

DIPLOMATIC WORKING DOCUMENT

Sovereign Insulated Stabilization Framework

*A Triadic Sovereign Guarantor Architecture for US-Iran
Crisis De-escalation, Nuclear Stabilization, and Hormuz
Governance Through Neutral-Allied De-Legation*

VERSION 1.1 — Post-Hardening Draft (30 Changes Integrated)

CALIBRATED FOR The May 2026 Crisis Environment

AS OF May 22, 2026

STATUS Negotiation Draft — Ad Referendum

LEGAL FORM Triadic Sovereign Executive Agreements

CORE DOCTRINE

Sovereign De-Legation equals Political Protection. This Framework transforms volatile, face-losing bilateral compromise into prestigious, insulated transactions with mutual allies — preserving absolute internal deniability and ideological sovereignty for all Principals.

AUTHORIZED NEGOTIATORS ONLY — CONFIDENTIAL

Table of Contents

Preamble: The May 2026 Moment	Section 9: Staged Implementation
Executive Summary	Section 10: Core Triad Oversight
Section 1: The Sovereign Insulation Architecture	Section 11: Three-Tier Breach System
1.1 The SGD Triadic Firewall	Section 12: Framework Survival Core
1.2 Graduated Incident Response	Section 13: Rollback Architecture
1.3 Tier 2B Gray-Zone Breach	Section 14: Spoiler Management
1.4 Direct Principal Override	Section 15: Political Shock Absorber
Section 2: Core Principles	Section 16: MVA Fallback
Section 2A: Minimum Viable Configuration	Section 17: Parallel Public Framework
Section 3: The Sovereign Guarantor Directorate	Section 18: Joint Coordination Secretariat
Section 4: Maritime De-escalation	Section 19: Face-Saving Metrics
Section 5: Nuclear Safeguards	Section 20: Crisis Protocols
Section 6: Regional Stabilization	Section 21: Instruments of Acceptance
Section 7: Economic Reconnection	Appendix A: Quick Reference Card
Section 8: The Core Exchange	Appendix B: Change Log v1.0 to v1.1

Preamble: The May 2026 Moment

"We were getting ready to do a very major attack tomorrow, and I've put it off for a little while, hopefully maybe forever."
— President Donald J. Trump, May 18, 2026

Current Standoff: The Impasse of May 2026

As of May 22, 2026, the United States and the Islamic Republic of Iran stand at the closest point to renewed large-scale military confrontation since hostilities began in late February 2026. On May 18, President Trump announced he had called off a planned "very major attack" on Iran at the request of Gulf allies Qatar, Saudi Arabia, and the UAE, citing "serious negotiations now taking place."

Table 1: The May 2026 Impasse: Irreconcilable Direct Demands

Party	Demand	Why the Other Side Cannot Accept
United States	Iran delivers 400kg enriched uranium to the US	Iran cannot surrender sovereign nuclear material directly to its adversary; this would constitute capitulation
United States	Iran maintains only one operational nuclear facility	Iran views multiple facilities as sovereign right and insurance against single-point attack
United States	Link nuclear talks to cessation of all hostilities	Iran cannot accept that proxy forces become bargaining chips in nuclear talks
Iran	Full war reparations for damages	US Congress will not authorize payments to a hostile state; implies US admission of fault
Iran	Release of 100% of frozen assets	Trump has refused to release at least 25%; releasing all removes leverage
Iran	Sovereign control of Strait of Hormuz	US maintains Hormuz is international waterway; ceding control legitimates Iranian chokehold

Why Sovereign Insulated Stabilization Now

The SIS Framework inverts the traditional diplomatic model by replacing proxy-based mediation with sovereign neutral-guarantor de-delegation. Earlier iterations relied upon "double-insulated buffers" built from military commands and proxy labels. The SIS transcends this paradigm entirely.

The SIS framework makes sovereign, non-aligned nations prestigious instruments of peace, allowing both Washington and Tehran to execute high-stakes diplomatic maneuvers without direct domestic political heat. **For Washington:** Secure Iranian nuclear constraint, open Hormuz, and stabilize the region without signing a "weak deal" directly with Tehran. **For Tehran:** Secure sanctions relief, maintain Hormuz influence, preserve sovereign nuclear rights, and obtain reconstruction resources without surrendering enriched uranium directly to the United States.

Core Maxim: "Sovereign De-Legation equals Political Protection." By transferring the physical custody of strategic assets and the administrative control of stabilizing financial pipelines entirely onto neutral, sovereign third-party soil under international oversight, the framework transforms volatile, face-losing bilateral compromise into prestigious, insulated transactions with mutual allies.

Executive Summary — Read This First

Document Summary

This Framework creates a triadic sovereign guarantor architecture through which the United States and Iran achieve crisis stabilization without direct bilateral contact. Four pages capture the essence; the remainder are technical annexes. Version 1.1 incorporates thirty systematic hardening changes across institutional architecture, financial controls, nuclear custody, maritime security, rollback management, and legislative risk protection.

The Problem

Direct negotiations have failed. Neither side can move first without appearing to capitulate. The five irreconcilable demands create a diplomatic trap with no bilateral exit. Previous proxy-based frameworks introduced operational complexity and legitimacy deficits that eroded under political pressure.

The Sovereign Insulation Solution

The United States and Iran never sign a direct treaty. Both Principals legally delegate operational authority to a Sovereign Guarantor Directorate (SGD) composed of three universally respected, non-aligned nations: the **Sultanate of Oman** (Political and Maritime Guarantor), the **Swiss Confederation** (Financial and Escrow Guarantor), and the **Republic of Ireland** (Technical and Verification Co-Guarantor).

These sovereign guarantors execute politically hazardous steps in their own names: Oman physically hosts and takes sovereign title of Iranian enriched uranium stockpiles; Switzerland assumes sole legal liability for all stabilization fund transfers; Ireland jointly chairs nuclear verification alongside the IAEA. The Principals establish strategic boundaries and provide underlying assets, but maintain zero direct diplomatic contact.

The Backbone (MVC): Four Elements That Cannot Collapse

Even if everything else fails, these survive for 180 days minimum: (1) **Ceasefire** — 72-hour auto-renewing; (2) **Humanitarian corridor** — Zero-fee Hormuz transit; (3) **60% enrichment freeze** — IAEA-verified within 72 hours; (4) **\$250M humanitarian tranche** — Swiss escrow, non-reversible.

What Each Side Gets

Table 2: Principal Gains Summary

Iran	United States
"We preserved sovereignty. We secured relief through sovereign allies. We never surrendered to the US directly. HEU remains under IAEA dual-lock custody in Oman — not US territory."	"We removed HEU from Iran. We capped enrichment. We kept all military options. We never signed a deal with Iran. We led through the SGD and set the terms. Sanctions remain officially in full force."

Section 1: The Sovereign Insulation Architecture

In the SIS framework, the United States and the Islamic Republic of Iran never sign a direct bilateral treaty. They act as Principal States who legally delegate operational authority to the Sovereign Guarantor Directorate (SGD) through three parallel sovereign executive agreements between each Principal and each Guarantor state. This is **Sovereign De-Legation**: the transfer of politically hazardous operational tasks from the Principals to neutral, sovereign third parties who execute in their own name.

Table 3: The Sovereign Insulation Architecture

Layer		Function	Interface	
Principal States		US and Iran establish strategic boundaries, provide assets, authorize incentives	Zero direct contact	
Sovereign Directorate	Guarantor	Oman, Switzerland, Ireland execute politically hazardous steps in their own sovereign names	SGD-to-Principal agreements	executive
Neutral Facilitators		IAEA (technical), UN (procedural), Pakistan (emergency convening)	Oversight, mediation	verification,

1.1 The SGD Triadic Firewall

Table 4: SGD Triadic Firewall: Functions and Political Shields

Guarantor		Domain		Sovereign Function	Political Shield
Sultanate of Oman		Political & Maritime		Legal intermediary; nuclear custody host; Hormuz transit oversight; 24/7 hotline	Disputes are Oman-Iran or Oman-US, never US-Iran bilateral
Swiss Confederation		Financial Escrow	&	Sole custody of stabilization funds; legal liability for transfers; SWIFT administration	Swiss sovereign jurisdictional immunity blocks unilateral freezing
Republic of Ireland		Technical Verification	&	Joint chairs verification with IAEA; neutral compliance certification; backup data hosting	No adversarial-state inspectors; verification ring-fenced from EU-US intelligence sharing pipelines

Article 1.1A — Irish Verification Technical Ring-Fence (Change #5)

All satellite telemetry, mass spectrometry data, and data-processing nodes utilized by Ireland and the IAEA under this Framework shall be structurally ring-fenced from standard EU-US intelligence sharing pipelines. No data collected for SIS verification purposes shall be transmitted to, accessible by, or stored on systems subject to Five Eyes intelligence agreements or equivalent Western military intelligence sharing protocols. This provision preserves the required non-adversarial baseline and ensures the verification layer cannot be characterized as a cover for Western military espionage.

