated, planned, or permitted under this Framework. **(c)** If Iran breaches the Framework in a manner that might trigger War Powers Act considerations, the President shall consult with Congress before any military response. **(d)** The proxy-led architecture ensures that no US military personnel are exposed to Iranian military action, eliminating War Powers Act triggers. **(e)** A formal presidential certification shall be transmitted to Congress within 30 days of Framework signature confirming War Powers Act non-applicability.

15.6 Emergency Congressional Session Protocol

Article 15.6 — *Emergency Congressional Consultation Protocol* #74

(a) If a Tier 3 breach occurs, the President shall convene closed-session briefings for the Gang of Eight within 48 hours. **(b)** If a Tier 2 breach occurs, the President shall notify relevant Congressional committees within 72 hours. **(c)** Monthly classified briefings shall be provided to the House Foreign Affairs and Senate Foreign Relations committees. **(d)** An unclassified annual report shall be published summarizing Framework implementation, compliance status, and tranche releases. **(e)** Congress may request additional briefings with 14 days' notice.

15.7 No UN Security Council Framework

Article 15.7 — *Exclusion of UN Security Council Mechanism* #75

(a) This Framework is not submitted to, endorsed by, or registered with the UN Security Council. **(b)** No Chapter VII resolution is sought or required. **(c)** The Framework is a bilateral executive understanding facilitated by neutral third parties, not a multilateral treaty. **(d)** Neither Principal may bring Framework disputes to the UN Security Council without 30 days' prior Core Triad consultation. **(e)** This exclusion prevents Russian and Chinese veto manipulation.

15.8 Presidential Withdrawal Clause

Article 15.8 — *Unilateral Presidential Withdrawal* #76

(a) The President of the United States may withdraw from this Framework with 90 days' written notice to the Core Triad. **(b)** Withdrawal does not require Congressional approval. **(c)** Upon withdrawal notice: all tranche releases cease; SWIFT reconnection terminates; the MVC continues for 180 days per Article 12.2; core provisions (60% cap, etc.) continue unless Iran also withdraws. **(d)** Iran may withdraw with 90 days' notice on identical terms. **(e)** The 90-day notice period is mandatory and cannot be waived. **(f)** A successor President may reverse withdrawal with 30 days' notice if the other Principal has not also withdrawn.

Section 16: MVA Fallback — Minimum Viable Accord

If proxy channels collapse entirely, the MVC remains: 72-hour auto-renewing ceasefire; humanitarian corridor; 60% enrichment freeze; \$250M humanitarian tranche. Reactivation requires: 14-day cooling-off; unanimous Core Triad recommendation; IAEA confirms freeze still active.

16.1 MVA Duration and Terms

Article 16.1 — *MVA Minimum Duration*

The MVA survives total Framework collapse for 180 days minimum. During MVA phase: no new tranches; no SWIFT; no sanctions relief beyond T1; MVC elements continue. After 180 days, either Principal may provide 30 days' notice of MVA termination.

16.2 MVA Reactivation

From MVA to full Framework reactivation: 14-day cooling-off; Core Triad convenes; IAEA confirms 60% freeze; JPEC recommends resumption; both Principals confirm in writing.

Section 17: Parallel Public Framework — The Both-Sides-Win Narrative

17.1 Dual Victory Framing

Per Articles 2.1A and 2.1B, each Principal may characterize the Accord domestically in self-flattering terms. The Framework does not require either side to acknowledge the other's gains as legitimate in domestic communications.

17.2 "No Surrender" Clause

Article 17.2 — *No Surrender Certification* #34

(a) The United States does not require Iran to: acknowledge defeat; renounce the nuclear program; accept responsibility for proxy attacks; apologize for past actions; or modify its constitution or form of government. (b) Iran does not require the United States to: acknowledge regime legitimacy; renounce sanctions policy; apologize for past actions; or modify its alliance structure. (c) Neither Principal's signature constitutes recognition of the other's political system, ideology, or historical narrative. (d) Both Principals may continue all existing foreign policies unrelated to this Framework.

17.3 "America First" Marketing

The US Administration shall market the Framework domestically as: "The toughest Iran deal ever negotiated — no direct talks, no sanctions surrender, no embassy, no Boeing, permanent enrichment cap, China and Russia locked out, and a kill switch on SWIFT. Iran complied because our pressure worked."

17.4 "Resistance Diplomacy" Marketing

Iranian authorities may market the Framework domestically as: "The US was forced to abandon direct confrontation and accept Iran's terms. We kept 60% enrichment, kept Fordow, kept our missiles, kept our regional influence, and got economic relief without bowing to American demands."

17.5 No Cross-Congratulation Required

No joint press conference. No handshake photo. No joint statement. Each Principal announces independently through own channels. The Core Triad may issue factual implementation reports; these are technical, not diplomatic.

Section 18: Joint Coordination Secretariat — Geneva

18.1 Structure

The Secretariat in Geneva houses: Executive Coordinator (Swiss national); Deputy Coordinator (Omani diplomat); IAEA Liaison Officer; Financial Control Officer; Political Reporting Officer; six regional desk officers.

