Proxy-Led Stabilization Accord

*A Peace-by-Proxy Framework for US-Iran De-escalation, Hormuz Governance,
Nuclear Stabilization, and Regional Security Through Deniable Proxy Coalitions*

*"This Framework does not expire. It continues unless affirmatively voted down.
Inaction = peace."*

Version 1.5 — Enhanced Negotiation Draft

Calibrated for: The May 2026 Negotiation Environment

As of: May 20, 2026

Status: Negotiation Draft — Ad Referendum

Drawing from: Stability First Enhanced Accord v5.7 | Reciprocal Stabilization Custody Framework
v6.0 | Peace-by-Proxy Architecture PL1

Executive Summary — Read This First

Four pages. The rest are technical annexes.

The Problem

Direct negotiations have failed. Neither side can move first without appearing to capitulate.

The Proxy Solution

The US and Iran never sign a direct treaty. Two proxy coalitions do the work:

- **MSCG** (Maritime Security Coordination Group) — US-aligned
- **RSCC** (Regional Stability Coordination Cell) — Iran-aligned

These entities are not new standing coalitions. They are coordinating mechanisms that leverage existing institutions: US CENTCOM, Iranian naval command, Omani maritime authorities, and Swiss financial channels.

The De-Risking Principle

Proxy violations are treated as graduated incidents under a tiered response system, not automatic state-to-state war. This transforms what would traditionally trigger conflict into a manageable law-enforcement problem with a credible escalation ladder.

The Backbone (MVC): Four Elements That CANNOT Collapse

Even if everything else fails, these survive for a minimum of 180 days:

1. **Ceasefire** — 72-hour auto-renewing (Omani-facilitated hotline; renews at Hour 71)
2. **Humanitarian corridor** — Zero-fee Hormuz transit for medicine, food, medical equipment
3. **60% enrichment freeze** — IAEA-verified within 72 hours

4. \$250M humanitarian tranche — Swiss escrow, non-reversible upon signature

What Each Side Gets

Iran

"We preserved sovereignty. We secured relief through proxies. We never surrendered to the US directly. HEU remains under IAEA dual-lock custody in Oman — not US territory."

United States

"We removed HEU from Iran. We capped enrichment. We kept all military options. We never signed a deal with Iran. We led through the MSCG and set the terms."

Total pages to read: 4. The remainder are technical annexes for implementation staff.

Section 14: Spoiler & Rogue Actor Management

Section 15: Political Shock Absorber

15.1A Emergency Judicial Pause

15.1B Presumptive Continuation with Biennial Affirmative Vote

15.1C Cooling-Off Period (Post Opt-Out)

Section 16: Minimum Viable Accord Fallback

Section 17: Parallel Public Framework (Dual-Track Option)

Section 18: Joint Coordination Secretariat

Section 19: Face-Saving Metrics & Domestic Narratives

Section 20: Communications & Crisis Protocols

Section 21: Instruments of Acceptance

Appendix A: Quick Reference Card

Preamble: The May 2026 Moment

"We were getting ready to do a very major attack tomorrow, and I've put it off for a little while, hopefully maybe forever." — President Donald J. Trump, May 18, 2026

Current Standoff: The Impasse of May 19, 2026

As of May 20, 2026, the United States and the Islamic Republic of Iran stand at the closest point to renewed large-scale military confrontation since hostilities began in late February 2026. On May 18, President Trump announced he had called off a planned "very major attack" on Iran scheduled for May 19 at the request of Gulf allies Qatar, Saudi Arabia, and the United Arab Emirates, citing "serious negotiations now taking place."

The current impasse is defined by five irreconcilable direct demands:

Table 1 The May 2026 Impasse: Irreconcilable Direct Demands

Party	Demand	Why the Other Side Cannot Accept Directly
United States	Iran delivers 400kg of enriched uranium to the United States	Iran cannot surrender sovereign nuclear material directly to its adversary; this would constitute capitulation, not diplomacy
United States	Iran maintains only one operational nuclear facility	Iran views multiple facilities as sovereign right and insurance against single-point attack; dismantling equals disarmament
United States	Link nuclear negotiations to cessation of all hostilities	Iran cannot accept that proxy forces in Lebanon, Gaza, and Yemen become bargaining chips in nuclear talks
Iran	Full war reparations for damages	US Congress and electorate will not authorize payments to a state designated as hostile; implies US admission of fault
Iran	Release of 100% of frozen assets	Trump has explicitly refused to release at least 25%; releasing all assets removes leverage and invites Congressional revolt
Iran	Sovereign control of Strait of Hormuz	US maintains Hormuz is international waterway; ceding control would legitimize Iranian chokehold on global energy

These demands cannot be resolved through direct bilateral negotiation. Each represents a core sovereignty claim that neither capital can surrender without domestic political catastrophe. The direct negotiation format has produced only deadlock, escalating threats, and a planned military attack halted at the last moment by third-party intervention.

Why Proxy-Led Architecture Now

The Proxy-Led Stabilization Accord (PLSA) inverts the traditional diplomatic model. In conventional frameworks, proxies are treated as spoilers or deniable tools of asymmetric warfare. The PLSA flips this dynamic: proxies become deniable instruments of peace, allowing both Washington and Tehran to execute high-stakes diplomatic maneuvers without taking direct domestic political heat.

This model provides both capitals with what they most need in May 2026:

- **For Washington:** A pathway to secure Iranian nuclear material, open Hormuz, and stabilize the region without signing a "weak deal" directly with Tehran, without transferring reparations, and without releasing all frozen assets
- **For Tehran:** A pathway to secure sanctions relief, maintain Hormuz influence, preserve sovereign nuclear rights, and obtain reconstruction resources without surrendering enriched uranium directly to the United States or dismantling its enrichment capability

The PLSA creates a structural shield for both leaderships. If an administrative step fails, the Principal simply condemns "operational friction" and tasks neutral channels with fixing it. The framework never triggers immediate state-to-state war.

Section 1: Core Architecture — The Double Insulated Buffer

In the PLSA framework, the United States and the Islamic Republic of Iran never sign a direct bilateral treaty, nor do they directly coordinate actions. Instead, they act as Principal Guarantors who sit behind two distinct, formalized coordination mechanisms.

Table 2 The Double Insulated Buffer: Architecture Overview

Layer	Western Side	Iranian Side	Interface
Principal Guarantor	United States	Islamic Republic of Iran	No direct contact

Proxy Coalition	Maritime Coordination (MSCG)	Security Group	Regional Coordination	Stability Cell (RSCC)	The Pact — proxy-to-proxy agreements	— bilateral
Neutral Facilitating States	Oman, Switzerland, mediation	IAEA (Core Triad)	— Oversight, escrow, verification,			

Terminology Note: The MSCG and RSCC are not new standing coalitions. They are coordinating mechanisms that leverage existing institutions: US CENTCOM, Iranian naval command, Omani maritime authorities, and Swiss financial channels.

1.1 The Maritime Security Coordination Group (MSCG)

The MSCG comprises the United Kingdom, specialized Gulf Cooperation Council (GCC) task forces, Switzerland, and Oman. They act as the operational and legal proxies for the United States. The MSCG is not a new standing coalition. It is an administrative label for existing command-and-control channels: US CENTCOM + allied naval commands + Omani maritime authority. Its function is to broadcast US de-escalation orders and monitor compliance.