Pass-Through Immunity for SGD Intermediaries (Change #18)

Article 1.1B — Absolute Transit Immunity for SGD Couriers

Any physical or digital diplomatic courier moving between the SGD Secretariat and the Principal States is granted temporary, absolute, transit-only diplomatic immunity by all facilitating states. This immunity applies exclusively to transit activities and communications relay, does not extend to unrelated criminal conduct, and remains in force even during localized military flare-ups, Tier 1 breaches, or temporary module suspensions. This guarantee ensures that SGD communications remain active during periods of heightened bilateral tension.

1.2 Graduated Incident Response

Article 1.3 — Graduated SGD-Managed Incident Response

Table 5: Graduated Incident Response Tiers

Tier	Incident	Response	State-to-State Impact
1	Minor operational deviation: transit delay, administrative discrepancy	SGD internal coordination within 24 hours	None — operational friction
2	Significant: material accounting discrepancy, custody chain interruption	48-hour SGD Verification Board; affected module pauses	Tier 1 state review; no military response
2B	Gray-zone: unattributed kinetic activity with high probability of non-state actor linkage	7-day Tactical Freeze on discretionary tranches (T5–T7); investigation proceeds	No automatic state-level escalation; protected tranches continue
3	Major: confirmed diversion of nuclear material, misappropriation of escrow, attack on SGD personnel	Emergency SGD consultation within 6 hours; Principals notified via Omani relay	Potential state-level escalation; DPO activates

Tier 1 Hard Boundary (Change #19)**Article 1.3A — Quantified Tier 1 Minor Incident Boundary**

A Tier 1 minor incident is defined exclusively as: kinetic or cyber activity resulting in zero fatalities AND under \$50,000 in independently audited physical property damage, as certified by the Swiss Financial Cell for economic assessments and the JMMC for maritime incidents. This hard boundary prevents minor border skirmishes, small-arms discharges, or low-grade cyber nuisance from being hyper-politicized into treaty-threatening events.

72-Hour Attribution Clock (Change #25)**Article 1.3B — Non-Extendable 72-Hour Attribution Clock**

When any maritime or regional incident occurs that could trigger Tier 2 classification or above, the Joint Forensic Maritime Board (JFMB) has a non-extendable 72-hour window to deliver its preliminary attribution ruling. This hard boundary blocks domestic media cycles from prematurely forcing an irreversible military response from either Principal before forensic and intelligence assessments are completed. If the JFMB cannot deliver a ruling within 72 hours, the incident defaults to Tier 2B classification pending final determination.

1.3 Tier 2B Gray-Zone Breach Classification (Change #20)**Article 1.3C — Tier 2B Gray-Zone Breach**

A Tier 2B breach classification applies to "Unattributed Kinetic Activity inside the Maritime Corridor or Regional Theater with a High Probability of Non-State Actor Linkage." This classification mandates a mandatory 7-day Tactical Freeze on discretionary asset tranches (T5–T7 only) while investigations proceed. All protected tranches (T1–T4) and inviolable MVC elements continue unconditionally. The 7-day Tactical Freeze does not constitute a breach finding; it is a precautionary measure. If the JFMB rules non-attribution within 7 days, discretionary tranches resume automatically. This classification prevents immediate state-level escalation where attribution is uncertain.

1.4 Direct Principal Override (Emergency Channel)

Article 1.4 — Direct Principal Override

- (a) **Normal Operations:** All communications flow through SGD channels and the Core Triad.
- (b) **Emergency Override Threshold:** Either Principal may invoke DPO if: 10+ military fatalities; confirmed state-to-state strike; nuclear facility attacked; existential threat certified.
- (c) **Procedure:** SGD channels NOT suspended; Principal-to-Principal hotline becomes primary; Core Triad convenes within 6 hours; 72-hour cooling-off activates.
- (d) **Deniability Preservation:** DPO invocation does NOT constitute admission of SGD channel failure. Reversion to SGD channels within 30 days unless both Principals agree otherwise.

Section 2: Core Principles

2.1 Synchronized Reciprocal Motion

Principle: *Neither side moves alone. Every Iranian commitment is matched by a corresponding US commitment, activated simultaneously, verified by SGD neutral observers.*

Narrative Asymmetry Allowance (US Framing)

The United States may characterize this Framework as: "America First — The Sovereign Insulation Principle. The US led the design, set the security parameters, conditioned every Iranian step on verified US security interests, and maintains full sanctions architecture as leverage. Iran follows through sovereign guarantors because direct confrontation with the United States failed."

Narrative Asymmetry Allowance (Iranian Framing)

The Islamic Republic may characterize this Accord as: "Resistance diplomacy triumphed. The United States was forced to work through sovereign guarantors because direct confrontation failed. Iran never surrendered sovereign rights, never signed a direct deal with the United States, and secured relief while preserving all strategic assets."

Article 2.1C — No Goalpost Moving

Neither party may unilaterally redefine compliance criteria, verification standards, or certification thresholds after they have been certified by the Joint Implementation Group.

Article 2.1D — Non-Humiliation Cooling-Off Penalty (Change #29)

If a senior cabinet member, head of government, or administration official of either Principal State publicly labels the framework a "capitulation," "defeat," "surrender," or equivalent pejorative on the official record, the affected Principal may delay its next implementation milestone by exactly 48 hours as a non-breach diplomatic cooling-off measure. This penalty is automatic upon certification by the Coordination Secretariat and does not require Core Triad approval. It serves as an enforcement mechanism for the mutual narrative allowances, preserving the political space necessary for both leaderships to defend the framework domestically without risking substantive collapse.

2.2 Sovereignty Preservation

Article 2.2 — Sovereignty Preservation

This Accord does not supersede any constitution. It does not create supranational authority. NPT rights are preserved. US treaty commitments to Gulf partners are preserved. Iranian sovereign title to all nuclear material remains intact regardless of custodial location or down-blending status.

2.3 Modular Architecture with Partial Continuity

Article 2.3 — Partial Continuity Rule

Stabilization pause in one module does not suspend unrelated modules. The Partial Continuity Rule applies automatically. When one module enters pause, all other modules continue at current operational levels for a minimum of 90 days.

Table 6: Module Survival Tiers

Tier	Modules	Behavior During Pause
------	---------	-----------------------

Inviolable	Ceasefire hotline; humanitarian access; emergency diplomatic channel	Never pause under any circumstances
Protected	IAEA basic monitoring; Hormuz non-military transit; asset tranches 1–3	Continue during most stabilization pauses
Conditional	SWIFT reconnection; bonus tranches; successor framework talks; Fordow advanced phases	May enter hold during disputes

Article 2.4 — Exclusion of Designated Adversary States

(a) China and Russia are explicitly excluded from IHTC membership, Secretariat observer status, escrow oversight, and all facilitation roles. (b) Neither Iran nor any SGD entity may use Framework-enabled trade flows to advance prohibited transactions with China or Russia. (c) The Swiss Financial Cell shall monitor all escrow dispersals and report suspicious patterns. (d) The IAEA shall monitor enrichment facilities for technical assistance from non-Framework state sources.

Article 2.5 — No Precedent Clause

This Accord establishes no legal or political precedent for unrelated disputes globally. It is *sui generis*, tailored exclusively to the May 2026 operational environment. No inference may be drawn regarding sovereign guarantor frameworks in other conflicts; maritime governance in other waterways; sanctions architecture for other jurisdictions; bilateral diplomatic frameworks with other parties.

Section 2A: Minimum Viable Configuration (Backbone)

The MVC is not a fallback. It is the backbone. Four elements survive total suspension:

Table 7: MVC Backbone Elements

#	Element		Specification
1	72-Hour Ceasefire	Auto-Renewing	Omani-facilitated hotline. Renews at Hour 71 UTC via Ping/Ack. Neither party may disable without 30 days' notice.
2	Humanitarian Corridor		Zero-fee Hormuz transit for medicine, food, medical equipment. Legally non-divertible.
3	60% Enrichment Freeze		IAEA-verified within 72 hours. All downstream benefits contingent on this confirmation.
4	\$250M Humanitarian Tranche		Swiss escrow to UN OCHA upon signature. Non-reversible.

Even if all SGD modules collapse, the MVC continues for a minimum of 180 days.

Section 3: The Sovereign Guarantor Directorate

The SGD comprises three universally respected, non-aligned nations acting as functional firewalls. Each Guarantor executes politically hazardous steps in its own sovereign name, not as a proxy or delegate of any Principal.

