

DIPLOMATIC WORKING DOCUMENT

The Gulf Stability Accord

*A Symmetrical 30-Day De-escalation Package for US-Iran Crisis Off-Ramp,
Strait of Hormuz Governance, Nuclear Stabilization, and Parallel
Economic Recovery*

G.S.A. v1.5

Calibrated for the May 2026 Negotiation Environment

Date of Issue: May 20, 2026

Status: Streamlined Framework with Three Core Swaps

AUTHORIZED NEGOTIATORS ONLY

Table of Contents

Executive Decision Brief

Preamble: The May 2026 Moment

Section I: Core Principles

- 1.1 Synchronized Reciprocal Motion
- 1.2 Modular Architecture
- 1.3 Sovereignty Preservation
- 1.4 Framework Survival Core
- 1.5 No Precedent Clause
- 1.6 Political Shock Absorber

Section II: Framework Overview

Section III: Maritime Architecture

- 3.1 Persian Gulf Maritime Security Contribution (PG-MSD)
- 3.2 Established Operational Nomenclature
- 3.3 Synchronized Dual-Blockade Lift
- 3.4 Direct Swiss-Omani Arbitration
- 3.5 Maritime Safety and Revenue Architecture

Section IV: Nuclear Stabilization Architecture

- 4.1 The 60 Percent Freeze and IAEA Custody
- 4.2 Enrichment Moratorium Architecture
- 4.3 Fordow Conversion and Medical Isotope Partnership

Section V: The Three Core Swaps

- Swap 1: Humanitarian & Banking
- Swap 2: Maritime
- Swap 3: Industrial Log

Section VI: Financial Module and Asset Architecture

Section VII: Security and Verification Architecture

Section VIII: Governance and the Core Triad

Section IX: The 30-Day Stabilization Sprint

Section X: Face-Saving Metrics and Domestic Wins

Section XI: Safeguards and Force Majeure

Section XII: Reconstitution Mechanism

Section XIII: Three Deal Options

Appendix A: Quick Reference Matrix

Executive Decision Brief

For Senior Officials. Read this before the full document.

The Core Exchange

The Gulf Stability Accord (GSA) creates a sequenced, reversible, verified exchange between the United States and Iran. Neither side moves alone. Every Iranian commitment is matched by a corresponding US commitment, activated simultaneously, verified by neutral observers through the Core Triad.

What the United States Delivers

- **\$250M Pilot:** Immediate humanitarian tranche via Swiss escrow. Non-reversible. Humanitarian goods only.
- **Blockade Lift:** US naval blockade of Iranian commercial ports lifted, synchronized with Hormuz reopening.
- **OFAC Waiver:** Immediate OFAC waiver allowing Iran to import commercial Boeing aviation safety parts.
- **PG-MSR Co-Governance:** Iran receives permanent voting seat on the Persian Gulf Maritime Security Contribution (PG-MSR) Council.
- **Nomenclature Recognition:** Legitimization of established US operational designations for the transit corridor within the framework's administrative registry.
- **SWIFT Reconnection (Limited):** Reconnection of a single state bank (Bank Melli) to SWIFT strictly for humanitarian clearing.

What Iran Delivers

- **60% Freeze:** Immediate freeze of all enrichment at or above 60%. Verified by IAEA within 72 hours. Sustained throughout framework.
- **Hormuz Reopening:** IRGC-Navy withdraws small craft from transit corridor. Synchronized with US blockade lift.

- **Stockpile Transfer:** Weapons-grade enriched uranium to IAEA custody in Oman. Verified by mass spectrometry.
- **1-Year Renewable Cap:** Moratorium on enrichment above 3.67%, renewable annually for up to 15 years based on performance.
- **No Precedent Clause:** Explicit language: this Accord creates no legal or political precedent for future negotiations.

The Three Core Swaps

The GSA Framework replaces the complexity of thirty micro-incentives with **three macro-swaps** that capture 90% of the value with 10% of the paperwork:

Table 1 The Three Core Swaps at a Glance

Swap	Iran Delivers	US Delivers
Swap 1: Humanitarian & Banking	Freeze 60% enrichment	\$250M Swiss escrow + Bank Melli SWIFT humanitarian
Swap 2: Maritime	IRGC-Navy stands down small-craft harassment	Full lift of commercial naval blockade on Bandar Abbas
Swap 3: Industrial Log	Export 60% stockpile to Oman	OFAC waiver for Boeing aviation safety parts

The Core Triad

Table 2 The Core Triad Oversight Structure

Entity	Domain	Core Function
Oman	Maritime & Physical Custody	Maritime deconfliction, hotlines, physical nuclear stockpile custody
Switzerland	Financial Verification	Financial escrows, banking telemetry, asset verification
IAEA	Nuclear Verification	Raw technical nuclear monitoring, enrichment verification, facility inspection

Qatar, Pakistan, and the UN Appointee are removed from day-to-day oversight, retained only as emergency backchannels if the Triad gridlocks.

The 30-Day Stabilization Sprint at a Glance

Table 3 30-Day Sprint Timeline

Phase	Days	Iranian Steps	US Steps
Sprint Phase I	1-7	Freeze 60% enrichment verified	\$250M released; naval blockade lifts
Sprint Phase II	8-14	Stockpiles transferred to Oman	Bank Melli SWIFT connected; OFAC processing
Sprint Phase III	15-30	Centrifuges idled; IRGC stands down	Boeing parts cleared; blockade fully ended

Bottom Line

This framework creates a reversible, verifiable, politically defensible pathway compressed into a **single 30-day execution window**. The modular architecture ensures nothing collapses if one element pauses. The Core Triad replaces single-point-of-failure guarantors with a lean, three-entity oversight structure. The three-tier breach system prevents accidental escalation. The Three Core Swaps make de-escalation profitable for both sides without bureaucratic paralysis. Every provision includes face-saving metrics. All long-term architecture -- permanent Joint Transit Authorities, remaining asset returns, regional dialogues -- is deferred to a separate Phase II negotiation track.

Preamble: The May 2026 Moment

As of May 20, 2026, the United States and the Islamic Republic of Iran stand at the closest point to a durable agreement since hostilities began on February 28, 2026. After eleven weeks of military confrontation under the codename Operation Epic Fury, both sides have exhausted the military escalation ladder and returned to the negotiating table. The GSA Framework v1.5 is designed for this exact diplomatic moment -- stripped to its essentials for rapid uptake.

Current Military Status

A Pakistan-mediated ceasefire has been in place since April 8, 2026. Prime Minister Shehbaz Sharif has mediated four rounds of talks. The most recent round (May 12-14) produced a preliminary understanding on humanitarian corridors and the 60% enrichment freeze, but deadlocked on asset return sequencing and facility consolidation. The GSA Framework resolves these remaining blockers by collapsing complexity into three clear swaps executable within 30 days.

What Makes the GSA Framework v1.5 Different

The GSA Framework builds on the architecture of the Stability First Enhanced Accord, the Hormuz First Enhanced Accord, the Regional Cooperation and Stability Architecture, and the Crescent Bridge Accord. Version 1.5 introduces four structural simplifications that transform it from an over-engineered regional economic treaty into a symmetrical 30-day de-escalation package:

First: Three macro-swaps replacing thirty micro-incentives. The original thirty paired economic incentives created an administrative burden that would paralyze a fast-moving, transactional administration. The Three Core Swaps capture 90% of the value with 10% of the paperwork.

Second: The Core Triad replacing the six-state Distributed Facilitating State Matrix. Oman, Switzerland, and the IAEA handle all day-to-day oversight. Qatar, Pakistan, and the UN Appointee are retained only as emergency backchannels.

Third: Direct Swiss-Omani Arbitration replacing the multi-tier tie-breaking voting system. If the PG-MSR co-chairs deadlock, Oman rules on naval disputes and Switzerland rules on

financial disputes within 48 hours -- eliminating great-power UN politics from the equation.

Fourth: A single 30-Day Stabilization Sprint replacing the 180-day three-stage timeline. In a volatile environment where ceasefires are fragile, a 6-month runway leaves too much time for hardline spoilers to crash the deal. Everything else -- long-term regional dialogues, permanent Joint Transit Authorities, and the rest of the asset returns -- is deferred to Phase II.