Table 3 MSCG Composition and Functions

Member	Domain	Proxy Function
United Kingdom	Maritime Security / Diplomatic Hosting	Hosts asymmetric security forums; provides naval escort for transit corridors; politically shields US from direct engagement with RSCC actors
GCC Task Force (UAE, Saudi Arabia, Bahrain, Kuwait, Qatar)	Maritime Patrol / Economic Bridge	Provides regional naval patrol replacing direct US presence; offers regional banking corridors for sanctions-compliant trade
Switzerland	Financial Escrow / Verification	Administers all escrow accounts; verifies asset transfers; provides neutral financial oversight shielding US Treasury from direct Iranian transactions
Sultanate of Oman	Maritime Deconfliction / Political Relay	Manages Hormuz transit oversight; hosts proxy negotiations; provides 24/7 hotline management

1.2 The Regional Stability Coordination Cell (RSCC)

The RSCC formally reconstitutes Iran's regional network into an integrated regional policing bloc. They act as the operational proxies for Tehran. The RSCC is not a new standing coalition. It is an administrative label for existing command-and-control channels: Iranian naval command + IRGC liaison + Omani relay channel. Its function is to broadcast Iranian stand-down orders and verify proxy receipt.

Table 4 RSCC Composition and Functions

Member	Domain	Proxy Function
Ansar Allah (Houthis)	Red Sea / Gulf of Aden Maritime	Signs localized Maritime Freedom Pact; declares moratorium on commercial vessel targeting; collects environmental transit tariff via Omani Maritime Trust
Kata'ib Hezbollah & Iraqi PMF Elements	Border Security / Drone Buffers	Signs border-security stabilization agreements; commits to drone-free buffer zones; provides proxy policing of commercial lines
Government of Iraq (Cooperative Elements)	Security Forum Hosting	Hosts asymmetric security forum in Baghdad; provides legitimacy umbrella for RSCC-MSCG engagement
Omani Maritime Trust	Revenue Collection Escrow	Collects synchronized transit tariffs; routes funds to third-party logistical escrow; provides cash flows without Iranian state directly charging fees

1.3 Graduated Proxy Incident Response

Article 1.3 — Graduated Proxy Incident Response (Replaces De-Risking Principle)

Tier	Incident Type	Response	State-to-State Impact
1	Minor violation (single drone overflight, warning shot)	RSCC/MSCG coordination within 24 hours; no economic penalty	None — operational friction
2	Significant violation (vessel interdiction, mine-laying attempt)	48-hour attribution by Joint Forensic Maritime Board; affected module pauses	Tier 1 state review; no military response
3	Major attack (US/GCC vessel damaged or crew killed, de-confirmed Iranian-supplied weapons)	Emergency consultation within 6 hours; Tier 3 economic penalties; Reconstitution Conference within 30 days	Potential state-level escalation; de-escalation priority

No automatic state-to-state war. Attribution must be confirmed by Joint Forensic Maritime Board before Tier 3 response. This preserves deniability while providing a credible escalation ladder.

Source: Reciprocal Stabilization v4.0, Section 4.4; GSA v1.5, Section 7.2.

1.4 Direct Principal Override (Emergency Channel)

Article 1.4 — Direct Principal Override (Emergency Channel)

(a) **Normal Operations:** All communications and dispute resolution flow through proxy coalitions (MSCG/RSCC) and the Core Triad.

(b) **Emergency Override Threshold:** Either Principal (US or Iran) may invoke Direct Principal Override if:

- An incident causes 10+ military fatalities from a single state
- A confirmed state-to-state military strike occurs
- A nuclear facility is attacked
- Either Principal certifies an "existential threat" to the Framework

(c) **Procedure Upon Override:**

- Proxy channels are NOT suspended, but the Principal-to-Principal hotline (Omani-facilitated) becomes the primary channel
- All MVC elements continue unconditionally
- The Core Triad convenes within 6 hours
- No automatic military response; 72-hour cooling-off period activates

(d) **Deniability Preservation:** Invocation of Direct Principal Override does NOT constitute admission that proxy channels failed. It is a crisis management tool, not a breach declaration.

(e) **Reversion:** Once the crisis is contained, operations revert to proxy-led channels within 30 days unless both Principals agree otherwise.

Section 2: Core Principles

2.1 Synchronized Reciprocal Motion

Principle: Neither side moves alone. Every Iranian commitment is matched by a corresponding US commitment, activated simultaneously, verified by neutral observers through the Core Triad.

The Waltz Pairing is the fundamental transaction unit of the PLSA. Each Iranian step is matched by a simultaneous US step of equal political weight. Unlike sequential models where one side moves first and trusts the other to follow, the PLSA requires simultaneous activation verified by third parties.

2.1A Narrative Asymmetry Allowance (US Framing)

Section 2.1A — Narrative Asymmetry Allowance (US Framing)

The United States may characterize this Accord as:

"America First, So We Go First — through proxies. The United States led by establishing the MSCG, setting the terms of maritime security, and conditioning relief on verified Iranian proxy stand-down. Iran follows through the RSCC. America dictates the pace."

This framing is factually consistent with the sequential activation protocol.

Source: Step Forward v2.0, Preamble; Reciprocal Stabilization v4.0, Section 2.7.

2.1B Narrative Asymmetry Allowance (Iranian Framing)

Section 2.1B — Narrative Asymmetry Allowance (Iranian Framing)

The Islamic Republic may characterize this Accord as:

"Resistance diplomacy triumphed. The United States was forced to work through proxies because direct confrontation failed. Iran never surrendered sovereign rights, never signed a direct deal with the United States, and secured relief while preserving all strategic assets."

This framing is factually consistent with the proxy architecture.

Source: Mutual Step-Back v4.0, Section 9.6.

2.1C No Goalpost Moving

Article 2.1C — No Goalpost Moving

Neither party may unilaterally redefine compliance criteria, verification standards, or certification thresholds after they have been certified by the Joint Implementation Group.

Completed milestones and already-released benefits remain in force regardless of subsequent compliance slippage in other modules.

Source: Reciprocal Stabilization v4.0, Section 1.14.

2.1D No Precedent Clause

Article 2.1D — No Precedent Clause

This Accord establishes no legal or political precedent for unrelated disputes globally. It is *sui generis*, tailored exclusively to the May 2026 operational environment.

No inference may be drawn regarding:

- Proxy frameworks in other conflicts (Ukraine, Taiwan, Yemen, etc.)
- Maritime governance in other waterways
- Sanctions architecture for other jurisdictions
- Bilateral diplomatic frameworks with other parties

This text shall not be cited in any international court or treaty to define or alter sovereign rights under international law elsewhere in the world.

Source: Reciprocal Stabilization v4.0, Section 1.5.

2.2 Sovereignty Preservation

Article 2.2 — Sovereignty Preservation

This Accord does not supersede any constitution. It does not create supranational authority. NPT rights are preserved. US treaty commitments to Gulf partners are preserved. Iranian sovereign title to all nuclear material remains intact regardless of custodial location. The framework explicitly recognizes Iran's sovereign right to peaceful nuclear energy under NPT Article IV through monitored, non-weapon pathways.

2.3 Modular Architecture with Partial Continuity Rule

Article 2.3 — Partial Continuity Rule

Stabilization pause in one module does not suspend unrelated modules. Maritime disputes cannot terminate humanitarian channels. Cyber incidents cannot terminate medical isotope cooperation. Nuclear verification gaps do not affect Hormuz transit.

The Partial Continuity Rule applies automatically. No governance body approval required. When one module enters stabilization pause, all other modules continue at current operational levels for a minimum of 90 days while the Coordination Secretariat assesses recovery options.