Table 8: SGD Guarantor Functions and Legal Basis

Guarantor	Primary Functions	Legal Basis
Sultanate of Oman Political & Maritime Guarantor	Sole legal intermediary; host of Omani Nuclear Custody Facility; Hormuz transit oversight; 24/7 hotline; crisis facilitation	Omani sovereignty; diplomatic immunity conventions; UNCLOS
Swiss Confederation Financial & Escrow Guarantor	Sole custody of stabilization funds; legal liability for transfers; SWIFT reconnection protocol; trade verification; financial shielding	Swiss banking law; FINMA oversight; SWIFT governance; Swiss sovereign immunity
Republic of Ireland Technical & Verification Co-Guarantor	Joint chairs nuclear verification with IAEA; neutral compliance certification; backup verification data; inspector nationality enforcement	Irish sovereign mandate; IAEA agreement; SGD Executive Agreement

SGD Decision Architecture (Change #1)

Article 3.1 — Anti-Deadlock Voting Protocol
(a) Routine operational decisions: Simple majority. Abstention permitted; matter deferred to next meeting. (b) Tranche release decisions: Unanimous among participating members. However, a formal abstention by one Guarantor state due to domestic caretaker government transitions, constitutional crises, or certified force majeure shifts the threshold to a two-thirds majority of the remaining participating Directorate members. This anti-deadlock provision prevents a bureaucratic freeze in Dublin or Bern from collapsing the entire economic pipeline. (c) Tier classification: Consensus required; abstention not permitted. (d) Framework survival core activation: All three present, no objection. (e) Amendment recommendation: Unanimous; abstention blocks.

Table 9: SGD Decision Rules (Hardened v1.1)

Decision Type	Vote Required	Abstention Rule
Routine operational	Simple majority	Permitted; deferred
Tranche release	Unanimous; shifts to 2/3 of remaining if formal abstention due to caretaker/force majeure	Permitted with cause; does not block
Tier classification	Consensus	Not permitted
Survival core activation	All three present, no objection	Not permitted
Amendment recommendation	Unanimous	Blocks

Key Distinction from Proxy Models

Unlike proxy coalitions relying upon deniable non-state or sub-state actors, the SGD comprises fully sovereign states acting in their own name and under their own legal authority. Every SGD action is an act of that sovereign state, not a delegated function of a Principal. This transforms the political character of de-escalation from covert manipulation into prestigious diplomatic service.

Section 4: Maritime De-escalation — The Hormuz Framework

Article 4.1 — Strait of Hormuz Civilian Transit Guarantee

(a) All civilian commercial vessels — regardless of flag state, ownership nationality, or cargo origin — are guaranteed safe, unimpeded transit through the Strait of Hormuz and Persian Gulf sea lanes. (b) This guarantee applies to vessels of all nations. (c) Transit fees, if any, shall be assessed uniformly without discrimination. (d) Any interference constitutes a breach subject to the Three-Tier Breach System.

Article 4.1A — Automated UNCLOS Fail-Safe (Change #16)

If the Joint Coordination Secretariat's maritime subcell is temporarily blinded or incapacitated due to external cyber crisis, system failure, or physical disruption, all civilian transit regulations automatically defer to the 1982 United Nations Convention on the Law of the Sea (UNCLOS) baseline transit-passage rules until full systems are restored and the Secretariat issues an operational restoration certificate. This fail-safe ensures that the legal baseline for safe transit never disappears, even if monitoring systems are compromised.

Article 4.2 — No Restraint on Iranian Military Naval Operations

(a) Nothing in this Accord restricts Iranian naval forces from conducting military operations in the Persian Gulf, Strait of Hormuz, or Gulf of Oman, including exercises, patrols, port visits, or intelligence collection. (b) Iranian military vessels retain full freedom of navigation in international waters. (c) The Civilian Transit Guarantee does not extend to military vessels. (d) Both Principals shall issue clear rules of engagement to minimize accidental engagement.

Standardized Spatial Terminology (Change #17)

Article 4.2A — Mandatory Naval Standoff Zone

The operational safety envelope for all non-scheduled naval deployments within the Strait of Hormuz is defined as: a mandatory 5 nautical mile (nm) standoff zone from the internationally recognized Traffic Separation Schemes (TSS) of the Strait of Hormuz. No naval vessel from either Principal may operate within this 5nm standoff zone without 24-hour advance notification to the JMMC. Scheduled naval patrol routes previously registered with the Secretariat are exempt from the notification requirement but must adhere to the standoff distance.

Article 4.3 — Joint Maritime Monitoring Cell

(a) A Joint Maritime Monitoring Cell (JMMC) comprising Omani, Swiss, and IAEA-registered neutral observers shall monitor civilian transit flows. (b) The JMMC publishes weekly transit statistics. (c) Any deviation from normal transit patterns exceeding 20% triggers automatic JMMC investigation and Core Triad notification. (d) All monitoring data is public within 48 hours.

International Hormuz Transit Council

The SIS integrates the Persian Gulf Strait Authority (PGSA) into a broader multilateral framework: the PGSA continues as an Iranian national body. A new **International Hormuz Transit Council (IHTC)** is established with membership: Iran, Oman, UAE, Switzerland (observer), UK (observer), IAEA Maritime (technical). The IHTC sets transit rules and dispute resolution; a supermajority (4 of 6 voting members) is required for rule changes. Iran retains the PGSA as a sovereign institution; the US achieves multilateral oversight.

Hormuz Security Architecture

Table 10: Hormuz Security Layers

Layer	Function	Participants
Layer 1: Patrol	Visible naval presence, SAR, interdiction	Oman, Qatar, Kuwait coast guards
Layer 2: Surveillance	Radar, AIS monitoring, satellite coverage	SGD shared C4I cell
Layer 3: Diplomatic	Incident de-escalation, hotline management	Omani Maritime Authority + Swiss relay
Layer 4: Economic	Trade flow monitoring, sanctions enforcement	Swiss Financial Cell + IHTC

No Layer 1 patrol vessel may approach within 500 meters of another state's flagged vessel without prior coordination.

Section 5: Nuclear Safeguards — The Neutral Custody Architecture

Article 5.1 — Permanent Enrichment Cap at 60%

(a) Iran shall maintain uranium enrichment at or below 60% U-235 at all facilities, permanently. (b) This cap is not subject to sunset, renewal negotiation, or reversion. (c) IAEA continuous monitoring verifies compliance in real-time. (d) Any enrichment exceeding 60% constitutes immediate Tier 3 breach. (e) This provision survives Accord termination.

Article 5.1A — Isolated Real-Time Monitoring Streams (Change #13)

The real-time continuous monitoring data feed from Natanz and Fordow to Vienna and Geneva shall be routed through dedicated, Swiss-provided quantum-encrypted virtual private networks physically separate from standard internet backbone infrastructure. These dedicated channels insulate the compliance data pipeline from destructive cyber warfare operations seeking to spoof a breach and trigger an accidental war. No monitoring data shall traverse commercial cloud infrastructure or networks subject to third-party intelligence access.

The Omani-Swiss Nuclear Escrow

The AEOI signs a technical storage agreement strictly with the Sultanate of Oman. The US and Iran remain entirely arms-length. Sovereign title to all nuclear material remains with Iran; the transfer is custodial, not proprietary. Iranian observer teams accompany every stage.

Table 11: Custody Chain

Phase	Period	Action	Verifier
Activation	Day 1 (72h window)	Framework activates; IAEA inspectors arrive at Esfahan	Joint Secretariat
Inventory	Days 1–7	Physical inventory; mass spectrometry; cask loading; Dual-Signature Cryptographic Seals applied	IAEA + AEOI
Transit	Days 7–14	Convoy under IAEA armed escort; GPS tracking	IAEA + Omani Navy
Receipt	By Day 14	Casks unsealed with IAEA, Omani director, Iranian AEOI observer present	Three Channels
Custody Transfer	Day 14+	IAEA operational custody; Transfer Certificate triggers T3 release	IAEA + Oman
Down-Blending	Days 14–104	Physical down-blending of HEU to under 5% LEU begins	IAEA + Irish Co-Chair

Dual-Signature Cryptographic Seals (Change #11)

Article 5.1B — Dual-Signature Cryptographic Seals

The tamper-evident seals placed on all HEU casks during the Inventory Phase shall be Dual-Signature Cryptographic Seals. Both an IAEA inspector and an Atomic Energy Organization of Iran (AEOI) official must digitally register the seal deployment using sovereign-key cryptography, with signature records stored simultaneously on IAEA, Omani, and Irish servers. Neither Principal can unilaterally allege manipulation during the transit phase; both signatures are required for seal validation, removal, or dispute arbitration.

Down-Blending Pathway (Change #12)

Article 5.1C — Mandatory Down-Blending Pathway

Within 90 days of the HEU stockpile arriving at the Omani Nuclear Custody Facility, the material must begin a physical down-blending process to under 5% Low-Enriched Uranium (LEU), permanently eliminating its weapons-grade utility. The down-blending process shall occur under IAEA supervision at the Omani facility. The physical material remains under nominal Iranian ownership throughout the process. Down-blending completion triggers the Year-End Review tranche (T7) eligibility assessment. This provision transforms the security threat while preserving sovereign title.

Prohibition on US Custody

Article 5.2A — Prohibition on US Custody

Under no circumstances may Iranian enriched uranium be transferred to US territory, custody, or control. The Oman Nuclear Custody Facility is the sole designated location. All disposition pathways specify third-party destinations. No pathway terminates in US jurisdiction. This provision is binding and non-negotiable.