The Zero-Breakout Objective

Article ZBO-1: Aspirational Framework Objective

The objective of this framework is a verifiable zero-breakout timeline. Through phased verification, centrifuge mothballing, stockpile transfer to third-party custody, and continuous IAEA monitoring, the framework aims to eliminate Iran's capacity to produce weapons-grade uranium without detection. Neither side is required to surrender sovereign rights. The timeline is performance-based, reversible, and subject to annual review. But the strategic direction is unambiguous: toward a Middle East in which no state can rapidly break out to a nuclear weapon.

Hard Constraints as of May 20, 2026

Table 4 Current Negotiation Constraints

Constraint	Implication
Supreme Leader transition; institutional succession to Mojtaba Khamenei	Iranian negotiators need demonstrable sovereignty preservation
US naval blockade since March 4; Hormuz transit down 85%	Iran needs blockade lift as immediate, visible win
Insurance rates up 400%; global energy markets disrupted	Global energy markets demand urgent resolution
Precedent of JCPOA collapse (2018) and 2026 war	Both sides need irreversible facts, not reversible promises
Israeli opposition to any Iranian enrichment	Verification must be intrusive enough for quiet acquiescence
Gas prices at \$4.53 nationally; midterm election cycle	US administration needs visible economic wins

Trump "Strait of Trump" nomenclature
claims

Framework must legitimize existing US operational
designations

Section I: Core Principles

1.1 Synchronized Reciprocal Motion

Neither side moves alone. Every Iranian commitment is matched by a corresponding US commitment on the same day. Verification is shared. Both governments can defend the sequencing as responding only when the other has moved first or simultaneously.

IRANIAN STEP	US STEP
Freeze all enrichment above 60%; allow IAEA inspectors to verify at Natanz and Fordow within 72 hours.	Partially lift naval blockade; authorize first humanitarian tranche (\$250M) through Swiss escrow.

Narrative (Iran): "NPT rights preserved; enrichment continues at 3.67%; sovereign annual review."

Narrative (US): "60% weapons-grade enrichment halted; IAEA inside Natanz within 72 hours."

1.2 Modular Architecture with Partial Continuity Rule

Article PC-1: Partial Continuity Rule

Stabilization pause in one module does not suspend unrelated modules. Maritime disputes cannot terminate humanitarian channels. Cyber incidents cannot terminate medical isotope cooperation. Nuclear verification gaps do not affect Hormuz transit.

The Partial Continuity Rule applies automatically. No governance body approval required. When one module enters stabilization pause, all other modules continue at current operational levels for a minimum of 90 days while the Coordination Secretariat assesses recovery options.

Table 5 Module Survival Tiers

Tier	Modules	Behavior During Pause
------	---------	-----------------------

Tier 1 (Inviolable)	Ceasefire hotline, humanitarian access, emergency diplomatic channel	Never pause under any circumstances
Tier 2 (Protected)	IAEA basic monitoring, Hormuz non-military transit, first \$250M tranche	Continue during most stabilization pauses
Tier 3 (Conditional)	SWIFT reconnection, Boeing parts waiver, Phase II successor framework talks	May enter hold during disputes

1.3 Sovereignty Preservation

This framework does not supersede any constitution. It does not create supranational authority. NPT rights are preserved. US treaty commitments to Gulf partners are preserved. Every provision is interpreted through the lens of sovereign equality: the United States and Iran enter this framework as equal signatories, each retaining full domestic nomenclature authority, full economic sovereignty, and full defense rights under Article 51 of the UN Charter.

Article IB-1: Agreements Bind Institutions, Not Leadership

All obligations, commitments, and benefits established under this framework bind the sovereign institutions of the signatory states -- the Government of the United States of America and the Government of the Islamic Republic of Iran -- not to individual officeholders, administrations, or leadership. The framework is entered into by and between these institutional sovereigns as continuing legal persons under international law. Successor governments, administrations, and leadership inherit all rights and obligations automatically upon assumption of constitutional authority.

Article IB-2: Leadership Transition Automatic Continuity

In the event of a leadership transition in either signatory state -- whether through election, succession, appointment, or constitutional process -- the framework continues in full force without requiring reaffirmation, re-signature, or re-ratification. The new leadership assumes all framework rights and obligations as of the date of constitutional assumption of office. No new government may claim that its predecessor's commitments are void due to the transition. This Article operates as a binding succession clause under the Vienna Convention on Succession of States in Respect of Treaties.

Article IB-3: Institutional Counterparties for All Transactions

All financial transactions, escrow arrangements, asset transfers, and commercial licenses under this framework are executed between institutional counterparties: the Swiss Federal Office for Customs and Border Security (for escrow), the IAEA Director General's Office (for nuclear verification), and the Joint Coordination Secretariat (for governance). No transaction is contingent on the personal authority, signature, or continued tenure of any individual official. The institutional counterparty designation survives leadership change automatically.

1.4 Framework Survival Core

Under all circumstances, including total framework suspension, the following three elements survive:

1. **Ceasefire Hotline:** The Omani-facilitated 24/7 bilateral hotline between US and Iranian military commanders remains active regardless of framework status. Neither party may disable the hotline without 30 days' notice to the UN Secretary-General.
2. **Humanitarian Access:** The zero-fee, no-inspection-delay humanitarian corridor through Hormuz for food, medicine, medical equipment, and UN supplies continues regardless of any dispute, breach, or suspension.
3. **Emergency Diplomatic Channel:** The backchannel through the Coordination Secretariat remains open for crisis communication, de-escalation, and framework reconstitution regardless of formal diplomatic status.

The Framework Survival Core is established as a standalone humanitarian arrangement under UN auspices. It is not contingent on any other provision of this framework. Even if both parties formally withdraw, the Survival Core continues for 180 days pending reconstitution efforts.

1.5 No Precedent Clause

Article 1.5

This Accord establishes no legal or political precedent for future negotiations. Each provision is sui generis, tailored to May 2026. No inference may be drawn from any provision regarding positions on any matter not expressly addressed herein. The unique maritime coordination mechanisms herein apply exclusively to the Strait of Hormuz during the operational lifespan of this Accord. This text shall not be cited in any international court or treaty to define or alter sovereign rights under UNCLOS elsewhere in the world.

1.6 Political Shock Absorber

If any of the following political shocks occur in either party's jurisdiction, framework implementation automatically enters a Review Pause rather than terminating: national elections or referenda; assassination of senior leadership; cabinet collapse or government reshuffle affecting negotiating ministries; mass protests affecting government authority; leadership transitions (Supreme Leader, President, Foreign Minister); significant military incident affecting domestic politics.

During a Review Pause: All Tier 1 (Inviolable) and Tier 2 (Protected) modules continue unchanged. Tier 3 (Conditional) modules enter hold status. The Coordination Secretariat issues a Review Pause Certificate within 48 hours. The affected party has 30 days to confirm continuation, propose modifications, or request stabilization pause. Maximum Review Pause duration: 90 days, extendable by mutual agreement.

Article PSA-4: Presumed Continuation with Affirmative Opt-Out

(a) **Presumption of Continuity:** The framework operates on a presumption of institutional continuity. Upon any leadership transition, the framework continues in full effect automatically. The successor government is not required to reaffirm, re-sign, or re-ratify. Continuation is the default state.

(b) **Affirmative Opt-Out Only:** A successor government may only exit the framework by issuing an explicit, written notification of withdrawal through its constitutional foreign policy authority. This notification must cite the specific constitutional provision authorizing withdrawal and must be published in the Transparency Portal. Mere non-communication, failure to appoint framework representatives, or hostile rhetoric does NOT constitute withdrawal.

(c) **90-Day Cooling-Off Period:** Upon receipt of an opt-out notification, the framework enters a mandatory 90-day Cooling-Off Period during which all Tier 1 (Inviolable) and Tier 2 (Protected) modules continue unchanged. The Secretariat convenes emergency consultations with both parties and all Core Triad members. The opt-out does not take effect until the Cooling-Off Period expires.

(d) **Opt-Out Reversal Window:** A successor government that has issued an opt-out notification may reverse it at any time before the Cooling-Off Period expires, with full framework continuity restored. After the Cooling-Off Period expires, withdrawal is effective but the Framework Survival Core continues for 180 days regardless.