Table 5 Module Survival Tiers

Tier	Classification	Modules	Behavior During Pause
1	Inviolable	Ceasefire hotline; humanitarian access; emergency diplomatic channel	Never pause under any circumstances
2	Protected	IAEA basic monitoring; Hormuz non-military transit; asset tranches 1–3	Continue during most stabilization pauses
3	Conditional	SWIFT reconnection; bonus tranches; successor framework talks; Fordow advanced phases	May enter hold during disputes

Section 2A: Minimum Viable Configuration (Backbone)

Section 2A — Minimum Viable Configuration (Backbone)

The MVC is not a fallback. It is the backbone. Four elements operate independently of all proxy coalitions and survive total suspension:

Table 6 MVC Backbone Elements

#	Element	Specification
1	72-Hour Auto-Renewing Ceasefire	Omani-facilitated hotline. Renews at Hour 71. Neither party may disable without 30 days' notice.
2	Humanitarian Corridor	Zero-fee Hormuz transit for medicine, food, medical equipment. Legally non-divertible.
3	60% Enrichment Freeze	IAEA-verified within 72 hours. All downstream benefits contingent on this confirmation.
4	\$250M Humanitarian Tranche	Swiss escrow to UN OCHA upon signature. Non-reversible.

Even if all proxy modules collapse, the MVC continues for a minimum of 180 days.

Source: Reciprocal Stabilization v4.0, Section 3.

Section 3: The Proxy Coordination Architecture

3.1 Not New Coalitions — Existing Institutions

The MSCG and RSCC are not new standing coalitions. They are administrative labels for existing command-and-control channels:

- **MSCG (Maritime Security Coordination Group):** US CENTCOM + allied naval commands + Omani maritime authority. Function: Broadcasts US de-escalation orders, monitors compliance.
- **RSCC (Regional Stability Coordination Cell):** Iranian naval command + IRGC liaison + Omani relay channel. Function: Broadcasts Iranian stand-down orders, verifies proxy receipt.

3.2 Proxy "Commitments" Are Principal Commitments (via Relay)

When the Accord says "Houthis commit to a maritime pause," the operational mechanism is:

1. Iran transmits written orders to Houthi leadership through established Omani-relay channels.
2. Iran provides the Secretariat with proof of transmission (time-stamped, encrypted).
3. The Houthis are not signatories. Iran is responsible for transmitting orders. Compliance is verified through Joint Forensic Maritime Board (incident attribution).

3.3 No Proxy Autonomy

Proxy coalitions have no independent authority to:

- Declare breach
- Suspend benefits
- Modify timelines
- Communicate directly with the other Principal's proxy coalition

All significant decisions are made by the Principals through the Core Triad. Proxies are implementers, not negotiators.

3.4 Proxy Universe Freeze

Article 3.4 — Proxy Universe Freeze

- (a) **Initial Designations:** The proxy universe is limited to groups explicitly listed in Annex P (Classified) at signature.
- (b) **No New Designations:** Neither party may add new groups to its proxy coalition after signature without unanimous consent of the Core Triad and 30 days' written notice to the other Principal.
- (c) **Removal:** Either party may unilaterally remove a group from its own proxy coalition by written notice to the Secretariat. Removal is effective immediately. The removed group is no longer governed by this Accord's proxy provisions.
- (d) **Rogue Group Protocol:** If a group not listed in Annex P commits an attack, it is NOT attributable to either Principal unless the JFM Board finds clear evidence of command, control, or material support. Default: non-attributable, criminal referral.
- (e) **Annex P Review:** Annex P is reviewed every 24 months. Additions require mutual consent. No additions within the first 12 months of Framework operation.

Section 4: Maritime De-escalation & The Hormuz Proxy Solution

4.1 The Traditional Trap

The direct negotiation trap on Hormuz is insurmountable:

- Trump cannot legally or politically tolerate Iran unilaterally controlling transit through the Strait, nor can he accept Iranian tolling of international shipping
- Tehran cannot back down on Hormuz sovereignty without destroying its anti-imperialist posture and ceding what it considers sovereign territorial waters
- The Persian Gulf Strait Authority (PGSA), established by Iran in May 2026 to manage Hormuz transit, is unacceptable to Washington as a unilateral Iranian body
- Any direct US-Iran deal on Hormuz would require one side to capitulate on a core sovereignty claim. The PLSA solves this by making Hormuz governance a multilateral proxy function, not a bilateral concession.

4.2 The Proxy Solution: Red Sea & Gulf of Aden Maritime Freedom Pact

Article 4.2 — The Maritime Freedom Pact

Ansar Allah (Houthis) and the Omani Maritime Trust co-sign a localized Red Sea & Gulf of Aden Maritime Freedom Pact. Under this pact:

1. The Houthis formally announce a complete moratorium on all commercial vessel targeting in the Red Sea, Gulf of Aden, and Bab-el-Mandeb
2. In exchange, the Omani Maritime Trust collects a synchronized "Regional Environmental and Safety Tariff" from commercial shipping transiting these waters
3. This tariff is cleanly routed to a third-party logistical escrow administered by Switzerland
4. The escrow provides cash flows to regional actors for "infrastructure security" without the US Navy or Iranian regular forces changing a single official rule of engagement
5. The US Navy maintains its presence but transitions to stand-off posture (no patrols within 5nm of transit corridor)
6. IRGC-Navy small craft withdraw from the central transit corridor

Table 7 Environmental Transit Tariff Schedule

Vessel Type	Tariff	Collection Method
Oil tankers (>50,000 DWT)	\$0.10 per barrel of cargo	Automated via AIS + cargo declaration
Container vessels	\$500 per transit	Pre-paid through Maritime Council online portal
General cargo / bulk carriers	\$250 per transit	Pre-paid through Maritime Council online portal
WFP / humanitarian vessels	\$0 (exempt)	Automated exemption via UN registration
Military / naval vessels	\$0 (exempt)	Flag state declaration

4.3 The Persian Gulf Strait Authority (PGSA) Integration

The PLSA does not demand Iran dissolve the PGSA. Instead, it integrates the PGSA into a broader multilateral framework:

PGSA Integration Mechanism

- The PGSA continues to exist as an Iranian national body responsible for Iranian territorial waters
- A new International Hormuz Transit Council (IHTC) is established as the multilateral oversight body, with membership: Iran, Oman, UAE, Switzerland (observer), UK (observer), IAEA Maritime (technical)
- The IHTC sets transit rules, tariff rates (which may not exceed the Schedule in Table 7 without consensus), and dispute resolution procedures
- The PGSA implements IHTC rules on the Iranian side; Omani authorities implement on the Omani side
- Neither the US nor Iran has unilateral veto over IHTC decisions — a supermajority (4 of 6 voting members) is required for rule changes

Face-Saving: Iran retains the PGSA as a sovereign national institution. The US achieves multilateral oversight preventing Iranian unilateral chokehold. Both sides claim governance of Hormuz.

4.4 Joint Forensic Maritime Board (Sole Attribution Authority)

Article 3.2A — Joint Forensic Maritime Board (Sole Attribution Authority)

(a) **Exclusive Jurisdiction:** The JFM Board has sole, exclusive, binding authority to attribute maritime attacks, vessel seizures, and weapons incidents to a specific party or proxy.

(b) **Composition (expanded):**

- 2 forensic EOD experts (1 US-nominated, 1 Iran-nominated)
- 2 independent forensic experts (Omani + Swiss)
- 1 signals intelligence specialist (neutral, rotating)
- 1 maritime law expert (ITLOS-appointed)
- 1 UN observer (non-voting)

(c) **Binding Timeline:**

- Preliminary finding: 48 hours
- Final binding attribution: 96 hours
- No attribution = no breach classification

(d) **No Unilateral Attribution:** No Principal, proxy, or facilitating state may declare an attack to involve Iranian-supplied weapons or US-origin technology without JFM Board certification.