IAEA Verification Parameters

Article 5.3 — No Additional Protocol; Four-Pillar Verification

Iran is not required to implement the IAEA Additional Protocol. Verification is limited to: declared facility monitoring; 60% enrichment cap confirmation; centrifuge inventory tracking; material accountancy. The IAEA Director General certifies quarterly based solely on these four pillars.

Article 5.4 — Scheduled Inspections Only

(a) All inspections occur on a published 90-day schedule. (b) Iran receives 30 days' advance notice. (c) No surprise, challenge, or short-notice inspections. (d) Inspections at declared facilities during business hours (0800–1800 local). (e) Ad-hoc inspections require unanimous Core Triad approval.

Article 5.5 — Exclusion of Military Sites

(a) IAEA inspectors shall not enter, overfly, or remotely monitor any Iranian military installation. (b) IRGC-commanded sites are presumptively military. (c) Access requires: enrichment above 60% detected; Core Triad unanimous approval; AND Iran consent. (d) No IAEA inspector of US, UK, French, Canadian, Australian, or Israeli nationality shall participate at any Iranian nuclear facility.

Article 5.6 — Centrifuge Limits with Physical Disconnection (Change #15)

(a) Iran shall maintain no more than 1,060 IR-1 and 506 IR-2m centrifuges in operating configuration at Natanz and Fordow combined. (b) Excess centrifuges shall be placed under IAEA seal and their physical frequency inverters and power supply lines entirely dismantled and stored in separate, monitored modules under IAEA custody. This physical disconnection prevents rapid re-mobilization. (c) Iran may retain all excess centrifuges as property; they are not destroyed. (d) No new centrifuge types may be introduced without 180 days' notice and Core Triad approval.

Article 5.7 — Fordow Conversion with Emergency Maintenance Fund (Changes #14, #24)

(a) The Fordow Fuel Enrichment Plant shall transition from uranium enrichment to stable isotope production and research. (b) No enrichment above 3.67% at Fordow. (c) Two IR-1 cascades (348 machines) may remain for stable isotope production only. (d) IAEA monitors Fordow via declared inspections per Article 5.4. (e) Iran retains ownership; no foreign personnel stationed.

(f) **Emergency Maintenance Fund:** \$15 million of the initial Swiss-administered stabilization funds shall be locked in an insulated account to pay baseline salaries of idled Iranian technical teams at Fordow during any Review Pause or stabilization suspension. This ensures human capital remains incentivized to preserve the non-enrichment status quo even when political negotiation stalls. Access to this fund is automatic upon Secretariat certification of a Review Pause; no Core Triad vote required.

Article 5.8 — Minimum One-Year Breakout Timeline

(a) The combined effect of Articles 5.1, 5.6, and 5.7 shall ensure Iran's breakout timeline is not less than 12 months. (b) The IAEA shall verify breakout timeline estimates quarterly. (c) If breakout falls below 10 months, automatic consultation within 48 hours. (d) Below 6 months constitutes Tier 3 breach.

Omani Security Caretaker Clause (Change #14)

Article 5.9 — Omani Security Caretaker Clause

If the Sultanate of Oman experiences an unforeseen domestic security crisis, regional military spillover, or incapacitation of local security forces, physical security and operational control of the Omani Nuclear Custody Facility automatically upgrades to a direct UN Blue Helmet security detail within 2 hours of certification by the IAEA Director General or the Irish Co-Chair. This upgrade bypasses local chain-of-command friction and ensures uninterrupted physical protection of all nuclear material under SIS custody. Omani sovereignty over the facility is not diminished; UN security operates under Omani authority.

Section 6: Regional Stabilization

The SIS addresses regional stabilization through SGD-facilitated sovereign-to-sovereign commitments. Unlike proxy-based frameworks, the SIS does not require Iran to issue public stand-down orders to non-state actors.

Table 12: Regional Stabilization Verification Chain

Zone	Commitment	Verifier	Trigger
Gaza	PIJ ceasefire	Egypt + Oman	72h no-fire
Lebanon	Hezbollah north of Litani River; no cross-border strikes	UNIFIL + Swiss monitoring	60-day restraint
Iraq	Iraqi government assumes sovereign security responsibility; militia stand-down	Iraqi Gov + JIMT	30-day verified
Yemen (maritime)	Houthi Red Sea/Gulf of Aden pause	Oman naval	72h no-attack
Yemen (land)	Houthi KSA freeze	UN monitors	30-day verified
Syria	IRGC/affiliate restraint	Russian + Omani	30-day verified

Article 6.5 — No New Fronts Commitment

Iran shall not activate new conflict fronts during Framework operation. Any attack by an Iran-linked group in a theater not listed above constitutes Tier 2 breach unless non-attributed per SGD protocols.

Section 7: Economic Reconnection

Article 7.1 — Oil Revenue Escrow with Hard Cap, SDR Indexing, and Legal Immunization (Changes #7, #8)

(a) Iranian oil export revenues flow into a Swiss-governed escrow account. (b) A hard cap applies, indexed to International Monetary Fund Special Drawing Rights (SDR) baselines at a rate equivalent to \$3.5 billion per quarter at the SDR valuation on the date of Framework signature. Quarterly adjustments preserve the real value of Iran's economic relief against global inflation and dollar fluctuations. (c) Revenues exceeding the SDR-indexed cap shall be held separately; released only with unanimous Core Triad approval. (d) The Swiss Financial Cell publishes monthly balance reports.

(e) **IEEPA National Security Waiver:** Upon Framework signature, the US Executive Branch shall issue an un-appealable, rolling National Security Waiver under the International Emergency Economic Powers Act (IEEPA) immunizing the Swiss escrow accounts from attachment, garnishment, or judicial seizure by US domestic courts, terror-victim civil litigants, or state-level prosecutors. This waiver legally preempts any domestic legal action targeting escrow funds and shall be renewed automatically every 90 days for the duration of Framework operation.

Article 7.2 — SWIFT Reconnection with Kill Switch and Executive Shield (Changes #6)

(a) Iranian banks designated in Annex B reconnected to SWIFT. (b) The US retains a unilateral "kill switch" — the Secretary of the Treasury may order immediate disconnection with 48 hours' notice. (c) Kill switch activation does not constitute Accord breach.

(d) **Belgian Law Bypass Clause:** Because SWIFT is a corporate cooperative under Belgian law and subject to EU regulations, the US Executive shall utilize existing executive emergency powers to issue special general licenses shielding Swiss financial entities and SWIFT operators from secondary US penalties if they execute authorized SGD tranches during a dispute window. These licenses ensure that SWIFT infrastructure operators face no legal conflict between US executive instructions and Belgian/EU regulatory requirements during temporary disputes.

(e) SWIFT reconnection occurs only after 60% enrichment freeze verification.

Article 7.3 — No Full Diplomatic Relations; Article 7.4 — No Embassy Reopening

No exchange of ambassadors. No permanent diplomatic missions. Swiss protecting power for US interests in Iran continues. Pakistani protecting power for Iranian interests in the US continues. No upgrade to existing arrangements.

Humanitarian Procurement Routing (Change #9)

Article 7.4A — Strict Humanitarian Procurement Routing

The Swiss Financial Cell shall not disburse cash, liquid capital, or fungible financial instruments directly to Iranian state entities, Revolutionary Guard-affiliated organizations, or entities on any UN, EU, or OFAC sanctions list. All escrow disbursements for humanitarian, agricultural, and medical purposes shall be paid directly to certified international suppliers of agricultural commodities, pharmaceutical products, and civil medical equipment. This procurement-routing requirement ensures absolute compliance with anti-money laundering (AML) protocols, minimizes domestic political blowback in Washington, and guarantees that funds reach their intended humanitarian endpoints without intermediary diversion.

Sanctions Lock Safeguard (Change #10)

Article 7.4B — Sanctions Lock Safeguard

If the US Treasury designates a new Iranian entity under terrorism authorities (including Executive Order 13224, CAATSA, or successor authorities) during the Framework's operational lifespan, the new designation shall not retroactively apply to transactions, supply chains, or financial flows explicitly approved by the Swiss Financial Cell and documented in the SIS escrow ledger prior to the designation date. This Sanctions Lock prevents bureaucratic sabotage from within Washington's agencies by ensuring that good-faith Framework-enabled transactions cannot be invalidated by subsequent designation actions. The Swiss Financial Cell maintains the authoritative transaction register for Sanctions Lock determinations.

Tranche Release Schedule

Table 13: Tranche Architecture: \$4.5B Annual Pathway

Tranche	Amount	Release Condition	Binding Authority
T1: Humanitarian	\$250M	Signature	Immediate, non-reversible
T2: Enrichment Freeze	\$500M	IAEA 60% freeze certified	IAEA DG
T3: Ceasefire Verified	\$750M	30-day ceasefire all zones	JIG Chair
T4: SWIFT	\$400M	SWIFT reconnected	Swiss Financial Cell
T5: 90-Day Review	\$600M	No Tier 2+ in 90 days	JIG Chair
T6: 6-Month Review	\$800M	First JPEC report positive	JPEC consensus
T7: Year-End	\$1.2B	Full Year 1 certification; down-blending initiated	Core Triad unanimous

Article 7.5 — Frozen Asset Release Sequencing

(a) Iranian assets frozen in third-country accounts released in three tranches: Tranche 1 (30%) upon 60% freeze certification; Tranche 2 (40%) upon 90-day verified ceasefire; Tranche 3 (30%) upon completion of Year 1 review with no Tier 3 breaches. All releases flow through Swiss escrow. No direct bank-to-bank transfers. Assets in US jurisdiction excluded.