18.2 Functions

Function	Description	Frequency
Tranche administration	Process release requests, verify conditions, execute transfers	Continuous
Incident logging	Record all proxy incidents, attribute per JFM Board findings	Real-time
Compliance reporting	Compile IAEA, JIMT, JPEC inputs into unified reports	Monthly
Public transparency	Publish aggregate data, transit statistics, incident summaries	Weekly
Diplomatic relay	Maintain Omani-channel integrity, message verification	Continuous
Annual review prep	Coordinate Year-End Review conference logistics	Annual

18.3 Budget

Administrative costs: 0.5% of all tranches. Swiss government contributes Geneva facilities. Oman contributes diplomatic infrastructure. IAEA contributes technical staff (costs covered by regular budget).

18.4 Immunity

All Secretariat personnel enjoy functional immunity under Swiss host state agreement. Premises inviolable. Archives and documents protected. Swiss courts have no jurisdiction over Framework-related activities.

Section 19: Face-Saving Metrics — Measuring Success Without Admitting It

19.1 Iranian "Victory" Metrics

- 60% enrichment preserved (not rolled back to 3.67%)
- No Additional Protocol implemented
- No military site access granted
- No US troops on Iranian soil
- No regime change policy
- Economic relief via escrow (sovereign funds, not charity)
- Regional influence preserved through proxy architecture
- Direct US-Iran confrontation avoided
- UN Security Council bypassed (no Russian/Chinese leverage)

19.2 US "Victory" Metrics

- Permanent 60% cap (vs. JCPOA 3.67% with sunset)
- 12-month breakout timeline (vs. JCPOA shrinking timeline)
- No Additional Protocol (vs. JCPOA requirement)
- No military site access (vs. JCPOA managed access)
- Proxy stand-downs in 6 theaters
- Houthi Red Sea pause
- SWIFT kill switch retained
- China and Russia excluded
- No Boeing/Airbus sales
- No embassy reopening
- No full diplomatic relations
- Inspector nationality control

19.3 Neutral Success Indicators

Indicator	Baseline (May 2026)	Year 1 Target	Verifier
Hormuz civilian transit incidents	12/month	<2/month	JMMC
Red Sea commercial vessel attacks	8/month	Zero	Oman naval
Iraq militia attacks on US	15/month	<3/month	JIMT
Lebanon cross-border fire	20/month	<5/month	UNIFIL
IAEA 60% enrichment detections	Above 60%	Zero above 60%	IAEA
Breakout timeline	2-3 months	12+ months	IAEA
Iranian oil exports (barrels/day)	1.2M	1.8M	Swiss Financial Cell
SWIFT transaction volume	Zero	\$500M/month	Swiss Financial Cell

Section 20: Communications & Crisis Protocols

20.1 Normal Communications

All routine communications: transmitted through Omani relay; copied to Secretariat; 48-hour response standard; formal diplomatic note format preferred.

20.2 Crisis Communications

Level	Trigger	Channel	Response Time
Elevated	Tier 1 breach	Omani relay + Secretariat alert	24 hours
High	Tier 2 breach	Omani relay + Core Triad emergency	6 hours
Critical	Tier 3 breach	DPO hotline + Core Triad within 6h	1 hour
Existential	Nuclear facility attack; mass casualty	DPO hotline + all Principals + Core Triad	30 minutes

20.3 Direct Principal Override Hotline

Encrypted voice and text channel between US National Security Advisor and Iranian Supreme National Security Council Secretary. Tested weekly. Omani monitoring (passive, recording only). Activated only upon DPO invocation per Article 1.4.

20.4 De-escalation Procedures

Every crisis communication must include: factual description (no interpretation); requested action (specific); proposed timeline; escalation warning (what happens if no response). No threats. No deadlines under 24 hours except DPO activation.

20.5 Media and Public Communication

Each Principal communicates independently. No joint statements. No shared press conferences. Secretariat may issue factual reports (implementation data, statistics) but not political assessments. Leak protocol: if either Principal leaks Framework details, the other may issue clarifying statement within 24 hours.

Section 21: Instruments of Acceptance

21.1 Signature

This Framework enters into effect upon: signature by authorized US representative; signature by authorized Iranian representative; IAEA Director General written confirmation of readiness; Swiss government written confirmation of escrow establishment; Omani government written confirmation of relay channel activation.

21.2 Form

Signed copies in English, Persian, Arabic, French, and German. English version prevails in case of divergence. Signatures may be concurrent or sequential; Framework activates upon the later of the two Principal signatures.

21.3 Termination

Either Principal may terminate with 180 days' written notice to the Core Triad. Upon termination: all tranches freeze; SWIFT terminates; MVC continues for 180 days; core provisions survive per Article 15.4. Immediate termination without notice only upon: confirmed nuclear weapons test; confirmed attack on nuclear facility by either Principal; formal declaration of war.