(e) **False Flag Protection:** If the Board determines an attack was a false flag (committed by a third party to frame a Principal), the incident triggers a 72-hour Cooling-Off Default. Neither Principal may escalate. The investigating party bears costs if proven false.

(f) **Transparency:** De-identified annual summary of attributions published. Full reports available to both Principals.

Section 5: Nuclear Safeguards — The Omani-Swiss Escrow

5.1 The Traditional Trap

The nuclear impasse as of May 19, 2026:

- Trump demands that Iran deliver 400kg of enriched uranium to the United States and maintain only one operational nuclear facility
- Iran refuses to surrender sovereign nuclear material directly to its adversary, viewing this as capitulation
- Trump admitted publicly on May 15 that seizing the uranium is "not necessary, except from a public relations standpoint" — signaling that the underlying security concern is separation from Iranian weaponization access, not US possession
- Iran maintains that enrichment is a non-negotiable sovereign right under NPT Article IV

5.2 The Proxy Solution: Technical Storage via Oman

Article 5.2 — The Omani-Swiss Nuclear Escrow

The Atomic Energy Organization of Iran (AEOI) signs a technical storage agreement strictly with the Sultanate of Oman. The United States and Iranian states remain entirely arms-length, treating the move as a localized technical arrangement between Muscat, Bern, and Tehran.

1. Omani personnel physically take custody of the sealed HEU canisters and move them to a secure Omani military facility under IAEA oversight
2. Simultaneously, Switzerland opens a mirrored humanitarian credit facility for private Iranian commercial firms
3. Sovereign title to all nuclear material remains with Iran at all times; the transfer is custodial, not proprietary
4. Iranian observer teams accompany every stage of packaging and transit
5. The US is explicitly barred from ever receiving, storing, transporting, or exercising operational control over the Iranian enriched-uranium stockpile
6. Final disposition of the material is deferred to a later comprehensive agreement; the initial escrow period is 12 months, renewable

Table 8 Custody Chain of the Omani-Swiss Escrow

Phase	Period	Action	Verifying Party
-------	--------	--------	-----------------

Activation	Day 1 (72-hour window)	Framework activates; IAEA inspectors arrive at Esfahan	Joint Coordination Secretariat	
Inventory	Days 1–7	Physical inventory; mass spectrometry confirms isotopic composition; cylinders loaded into casks; tamper-evident seals applied	IAEA	
Transit	Days 7–14	Convoy departs under IAEA armed escort; GPS tracking activated; transit initiation verified	IAEA + Navy	Omani
Receipt	By Day 14	Casks unsealed in presence of IAEA rep, Omani facility director, and Iranian AEOI observer	Three Channels	Primary
Custody	Day 14+	IAEA assumes operational custody; Custody Transfer Certificate triggers Tranche 3 release	IAEA + Military	Omani

5.2A Prohibition on US Custody

Article 5.2A — Prohibition on US Custody

Under no circumstances may Iranian enriched uranium be transferred to US territory, custody, or control. The Oman Nuclear Custody Facility is the sole designated location for Iranian HEU stockpile under IAEA dual-lock custody.

All six disposition pathways specify third-party destinations. No pathway terminates in US jurisdiction. This provision is binding and non-negotiable.

Source: Reciprocal Stabilization v4.0, Annex A.1A.

5.3 The Fordow Medical Isotope Joint Venture

To address Trump's demand for a single operational nuclear facility without requiring Iran to dismantle Fordow:

Fordow Conversion: The International Medical Isotope Research Center (IMIRC)

- The Fordow facility is converted to the International Medical Isotope Research Center (IMIRC)
- International oversight is provided through a scientific joint venture led by neutral nations (Switzerland, Oman, WHO, IAEA)
- All enrichment at Fordow ceases; the facility is repurposed for medical isotope production under full IAEA safeguards
- International funding of \$175M+ is provided through the joint venture, with contributions from Switzerland (\$25M seed), Oman (\$15M), Qatar (\$20M), WHO/IAEA (\$30M), EU (\$25M), and Iranian in-kind contribution (\$40M equivalent in facility and workforce)
- Iran maintains sovereign ownership of the facility; international partners provide operational oversight and funding

This satisfies the US requirement of "one operational enrichment facility" (Natanz continues at 3.67%) while preserving Fordow as a functioning Iranian nuclear facility under international auspices.

Section 6: Regional Ceasefires & The Proxy Police Matrix

6.1 The Traditional Trap

The United States cannot openly negotiate with groups it has designated as terrorist organizations. Iran cannot openly command these groups to disarm without looking weak to domestic hardliners and the IRGC. The result: proxy forces in Iraq, Syria, Lebanon, and Yemen operate as spoilers, able to derail state-level diplomacy with a single attack.

6.2 The Proxy Solution: Asymmetric Security Forum

Article 6.2 — The Proxy Police Matrix

The United Kingdom and the Government of Iraq host an Asymmetric Security Forum in Baghdad. At this forum:

1. Localized proxy networks (including elements of the Iraqi Popular Mobilization Forces) formally sign a border-security stabilization agreement with regional GCC borders
2. They commit to enforcing a drone-free buffer zone along critical commercial lines
3. If a rogue rocket is fired, it is treated as a local criminal violation enforced by the proxy coalition's internal policing mechanism
4. The Joint Coordination Secretariat's Crisis Response Cell investigates attribution; findings are reported to the Asymmetric Security Forum, not directly to Washington or Tehran
5. Both Principal Guarantors maintain plausible deniability: "We do not control these actors; the Forum handles enforcement"

6.3 Drone-Free Buffer Zones

Table 9 Drone-Free Buffer Zone Specifications

Zone		Coordinates	Restriction	Enforcement		Violation Response
Hormuz Transit Corridor		26°N, 56°E (central channel)	No armed UAVs; no loitering drones	Omani naval radar + IHTC monitoring		Tier 1 technical dispute; 48-hour remediation
GCC Regions	Border	Iraq-Kuwait, Iraq-Saudi borders	No cross-border drone transit	PMF internal policing + UK technical assistance	Tier 1; Asymmetric Security Forum convenes	
Red Sea Commercial Lane		Bab-el-Mandeb – Suez	No vessel-targeting UAVs	Houthi moratorium + coalition patrol		Tier 2 if attributed; escrow suspension
Israel-Lebanon Buffer		Blue Line 10km	No offensive drone operations	UNIFIL enhanced + Hezbollah commitment		Tier 2; De-escalation Interval activates

Section 7: Economic Reconnection

7.1 Primary Channel: Swiss Escrow

All financial flows go through the Swiss Financial Cell (existing, credible, neutral). The Swiss escrow is protected by a formal Presidential Policy Directive prohibiting unilateral re-freezing except in Tier 3 breach.

7.2 Secondary Channel: Ring-Fenced Clearinghouses (If Swiss Escrow Is Blocked)

If Swiss escrow encounters operational failure or domestic court restraint, UAE/Omani private banking syndicates may activate as a backup channel. These clearinghouses verify transactions using localized, AI-driven compliance telemetry and route funds through the Qatari riyal bridge.

7.3 Staged Asset Release via Swiss Escrow

Table 10 Staged Asset Release Schedule

Stage	Timing	Amount	Trigger
Micro-Pilot	Day 1	\$250M	Framework signature
Stage 1	Day 14	\$750M	HEU in Omani custody
Stage 2	Day 45	\$1.5B	Moratorium ratified
Stage 3	Day 180	\$5B	Full compliance

All releases are non-reversible once executed.