Section 8: The Core Exchange — What Each Side Gets

Table 14: Core Exchange Summary

Category	US Commitment	Iranian Commitment
Security	No direct military action; SGD-only channels; DPO threshold high	60% enrichment cap permanent; no weaponization; regional restraint
Economic	Graduated sanctions relief via escrow; SWIFT reconnection; no new designations; Sanctions Lock protection	Oil revenue transparency; no circumvention; escrow compliance; humanitarian procurement routing
Regional	Gulf partner coordination; no provocative exercises; Hormuz civilian guarantee; 5nm naval standoff	Regional restraint; no new fronts; Red Sea maritime pause
Nuclear	No Additional Protocol pursuit; no military site access; inspector nationality respect; IEEPA waiver shield	IAEA monitoring at declared facilities; centrifuge limits; Fordow conversion; HEU down-blending to <5% LEU
Political	No regime change policy; balanced narrative framing; 48-hour cooling-off penalty for humiliation violations	No "victory" framing claiming US defeat; mutual narrative discipline

What Iran Gets

- \$4.5B annual economic incentive pathway via SDR-indexed Swiss escrow
- 60% enrichment preserved (NPT-compliant); no dismantlement
- No Additional Protocol, no military site access
- SWIFT reconnection with kill switch and Belgian-law bypass shield
- Oil revenue access via SDR-indexed capped escrow
- IEEPA waiver immunizing escrow from US judicial seizure
- No regime change policy; humanitarian corridor guaranteed
- Sovereign title to all nuclear material preserved through down-blending
- No Western inspectors at any facility
- Zero direct negotiations with the United States

What the United States Gets

- Permanent 60% enrichment cap; 12-month minimum breakout timeline
- Mandatory HEU down-blending to <5% LEU within 90 days of Oman custody
- Regional restraint in all theaters; Red Sea maritime pause
- Real-time IAEA monitoring on dedicated quantum-encrypted channels
- No new conflict fronts; oil revenue transparency
- China/Russia exclusion from Framework benefits
- SWIFT kill switch authority; Sanctions Lock against bureaucratic sabotage
- No full diplomatic relations required; no embassy reopening
- Humanitarian procurement routing ensuring AML compliance
- Snap-back protection via IEEPA waiver and sequenced deactivation

Asymmetric Gains Acknowledged: The US gains strategic stability and Iranian nuclear constraint without military action. Iran gains economic relief and sovereignty preservation without political submission. Both gains are real. Neither side is required to characterize the other's gains as legitimate in domestic communications.

Section 9: Staged Implementation — Three-Month Cadence

Table 15: Year One Implementation Calendar

Phase	Timeline	Iranian Actions	US Actions	Verification
Signature	Month 0	Signature; MVC activates	T1 humanitarian release; IEEPA waiver issued	Immediate
Freeze	Month 0–1	60% enrichment freeze; IAEA confirms	T2 release; SWIFT prep	IAEA 72h
Ceasefire	Month 1–2	Regional restraint orders transmitted	T3 release; SWIFT connect	JIMT 30-day
Stabilization	Month 3	First JPEC report	T5 release; 90-day review	JPEC consensus
Consolidation	Month 6	6-month review; Fordow progress	T6 release	JPEC + IAEA
Annual Review	Month 12	Full compliance report; down-blending status	T7 release; Year 2 talks	Core Triad unanimous

Article 9.2 — Sequential Activation Protocol

US commitments activate only after Iranian commitments are verified. Sequence: Iranian action → neutral verification → US response. Never simultaneous. Never US-first. The US releases tranches only after the IAEA, JIMT, or JPEC certifies Iranian compliance.

Pause and Reversal: Any module may enter pause upon Tier 2 or 3 breach finding. All other modules continue per Partial Continuity Rule. Pause triggers: automatic Core Triad consultation within 48 hours; 14-day cooling-off; Reconstitution Conference within 30 days.

Section 10: The Core Triad — Operational Oversight

The Core Triad — Oman, Switzerland, and the IAEA — provides operational oversight of SGD functions. The Triad monitors; the SGD executes.

Table 16: Core Triad Functions

Member	Role	Key Functions
Oman	Political Relay	Chairs JFMB; all non-military communications through Muscat; diplomatic immunity for relay personnel; costs covered by escrow admin fund (0.5% of tranches)
Switzerland	Financial Custodian	Manages escrow, SWIFT protocol, trade verification; banking secrecy for individual data; aggregate published quarterly
IAEA	Technical Verifier	Monitors enrichment, centrifuge inventory, declared facility access; quarterly compliance certification; no Additional Protocol, no military sites, scheduled inspections only

Section 11: Three-Tier Breach System

Table 17: Breach System Summary (Hardened v1.1)

Tier	Trigger	Attribution	Response	Economic Impact	Escalation
1 Minor	Kinetic or cyber activity: zero fatalities AND under \$50,000 independently audited property damage	48-hr JFM Board	Diplomatic note; 14-day cooling-off; module pause	None; discretionary tranches may defer	3 Tier 1s in 90 days = Tier 2
2B Gray-Zone	Unattributed kinetic activity with high probability of non-state actor linkage	7-day JFM Board investigation	Mandatory 7-day Tactical Freeze on T5–T7 only	Discretionary tranches on hold; protected continue	Confirmed attribution shifts to Tier 2; 2 Tier 2s in 180 days = Tier 3
2 Significant	Vessel interdiction; mine-laying; facility attack; attacks during stand-down	7-day JFM Board; 72-hr non-extendable clock	Module pause; 14-day cooling-off; Reconstitution Conference within 30 days	Discretionary (T5–T7) on hold; protected (T1–T3) continue	2 Tier 2s in 180 days = Tier 3
3 Existential	Confirmed state-to-state strike; nuclear facility attack; enrichment above 60%; mass-casualty attack	Emergency JFM Board within 6 hours; DPO activates	Full stabilization pause; all tranches frozen; Core Triad emergency; MVC survives	All tranches frozen; SWIFT kill switch available	Recovery only via Reconstitution Conference

Article 11.4 — Tactical Freeze on Discretionary Tranches

During any Tier 2 or Tier 2B investigation, only discretionary tranches (T5–T7) enter temporary hold. Protected tranches (T1–T4) and inviolable elements (MVC) continue unconditionally. The 7-day investigation does not constitute breach finding. If the JFM Board rules non-attribution within 7 days, discretionary tranches resume automatically. Humanitarian access, ceasefire hotline, and basic IAEA monitoring continue regardless of investigation status.

Cyber Incident Attribution Standard (Change #22)

Article 11.5 — Cyber Incident Attribution Threshold

An infrastructure cyberattack against Framework-protected systems cannot be classified as a Tier 2 or Tier 3 breach unless the Joint Forensic Maritime Board (JFMB) or the Coordination Secretariat issues a verified cryptographic attribution linking the source directly to a Principal State's sovereign military apparatus with confidence level of 95% or higher. Absent such verified attribution, cyber incidents default to Category I/II/III technical response per Article 20.3 and do not trigger the breach system. This provision insulates the Framework from false-flag cyber operations designed to force accidental escalation.

Section 12: Framework Survival Core — The Lifeboat

Per Section 2A, four elements survive total Framework collapse:

1. **72-Hour Auto-Renewing Ceasefire:** Omani hotline, auto-renews at Hour 71 UTC. Neither party may disable without 30 days' notice.
2. **Humanitarian Corridor:** Zero-fee Hormuz transit for medicine, food, medical equipment. Legally non-divertible.
3. **60% Enrichment Freeze:** IAEA-verified within 72 hours. All downstream benefits contingent.
4. **\$250M Humanitarian Tranche:** Swiss escrow to UN OCHA upon signature. Non-reversible.

Article 12.2 — Survival Core Duration and Reactivation

The MVC continues for 180 days minimum regardless of any other Framework element's status. After 180 days, either Principal may provide 30 days' notice of MVC termination. Reactivation from MVC requires: unanimous Core Triad recommendation; 14-day cooling-off; formal written notification by both Principals; IAEA confirms 60% freeze still active.

Section 13: Rollback Architecture — Graduated, Not Snap

Article 13.1 — Graduated Rollback with Accelerated Earn-Back (Change #21)

Penalties for verified breach are graduated, calibrated, and reversible. No snapback. Each rollback step requires human decision by JPEC. **Earn-Back Acceleration:** The JPEC review petition window for compliance restoration is 7 days (compressed from 14 days to match the May 2026 crisis operational timeline). If a party rapidly corrects a compliance error, the economic relief pipeline moves forward without artificial structural delays. Each rollback step is reversible upon: verified compliance restoration; JPEC positive recommendation; 7-day sustained compliance; Core Triad administrative clearance.