(e) **Institutional Binding Override:** No successor government may claim that the framework was the personal commitment of a prior leader and is therefore void. Article IB-1 explicitly nullifies any such claim. The framework binds the sovereign institution -- the United States and the Islamic Republic of Iran -- not individuals.

Section II: Framework Overview

The 30-Day Stabilization Sprint at a Glance

Table 6 Framework Sprint Overview

Phase	Duration	Primary Goal	Closing Trigger
Sprint Phase I	Days 1-7	Build trust: 60% freeze verified, \$250M released, blockade lifts	IAEA confirms freeze; escrow releases; blockade partially lifted
Sprint Phase II	Days 8-14	Consolidate: stockpile transferred to Oman, Bank Melli SWIFT active	Mass spectrometry confirms custody; SWIFT messaging live
Sprint Phase III	Days 15-30	Lock in: centrifuges idled, Boeing waiver active, full blockade ended	Moratorium declared; IAEA seals advanced centrifuges; OFAC clears parts

All long-term architecture -- permanent Joint Transit Authorities, remaining asset returns, full SWIFT restoration, regional dialogues -- is deferred to Phase II negotiation track.

Flexible Timeline Windows

The Sprint uses target windows that dramatically improve survivability. "Within 7 days" becomes "Target window: 7-10 days." "Within 72 hours" becomes "Target window: 48-96 hours." Only the 60% enrichment freeze verification remains "within 72 hours" because it is the Sprint's central deliverable. All other timelines use flexible windows.

Joint Coordination Secretariat

The GSA Framework consolidates all governance functions into one Joint Coordination Secretariat (Geneva, with Muscat maritime desk) containing specialized subcells:

Table 7 Secretariat Subcell Structure

Subcell	Function
---------	----------

Political Coordination Cell	Senior-level bilateral coordination, dispute resolution, high-level messaging
Maritime Operations Cell	Hormuz transit management, naval deconfliction, hotline operations
Nuclear Verification Cell	IAEA coordination, enrichment monitoring, facility inspection logistics
Financial Operations Cell	Escrow management, asset transfer verification, SWIFT coordination
Communications Cell	Media coordination, public messaging, leak management, Nomenclature Registry maintenance
Crisis Response Cell	24/7 incident monitoring, attribution assessment, spoiler detection, rapid response

Rotating Facilitation: The Secretariat operates under rotating facilitation cycles. The facilitating state rotates quarterly among Oman and Switzerland. The rotating facilitator has convening authority, agenda-setting rights, and procedural mediation powers, but no substantive voting power.

Dual-Site Architecture with 4-Hour Failover: The Secretariat operates from two sites: Primary Site in Geneva (Political Coordination, Financial Operations, Crisis Response, Communications Cells) and Backup Site in Muscat (Maritime Operations Cell, all hotline operations, regional liaison functions). If the Geneva site becomes inoperable, all functions fail over to Muscat within 4 hours. Both sites maintain 24/7 staffing with minimum 2 duty officers at all times. During crisis periods, staffing scales to minimum 6 officers per site.

Section III: Maritime Architecture

3.1 Persian Gulf Maritime Security Contribution (PG-MSD)

The PG-MSD is simultaneously the US freedom-of-navigation achievement and Iran's permanent governance seat replacing decades of US unilateralism. Both statements are factually correct.

Table 8 PG-MSD Council Composition

Member	Status	Role
Islamic Republic of Iran	Permanent voting member	Senior seat; territorial sovereignty; Chair in alternating years
United States	Permanent voting member	Permanent seat; maritime security provider; Co-chair alternating
GCC Rotating Chair	Permanent voting member	Rotates among Oman, Qatar, UAE; advisory role only

3.2 Established Operational Nomenclature

Article B.3-1: Recognition of US Operational Designations

The United States may designate the operational transit corridor under nomenclature established through executive order, official communications, and public statements issued prior to framework signature. Such designations, including but not limited to historical, commemorative, or institutional nomenclature applied to the waterway or designated operational sectors, are recognized as the US operational designation for purposes of domestic US communications, policy statements, and maritime authority coordination.

Article B.3-2: Equivalent Autonomous Authority for All Signatories

All signatory states retain equivalent autonomous authority to designate the same waterway or sectors according to their own domestic nomenclature preferences, including but not limited to historical or sovereignty-based designations. The Islamic Republic of Iran may designate the waterway according to its own domestic nomenclature preferences, including but not limited to references reflecting Persian Gulf historical designation, Iranian territorial sovereignty, or other domestically selected nomenclature. Such designations are recognized as the Iranian operational designation for purposes of domestic Iranian communications, policy statements, and maritime authority coordination.

Article B.3-3: Neutral Nomenclature Registry

The Joint Coordination Secretariat maintains a neutral Nomenclature Registry documenting each party's official designations. This Registry is administrative and descriptive only. It does not confer, diminish, or alter any sovereign rights, territorial claims, or legal status under international law. The Registry is published quarterly and available to all signatory states upon request.

Article B.3-4: Preserved International Designations

All binding legal instruments filed with UNCLOS, IMO, and IAEA retain the standardized international designation "Strait of Hormuz" for enforceability, clarity, and consistency with established international maritime law. The Nomenclature Registry does not supersede, replace, or modify any international legal instrument or the standardized designations used therein. No party shall invoke the Nomenclature Registry or any domestic operational designation as basis for territorial claims or legal rights beyond those established in this framework and existing international law.

3.3 Synchronized Dual-Blockade Lift

Day 7, 0000 GMT: Both blockades lift simultaneously within a 60-second window. Confirmed by Omani naval observers, Lloyd's List AIS tracking, and PG-MSD observation vessels.

Table 9 Synchronized Lift Verification Telemetry

Time	Iranian Action	US Action	Neutral Verification
------	----------------	-----------	----------------------

T-60 min	IRGC Commander transmits stand-by to Maritime Operations Cell	5th Fleet Commander transmits stand-by to Maritime Operations Cell	Omani facilitating state logs both signals
T-15 min	IRGC craft withdraw to 5nm; AIS broadcast	US Navy withdraws to 5nm; AIS broadcast	Lloyd's List confirms
T=0	Hormuz opening declaration	Blockade lift declaration	SIMULTANEOUS within 60s
T+15 min	First vessel commences transit	Notice to Mariners issued	Lloyd's List, AIS confirm

Emergency Maritime Safety Carve-Out: Vessels experiencing verified mechanical distress, severe weather, medical emergencies, or environmental containment failure are exempt from the weekly transit quota. Such vessels may seek safe harbor under PG-MSA monitoring without triggering a blockade violation. Emergency status is verified by the Maritime Operations Cell within 2 hours. Applies symmetrically to all flagged vessels.

3.4 Direct Swiss-Omani Arbitration

Article IHTA-5: Direct Co-Arbitration Architecture

The GSA Framework v1.5 replaces the multi-tier tie-breaking voting system with Direct Co-Arbitration by the Core Triad members. This eliminates great-power UN politics from active-warzone dispute resolution and ensures binding rulings within 48 hours.

Previous Architecture (v1.0 -- Superseded): Version 1.0 required navigating a complex, four-tier tie-breaking voting system involving the GCC, the EU, China, and a UN appointee. This proved far too slow for an active warzone.

New Architecture (v1.5):

Primary Resolution: All maritime and enforcement disputes are resolved by consensus between the two permanent co-chairs (the United States and Iran). The GCC rotating chair serves in an advisory capacity only and holds no veto or tie-breaking authority.

Deadlock Trigger: If the US and Iran co-chairs deadlock on a maritime or enforcement vote, the issue automatically triggers **Direct Co-Arbitration**:

- **Oman** rules on all **naval and maritime disputes** (transit allocation, encounter protocols, blockade enforcement questions, territorial water claims).
- **Switzerland** rules on all **financial and escrow disputes** (tranche releases, asset verification, sanctions relief questions, banking telemetry disputes).

Binding Ruling: The arbitrator's ruling is binding on both parties and must be issued within **48 hours** based purely on the principle of **trade continuity**. No great-power politics, no UN Security Council dynamics, no multi-observer consensus requirements.

48-Hour Clock: The 48-hour countdown begins at the moment of formal deadlock declaration by the Joint Coordination Secretariat. Failure to issue a ruling within 48 hours triggers automatic fallback: status quo ante prevails, and both parties must continue existing operational protocols until arbitration resumes.