Face-Saving: Washington maintains that sanctions remain in place officially; the proxy banks handle "humanitarian exemptions" and "third-country trade." Tehran receives its funds through Islamic partnerships without formally accepting FATF surveillance.

Source: *Reciprocal Stabilization v4.0, Section 7; GSA v1.5, Section VI.*

Section 8: The Core Exchange — Day-One Reciprocal Trade

The Core Exchange is the simultaneous, irrevocable activation of all proxy commitments on Day 1. Neither Principal moves alone. All actions are verified by neutral observers.

8.1 What Iran Delivers (via RSCC Proxies)

Table 11 Iranian Commitments — Day 1 Activation

Commitment	Proxy Vehicle	Verification Method
Entire 60% HEU stockpile consolidated and placed in IAEA custody for transfer to Oman	AEOI → Omani Nuclear Facility Custody	IAEA DG confirmation within 72 hours; mass spectrometry; chain-of-custody documentation
Freeze all enrichment at or above 60% at Natanz and Fordow	AEOI technical declaration	IAEA continuous monitoring; real-time data to Vienna + Geneva
Houthi moratorium on all Red Sea/Gulf of Aden commercial vessel targeting	Ansar Allah → Omani Maritime Trust Pact	Omani maritime observation; Lloyd's List incident reporting; 14-day zero-incident certification
Proxy operational pause — reduction in attacks on US positions	ARS internal command	CENTCOM threat assessment; Asymmetric Security Forum reporting
IRGC-Navy small craft withdraw from Hormuz transit corridor	Iranian naval command	AIS broadcast; satellite confirmation; Omani naval observer verification
Formal notification to Joint Coordination Secretariat confirming all Day-1 activations	Iranian Foreign Ministry	Secretariat records; Transparency Portal entry

8.2 What the United States Delivers (via MSCG Proxies)

Table 12 United States Commitments — Day 1 Activation

Commitment	Proxy Vehicle	Verification Method
USD 250 million humanitarian tranche credited via Swiss escrow	Swiss Financial Cell → Iranian Central Bank humanitarian account	Swiss escrow agent certification; transaction settled and irrevocable

OFAC general license for humanitarian trade (medicine, food, medical equipment, aviation safety) for 90 days	US Treasury published general license	→	Federal Register publication; Swiss confirmation of operational status
US naval forces transition to stand-off posture: no patrols within 5nm of Hormuz transit corridor	5th Fleet Maritime Operations Cell		AIS broadcast by all US naval vessels; daily satellite confirmation; Omani naval observer
Written commitment: no new sanctions designations for Framework duration	US Treasury → Joint Coordination Secretariat		Secretariat records; 14-day monitoring window
Formal statement acknowledging Iran's sovereign right to peaceful nuclear energy under NPT Article IV through monitored, non-weapon pathways	US State Department simultaneous publication by both capitals	→	Published simultaneously; UN registration
Activation of proxy banking clearinghouses for humanitarian and small-business trade	UAE/Omani private banks		Transaction flow verification through Transparency Portal

8.3 Simultaneous Verification

Article 8.3 — The Fourteen-Day Stabilization Gate

Both moves activate simultaneously on Day 1 and are not contingent on later political declarations. The only contingency is mechanical: both Parties activate within the 72-hour window.

By Day 14, three primary verification channels must certify completion:

1. **Channel 1 — Nuclear Verification (Primary):** IAEA certifies all 60% HEU cylinders consolidated, sealed, and in transit or arrived at custody facility; mass spectrometry confirms declared isotopic composition
2. **Channel 2 — Maritime Observation (Primary):** Omani Maritime Operations Cell certifies US vessels at stand-off posture, Iranian craft withdrawn, zero interdiction incidents Days 1–14
3. **Channel 3 — Financial Confirmation (Primary):** Swiss escrow agent certifies USD 250M credited, transaction settled, OFAC license issued and in force

Two advisory channels provide political confirmation:

- **Channel 4 — Political Facilitation (Advisory):** Omani Foreign Ministry confirms both Parties activated in good faith
- **Channel 5 — Procedural Registration (Advisory):** UN Secretary-General confirms Framework entry into force registered

Channel Silence Protocol: If any primary channel has not issued certification by Day 14, the Secretariat convenes a 48-hour Operational Consultation Window. Late certification is accepted without penalty. Non-certification after 72 hours triggers investigation, but Day-One commitments survive.

Section 9: Staged Implementation Timeline

Table 13 Implementation Timeline at a Glance

Phase	Duration	Iranian Steps	US Steps
Phase 0: Micro-Pilot	Days -30 to -1	Halt centrifuge installation; reduce Hormuz interdiction; pause proxy attacks	No new sanctions; reduce patrols; process humanitarian licenses

Stage 1: Opening	Days 1–14	Ceasefire; stockpile to IAEA; Suspend military operations; Hormuz reopening; proxy stand-down	OFAC license; blockade lift; maritime notice
Stage 2: Deferred Window	Days 15–44	Declare moratorium; idle centrifuges; Fordow Phase A; HEU export plan	Sanctions tranche; aviation licenses; 25% asset return
Stage 3: Permanent Authority	Days 45–180	Transit Authority operational; successor framework; Phases B/C	Full sanctions relief; 85% assets returned; Fordow; SWIFT reconnection

9.1 Phase 0: The 30-Day Micro-Pilot

Micro-Pilot Parameters

- **Duration:** 30 days (extendable to 45 by mutual consent; +7 by Triad for verified delays)
- **Legal Status:** Politically binding exchange of letters; not a treaty
- **Iranian Commitment:** Freeze all enrichment at or above 60% at Natanz and Fordow
- **US Commitment:** Release \$250M humanitarian tranche via Swiss escrow
- **Verification:** IAEA confirms 60% freeze within 72 hours of pilot start
- **Scope:** Humanitarian goods only (medicine, food, agricultural inputs)
- **Reversibility:** Either side may terminate with 7 days written notice; no penalty
- **Transition:** Upon successful completion, automatically transitions to Stage 1

9.2 Stage 1: The 14-Day Opening

Stage 1 produces seven irreversible operational deliverables:

Table 14 Stage 1 — Day-by-Day Activation

Time	Iranian Action	US Action	Verification
Day 1	Transfer 60% stockpile to IAEA custody; ceasefire; proxy pause	\$250M via Swiss escrow; OFAC license; naval stand-off	IAEA DG confirmation; mass spectrometry; concurrent certification by Omani + Swiss + UN channels

Day 3–5	Complete physical inventory; finalize chain-of-custody; deploy transit escort routing; notify 5th Fleet	Publish sovereign-rights statement; activate escrow portal entry	Secretariat records; transparency portal entry
Day 7	IRGC craft withdraw to 5nm stand-off; AIS broadcast	US Navy withdraws to 5nm; blockade lift declaration	Omani monitor logs both signals; Lloyd's observer confirms; SIMULTANEOUS within 60-second window
Day 14	Transit completion; Stabilization Gate certification	Tranche 2a release: petrochemicals, services, aviation	Three primary channels certify; 10-day Technical Extension available

9.3 Stage 2: The 30-Day Deferred Window

Article 9.3 — Stage 2 Obligations

Iranian Commitments:

1. Declare moratorium on enrichment above 3.67% — renewable annually for up to 12 years based on performance
2. Idle all cascades configured for enrichment above 3.67%; UF6 feedstock removed and IAEA-sealed
3. Zero new centrifuges installed at any facility, including hardened underground sites
4. Begin Fordow Phase A: conversion planning for International Medical Isotope Research Center
5. Submit HEU export plan to IAEA for final disposition timeline

US Commitments:

1. Release Tranche 2a (Day 14): Petrochemicals and oil-services trade licenses, plus civilian aviation safety authorizations
2. Release Tranche 2b (Day 45): Expanded petrochemical trade access; 25% of frozen assets released upon IAEA confirmation of freeze completion
3. Commit no new sanctions for Framework duration
4. Support International Gulf Reconstruction Fund with \$2B Qatari bridge financing

9.4 Stage 3: Permanent Transit Authority

Table 15 Stage 3 Progressive Milestones

Milestone	Timing	Iranian Deliverable	US Deliverable
Tranche 3	Day 60	IAEA confirms high-enrichment freeze sustained	\$1.5B release; commercial insurance facility access
Tranche 4 / SWIFT	Day 90	IAEA confirms zero new centrifuge installation	SWIFT reconnection for FATF-compliant banks
Tranche 5	Day 120	Transit Authority operational; Fordow Phase A complete	\$3B; expanded trade authorizations
Tranche 6	Day 150	Six-month clean certification	Banking normalization for Tier 1 institutions
Tranche 7 / Final	Day 180	Full six-month compliance; successor framework opened	\$5B; 85% assets returned; technology transfer licenses
Year 1 Clean	Day 365	Additional Protocol ratified; annual review passed	\$10B total; full normalization pathway

Section 10: The Core Triad

All day-to-day oversight is consolidated into three entities. This replaces the previous six-domain facilitating state matrix to eliminate gridlock and accelerate decision-making.

Table 16 The Core Triad: Consolidated Oversight

Entity	Domain	Core Function
Oman	Maritime + Physical Custody	Hotline, naval deconfliction, HEU physical custody, Joint Forensic Maritime Board
Switzerland	Financial Verification	Escrow, asset transfers, sanctions relief monitoring, ring-fenced clearinghouses
IAEA	Nuclear Verification	Enrichment monitoring, facility inspection, chain-of-custody

Qatar, Pakistan, and the UN Appointee are removed from day-to-day oversight. They are retained ONLY as emergency backchannels if the Triad gridlocks.

Source: Reciprocal Stabilization v4.0, Section 4.1; GSA v1.5, Section VIII.

Terminology Note: The PLSA uses "Facilitating State" not "Guarantor." "Guarantor" implies enforcement obligations and geopolitical alignment. "Facilitating State" suggests assistance without enforcement commitment. This softer language reduces political resistance while maintaining operational effectiveness.

Section 11: Three-Tier Breach System

The PLSA employs a graduated breach architecture that prevents minor violations from triggering catastrophic collapse. The three-tier system applies equally to Principal and Proxy actions.

Table 17 Three-Tier Breach Architecture

Tier	Trigger	Remedy	Surviving Rights
Tier 1: Technical Dispute	Single data-point anomaly; reporting deadline missed by <48h; one centrifuge offline but no enrichment above 3.67% detected; minor proxy ceasefire violation	14-day remediation continues. Enhanced inspection of specific item; daily reporting until cleared; no relief suspension	All sanctions relief continues. All enrichment constraints remain. Humanitarian channel uninterrupted. Proxy coalitions remain active.
Tier 2: Material Disruption	IAEA confirms enrichment above 3.67%; unauthorized centrifuge installation; UF6 diversion to undeclared location; sustained proxy attacks after warning; serious Hormuz interdiction	Discretionary relief (Tranches 5–7) suspended; enhanced escrow mechanism activated; 60-day remediation; daily reporting	Humanitarian channel continues. Enrichment freeze cap survives. IAEA survives. Ceasefire hotline active. Tier 1 and 2 modules continue.

Tier	3:	Weaponization activity	Full rollback; posture	Humanitarian corridor
Deliberate		confirmed by IAEA and two	returns to pre-Day 1	continues under UN mandate.
Hostile		independent technical	configuration;	NPT safeguards remain.
Violation		sources; sustained non-	Reconstitution	Ceasefire hotline resumes;
		compliance after Tier 2	Conference convened	naval active 180 days.
		expires; state-level military	within 30 days	Custodial stockpile remains
		attack by either Principal		under IAEA control — not
				returned to Iran absent new
				agreement.

Article 11.1 — Attribution Rules for Proxy Actions

When a proxy coalition member commits an act that would constitute a breach if attributed to a Principal:

- 1. Level 1 (State Command):** Clear evidence the Principal ordered the act → treated as Principal breach at corresponding tier
- 2. Level 2 (State Knowledge):** Evidence the Principal knew and failed to prevent → Tier 1 or 2 depending on severity
- 3. Level 3 (Rogue Actor):** No evidence of Principal knowledge or involvement → proxy internal matter; Asymmetric Security Forum handles enforcement; does not trigger Principal-level breach unless pattern persists 30+ days
- 4. Level 4 (False Flag):** Evidence the act was committed by a third party to frame a Principal → Cooling-Off Default activates; investigation period 72 hours

This attribution framework is the critical enabler of the proxy architecture. It separates genuine violations from proxy friction, allowing the framework to survive the inevitable irregularities of proxy management.

Section 12: Framework Survival Core

Article 12 — Framework Survival Core

Under all circumstances, including total framework suspension, the following three elements survive:

1. **Ceasefire Hotline:** The Omani-facilitated 24/7 bilateral hotline between US and Iranian military commanders remains active regardless of framework status. Neither party may disable the hotline without 30 days notice to the UN Secretary-General.
2. **Humanitarian Access:** The zero-fee, no-inspection-delay humanitarian corridor through Hormuz for food, medicine, medical equipment, and UN supplies continues regardless of any dispute, breach, or suspension.
3. **Emergency Diplomatic Channel:** The backchannel through the Coordination Secretariat remains open for crisis communication, de-escalation, and framework reconstitution regardless of formal diplomatic status.

Legal Status: The Framework Survival Core is established as a standalone humanitarian arrangement under UN auspices. It is not contingent on any other provision of this Accord. Even if both parties formally withdraw, the Survival Core continues for 180 days pending reconstitution efforts.

Section 13: Rollback, Not Snapback Architecture

The PLSA replaces the JCPOA-style "snapback" with a graduated rollback that preserves more than it removes. This is the single most important structural improvement over previous frameworks.

Rollback Principles

- **Proportionality:** Response matches severity
- **Graduation:** Each tier preserves more than it removes
- **Reversibility:** Suspended benefits are earn-backable through verified compliance
- **Protected Milestones:** Completed milestones and already-released benefits remain in force regardless of subsequent compliance slippage
- **No Goalpost Moving:** Neither party may unilaterally redefine compliance criteria after they have been certified

Article 13.1 — Earn-Back Protocol

A Party correcting a Tier 1 or Tier 2 breach may petition for earn-back. The Secretariat convenes within 14 days. If IAEA confirms 60 days of sustained compliance post-correction, suspended tranches restore progressively:

- After 30 days clean: 25% of suspended tranches released
- After 60 days clean: 50% of suspended tranches released
- After 90 days clean: 75% of suspended tranches released
- After 120 days clean: 100% restoration; compliance score reset

Section 14: Spoiler & Rogue Actor Management

The PLSA's proxy architecture inherently manages spoilers by incorporating them into the framework rather than treating them as external threats.

14.1 Internal Spoiler Management (Within Proxy Coalitions)

Table 18 Spoiler Categories and Responses

Category	Definition	Default Response	Escalation
Minor Spoiler	Localized, limited-duration incident; single actor; no state involvement	Information exchange; Asymmetric Security Forum meeting; no automatic hold	None; proxy coalition internal discipline

Serious Spoiler	Sustained incident with measurable regional impact; pattern of violations linked to Principal	Secretariat convenes within 5 days; 30–60 day Stabilization Hold on affected module	Tier 2 breach if pattern continues
Critical Spoiler	Major escalation threatening Framework assumptions; mass-casualty event; Principal involvement proven	Emergency convening within 24 hours; Stabilization Hold extended up to 120 days	Tier 3 if deliberate

14.2 External Spoiler Shield

Article 14.2 — External Spoiler Shield

Actions by states or non-state actors who are not Parties to this Accord shall not be attributed to either Principal unless clear evidence of command, control, or material support is established through the multi-source verification protocol.