Table 18: Rollback Ladder (Hardened v1.1)

Step	Condition	US Action	Iranian Consequence	Reversibility
1	Tier 1 breach	Diplomatic note; cooling-off	Module pause	Automatic after 14 days if no recurrence
2	Three Tier 1s in 90 days	Discretionary tranches deferred	Economic pressure	Reversible after 7 days compliance (JPEC petition)
3	Tier 2 breach	Protected tranches pause; SWIFT review	Significant economic impact	Reversible after JPEC recommendation (7-day review)
4	Two Tier 2s in 180 days	SWIFT kill switch; all tranches frozen	Full economic isolation	Reversible after unanimous Core Triad vote
5	Tier 3 breach	Full stabilization pause; MVC only	Existential crisis	Only via Reconstitution Conference

Sequenced Deactivation on Withdrawal (Change #23)

Article 13.2 — Mandatory Sequenced Deactivation Protocol

If a Principal State invokes its right to withdraw from the Framework per Article 21.5, a mandatory module-by-module sequenced rollback shall occur over 90 days in reverse implementation order: (a) Days 1–30: Discretionary economic incentives (T5–T7) suspended; SWIFT reconnection reviewed; no new escrow disbursements. (b) Days 31–60: Protected tranches (T3–T4) suspended; humanitarian procurement routing scaled to minimum; IAEA inspections continue. (c) Days 61–90: IAEA monitoring scales back to baseline; MVC elements enter 180-day sunset; final asset accounting completed. This sequenced deactivation provides critical off-ramps to preserve the peace at the zero hour and prevents precipitous collapse that could trigger unintended military escalation.

Section 14: Spoiler Management — Israel, Saudi Arabia, Internal Factions

Article 14.1 — Israeli Military Action Contingency

(a) If Israel conducts unilateral strikes against Iranian nuclear facilities: the Framework does NOT automatically terminate; the MVC survives; Iran may suspend non-MVC modules for 30 days without breach; Core Triad convenes within 48 hours. (b) If Israeli strikes occur after Iran has complied with 60% freeze for 90+ days: the US shall characterize Israeli action as "inconsistent with the diplomatic pathway" and suspend intelligence sharing on Iranian nuclear targets for 90 days. (c) Iran retains right to proportional response against Israeli military targets without Framework breach if: IAEA confirms 60% freeze active; response limited to military installations; civilian targets excluded.

Article 14.2 — Saudi/UAE Opposition Contingency

(a) If Saudi Arabia or UAE withdraw from cooperation or take military action: the Framework continues; the US mediates through bilateral GCC channels; Iranian compliance obligations reduced proportionally to spoiler impact. (b) If a GCC state provides material support to anti-Iranian groups: grounds for Iranian module suspension without breach.

Article 14.4 — Comparison Shield

No member of Congress, media commentator, or policy advocate may compare this Framework to prior agreements in a manner creating binding political obligation. Each Framework is *sui generis*. Historical references permissible; precedential inference is not.

Section 15: Political Shock Absorber & Force Majeure

Article 15.1 — Automatic Review Pause

If any of the following occur in either Principal's jurisdiction, implementation automatically enters a Review Pause rather than terminating: national elections or referenda; assassination of senior leadership; cabinet collapse affecting negotiating ministries; mass protests affecting government authority; leadership transitions (Supreme Leader, President, Foreign Minister); significant military incident affecting domestic politics.

Article 15.2 — Review Pause Provisions

During Review Pause: (a) All Tier 1 (Inviolable) and Tier 2 (Protected) modules continue unchanged. (b) Tier 3 (Conditional) modules enter hold. (c) Secretariat issues Review Pause Certificate within 48 hours. (d) Affected party has 30 days to confirm continuation, propose modifications, or request stabilization pause. (e) If no response within 30 days, Review Pause extends 30 more days. Maximum: 90 days, extendable by mutual agreement.

Article 15.3 — Review Pause Non-Breach Status

Review Pause does NOT constitute material breach, does NOT trigger the three-tier breach system, does NOT affect compliance scoring, and does NOT enable the other party to suspend its obligations.

Article 15.4 — US Congressional Oversight

(a) Tranches 3+ subject to 30-day Congressional review before release. (b) President submits certification 30 days before each tranche release. (c) Congressional review is notification and consultation, not veto authority. (d) If Congress passes joint resolution of disapproval, President may waive under existing statutory authority.

Act of God Suspension Protocol (Change #30)

Article 15.5 — Force Majeure Protocol

If a natural disaster, severe seismic event, pandemic, or industrial accident heavily damages a monitored nuclear facility, a primary shipping lane, or an SGD operational site, all implementation timelines are automatically frozen for 14 days by the Coordination Secretariat upon certification by the affected facility's technical authority (IAEA for nuclear sites, JMMC for maritime infrastructure, Secretariat for SGD sites). This freeze is non-negotiable and does not require Core Triad approval. During the 14-day Force Majeure Pause, all MVC elements continue unconditionally; only conditional modules (Tier 3) enter hold. The Secretariat shall convene the Core Triad within 7 days to assess alternative arrangements. No penalty accrues for Force Majeure suspension. This provision ensures that environmental catastrophes cannot be misconstrued as deliberate, clandestine acts of war or non-compliance.

Section 16: Minimum Viable Accord Fallback

If negotiators reject the full architecture, the MVA provides a stripped-down emergency pathway:

- **Ceasefire:** 72-hour auto-renewing, Omani-facilitated
- **Hormuz reopening:** Civilian transit guarantee
- **Humanitarian channel:** Zero-fee medicine and food transit
- **Enrichment freeze:** 60% cap, IAEA-verified

Article 16.2 — MVA Activation Protocol

(a) Either Principal may propose MVA activation by written notice to the Secretariat. (b) Secretariat convenes Core Triad within 48 hours. (c) If either Principal confirms MVA preference, MVA activates within 72 hours regardless of the other's position. (d) MVA activation does not preclude full Framework reactivation. (e) MVA continues for 90 days renewable; full Framework negotiations may proceed in parallel.

Section 17: Parallel Public Framework

The SIS operates on two tracks: the operational track and a public track for domestic political consumption.

Sanitized Public Track Nomenclature (Change #27)

Article 17.1A — Public Document Titling Protocol

The Parallel Public Framework document shall be titled exclusively as a **"Joint Concordance of Intent."** The legal terms "Accord," "Agreement," "Treaty," "Protocol," or "Pact" shall not appear in any public release, press statement, or official communication regarding the Framework. This nomenclature restriction maximizes the US President's domestic insulation against hawkish critics claiming a formal pact was signed without legislative consent, while preserving the binding operational character of the sovereign executive agreements that constitute the actual legal framework.

Table 19: Dual-Track Framework

Element	Operational Track	Public Track
Legal form	SGD Executive Agreements	UN-registered Joint Concordance of Intent
Contact	Zero direct US-Iran contact	Acknowledgment of "diplomatic pathway"
Nuclear	Omani custody of HEU; down-blending to <5% LEU	"IAEA-secured stockpile under international oversight"
Financial	Swiss escrow; SDR-indexed	"Humanitarian channel"
Maritime	IHTC governance; 5nm standoff	"International transit cooperation"

Article 17.2 — Coordinated Public Messaging

(a) Neither Principal shall publicly disparage the SGD or Guarantor states. (b) Both Principals shall characterize Framework achievements as products of their own leadership. (c) Secretariat issues factual progress reports; narrative framing is each Principal's sovereign prerogative. (d) Neither Principal shall reveal SGD custody operational details beyond: "Materials are secured under international oversight in a third-country facility."

Section 18: Joint Coordination Secretariat

Legal Immunity Charter (Change #2)

Article 18.1A — SGD Secretariat Diplomatic Immunity

The Joint Coordination Secretariat subcells in Geneva and Muscat shall operate under an expedited Swiss-Omani bilateral diplomatic immunity charter executed concurrently with the Framework's entry into force. All Secretariat personnel, communication logs, encrypted data portals, and operational records shall enjoy the equivalent of diplomatic mission immunity under the Vienna Convention on Diplomatic Relations. This immunity prevents hostile domestic political actors, subpoena-happy courts, or third-party litigants from seizing encrypted communication logs, freezing Secretariat operational accounts, or compelling disclosure of SGD coordination records. The immunity charter shall be registered with the UN Secretary-General and recognized by both Principal States as a condition of Framework participation.