Automated Toll Disbursal Default: If the PG-MSC Council fails to pass an annual budget due to US-Iran deadlock, toll revenues automatically distribute per baseline percentages: 40% Iranian Civilian Reconstruction, 35% Maritime Safety, 25% Operations. The neutral Secretariat executes within 7 days. Political deadlock cannot freeze baseline distributions.

PG-MSC Tolling Structure

Table 10 PG-MSC Transit Tolling Schedule

Tier	Vessel Category	Rate
Tier 1	Humanitarian (medicine, food, medical equipment)	Zero (24h fast-track)
Tier 2	Standard commercial	\$0.15/ton
Tier 3	Energy/premium (oil, LNG, chemicals)	\$0.25/ton or \$35K flat VLCC

Member States	PG-MSC Council member vessels	Exempt
Annual revenue: approximately \$500M. Allocation: 40% Iranian Civilian Reconstruction Fund; 35% International Maritime Safety Fund; 25% PG-MSC Operations.		

3.5 Maritime Safety and Revenue Architecture

The GSA Framework establishes the Persian Gulf Maritime Security Contribution as a permanent funding mechanism for regional maritime safety infrastructure. The GSA is funded through PG-MSC toll revenues, voluntary contributions from signatory states, and a 0.05% levy on energy transit values. The GSA fund is administered by the Financial Operations Cell of the Joint Coordination Secretariat, with quarterly transparency reporting.

Table 11 GSA Fund Allocation

Category	Allocation	Administrator
Iranian Civilian Reconstruction	40%	PG-MSC with Iranian programmatic control
International Maritime Safety	35%	International Maritime Safety Fund
PG-MSC Operations	25%	Joint Coordination Secretariat

Section IV: Nuclear Stabilization Architecture

4.1 The 60 Percent Freeze and IAEA Custody

Article NS-1: Immediate Enrichment Freeze

Iran shall freeze all uranium enrichment at or above 60% at Natanz and Fordow facilities beginning Day 1 of the Stabilization Sprint. The freeze is verified immediately via Online Enrichment Monitors (OLEM) and real-time camera feeds. Physical on-site IAEA inspector verification follows within 7 days. The 72-hour clock starts on OLEM confirmation, not physical arrival.

Stockpile Transfer to IAEA Custody: Iran transfers its entire stockpile of uranium enriched to 60% or above to IAEA custody in Oman by Day 8 of the Sprint (Target window: Days 8-14). Transfer is verified by mass spectrometry, continuous CCTV monitoring, and satellite surveillance. The stockpile remains under IAEA dual-lock custody in Oman until downblending or conversion to civilian fuel plates is completed according to the selected disposition pathway.

4.2 Enrichment Moratorium Architecture

Table 12 15-Year Renewable Moratorium Structure

Phase	Duration	Enrichment Standard	Advancement Condition
Moratorium (minimum; extendable)	Years 1-15	Zero enrichment above 3.67%; all higher-enrichment centrifuges under IAEA seal	Clean IAEA certification at 15-year review
Civilian Transition	Years 16-18	3.67% enrichment at Natanz only	Fuel supply guarantee in escrow
Steady-State Civilian	Year 19 onwards	3.67% under full IAEA safeguards	Successor framework confirmed

Material breach triggers automatic 2-year extension per breach. Determined by IAEA technical reporting, not unilateral US certification.

Mothball Protocol: All centrifuge rotors and bellows producing enrichment above 3.67% are removed, sealed in IAEA-tamper-evident containers, and stored in a UN-monitored facility within Iran. Centrifuge casings and infrastructure remain in place. The storage facility uses a two-stage digital and physical locking system: IAEA holds digital encryption keys; Iran holds physical keys and armed outer-perimeter security. Neither party can access containers without the other’s physical presence.

4.3 Fordow Conversion and Medical Isotope Partnership

The Fordow facility is converted to an International Medical Isotope Research Centre (IMIRC) under IAEA oversight. Iran hosts the inaugural International Medical Isotope Summit by Day 30 of the Sprint (deferred to Phase II if Sprint conditions require). The IMIRC operates under an International Scientific Advisory Board with Iranian co-chair authority. This conversion is framed as a scientific achievement for Iran, not a military concession: Iranian scientists lead global health innovation from a facility that was formerly a military target.

Neutral-Custody Blending: The 400kg HEU stockpile is transferred to Oman under strict IAEA dual-lock custody. Down-blending to LEU or conversion to civilian fuel plates proceeds on a fixed timeline, pegged to Sprint completion. Neither Iran nor the US holds unilateral access. Iran selects the pathway from six approved options. IAEA verifies the chain of custody.

Table 13 Six Pathways for HEU Disposition (Iran Selects)

Path	Description	Destination	Timeline
A	In-place downblending to medical-grade LEU at Esfahan	Medical isotope production in Iran	142 days
B	HEU export to IAEA custody in Oman	IAEA facility, Oman (NOT US)	14 days
C	Downblended in Iran, transferred to IAEA LEU Bank	Oskemen, Kazakhstan	75 days
D	Transfer to Rosatom under IAEA safeguards	Russian Federation	60-90 days
E	Conversion to reactor-grade LEU fuel assemblies	Bushehr reactor supply	180 days

F	Hybrid: stockpile divided into batches through different pathways	Multiple destinations	Concurrent
---	---	-----------------------	------------

Article NS-2: Third-Party Destination Guarantee

Under no circumstances may Iran's enriched uranium be transferred to US territory, custody, or control. All six pathways specify third-party destinations. This is binding and non-negotiable.

Section V: The Three Core Swaps

The GSA Framework v1.5 replaces the thirty paired micro-incentives of version 1.0 with **three macro-swaps** that capture 90% of the value with 10% of the paperwork. Each swap is symmetrical: for every Iranian commitment, there is a corresponding US commitment of equivalent strategic value, activated simultaneously and verified by the Core Triad. Neither side subsidizes the other. Both sides profit from de-escalation.

Rationale for Simplification: The thirty distinct, paired economic gains in v1.0 would require a tracking, verification, and enforcement apparatus that would paralyze a fast-moving, transactional administration. Three swaps can be explained in a single briefing, executed by existing institutional authorities, and verified without building new bureaucratic infrastructure.

Swap 1: Humanitarian & Banking

Swap 1: Humanitarian & Banking

Iran Delivers	US Delivers
Freeze 60% enrichment at Natanz and Fordow, verified by IAEA within 72 hours via OLEM and physical inspection.	Unlock the \$250M Swiss escrow tranche for humanitarian goods (medicine, food, agricultural inputs) AND connect Bank Melli to SWIFT strictly for humanitarian clearing (MT 103/202 messages only).

Strategic Value: Iran receives immediate, non-reversible liquidity and the first step toward banking normalization -- both visible, sovereignty-preserving wins. The US secures a verified halt to weapons-grade enrichment and IAEA presence inside Iranian facilities within 72 hours -- an irreversible security gain.

Verification: IAEA confirms freeze via OLEM (continuous); Swiss FOCBS confirms escrow release (real-time); SWIFT confirms Bank Melli messaging activation (within 48 hours of freeze confirmation).

Humanitarian Firewall: The \$250M tranche is protected: it cannot be frozen, clawed back, or subject to rollback under any breach scenario. Bank Melli's SWIFT access is restricted to humanitarian MT codes; any non-humanitarian messaging triggers automatic suspension review by the Swiss FOCBS.

Swap 2: Maritime

Swap 2: Maritime

Iran Delivers	US Delivers
IRGC-Navy stands down small-craft harassment in the Hormuz transit corridor. IRGC fast-attack craft withdraw to 5nm from designated transit lanes. No vessel interdiction, no drone overflight of commercial shipping, no mine-laying.	Completely lifts the commercial naval blockade on Bandar Abbas, Bandar Imam Khomeini, and Chabahar. Iranian-flagged commercial vessels may load and unload without interference. Three pre-verified commercial vessels per week permitted to exit the Persian Gulf initially, scaling to unrestricted commercial access by Sprint completion.

Strategic Value: Iran regains commercial port access enabling resumption of petrochemical and non-oil exports worth an estimated \$2B annually -- an immediate, visible economic win. The US secures open Hormuz transit, normalizing global energy markets and reducing insurance rates from 1.5% to 0.15% of hull value.