21.4 No Deposit, No Registration

This Framework is not deposited with the UN, the Swiss Federal Council, or any international registry. It is not a treaty under VCLT. It is an executive-level operational understanding. Each Principal retains one original.

21.5 Successor Framework

Beginning 180 days before expiration per Article 15.4, the Core Triad shall facilitate successor framework negotiations. Any successor requires: new signatures; new Congressional transmission; new IAEA confirmation. This Framework does not automatically transition to a successor.

21.6 Confidential Annexes

Technical details (centrifuge serial numbers, escrow account coordinates, hotline encryption specifications) are contained in classified annexes. Annexes are shared only with: the two Principals; the Core Triad; the Secretariat Executive Coordinator. Annexes are not subject to FOIA or Iranian equivalent.

Appendix A: Quick Reference Card — PLSA v1.7 Protections Summary

Protection	Beneficiary	Article	Change
60% enrichment cap — permanent, no sunset	Iran	5.1	#49
No Additional Protocol required	Iran	5.3	#51
No military site IAEA access	Iran	5.5	#53
Iran approves inspector nationalities	Iran	5.9	#37
No Western inspectors at Fordow	Iran	5.5(e)	#37
No US troops on Iranian soil	Iran	15.1	#35
No full diplomatic relations	Both	7.3	#43
No embassy reopening	Both	7.4	#44
No Boeing/Airbus sales	US	7.5	#45
China/Russia excluded from benefits	US	2.4	#36
SWIFT kill switch retained	US	7.2	#42
Oil revenue escrow hard cap (\$3.5B/qtr)	US	7.1	#41
72-hour JFM Board attribution deadline	Iran	3.4(d)	#16
Discretionary tranche tactical freeze	Iran	11.4	#17
Proxy messenger pass-through immunity	Both	3.5	#5
\$50K damage threshold for Tier 1	Iran	1.3	#20
72-hour ceasefire auto-renew (UTC)	Both	2A	#29
Advisor transparency requirement	Both	1.5	#67
"America First" US framing right	US	2.1A	#31
"No Surrender" clause	Both	17.2	#34
Israeli spoiler contingency	Both	14.1	#68
Saudi/UAE spoiler contingency	Both	14.2	#69
JCPOA comparison shield	US	14.4	#70
Presidential waiver authority preserved	US	14.5	#71
UN snapback insulation	Both	15.3	#66
4-year sunset with core survival	Both	15.4	#72
60-day Congressional review	US	15.2	#65
War Powers Act protection	US	15.5	#73
Emergency Congressional briefing	US	15.6	#74
No UN Security Council mechanism	Both	15.7	#75
Presidential withdrawal clause (90 days)	US	15.8	#76

Frozen asset 3-tranche sequencing	Both	7.6	#46
European bank subsidiary channel	Both	7.7	#47
US SPR purchase option	US	7.8	#48
Centrifuge stockpile limits	Both	5.6	#54
Fordow conversion to research	Both	5.7	#55
12-month minimum breakout timeline	Both	5.8	#56
Hormuz civilian transit guarantee	Both	4.1	#57
No restraint on Iranian naval ops	Iran	4.2	#63
Strait of Hormuz monitoring	Both	4.3	#64
Houthi Red Sea maritime pause	Both	4.4	#61
Iraqi Shia militia stand-down	Both	4.5	#59
Hezbollah southern Lebanon restraint	Both	4.6	#60
Shia militia graduated verification	Both	4.7	#62
Technology transfer prohibition	Both	5.10	#40
No JCPOA revival	Both	5.2	#50
Scheduled IAEA inspections only	Iran	5.4	#52

Appendix B: Change Log Round 1 — Decisions on Changes #1 through #30

#	Category	Change	Decision	Location
1	Governance	Clarify "signatory" refers to US and Iran only	ACCEPTED	Sec 1, Preamble
2	Governance	Add explicit "Principals" definition	ACCEPTED	Sec 1

Combined Summary (Rounds 1 & 2): 76 changes reviewed. 68 accepted (89.5%). 6 modified (7.9%). 2 passed (2.6%).

Modified Changes Detail

#	Original	Modification	Reason
36	China/Russia exclusion	Added financial monitoring, IAEA tech-assistance watch	Operational enforcement mechanism
58	No Hormuz military restraint	Added ROE guidelines to prevent accidental engagement	Safety de-escalation measure
67	Advisor transparency	US retains sole personnel authority; disclosure only	Preserved executive prerogative

Passed Changes Detail

#	Change	Reason
38	Iranian monitors at US bases	Non-reciprocal; no US presence in Iran to mirror
39	Mirror inspection rights	Iran has no comparable facilities for US to inspect

Proxy-Led Stabilization Accord

Version 1.7 — Political Hardening Draft

Incorporating 76 reviewed changes across two rounds

This document represents an executive-level operational understanding, not a treaty under VCLT.

Core provisions survive Framework termination.
No UN Security Council registration.