Table 20: Secretariat Subcells

Subcell	Function	Location
Political Coordination	Senior-level coordination, dispute resolution	Geneva
Maritime Operations	Hormuz transit management, naval deconfliction	Muscat
Nuclear Verification	IAEA coordination, enrichment monitoring	Geneva
Financial Operations	Escrow management, SWIFT coordination	Geneva
Communications	Media coordination, crisis communications	Geneva
Crisis Response	24/7 incident monitoring, attribution assessment	Muscat (primary), Geneva (backup)

Data Sovereignty Mirroring (Change #3)

Article 18.3 — Sovereign Data Mirroring with Post-Quantum Cryptography

All real-time data replication between the Geneva and Muscat Secretariat sites shall be stored exclusively on air-gapped, sovereign-owned server infrastructure utilizing post-quantum cryptographic protocols. No replication data shall traverse commercial cloud services, third-party hosting platforms, or networks subject to foreign intelligence access. If Western intelligence agencies, external hackers, or state-sponsored actors launch a cyber-interdiction against the Geneva site, the Muscat node can assume full master control within 4 hours without exposing compliance history, communication logs, or operational records. Both server farms shall be physically located on sovereign territory (Swiss-confederated territory for Geneva; Omani territory for Muscat) and subject exclusively to local data protection law.

Caretaker Facilitator Protocol (Change #4)

Article 18.4 — Caretaker Facilitator Emergency Default

The Secretariat operates under rotating facilitation cycles, with the facilitating state rotating quarterly among Oman, Switzerland, and Ireland. The rotating facilitator has convening authority and agenda-setting rights but no substantive voting power. **Emergency Default Rule:** If a Guarantor state experiences a sudden cabinet collapse, national emergency, force majeure, or constitutional crisis during its quarterly facilitation cycle, the role of facilitating state automatically defaults to the prior quarter's holder within 2 hours of Secretariat certification. This emergency transfer ensures continuous facilitation capacity without requiring a full SGD vote during the crisis period.

Rotating Facilitation: Standard rotation sequence: Oman → Switzerland → Ireland → Oman. Transitions occur at 00:00 UTC on the first day of each calendar quarter.

Section 19: Face-Saving Metrics — Domestic Narratives

Iranian Domestic Narrative

- "We ended the war" — Permanent bilateral ceasefire
- "Blockade lifted" — US naval blockade removed
- "Assets returning" — \$250M immediate; 50% by Month 3; 85% by Month 6
- "Sovereignty preserved" — No precedent clause; NPT rights intact; annual review
- "Nuclear rights defended" — 60% enrichment maintained; no dismantlement; down-blending on our terms
- "No direct surrender" — Zero direct negotiations with the United States
- "Prestigious allies" — Oman, Switzerland, Ireland as guarantors
- "Immunized funds" — IEEPA waiver protects escrow from US court seizure

US Domestic Narrative

- "Hormuz is open" — 200+ transits in 14 days
- "Weapons-grade uranium neutralized" — HEU down-blended to <5% LEU under IAEA custody in Oman
- "Enrichment capped and verified" — 12-month minimum breakout; IAEA continuous monitoring on dedicated channels
- "No bases lost" — All US Gulf bases remain
- "Congressional oversight" — Tranches 3+ subject to 30-day Congressional review
- "No capitulation" — We never signed a deal with Iran directly; no treaty, no accord
- "Led the architecture" — US set security parameters through SGD
- "Sanctions Lock" — New designations cannot retroactively kill good-faith transactions

Guarantor Prestige Narrative

For Oman, Switzerland, and Ireland, acting as operational guarantor of global shipping and nuclear non-proliferation enhances global prestige and security. They accept the heavy lifting because it cements their status as indispensable international actors. This is not burden-sharing; it is prestige acquisition.

Section 20: Communications & Crisis Protocols

Table 21: Communication Channels

Channel	Purpose	Security Level
Omani Political Relay	All non-military diplomatic communications	Encrypted, diplomatic pouch
Swiss Financial Hotline	Escrow, SWIFT, trade verification	Banking-grade encryption
IAEA Technical Channel	Inspection schedules, compliance data	Dedicated quantum-encrypted VPN
Irish Verification Channel	Backup verification data, compliance certification	Encrypted, sovereign; ring-fenced from EU-US intelligence
Crisis Hotline	Emergency de-escalation	Dedicated secure line

Article 20.2 — Cooling-Off Default

If disagreement occurs and attribution is unclear, all escalation freezes automatically for a mandatory 24–72 hour Cooling-Off Period. Negotiations continue. Verification teams investigate. No party may take escalatory action during the Cooling-Off Period.

Cyber Operations Stabilization

Table 22: Cyber Stabilization Categories

Category	Infrastructure	Restraint	Violation Response
I (Critical)	Nuclear monitoring; banking settlement; maritime navigation	Strict non-aggression	Tier 2; emergency session within 24h
II (Important)	Humanitarian logistics; medical supply chains	No offensive; defensive permitted	Tier 3; 72-hour review
III (Commercial)	General commercial infrastructure; telecoms	No persistent disruption	Tier 1 diplomatic resolution

Article 20.4 — Force Majeure

Natural disaster, pandemic, or external armed attack on a Guarantor state constitutes force majeure. Affected SGD functions suspend without breach. Triad arbitration within 7 days on alternative arrangements. No penalty for force majeure suspension. See also Article 15.5 for the 14-day automatic Force Majeure Protocol.

Section 21: Instruments of Acceptance

Legal Form and Signature Protocol

Table 23: Signature Protocol

Instrument	Signatories	Legal Effect
SGD-1: Omani Guarantee	US + Oman; Iran + Oman	Bilateral executive agreements
SGD-2: Swiss Guarantee	US + Switzerland; Iran + Switzerland	Bilateral executive agreements
SGD-3: Irish Guarantee	US + Ireland; Iran + Ireland	Bilateral executive agreements
Principal Declarations	US unilateral; Iran unilateral	Binding unilateral declarations
Operational Annexes	SGD members	Technical implementing documents

US Constitutional Basis (Change #26)

Article 21.3 — US Executive Authority and Statutory Waiver Anchoring

(a) Structured as executive agreements, not treaties requiring Senate advice and consent. (b) Each US-Guarantor agreement is a standalone bilateral executive agreement within the President's constitutional foreign affairs powers under *United States v. Curtiss-Wright Export Corp.*, 299 U.S. 304 (1936). (c) The US-Iran dimension operates through reciprocal unilateral declarations, not a bilateral treaty. (d) **Statutory Authority:** This framework is executed as a series of Executive Agreements backed by pre-existing statutory waiver authorities under the Countering America's Adversaries Through Sanctions Act (CAATSA), Sections 236 and 401, and the International Emergency Economic Powers Act (IEEPA), 50 U.S.C. §§ 1701–1707. These authorities structurally immunize the Framework from Senate filibusters, legislative blockage, or appropriations riders targeting specific SGD functions.

(e) **Congressional Inaction as Continuation:** The failure of the US Congress to pass a concurrent resolution of disapproval within 30 days of Presidential notification shall be interpreted by the Executive Branch as explicit statutory authorization to continue the Swiss escrow pipeline. This rule establishes a clear default: legislative inaction preserves, rather than disrupts, Framework operations.

Entry into Force

The Framework enters into force upon: signature of all six bilateral SGD agreements; deposit of both Principal declarations with the UN Secretary-General; issuance of the IEEPA National Security Waiver per Article 7.1(e); execution of the Swiss-Omani diplomatic immunity charter per Article 18.1A; and confirmation by the Secretariat that all MVC elements are operationally ready.

Article 21.5 — Framework Duration

(a) This Framework does not expire. It continues unless affirmatively voted down. (b) "Inaction = peace." (c) Either Principal may withdraw with 180 days' written notice. (d) Withdrawal triggers automatic Review Pause per Article 15.1 and mandatory sequenced deactivation per Article 13.2. (e) If no withdrawal confirmation by day 179, the Framework continues.

Appendix A: Quick Reference Card

Table 24: Key Facts at a Glance

Element	Detail
Framework	Sovereign Insulated Stabilization (SIS) Framework v1.1
Core Principle	Sovereign De-Legation = Political Protection
Guarantors	Oman (Political/Maritime); Switzerland (Financial); Ireland (Technical)
US-Iran Contact	Zero direct contact
Public Title	"Joint Concordance of Intent" (never "Treaty" or "Accord")
Backbone (MVC)	4 elements survive everything; 180-day minimum
Enrichment Cap	60% permanent; no sunset
HEU Final Disposition	Down-blending to <5% LEU within 90 days of Oman custody
HEU Custody	Oman (not US); IAEA dual-lock; Dual-Signature Cryptographic Seals
Financial Channel	SDR-indexed Swiss escrow; \$4.5B annual pathway
SWIFT	Reconnected with US kill switch + Belgian-law bypass shield
Legal Shield	IEEPA National Security Waiver; diplomatic immunity charter
Breach System	Four tiers (1, 2B, 2, 3); graduated rollback; no snapback
Attribution Clock	72-hour non-extendable JFMB window
Data Security	Air-gapped sovereign servers; post-quantum cryptography
Survival Core	Ceasefire + humanitarian corridor + enrichment freeze + \$250M
Duration	No expiration; continues unless voted down; 90-day sequenced deactivation on withdrawal
Precedent	None; sui generis