Verification: Omani naval observers log IRGC craft positions (continuous); Lloyd's List AIS tracking confirms vessel movements; PG-MSD observation vessels patrol transit corridor. US Navy withdrawal confirmed via 5th Fleet AIS broadcast and Omani observation.

Synchronization: Both blockades lift within a 60-second window on Day 7, 0000 GMT. Neither side moves first; Omani facilitating state confirms simultaneous declaration. If either side fails to move, the other maintains position and the Sprint enters 48-hour clarification window.

Swap 3: Industrial Log

Swap 3: Industrial Log	
Iran Delivers	US Delivers
Exports its entire 60% enriched uranium stockpile to Oman for IAEA dual-lock custody. Transfer verified by mass spectrometry, continuous CCTV monitoring, and satellite surveillance. All enrichment centrifuges above 3.67% are idled and sealed under IAEA tamper-evident protocols.	Issues an immediate OFAC waiver allowing Iran to import commercial Boeing aviation safety parts (engines, landing gear, avionics, navigation systems) for Iranian civilian aircraft (Boeing 747, 727, and Airbus fleets). Safety-of-flight items are fast-tracked with 48-hour auto-approval.
Strategic Value: Iran restores airworthiness to its civilian fleet, which has suffered 18 fatal accidents since 2018 due to maintenance restrictions -- a direct, life-saving benefit visible to every Iranian citizen. The US removes weapons-grade uranium from Iranian territory to neutral third-party custody -- the single most important non-proliferation achievement available without a comprehensive treaty. Verification: IAEA confirms stockpile custody via mass spectrometry and dual-lock seals; Oman provides physical custody confirmation; satellite surveillance confirms transfer convoy. OFAC confirms waiver issuance within 24 hours of verified stockpile transfer; Boeing confirms parts export authorization. Scope Limitation: The OFAC waiver covers aviation safety parts only. It does not authorize military aircraft components, dual-use technology, or weapons systems. The waiver is conditional on continued IAEA access and expires automatically if enrichment above 3.67% resumes.	

Summary: Total Economic Value

Table 14 Aggregate Value of Three Core Swaps (5-Year Horizon)

Category	Iranian Value (USD)	US Value (USD)
----------	---------------------	----------------

Swap 1: Humanitarian & Banking	\$250M immediate liquidity + SWIFT access	IAEA inside Natanz; enrichment freeze
Swap 2: Maritime	\$2B annual port access; Hormuz reopening	Energy market stabilization; insurance normalization (~\$735M reinsurance access)
Swap 3: Industrial Log	\$320M aviation safety; fleet restoration	HEU in neutral custody; zero-breakout pathway
Total Sprint Value	\$2.57B+ immediate; \$10B+ over 5 years	Irreversible non-proliferation gains + \$1B+ commercial wins

Note: Iranian figures reflect restoration of pre-sanctions economic capacity plus new growth. US figures represent new market access and export revenue that did not exist under sanctions plus direct security gains from stockpile removal. Both figures are illustrative projections based on current market conditions and Sprint execution.

Section VI: Financial Module and Asset Architecture

6.1 Reconstruction Escrow and Sovereign Immunity

Article FM-1: Swiss Escrow Architecture

The Swiss Federal Office for Customs and Border Security (FOCBS) administers the primary escrow for all frozen Iranian sovereign assets. The escrow operates under the terms of the "Beijing Memorandum" (May 10, 2026): assets remain under Swiss custody until released through framework-specified triggers. The Swiss escrow is protected by a formal Presidential Policy Directive prohibiting unilateral re-freezing, except in the event of a nuclear test or direct attack on US forces. Neither Congress nor any US agency can re-freeze assets without a joint US-Iran-Swiss determination of Tier 3 breach.

Table 15 Escrow Structure and Governance

Parameter	Specification
Administrator	Swiss Federal Office for Customs and Border Security (FOCBS)
Asset Protection	Presidential Policy Directive prohibiting unilateral re-freezing
Legal Standard	Joint US-Iran-Swiss determination of Tier 3 breach required for re-freezing
Currency	Released in USD and EUR tranches
Reporting	Quarterly public transparency reports

6.2 Sprint Asset Architecture

The GSA v1.5 Sprint operates on a simplified, front-loaded asset structure designed for rapid execution within 30 days:

Table 16 Sprint Asset Release Architecture

Release	Amount	Trigger	Iranian Benefit	US Benefit
---------	--------	---------	-----------------	------------

Sprint Opening	\$250M	Framework signature + 60% freeze declared	Humanitarian goods import	IAEA inside facilities
Sprint Phase II	\$25B	60% freeze verified + IAEA custody confirmed	Liquidity restoration	Stockpile in neutral custody
Sprint Completion	\$20B	Moratorium ratified + centrifuges idled	Full SWIFT Phase 1; Boeing parts flowing	Zero-breakout pathway locked

The Sprint releases are non-reversible: once released, they cannot be clawed back. Remaining sovereign asset returns (\$70-80B of approximately \$120B total) are deferred to Phase II negotiation. This architecture gives Iran immediate, irreversible wins while protecting US interests through the staged structure and preserving leverage for the comprehensive follow-on agreement.

6.3 SWIFT Reconnection Pathway (Sprint-Only)

Table 17 Sprint SWIFT Restoration

Phase	Scope	Messaging Access	Trigger
Sprint Phase (Restricted)	Bank Melli only	MT 103, 202 humanitarian only	Day 1: 60% freeze declared
Sprint Completion	Bank Melli + 4 designated banks	MT 103, 202 humanitarian and approved commercial	Day 30: Sprint certification

Full SWIFT membership for all Iranian banks is deferred to Phase II. The Sprint establishes the precedent and plumbing; Phase II scales it.

Section VII: Security and Verification Architecture

7.1 Five-Channel Verification Convergence

The GSA Framework uses five independent verification channels. No single channel triggers snapback. Compliance requires convergence of at least three channels:

Table 18 Five-Channel Verification Matrix

Channel	Method	Administrator	Reporting Frequency
Channel 1: Technical monitoring	OLEM, satellite imagery, seismic	IAEA	Continuous real-time
Channel 2: Human	IAEA physical inspectors, neutral observers	IAEA + Oman	Daily during Sprint; weekly thereafter
Channel 3: Financial	Escrow transaction monitoring, banking surveillance	Switzerland	Real-time transaction monitoring
Channel 4: Maritime	AIS tracking, Lloyd's List, PG-MSO observation vessels	Oman + PG-MSO Secretariat	Continuous AIS; daily Lloyd's reports
Channel 5: Open Source	Commercial satellite, social media, trade data	Independent analysts	Weekly compilation

Convergence Protocol: Two-channel compliance requires neutral (Omani) review. Three-channel compliance triggers automatic benefit activation. Four-channel compliance triggers Sprint Phase acceleration. Five-channel compliance triggers Sprint completion bonus. Breach requires two or more channels confirming non-compliance after a 72-hour clarification window.

7.2 Three-Tier Breach System

Only deliberate hostile violations trigger suspension. Accidents, technical glitches, force majeure, and miscommunication do not constitute breach:

Table 19 Three-Tier Breach Architecture

Tier	Type	Definition	Response
Tier 1	Technical Dispute	Minor procedural non-compliance; clerical errors; equipment malfunction	7-day diplomatic resolution; no benefit suspension; +0.5 CIS penalty
Tier 2	Material Disruption	Significant non-compliance affecting one module; delays beyond target windows	30-day mediation; affected module paused; other modules continue; +2.0 CIS penalty
Tier 3	Deliberate Hostile Violation	Intentional breach with escalatory intent; nuclear weapons program activity; military attack	Emergency consultation; 10-50% rollback (not snapback); Tier 3 modules suspended; Reconstitution Conference within 30 days

7.3 Step-Back Architecture (No Snapback)

The GSA Framework rejects the JCPOA's "snapback" model, which proved catastrophic in 2018. Instead, it employs graduated step-back: small penalties for small violations, with proportional responses rather than nuclear options:

Table 20 Graduated Step-Back Penalties

Breach Level	Penalty	Reversibility
Tier 1	+0.5 CIS procedural penalty; 7-day resolution	Fully reversible upon compliance
Tier 2	+2.0 CIS penalty; affected module paused; 30-day mediation	Reversible upon verified compliance; earn-back pathway
Tier 3, First Instance	10% penalty on next tranche; 30-day Reconstitution Conference	Fully reversible through Reconstitution Protocol

Tier 3, Second Instance	25% penalty; 60-day enhanced monitoring; deferred SWIFT	Reversible through 90-day compliance demonstration
Tier 3, Third Instance	50% penalty; full Tier 3 module suspension	Reversible only through full Reconstitution Protocol

Critical design principle: penalties are percentage reductions in future tranches, not clawbacks of already-released funds. Released funds stay released. This means Iran never loses what it has already received, creating irreversible ratchets that favor continued compliance.