If Israel conducts military strikes against Iranian nuclear facilities during Framework implementation:

1. The strikes do not automatically constitute Iranian breach
2. Iran may invoke the Political Shock Absorber (Section 15) for a 90-day Review Pause
3. Iran's enrichment obligations are suspended during Review Pause
4. US obligations continue unless IAEA determines Iran is exploiting the pause for weaponization
5. The Coordination Secretariat convenes emergency session within 24 hours

Section 15: Political Shock Absorber

Article 15 — Political Shock Absorber: Automatic Review Pause

If any of the following occur in either party's jurisdiction, framework implementation automatically enters a **Review Pause** rather than terminating:

- National elections or referenda
- Assassination of senior leadership
- Cabinet collapse or government reshuffle
- Mass protests affecting government authority
- Leadership transitions (Supreme Leader, President, Foreign Minister)
- Significant military incident affecting domestic politics

During Review Pause:

- All MVC elements continue unchanged
- Tier 3 (conditional) modules enter hold status
- Secretariat issues Review Pause Certificate within 48 hours
- Maximum duration: 90 days, extendable by mutual agreement

Review Pause does NOT constitute material breach, does NOT trigger the three-tier breach system, does NOT affect compliance scoring, and does NOT enable the other party to suspend its obligations.

15.1A Emergency Judicial Pause (FIX #10)

Article 15.1A — Emergency Judicial Pause

If a domestic court of competent jurisdiction issues a restraining order affecting implementation:

1. The MVC continues unconditionally
2. All parties automatically enter Review Mode
3. No penalties accrue during the judicial review period
4. If restraint persists beyond 45 days, the affected party may invoke Force Majeure Stabilization Mode without penalty

Judicial restraint does NOT constitute breach.

Source: Reciprocal Stabilization v4.0, Section 4.11.

15.1B Presumptive Continuation with Biennial Affirmative Vote (FIX #13 / 14.1B)

Article 15.1B — Presumptive Continuation with Biennial Affirmative Vote

(a) **Default State: Continuation.** This Framework continues in full force indefinitely unless terminated through the affirmative opt-out procedure in subsection (b).

(b) **Biennial Affirmative Vote.** Every 24 months (on the anniversary of entry into force), each party shall conduct a single, up-or-down domestic vote on continuation:

- For the United States: A recorded vote in both chambers of Congress (simple majority in each).
- For the Islamic Republic: A vote in the Majlis (simple majority).

(c) **Supermajority Not Required.** Continuation requires only a simple majority in each respective legislature. Failure to hold a scheduled vote, abstention, or absence constitutes a vote FOR continuation. Legislative inaction defaults to continuation.

(d) **Opt-Out Threshold.** To terminate, a party must secure an affirmative majority AGAINST continuation. If either party votes to terminate, the Framework enters a 90-day Cooling-Off Period (Section 15.1C) before termination takes effect.

(e) **No Presidential/Leadership Veto Override.** If the legislature votes FOR continuation, the executive may not override or refuse to implement Framework obligations. The vote binds the institution.

(f) **Rationale.** This mechanism ensures the Framework does not expire through neglect. It requires active political effort to terminate, not passive inaction. It respects each party's domestic legislative processes while making continuation the default, predictable outcome.

15.1C Cooling-Off Period (Post Opt-Out) (FIX #14.1C)

Article 15.1C — Cooling-Off Period (Post Opt-Out)

If either party's legislature votes to terminate:

1. Termination does NOT take effect for 90 days.
2. During the Cooling-Off Period, all MVC elements continue unconditionally.
3. The Core Triad convenes emergency consultations within 14 days.
4. The terminating party may reverse its opt-out at any time before the 90-day period expires, with full framework continuity restored.
5. If the Cooling-Off Period expires without reversal, withdrawal proceeds under Section 13.1 (sequenced deactivation over 90 additional days).

This 90+90 day window (Cooling-Off + sequenced withdrawal) provides 180 days total for reconstitution or reversal.

Section 16: Minimum Viable Accord Fallback

If negotiators reject the full PLSA architecture, a stripped-down emergency pathway covers four essential elements: ceasefire, Hormuz reopening, humanitarian channel, and enrichment freeze.

MVA Activation Protocol

1. Either party proposes MVA by written notice to the Coordination Secretariat
2. Core Triad convenes within 48 hours
3. Both parties confirm MVA acceptance through exchange of letters
4. MVA activates 72 hours after confirmation
5. IAEA advance team deploys within 48 hours

MVA Graduation to Full Accord: The MVA automatically graduates to the full PLSA when: (a) both parties confirm objectives met, (b) 14 consecutive days of verified compliance, (c) neither party objects within 7-day review window.

Thirty-Day Auto-Transition: If the full framework is not ratified by Day 30 of the Micro-Pilot, the agreement automatically transitions to its MVA state. Tier 3 modules pause; Tier 1

and 2 modules continue. Renegotiation begins within 14 days under the Reconstitution Mechanism.

Section 17: Parallel Public Framework (Dual-Track Option)

17.1 Rationale

The proxy architecture provides operational deniability, but the public requires a clear, accountable diplomatic framework. This section creates a parallel public track without altering the proxy-led operational mechanics.

17.2 Optional Activation

Within 30 days of Framework signature, both Principals may agree in writing to activate the Parallel Public Framework. Activation is not automatic; it requires mutual consent.

17.3 Public Framework Content (If Activated)

- A separate, 5-page public document is issued simultaneously in Washington and Tehran.
- The public document describes the same commitments using direct state-to-state language ("Iran commits," "US commits").
- It does NOT mention proxy coalitions, WMFC, ARS, or deniability.
- It is framed as a "Synchronized Stabilization Understanding."

17.4 Operational Seam

The public document and the operational proxy document are legally separate but factually identical. What Iran commits to in public is what Iran orders its proxies to do operationally.

17.5 Deniability Preserved

The operational proxy document remains classified. Public statements refer only to the public framework. If a proxy violates its orders, the US can say "Iran violated the public framework" — which is true, without admitting proxy coordination.

17.6 Example — Public Framing

"Under the Synchronized Stabilization Understanding, Iran commits to a 60% enrichment freeze and maritime stand-down. The United States commits to \$250M in humanitarian relief and blockade lift."

Operational reality: Iran orders RSCC proxies to stand down. The public never needs to know.

17.7 Termination of Parallel Track

Either party may withdraw from the Parallel Public Framework with 30 days' notice. Withdrawal does NOT affect the operational proxy framework.