Emergency Decision Matrix

Table 25: Emergency Decision Matrix

Scenario	First Action	Timeline	Authority
Minor incident at sea	JMMC investigates; SGD coordinates	48 hours	JMMC Chair
Enrichment discrepancy	IAEA verification; Irish co-chair review	72 hours	IAEA DG
Escrow irregularity	Swiss Financial Cell audit	48 hours	Swiss Cell Director
Tier 1 breach	Diplomatic note; 14-day cooling-off	48 hours	JFM Board
Tier 2B gray-zone	Tactical Freeze on T5–T7; investigation	7 days	JFM Board
Tier 2 breach	Module pause; Core Triad convenes	48 hours	JFM Board
Tier 3 breach	Full pause; MVC only; DPO if needed	6 hours	Core Triad
Political shock	Review Pause Certificate issued	48 hours	Secretariat
Israeli strike	Framework continues; MVC survives	48 hours	Core Triad
Force majeure	14-day automatic freeze; Triad arbitrates	7 days	Secretariat
Omani security crisis	UN Blue Helmet upgrade; facility secured	2 hours	IAEA DG / Irish Co-Chair
Cyber attack on monitoring	Dedicated VPN isolates; Muscat assumes master	4 hours	Secretariat

Crisis Contact Hierarchy

Table 26: Crisis Contact Hierarchy

Priority	Channel	Location	Response Time
1	Omani Crisis Hotline	Muscat	Immediate
2	Core Triad Emergency Session	Video conference	6 hours
3	Secretariat Crisis Response Cell	Muscat/Geneva	2 hours
4	DPO Principal Hotline	Via Oman	Immediate

Document Control: SIS Framework v1.1 — Post-Hardening Draft (30 Changes Integrated) | Authorized Negotiators Only

Calibration Date: May 22, 2026 | Previous Version: v1.0 (Inaugural Draft) | Change Log: See Appendix B

Distribution: Sultanate of Oman; Swiss Confederation; Republic of Ireland; United States; Islamic Republic of Iran (via Omani relay)

"Sovereign De-Legation equals Political Protection."

Appendix B: Change Log v1.0 to v1.1

This document records the thirty systematic hardening changes integrated into SIS Framework v1.1, organized by functional domain.

I. Institutional Architecture & Voting Hardening

Change #1:Anti-Deadlock Voting Protocol. Tranche release voting shifted from strict unanimity to "unanimous among participating; abstention due to caretaker/force majeure shifts threshold to 2/3 of remaining." Prevents bureaucratic freeze in Bern or Dublin from collapsing the economic pipeline.

Change #2:SGD Secretariat Diplomatic Immunity Charter. Expedited Swiss-Omani bilateral charter grants Secretariat personnel and records Vienna Convention-equivalent immunity. Prevents subpoena-happy courts from seizing encrypted logs or data portals.

Change #3:Data Sovereignty Mirroring with Post-Quantum Cryptography. Real-time replication between Geneva and Muscat stored on air-gapped, sovereign-owned servers using post-quantum cryptography. Muscat can assume master control within 4 hours of Geneva cyber-interdiction.

Change #4:Caretaker Facilitator Protocol. If a Guarantor experiences cabinet collapse or national emergency during its facilitation quarter, role automatically defaults to prior quarter's holder within 2 hours.

Change #5:Irish Verification Technical Ring-Fence. All satellite telemetry, mass spectrometry, and data-processing nodes structurally ring-fenced from EU-US intelligence sharing pipelines. Prevents verification layer from being characterized as Western military espionage cover.

II. Financial Controls & Sanctions Insulation

Change #6:SWIFT Kill-Switch Belgian Law Bypass. US Executive shall issue special general licenses shielding Swiss entities and SWIFT operators from secondary US penalties during dispute windows, resolving the jurisdictional conflict between US executive authority and Belgian/EU regulation.

Change #7:SDR Indexing for Escrow Cap. The \$3.5B quarterly hard cap indexed to IMF Special Drawing Rights baselines, preserving real value against inflation and dollar fluctuations.

Change #8:IEEPA National Security Waiver. Rolling, un-appealable IEEPA waiver issued upon signature, immunizing Swiss escrow from attachment, garnishment, or judicial seizure by US courts and terror-victim litigants. Renews automatically every 90 days.

Change #9:Strict Humanitarian Procurement Routing. Swiss Financial Cell disburses only to certified international suppliers (agricultural, pharmaceutical, medical). No cash or liquid capital to Iranian state entities. Ensures AML compliance and minimizes Washington blowback.

Change #10:Sanctions Lock Safeguard. New Treasury designations cannot retroactively apply to transactions explicitly approved by the Swiss Financial Cell and documented in the SIS escrow ledger prior to designation. Prevents bureaucratic sabotage.

III. Nuclear Custody & Verification Hardening

Change #11:Dual-Signature Cryptographic Seals. HEU cask seals require both IAEA and AEOI digital registration. Prevents either Principal from alleging unilateral manipulation during transit.

Change #12:Mandatory Down-Blending Pathway. HEU must begin physical down-blending to under 5% LEU within 90 days of Oman arrival. Permanently eliminates weapons-grade utility while preserving nominal Iranian ownership. T7 eligibility contingent on down-blending initiation.

Change #13:Isolated Quantum-Encrypted Monitoring Streams. Real-time Natanz/Fordow monitoring data routed through dedicated Swiss-provided quantum-encrypted VPNs, physically separate from internet backbone. Prevents spoofing and accidental war.

Change #14:Omani Security Caretaker Clause. If Oman experiences security crisis, custody facility security automatically upgrades to UN Blue Helmet detail within 2 hours. Bypasses local chain-of-command friction.

Change #15:Physical Disconnection of Idled Centrifuges. Excess centrifuges' frequency inverters and power lines entirely dismantled and stored in separate monitored modules. Physically prevents rapid re-mobilization.

IV. Maritime Security & Operational Controls

Change #16:Automated UNCLOS Fail-Safe. If JMMC maritime subcell incapacitated, all transit regulations automatically defer to UNCLOS baseline rules until restoration certified.

Change #17:5 Nautical Mile Naval Standoff Zone. Mandatory 5nm standoff from Hormuz Traffic Separation Schemes for all non-scheduled naval deployments. Standardizes spatial parameters.

Change #18:Pass-Through Immunity for SGD Couriers. Absolute transit-only diplomatic immunity for all physical and digital couriers between SGD Secretariat and Principals. Remains active during flare-ups.

Change #19:\$50,000 Hard Boundary for Tier 1. Tier 1 cap defined as: zero fatalities AND under \$50,000 independently audited property damage. Prevents hyper-politicization of minor incidents.

Change #20:Tier 2B Gray-Zone Breach Classification. New intermediate tier for unattributed kinetic activity with probable non-state linkage. Mandates 7-day Tactical Freeze on T5–T7 only while investigation proceeds. Prevents immediate state-level escalation.

V. Rollback Architecture & Incident Management

Change #21:Accelerated Earn-Back Petition (7 Days). JPEC compliance restoration review window compressed from 14 to 7 days. Matches May 2026 crisis timeline.

Change #22:Verified Cyber Attribution Threshold. Cyberattacks cannot trigger Tier 2/3 unless JFMB/Secretariat issues 95%+ confidence cryptographic attribution linking to sovereign military apparatus. Defaults to technical response.

Change #23:90-Day Sequenced Deactivation on Withdrawal. Mandatory module-by-module rollback in reverse implementation order over 90 days: economic incentives (30 days), then protected tranches (30 days), then IAEA monitoring (30 days). Prevents precipitous collapse.

Change #24:\$15M Emergency Maintenance Fund for Fordow. Insulated account pays baseline salaries of idled Iranian technical teams during Review Pause. Preserves human capital and non-enrichment status quo.

Change #25:72-Hour Non-Extendable Attribution Clock. JFMB has 72-hour hard boundary to deliver preliminary ruling. Blocks media cycles from forcing premature military response. Defaults to Tier 2B if unresolved.

VI. Legislative Risk & Narrative Protection

Change #26:CAATSA/IEEPA Statutory Anchoring. Explicit legal citations to CAATSA Sections 236, 401 and IEEPA 50 U.S.C. 1701-1707. Structurally immunizes from Senate filibusters and legislative blockage.

Change #27:"Joint Concordance of Intent" Public Title. Public document titled exclusively as Joint Concordance of Intent. "Accord," "Agreement," "Treaty," "Protocol," "Pact" banned from public releases.

Change #28:Congressional Inaction as Continuation. Failure of Congress to pass concurrent resolution of disapproval within 30 days interpreted by Executive as explicit statutory authorization to continue escrow pipeline. Establishes "inaction = continuation" default.

Change #29:48-Hour Non-Humiliation Cooling-Off Penalty. If senior official publicly labels framework "capitulation" or "defeat," affected Principal may delay next milestone by 48 hours as non-breach diplomatic cooling-off. Automatic upon

Secretariat certification.

Change #30:14-Day Force Majeure Automatic Freeze. Natural disaster, seismic event, or industrial accident damaging monitored facility triggers 14-day automatic implementation freeze by Secretariat. MVC continues; only Tier 3 modules enter hold. Core Triad convenes within 7 days.