Compliance Incentive Score (CIS)

The CIS provides incremental positive feedback: Iran earns +0.1 per clean day during Sprint Phase I, +0.2 per clean day during Sprint Phase II, and +0.3 per clean day during Sprint Phase III. At CIS +20, Iran receives bonus releases. At CIS -20, framework enters enhanced monitoring. The CIS is published monthly and provides visible, quantifiable evidence of compliance trajectory.

Full CIS methodology, including the published algorithm, data validation procedures, and scoring challenge protocol, is documented in Annex M (CIS Methodology Manual), available to both signatory states upon request from the Joint Coordination Secretariat.

Security and Privacy Protection

IAEA inspectors enjoy full diplomatic immunity. Inspectors are selected from neutral countries (non-US, non-Iranian). Sensitive facility data is encrypted with a three-key system: IAEA holds two keys, Iran holds one. All data transfer uses secure channels. Cameras stream encrypted video only to IAEA servers. Environmental samples are split: one portion to IAEA, one to a neutral third-party lab, one retained by Iran.

Cyber Operations Stabilization Module

Table 21 Cyber Stabilization Categories

Category	Protected Infrastructure	Restraint	Violation Response
----------	--------------------------	-----------	--------------------

I (Critical)	Nuclear monitoring systems; banking settlement; maritime navigation	Strict non-aggression	Tier 2 breach; emergency session within 24h
II (Important)	Humanitarian logistics; medical supply chains; pipeline control	No offensive operations; defensive permitted	Tier 3 response; 72- hour review
III (Commercial)	General commercial infrastructure; telecoms; civilian aviation	No persistent disruption	Tier 1 diplomatic resolution

Section VIII: Governance and the Core Triad

The Core Triad

The GSA Framework v1.5 replaces the six-entity Distributed Facilitating State Matrix of version 1.0 with **The Core Triad** -- a lean three-entity oversight structure that eliminates administrative logjam while preserving comprehensive verification coverage.

Rationale for Consolidation: Version 1.0 distributed monitoring across six different entities (Oman, Switzerland, Qatar, the IAEA, the UN, and Pakistan), creating an administrative burden where everyone had to talk to everyone. The Core Triad concentrates day-to-day authority in the three entities with the most direct operational roles. Qatar, Pakistan, and the UN Appointee are removed from routine oversight and retained only as emergency backchannels if the Triad gridlocks.

Table 22 The Core Triad

Entity	Domain	Core Function	Contact Point
Oman	Maritime Deconfliction & Physical Custody	All maritime deconfliction, hotlines, naval encounter facilitation, Hormuz transit oversight, AND physical nuclear stockpile custody in Oman	Omani Maritime Security Centre, Muscat
Switzerland	Financial Verification & Escrow	All financial escrows, banking telemetry, asset verification, sanctions relief monitoring, GSA fund oversight	Swiss FOCBS, Bern
IAEA	Nuclear Verification	Raw technical nuclear monitoring, enrichment verification, stockpile technical oversight, facility inspection, technical assessment reporting	IAEA Director General, Vienna

Emergency Backchannels (Triad Gridlock Only)

Three additional entities are removed from day-to-day oversight but retained as **emergency backchannels** if the Core Triad experiences deadlock:

- **Qatar:** Emergency liquidity facility, bridging finance, humanitarian corridor support. Activated only if Swiss escrow encounters operational failure.
- **Pakistan:** High-level crisis summits, backchannel facilitation, institutional relay. Activated only if all Triad communication channels fail.
- **UN Appointee:** Procedural mediation and governance facilitation. Activated only if Omani-Swiss co-arbitration deadlocks and a neutral third voice is required.

Rotating Facilitation

The Secretariat operates under rotating facilitation cycles between Oman and Switzerland (quarterly rotation). The rotating facilitator has convening authority, agenda-setting rights, and procedural mediation powers, but no substantive voting power. Decisions on operational matters require consensus of the Political Coordination Cell. Structural decisions (new annex activation, framework amendment) require unanimous consensus plus neutral chair concurrence.

The Nomenclature Registry

The Joint Coordination Secretariat Communications Cell maintains the Nomenclature Registry as a standing administrative function. The Registry is updated quarterly and published in the framework Transparency Portal. Each signatory state may update its official designation at any time through written notification to the Secretariat. The Registry documents the date of each designation, the authority issuing it, and the scope of application. The Registry does not evaluate, endorse, or rank designations. It is purely documentary.

Section IX: The 30-Day Stabilization Sprint

Overview

The GSA Framework v1.5 replaces the 180-day three-stage timeline of version 1.0 with a **single 30-Day Stabilization Sprint**. In a volatile environment where ceasefires are fragile, a 6-month runway left too much time for hardline spoilers to crash the deal. The Sprint compresses all essential de-escalation measures into one executable month, with everything else deferred to Phase II.

What Moves to Phase II: Long-term regional dialogues, permanent Joint Transit Authorities, full SWIFT membership for all Iranian banks, remaining sovereign asset returns (\$70-80B), the Crescent Compact opening, and the full 15-year successor framework negotiation. Phase II cannot begin until the Sprint is certified complete by all three Core Triad members.

The Sprint: Days 1-30

Sprint Phase I: Days 1-7 (Trust Building)

Table 23 Sprint Phase I -- Days 1-7

Day	Iranian Action	US Action	Verification
1	Declare 60% enrichment freeze; grant IAEA OLEM access at Natanz and Fordow	\$250M humanitarian tranche released via Swiss escrow; partial blockade reduction; open 30-day nuclear window	IAEA remote monitoring confirms OLEM data; Swiss FOCBS confirms escrow release
2-3	Reduce IRGC Hormuz patrols 30%; pause proxy attacks; reduce cyber ops	Suspend Epic Fury kinetic operations; process humanitarian licenses	Omani naval logs; Crisis Response Cell monitoring
4-5	Allow IAEA physical inspectors on-site at Natanz and Fordow	Begin Bank Melli SWIFT reconnection technical preparation	IAEA inspector confirmation; SWIFT technical team reports

6-	IRGC Commander	5th Fleet Commander	Omani facilitating state logs
7	transmits stand-by for Hormuz reopening	transmits stand-by; blockade lift declaration prepared	both signals; Lloyd's List AIS confirmation

Phase I Closing Trigger: IAEA confirms 60% freeze via OLEM and physical inspection; Swiss escrow confirms \$250M released; Omani naval logs confirm IRGC patrol reduction; both naval commands declare stand-by for synchronized lift.

Sprint Phase II: Days 8-14 (Stockpile Transfer)

Table 24 Sprint Phase II -- Days 8-14

Day	Iranian Action	US Action	Verification
8-10	Begin transfer of 60% enriched uranium stockpile to Oman under IAEA seals	Bank Melli SWIFT connection activated for humanitarian MT 103/202	Mass spectrometry begins; IAEA custody chain initiated; SWIFT confirms messaging live
11-12	Complete stockpile transfer convoy to Oman; IAEA dual-lock custody established	OFAC begins processing Boeing aviation safety parts waiver	IAEA confirms dual-lock custody; satellite surveillance confirms transfer
13-14	Begin mothballing centrifuge rotors above 3.67% under IAEA seal	Prepare full blockade lift authorization; Notice to Mariners drafted	IAEA inspector confirms mothballing underway; PG-MSD confirms transit corridor clear

Phase II Closing Trigger: Mass spectrometry confirms stockpile in IAEA custody in Oman; Bank Melli SWIFT operational; IAEA confirms centrifuge mothballing initiated; PG-MSD certifies transit corridor ready for reopening.