Section 18: Joint Coordination Secretariat

The PLSA consolidates governance into one Joint Coordination Secretariat (Geneva, with Muscat maritime desk) containing six specialized subcells:

Table 19 Secretariat Structure

Subcell	Function	Location
Political Coordination Cell	Senior-level bilateral coordination; dispute resolution; high-level messaging; proxy coalition liaison	Geneva
Maritime Operations Cell	Hormuz transit management; naval deconfliction; hotline operations; IHTC secretariat support	Muscat
Nuclear Verification Cell	IAEA coordination; enrichment monitoring; facility inspection logistics; Fordow JV oversight	Geneva
Financial Operations Cell	Escrow management; asset transfer verification; SWIFT coordination; proxy banking oversight	Geneva
Communications Cell	Media coordination; public messaging; leak management; crisis communications; narrative framing	Geneva

Crisis	24/7 incident monitoring; attribution assessment; spoiler	Muscat (primary) /
Response Cell	detection; rapid response; Cooling-Off activation	Geneva (backup)

Article 18.1 — Secretariat Governance

- **Rotating Facilitation:** The Secretariat operates under rotating facilitation cycles quarterly among Oman, Switzerland, and Qatar
- **Dual-Site Architecture:** Primary site Geneva (Political, Financial, Nuclear, Communications Cells); Backup site Muscat (Maritime, Crisis Response Cells); 4-hour failover protocol
- **Escrow Multi-Signature:** All tranche releases require digital signatures from 3 of 4 designated facilitating states (Oman, Switzerland, Qatar, IAEA) plus IAEA certification
- **Transparency Portal:** Secure portal providing real-time data on implementation status, compliance scores, asset tracking, transit verification, and spoiler monitoring

Section 19: Face-Saving Metrics & Domestic Narratives

Every PLSA provision includes quantifiable "wins" visible to domestic audiences. The proxy architecture amplifies these wins by allowing each side to credit its own coalition while blaming implementation friction on proxies or neutrals.

Table 20 Face-Saving Metrics Matrix

Domain	Iran Can Claim	US Can Claim
Nuclear	"We transferred material to IAEA custody under Omani supervision, not to the US. Sovereign title remains Iranian."	"60% enriched uranium left Iran on Day 1, verified by IAEA. Weapons-grade material secured."
Enrichment	"Enrichment continues at Natanz at 3.67% under NPT Article IV, acknowledged in writing by the US."	"Enrichment capped at 3.67%. IAEA on Iranian soil daily. No new centrifuges anywhere."
Hormuz	"The PGSA continues as our sovereign maritime authority, now integrated into a multilateral framework."	"Hormuz is open. 200+ transits in 14 days. Multilateral oversight prevents Iranian chokehold."
Proxies	"Our regional defensive networks remain intact. The RSCC is a formalized regional security cell."	"Iran's proxy networks have signed binding stand-down agreements. Attacks dropped 90%."

Economic	"Assets flowing through neutral Islamic partnerships. No surrender to Western financial surveillance."	"Every concession matched by verified Iranian steps. Nothing given away. Sanctions architecture intact."
Fordow	"Fordow transformed into an international medical center under our ownership. A scientific achievement."	"Fordow enrichment permanently ended. Facility converted to peaceful use under international control."
Process	"We negotiated as equals through neutral Islamic facilitators, without direct bilateral engagement."	"We did not sign a direct treaty with Iran. Proxy coalitions did the work. Our sanctions leverage remains."

Article 19.1 — Mutual Non-Humiliation Clause

Neither Party shall publicly characterize Framework implementation as surrender, capitulation, defeat, or coercive submission by the other Party. This prohibition applies to all forms of public messaging, official talking points, diplomatic communications, implementation readouts, and statements to domestic or international media. Both Parties undertake to describe the Accord as a reciprocal stabilization instrument in which each side gains commensurate benefits through neutral proxy facilitation.

Article 19.2 — No Regime Change Intent

This Accord shall not be interpreted as authorizing, supporting, or condoning forcible regime change, territorial fragmentation, unconstitutional political overthrow, covert destabilization operations, or economic strangulation designed to precipitate governmental collapse in either Party. Both Parties affirm that this instrument is confined to nuclear stabilization and maritime de-escalation and creates no license for broader political interference.

Section 20: Communications & Crisis Protocols

20.1 Rebranding Protocol

Remove terms like "deal," "rollback," or "concessions." Approved terminology:

Table 21 Approved Narrative Terminology

Avoid	Washington Uses	Tehran Uses
"Nuclear deal"	"Regional stability mechanism"	"Sovereignty-protecting de-escalation tool"

"Sanctions relief"	"Humanitarian facilitation"	trade	"Economic normalization through neutral channels"
"Uranium surrender"	"Weapons-grade secured"	material	"Custodial transfer to IAEA/Omani partners"
"Proxy disarmament"	"Regional security integration"		"Axis of Regional Stability formalization"
"Hormuz tolls"	"Environmental levy"	protection	"Sovereign maritime environmental fee"

20.2 Crisis Communications Protocol

Table 22 Crisis Response Matrix

Crisis Type	Trigger	Response Protocol	Response Time
Unauthorized Leak	Confidential text published by media	"We do not comment on draft documents" statement; internal investigation	4 hours
Contradictory Statement	Official Accord contradicts provisions publicly	Senior official issues clarification; attribution to Coordination Secretariat	24 hours
Viral Misinformation	False claims spread rapidly on social media	Pre-approved fact sheets; key influencers briefed; official corrections posted	6 hours
Inflammatory Speech	Senior politician attacks Accord	No official response; backchannel through Omani Foreign Minister; 72-hour cooling period	72 hours
Proxy Violation	RSCC or MSCG member breaches commitment	Principal condemns "operational friction"; neutral facilitators investigate; proxy coalition disciplines member	12 hours
External Attack	Israel or third party strikes during implementation	Political Shock Absorber activates; Review Pause; emergency Secretariat session	6 hours

Section 21: Instruments of Acceptance

This Framework is offered for acceptance by signature and exchange of instruments through the Designated Facilitating States, or by exchange of diplomatic notes confirming intent to be bound. It enters into force upon the later of the two acceptances, for an initial period of twelve months, renewable annually by mutual written consent. Non-renewal does not constitute breach and does not retroactively invalidate obligations performed during operation.

Appendix A: Quick Reference Card

For Senior Officials — Keep This Page at Hand

PLSA in One Page

What it is: A proxy-led stabilization instrument. The US and Iran never sign a direct bilateral treaty. Two coordination mechanisms (MSCG and RSCC) do the heavy lifting through the Core Triad (Oman, Switzerland, IAEA).

What it solves: The May 2026 impasse on uranium, Hormuz, sanctions, and proxies — without requiring either side to capitulate on core sovereignty claims.

Core exchange (Day 1): Iran's 60% HEU stockpile goes to IAEA custody in Oman (not to US, per binding Article 5.2A). US releases \$250M via Swiss escrow. Both activate simultaneously.

Why it's safe for Iran: Material goes to IAEA dual-lock custody in Oman — never US territory. Sovereign title stays Iranian. Binding No Regime Change and Mutual Non-Humiliation clauses. Renewable annually — not permanent surrender.

Why it works for the US: Weapons-grade uranium leaves Iran on Day 1. Enrichment capped at 3.67%. Every concession matched by verified Iranian step. Proxy stand-down reduces attacks 90%. Sanctions architecture intact.

If someone breaks it: Rollback is tiered, not collapse. Minor issues get 14-day fix. Material breaches suspend discretionary relief but keep humanitarian channel and ceasefire hotline alive. The MVC backbone survives 180 days minimum.

Duration: Indefinite. Continues unless affirmatively voted down via biennial legislative vote (Article 15.1B). Inaction = continuation. Three options: Minimal, Medium (default), Maximal.

Key v1.5 protections: Graduated tiered response (Article 1.3) | No US Custody (Article 5.2A) | No Goalpost Moving (Article 2.1C) | No Precedent firewall (Article 2.1D) | Emergency Judicial Pause (15.1A) | Proxy Universe Freeze (Article 3.4) | JFM Board sole attribution (Article 3.2A) | Direct Principal Override (Article 1.4) | Parallel Public Framework (Section 17) | Biennial continuation vote (Article 15.1B)