Sprint Phase III: Days 15-30 (Lock-In)

Table 25 Sprint Phase III -- Days 15-30

Day	Iranian Action	US Action	Verification
15-17	Declare moratorium on enrichment above 3.67%; idle all advanced centrifuges	Issue full OFAC waiver for Boeing aviation safety parts export	IAEA continuous monitoring confirms moratorium; OFAC publishes waiver

18-21	IRGC-Navy complete stand-down of small-craft harassment; withdraw to 5nm	Full naval blockade lift on Bandar Abbas, Bandar Imam Khomeini, Chabahar	Omani naval logs; Lloyd's List AIS; synchronized within 60s
22-25	IAEA seals all mothballed centrifuge containers; Iran holds physical keys only	Sanctions tranche release (\$20B); first Boeing parts shipments authorized	IAEA seal confirmation; Swiss escrow confirmation; Boeing export licenses issued
26-30	Sprint compliance review; maintain all commitments	Sprint compliance review; confirm all deliverables active	Core Triad joint certification; CIS score published

Sprint Completion Trigger: IAEA clean certification of 60% freeze, stockpile custody, moratorium declaration, and centrifuge mothballing; Omani certification of IRGC stand-down and Hormuz transit normalization; Swiss certification of all escrow releases and Bank Melli SWIFT operation; OFAC certification of Boeing waiver active.

Phase II Transition

Upon Sprint certification, the framework automatically transitions to Phase II negotiation track. Phase II is not pre-negotiated; its parameters are agreed during Days 20-30 of the Sprint through confidential Core Triad-facilitated discussions. Phase II may include:

- Remaining sovereign asset returns (\$70-80B in staged tranches)
- Full SWIFT membership restoration for all compliant Iranian banks
- Permanent Joint Transit Authority establishment
- Regional dialogue mechanisms and the Crescent Compact
- 15-year successor framework negotiation
- Fordow IMIRC full operational conversion

Phase II negotiation has no fixed deadline but operates under the same modular architecture, Partial Continuity Rule, and Political Shock Absorber protections as the Sprint.

Section X: Face-Saving Metrics and Domestic Wins

Iranian Domestic Narrative

Table 26 Iranian Face-Saving Metrics

Claim	Fact	Evidence
"We ended the war"	Permanent bilateral ceasefire	Ceasefire hotline active since Day 1
"Blockade lifted"	US naval blockade removed	Commercial port access restored
"Assets returning"	\$250M immediate; \$45B by Sprint completion	Swiss escrow transaction logs
"Banking reconnected"	Bank Melli on SWIFT for humanitarian	SWIFT messaging confirmation
"Enrichment capped and verified"	1-year renewable cap; IAEA continuous monitoring	IAEA monthly reports
"Sovereignty preserved"	No precedent clause; NPT rights intact; annual review	Framework Article 1.5
"Hormuz governed jointly"	Iran holds permanent voting seat on PG-MSC Council	PG-MSC charter Article 5
"Domestic nomenclature preserved"	Equivalent autonomous authority to designate waterway	Framework Section B.3
"Fordow transformed to science"	IMIRC operates under Iranian co-chair	Fordow IMIRC charter
"Aviation safety restored"	Boeing parts waiver active; fleet airworthiness	OFAC waiver; Boeing export logs

US Domestic Narrative

Table 27 US Face-Saving Metrics

Claim	Fact	Evidence
"Hormuz is open"	200+ transits in 14 days	Lloyd's List, AIS tracking
"Weapons-grade uranium secured"	Entire stockpile in IAEA custody in Oman	Mass spectrometry; IAEA report
"60% enrichment halted"	Freeze verified within 72 hours	OLEM data; IAEA confirmation
"No bases lost"	All US Gulf bases remain unchanged	DOD force posture
"We moved as equals"	Every US concession matched simultaneously	Waltz pairing documentation
"Operational nomenclature recognized"	US designations documented in Nomenclature Registry	Framework Section B.3
"Three clear swaps"	Simple, explainable deal: freeze for relief, stand-down for access, stockpile for parts	Section V summary
"30-day execution"	Sprint completed in 30 days, not 180	Sprint certification
"Zero new bureaucracy"	Core Triad only; no new institutions created for Sprint	Section VIII

Synchronized Announcement Strategy

Major framework milestones require coordinated announcement timing. Party A announces at T+0 hours (domestic prime time); Party B at T+6 hours (their domestic prime time). Joint press conference uses neutral venue (Geneva or Muscat); neutral chair delivers factual statement; each party's representative delivers their narrative-framed statement.

Narrative Violation Protocol

If a party makes a public claim contradicting framework provisions: +0.5 CIS procedural penalty; factual correction via transparency portal. If violation persists after 2 corrections within 90 days: +1.0 CIS penalty; revised communications guidance required. Narrative penalties are "soft" -- they do NOT trigger benefit suspension.

Section XI: Safeguards and Force Majeure

Humanitarian Firewall

The humanitarian channel operates independently of framework political conditions. Zero-fee, no-inspection-delay humanitarian corridor through Hormuz for food, medicine, medical equipment, and UN supplies continues regardless of any dispute, breach, or suspension. This includes the \$250M Sprint opening tranche (non-reversible), medical isotope shipments, and refugee camp supplies.

Force Majeure Protection

Natural disasters, epidemics, terrorist attacks, and external military interventions activate the Force Majeure Protocol: 30-90 day operational freeze; no penalties; humanitarian and IAEA operations continue; banking channels remain open at current tier; Reconstitution Conference convened within 30 days.

No-Precedent Binding Interpretation

Article NP-1: Binding No-Precedent Language

Article 1.5 applies to all framework provisions, all governance body decisions, all dispute resolution outcomes, and all international filings. No party may cite the GSA Framework in any international court, tribunal, or treaty negotiation to establish a precedent regarding: sovereign rights under UNCLOS; nuclear enrichment rights under NPT; sanctions architecture or relief mechanisms; maritime governance structures; or nomenclature provisions. This no-precedent clause is itself binding and enforceable through the dispute resolution mechanism.

Legal Architecture: Binding but Not a Treaty

The GSA Framework uses a "binding administrative arrangement" model: it is legally enforceable through the IAEA, PG-MSR, and escrow mechanisms, but does not require 67 Senate votes for ratification. It is structured as a "package deal" through existing executive

authorities and non-treaty instruments (IAEA Additional Protocol, IMO conventions, bilateral investment treaties, executive orders for asset release, and OFAC licensing actions). This legal architecture preserves both the President's authority to negotiate and Congress's oversight role without creating a ratification barrier.

Congressional Constraint

The \$250M Sprint opening tranche and Bank Melli SWIFT connection are non-reversible and require no Congressional action (funds are already frozen; release is administrative; SWIFT reconnection is Treasury Department regulatory action). Remaining Sprint releases (\$45B) require 30-day Congressional review but not affirmative approval. Congress can block, but cannot attach poison-pill riders, targeting waivers, or sunset provisions.

Article LC-2: Congressional Review Institutional Lock-In

(a) **Escrow Auto-Release Trigger:** If the 30-day Congressional review period expires without affirmative blocking resolution, tranches release automatically from escrow. Congressional inaction constitutes tacit approval. No affirmative vote is required. The Swiss escrow administrator releases funds upon certification that the 30-day window has closed without blocking action.

(b) **State-Level Beneficiary Constituencies:** The Boeing aviation parts waiver creates direct economic beneficiaries in specific US states (Washington, Kansas, South Carolina -- Boeing manufacturing; Ohio, Kentucky -- GE engine plants). These beneficiaries receive framework notification and are positioned to lobby their congressional delegations against blocking actions.

(c) **Contractual Pre-Commitment:** The Joint Coordination Secretariat enters into binding commercial contracts with US private-sector beneficiaries (Boeing, GE) contingent on Sprint completion. These contracts create vested third-party interests with standing to challenge executive re-freezing actions through domestic administrative and judicial processes.

(d) **Poison-Pill Rider Immunization:** The framework is designated as a "national security arrangement" under the International Emergency Economic Powers Act, immunizing executive implementation from Congressional riders, targeted waivers, and sunset provisions attached to unrelated appropriations bills. Any rider targeting this framework is deemed procedurally invalid under the framework's implementing executive order.

Section XII: Reconstitution Mechanism

Automatic Return-to-Talks

Any breach automatically triggers emergency consultation before suspension. Reconstitution Conference convened within 30 days of Tier 3 breach. All Core Triad members must attend. The Conference reviews breach circumstances, proposes modifications, and determines re-entry pathway.

Four Re-Entry Pathways

Table 28 Reconstitution Re-Entry Pathways

Pathway	Condition	Restoration
Pathway A: Clean Re-entry	Full compliance restored; IAEA clean certification	Full restoration of all modules; accelerated tranche schedule
Pathway B: Conditional Re-entry	Partial compliance; good-faith effort; technical delays only	Tier 1 and Tier 2 modules restored; Tier 3 deferred; enhanced monitoring
Pathway C: Modified Framework	Political changes require framework adaptation	Revised parameters negotiated; new incentives may be added; existing incentives protected
Pathway D: Emergency Fallback	Full collapse; no compliance pathway visible	Minimum Viable Accord activates: ceasefire, Hormuz transit, humanitarian channel, enrichment freeze

Framework Survival Core Doctrine

Under all circumstances, including total framework suspension, three elements survive: (1) the ceasefire hotline remains active, (2) humanitarian access continues uninterrupted, (3) the emergency diplomatic channel stays open. Even if everything else enters stabilization pause, the Survival Core continues for 180 days pending reconstitution efforts.

Section XIII: Three Deal Options

The GSA Framework presents three complete deal packages, each representing a different depth of commitment. Default: Minimal activates by default; automatic graduation to Medium upon verified Sprint Phase I completion.

Table 29 Three Deal Options Comparison

Parameter	Minimal (Crisis Containment)	Medium (Stability First)	Maximal (Comprehensive)
Nuclear	60% freeze; no stockpile transfer	60% freeze; stockpile to Oman; 3.67% cap	3.67% cap; full mothball; missile test moratorium
Monitoring	Minimal (cameras + OLEM)	Medium (OLEM + physical inspectors)	Maximal (OLEM + inspectors + open source)
Swaps Active	Swap 1 only (\$250M + freeze)	All Three Swaps	All Three Swaps + Phase II commitments
Duration	30 days renewable	90 days renewable	1-year renewable
PG-MSc	Observer status	Full voting member	Full member + alternating chair
Maritime	Basic transit; no blockade lift	Full blockade lift; PG-MSc governance	Full PG-MSc + GSA fund + Phase II architecture
Face-Saving	Basic	Enhanced	Maximum

Graduation Pathway: Minimal automatically graduates to Medium upon verified Day 7 Sprint Phase I completion (60% freeze confirmed, \$250M released). Medium graduates to Maximal upon Sprint completion certification. Graduation is automatic, not requiring new negotiations. Each graduation unlocks additional benefits, deeper integration, and expanded economic gains. The graduation pathway creates positive momentum: compliance at one level unlocks greater rewards at the next.

Appendix A: Quick Reference Matrix

Table 30 Framework Quick Reference

Question	Answer
What is the core exchange?	Three symmetrical swaps: freeze for relief, stand-down for access, stockpile for parts
How many economic incentives?	3 macro-swaps (replacing 30 micro-incentives from v1.0)
What is the Nomenclature provision?	Section B.3: Recognizes existing US operational designations; grants Iran equivalent authority; preserves "Strait of Hormuz" for UNCLOS/IMO/IAEA
What is the GSA?	Gulf Stability Contribution: funded mechanism for regional maritime safety, administered by PG-MSD
Who verifies compliance?	Core Triad: IAEA (technical), Oman (maritime/custody), Switzerland (financial)
What happens if someone cheats?	Three-tier breach: Tier 1 (diplomatic resolution), Tier 2 (module pause), Tier 3 (graduated rollback, not snapback)
Can either side walk away?	Yes, with 30 days' notice. But Survival Core continues: hotline, humanitarian, diplomatic channel
What survives total collapse?	Ceasefire hotline, humanitarian corridor, emergency diplomatic channel -- minimum for 180 days
Does Iran get to enrich?	Yes -- 3.67% for civilian energy, under IAEA safeguards, with annual review
Does the US get naming rights?	US operational designations recognized in Nomenclature Registry; "Strait of Hormuz" preserved for all international legal instruments
How long does this last?	Sprint: 30 days. Phase II: 1-year renewable. Moratorium: 1-year renewable up to 15 years
What about Congress?	\$250M + Bank Melli SWIFT: no Congress required. \$45B Sprint completion: 30-day review, not affirmative approval

What about the Supreme Leader?	Framework survives leadership transitions through Political Shock Absorber: automatic Review Pause
What about Israel?	Israeli Parallel Reassurance Mechanism: IAEA data-sharing, US coordination, military readiness guarantees
What about proxies?	Proxy cap: 30% reduction from pre-war baselines; attribution protocols; rogue commander accountability
What about arbitration?	Direct Co-Arbitration: Oman rules naval disputes, Switzerland rules financial disputes, 48-hour binding rulings
Who is in the Core Triad?	Oman (maritime + custody), Switzerland (financial), IAEA (nuclear). Qatar, Pakistan, UN Appointee: emergency only

Key Provisions Summary

Table 31 Key Framework Provisions

Provision	Location	Status
Synchronized Reciprocal Motion (Waltz)	Section I, Article 1.1	Core principle
Partial Continuity Rule	Section I, Article PC-1	Automatic
Framework Survival Core	Section I, Article 1.4	Inviolable
No Precedent Clause	Section I, Article 1.5	Binding interpretation
Political Shock Absorber	Section I, Article 1.6	Automatic Review Pause
PG-MSC Co-Governance	Section III, Article 3.1	Iran: permanent voting seat
Established Operational Nomenclature	Section III, Article B.3	Registry maintained by Secretariat
Direct Swiss-Omani Arbitration	Section III, Article IHTA-5	48-hour binding rulings
GSA Fund	Section III, Article 3.5	\$500M annual PG-MSC revenue
60% Freeze + IAEA Custody	Section IV, Article NS-1	Within 72 hours
15-Year Renewable Moratorium	Section IV, Article 4.2	Performance-based

Appendix A: Quick Reference Matrix

Six HEU Disposition Pathways	Section IV, Table 13	Iran selects; third-party only
Three Core Swaps	Section V	Symmetrical macro-swaps
Core Triad Oversight	Section VIII	Oman + Switzerland + IAEA
30-Day Stabilization Sprint	Section IX	Days 1-30 execution window
Three-Tier Breach System	Section VII, Article 7.2	Graduated step-back
CIS Compliance Incentive Score	Section VII, Article 7.3	Positive/negative feedback
Reconstitution Mechanism	Section XII	Four re-entry pathways

Document Certification

This document constitutes the Gulf Stability Accord (GSA) Framework Version 1.5, calibrated for the May 2026 negotiation environment between the United States and the Islamic Republic of Iran. It represents a streamlined, aggression-reduced revision of Version 1.0, incorporating four structural simplifications:

- **Three Core Swaps** replacing the Thirty Symmetrical Economic Incentives
- **The Core Triad** replacing the Distributed Facilitating State Matrix
- **Direct Swiss-Omani Arbitration** replacing the Multi-Tier Tie-Breaking Matrix
- **The 30-Day Stabilization Sprint** replacing the 180-Day Three-Stage Timeline

By making these changes, the document's identity shifts from an "Over-Engineered Regional Economic Treaty" to a "Symmetrical 30-Day De-escalation Package." It preserves what makes GSA unique -- strict, parallel symmetry -- but makes it punchy, fast, and light enough for negotiators to pick up and execute immediately.

It draws from the Stability First Enhanced Accord (v5.8), the Hormuz First Enhanced Accord (v2), the Regional Cooperation and Stability Architecture (v3.6), and the Crescent Bridge Accord (v3), incorporating the Three Core Swaps, the Established Operational Nomenclature provision, and the GSA financial architecture.

The framework is designed for authorized negotiators only. Distribution is restricted to the Joint Coordination Secretariat, the Core Triad members, and designated senior officials of the United States and Iranian governments.

Document Status:	Streamlined Framework with Three Core Swaps
Version:	1.5
Date of Issue:	May 20, 2026
Classification:	Diplomatic Working Document -- Authorized Negotiators Only
Next Review:	June 20, 2026 or upon Sprint completion, whichever is earlier
Supersedes:	GSA Framework Version 1.0 (May 20, 2026)

Joint Coordination Secretariat

Geneva, Switzerland / Muscat, Oman

May 20, 2026
